The government, however, did not authenticate numerous photographs of soldiers using dogs to intimidate detainees, though military prosecutors have used such images in open court while pursuing cases against the soldiers.

Many of the photos, or representative samples of them, have been published in The Washington Post and on washingtonpost.com over the past two years. Salon.com, an Internet magazine, recently published the photographs on its Web site after obtaining what appeared to be the Army's compilation of abuse photos used to prosecute low-ranking soldiers. The government also authenticated three short video clips. The original disc was given to Army investigators by a soldier concerned by the abuse that he saw in photos.

Avoiding an actual government release of the images, Justice Department lawyers instead authenticated photographs that were already up on the Salon Web site, using court papers to refer to the images by number. ACLU lawyers were also provided with one additional photograph – which appears to be two detainees with their arms around each other and their faces edited out of the image – and the government declined to provide an additional 29 photographs that ACLU lawyers said they are going to fight to see.

None of the photographs the government authenticated indicates any unknown instances of abuse. Hundreds of other photos – seized from soldiers' computers in Iraq – appear to show abuse but have not been authenticated by U.S. officials.

"Our aim was to get this information into the public domain, and the government's attempts at withholding this information have proved futile," said Amrit Singh, an ACLU lawyer pursuing the lawsuit. "This is a victory for us because information to which the public is entitled has been released into the public domain. The government has fought this tooth and nail."

Defense Department officials, including top generals, have opposed releasing the images, arguing that they could set off major unrest in Muslim nations. The images a federal judge in New York ordered the government to release, it turns out, largely were the same images that already have been published.

Associated Press

Government wiretapping, Google crackdown among Muzzle winners

April 11, 2006

RICHMOND, Va. -- President Bush and the Justice Department are among the winners of the 2006 Jefferson Muzzle awards, given by a free-speech group to those it considers the most egregious First Amendment violators in the past year.

Bush led the list, compiled by the Thomas Jefferson Center for the Protection of Free Expression, for authorizing the National Security Agency to tap the phones of U.S. citizens who make calls overseas. The wiretaps were conducted without authorization from a federal court. The White House defended the warrantless wiretapping program as necessary to fight terrorism.

The Justice Department earned a Muzzle for demanding that Google turn over thousands of Internet records, prompting concerns that more invasive requests could follow if the government prevails. "If individuals are fearful that their communications will be intercepted by the government, such fears are likely to chill their speech," the Jefferson center said.

Other winners of the 15th annual awards include the Department of Homeland Security for barring an air marshal from expressing concerns about public safety; the Yelm, Wash., City Council for banning the words "Wal-Mart" and "big-box stores" at public hearings; and students at the University of Connecticut who heckled conservative columnist Ann Coulter.

The center, based in Charlottesville, Va., awards the Muzzles each year to mark the April 13 birthday of Thomas Jefferson, the third president and a First Amendment advocate.

As in the past, this year's winners reflect concern about "the overextension of government authority into areas that clearly affect our lives and chill and inhibit our ability to express views," center director Robert M. O'Neil told The Associated Press.

Since The New York Times disclosed the surveillance program's existence in December, it has become the target of harsh criticism, several lawsuits and a congressional investigation. John W. Dean, who was Richard Nixon's White House counsel, remarked that the domestic spying exceeds the wrongdoing that toppled his former boss.

In the Google case, the Justice Department demanded search records to buttress its defense of a law aimed at protecting children from Internet pornography. Google resisted turning over any information because of user privacy and trade secret concerns. Other Internet providers -- including AOL, Yahoo and MSN -- complied with the government's demand.

"Google appears to be the only one that drew a line in the sand," O'Neil said. "We commend their insistence that aggregate data could end up identifying a particular subscriber."

The Department of Homeland Security won its Muzzle for taking air marshal Frank Terreri off flight duty after he e-mailed colleagues expressing concerns about air-security risks. The federal policy curbing such activity was modified, and Terreri was allowed back on duty. But he sued, contending the department's rules still restrict employees' right to free speech.

In Yelm, Wash., the city council banned discussion of a plan by Wal-Mart to build a super center after many opponents sought to express their views. When that didn't squelch opposition, the council voted in June to prohibit citizens from using the terms "Wal-Mart" or "big-box stores" at public meetings.

Hecklers at the University of Connecticut earned a Muzzle for drowning out Coulter's speech in December. People have a right to express their disagreement with a speaker, the free-expression center said, but preventing fellow audience members from hearing the message is contrary to the First Amendment's spirit.

END

The Kansas City Star

‘Under God’ in pledge is under attack again

April 11, 2006

KANSAS CITY, MO. - The children in Shauna Hammett’s kindergarten class faced a small American flag hanging from a wall at Pawnee Elementary School in Overland Park, Kan., one recent Monday morning.

Led by a child’s voice over the loudspeaker, they recited the Pledge of Allegiance.

But if California atheist Michael Newdow gets his way, the Pledge of Allegiance no longer would include the phrase "under God." Newdow is pursuing another court case to remove those words. He formerly sued as a parent but now is representing other parents as an attorney.

The 9th Circuit Court of Appeals in San Francisco has set dates this spring and summer for briefs to be filed in the case. The same court ruled in 2002 that "under God" in the pledge is unconstitutional.

No matter what the court decides this time, it is almost certain the case will be appealed again to the U.S.

Supreme Court, which dismissed the previous suit on procedural grounds. That dismissal left the core issue of the pledge's constitutionality unsettled.

Pawnee Principal Mark Kelly isn't worried about all of that. "I think it's a California thing," he said of the court fight, confident the pledge will remain intact.

When Newdow sued again last year, a senior judge of the Eastern District of California ruled in his favor, ordering the Rio Linda School District not to lead students in reciting the pledge.

But he stayed his order pending appeals in the case.

Why did Newdow sue again? "I can answer that in one word: equality," he said in a phone interview. "This is not a case of people who believe or don't believe in God but in people who believe in equality."

The Constitution says government should treat people equally, Newdow said, insisting it is unequal treatment of atheists to have "under God" in the pledge and "in God we trust" on money. He is suing to get that off, too. That case, filed in November, still is in federal court in California.

"Government isn't supposed to be in the religion business at all," he said.

Worried that courts may rule against "under God," U.S. Rep. Todd Akin, a Missouri Republican, is sponsoring the proposed Pledge Protection Act, which already has nearly 200 co-sponsors.

"The words 'under God' are not just there for window dressing," Akin said in a phone interview, "but they address a central aspect of what America is all about: We believe there is a God, even though we don't agree on exactly what his name is.

"God grants basic rights to people and government's job is to protect those rights. That's why that phrase in our pledge is in need of defense."

Supporters hope Congress will pass it by late summer. They say the issue is not just the two words Congress added to the pledge in 1954 but, also is about what they see as too much power for the federal courts – power they hope to curb.

Wulf, David M.

Subject:	Updated: Katrina "Lessons Learned" Recommendations--Meeting on ESF-13/SFLEO Recommendations
Location:	ATF 650 Massachussettes Ave. NW Washington, DC (Director's Conference Room)
Start:	Thursday, April 13, 2006 10:30 AM
End:	Thursday, April 13, 2006 12:00 PM
Show Time As:	Tentative
Recurrence:	(none)
Meeting Status:	Not yet responded
Organizer:	Wulf, David M.
Required Attendees:	Wulf, David M.; Hart, Rosemary; McIntosh, Brent; 'Tzitzon, Nicholas'; Mercer, Bill (ODAG); Taylor, Jeffrey (OAG); Jezierski, Crystal; 'Kim.Tilton@ic.fbi.gov'; 'Schofield, Regina'; 'Palma, Josephine'; 'Hagy, David'; 'Gillis, John'; 'Carter, Judy (USPC)'; Bouchard, Michael R.; Allen, Michael (JMD); Bradbury, Steve; Burton, Faith; Ferber, Alan L; 'G.Jones@ic.fbi.gov'; Gorsuch, Neil M; 'Rubin, Jim (ENRD)'; Rybicki, James E; Scolinos, Tasia; Vasaio, Tony; 'Vanyur, John'; 'Trono, Robert (USMS)'; 'Snelson, William (USMS)'; 'Schmitz, Fran (CTS)'; 'Roderick, Art Jr. (USMS)'; 'McManamon, Michael J'; 'Conley, Joyce'; 'Michael.Clemens@ic.fbi.gov'; 'David.Larson@ic.fbi.gov'; 'Craig.Olson@ic.fbi.gov'; 'David.Anderson@usdoj.gov'; Scavo, Tara; Rubenstein, Steve R.; Koett, Imelda M.; O'Keefe, Kevin C.; Bukovac, Michael A.; Zellers, Steven S.; McAtamney, James A; 'Charles.M.Metzger@usdoj.gov'; 'Donald.P.Augustine@usdoj.gov'
Optional Attendees:	Turner, Sandra; Graham-Wyatt, Nina; 'Metzger, C. Michael'; Vargas, Omar; 'Anderson, David (EOIR)'; Drake, Herbert W.
Importance:	High

When: Thursday, April 13, 2006 10:30 AM-12:00 PM (GMT-05:00) Eastern Time (US & Canada).
Where: ATF 650 Massachussettes Ave. NW Washington, DC (Director's Conference Room)

PUBLIC AFFAIRS DAILY NEWS WRAP
April 12, 2006

Contact: Brian Roehrkasse, Deputy Director, Office of Public Affairs (202) 514-2007

TOMORROW'S EXPECTED NEWS STORIES:

National Security Letter Litigation
The federal government will no longer seek to enforce a gag order on Connecticut librarians who received an FBI demand for records about library patrons under the Patriot Act. The ACLU, which filed suit on behalf of the librarians, said it will identify them once court proceedings are completed in the next few weeks. Early media reports imply that the Department changed its mind in the Connecticut case to allow the recipient to identify him/herself, implying the Department did so because it is now too late for the recipient to participate in the Patriot Act reauthorization debate. Significant media coverage is expected.

Talking Points:

- The Department has not changed its position on nondisclosure. It is the law governing disclosure that has changed, allowing case-by-case decisions as to the necessity of a nondisclosure requirement.

- As part of the reauthorization legislation, Congress has determined that the FBI should exercise discretion when issuing an NSL as to whether it should be accompanied by a nondisclosure order. Congress has made it clear that the FBI should revisit its judgment in the event the nondisclosure requirement is challenged, particularly as time passes.

- Prior to the amendments made as part of the USA PATRIOT Act reauthorization legislation, the law provided that all National Security Letters automatically were accompanied by a permanent nondisclosure order. This was Congress' determination and was binding on the Department.

- In this case, exercising the discretion that Congress is now encouraging us to exercise, the FBI has determined that allowing the recipient to disclose its identity (and only its identity) will not harm the national security or interfere with an ongoing investigation. Prior to the change in the law, the Department did not have the legal authority to make that judgment.

Washington Post Story on Civil Rights Division

Dan Eggen, *Washington Post*, is planning to run a story about the essay written by Hans von Spakovsky while employed at the Department of Justice and opinion about photo IDs. Mr. Eggen's focus seems to be on whether von Spakovsky sought permission to write the article under a pseudonym, and if such an article is consistent with Department conflict-of-interest policies.

Talking Points:

- Hans von Spakovsky left the Civil Rights Division in early January 2006. We appreciate the fine service that he provided at the Department of Justice.

- Any questions concerning a personal article that he allegedly wrote should be directed to Mr. von Spakovsky.

- The Department has received the ACLU's letter concerning Mr. von Spakovsky's personal writings. As with all correspondence that we receive, it will receive our careful review and attention.

- With respect to the three new changes to the Georgia identification law, the Department is currently reviewing whether these changes would have a retrogressive effect on minority voters: (1) Adding an additional form of identification available for free; (2) making these identification cards available in many more places (at least one location in every county in the state); and (3) running a publicity campaign organized by the GA Board of Elections on voter identification and absentee voters. As with all Section 5 reviews, we will conduct a careful and thorough analysis of these changes.

Companies to Spend $30 Million on PCB Cleanup at the Lower Fox River and Green Bay Superfund Site (ENRD)

As the latest in a series of partial settlements aimed at cleaning up and restoring the Lower Fox River and Green Bay Superfund Site in northeastern Wisconsin, NCR Corp. (NCR) and Sonoco-U.S. Mills, Inc. (Sonoco) have agreed to complete an important initial phase of the cleanup, the Justice Department and Environmental Protection Agency announced today.

Talking Points:

- The two companies have agreed to spend an estimated $30 million on the expedited dredging and disposal of the most highly-contaminated sediments in the Fox River.

- This action furthers the already substantial progress made on cleanup and restoration of the entire site, which is one of the largest contaminated sediment sites in the United States.

- Under the terms of the agreement, NCR and Sonoco will design and implement the cleanup project to dredge, dewater and dispose of the contaminated sediment, removing approximately 100,000 cubic yards of highly contaminated sediment downstream and west of the De Pere Dam.

- The removal of this substantial volume of contaminated sediments from the river will reduce exposure to polychlorinated biphenyls (PCBs) and diminish downstream migration of PCBs to the bay. Dredging is scheduled to begin in the spring of 2007.

IRS Summons Pay Pal (Tax)
On February 21, 2006, a federal judge in San Jose, California, issued an order authorizing the Internal Revenue Service to serve a "John Doe" summons on PayPal, Inc., for offshore bank and credit card records. The court issued the order at the request of the Justice Department. A "John Doe" summons allows the IRS to obtain information about possible tax evasion by United States taxpayers whose identities are not known to the IRS. The "John Doe" summons to PayPal is part of the Offshore Credit Card Project, an effort by the IRS to identify taxpayers who use offshore accounts in more than 30 countries, including Bermuda, Costa Rica, Luxembourg, Liechtenstein, Panama, Singapore, Switzerland and numerous Caribbean nations, to evade their tax obligations in the United States. Courts have previously authorized service of similar summonses on VISA, MasterCard, American Express and numerous other third-party credit card processors and merchants.

DOJ Seeks to Bar Jackson-Hewitt Franchise from Preparing Improper Returns for Native Americans (Tax)
The Justice Department today asked a federal court in Miami to bar a Jackson Hewitt franchise Labib Baltagi Inc. and three others from preparing federal income tax returns that falsely claim federal-income-tax exemption for casino gaming proceeds paid to Native Americans. According to the government complaint, Labib Baltagi, Inc. operates under a franchise agreement with Jackson Hewitt Tax Services, Inc., which is headquartered in Parsipanny, N.J.

Talking Points:

- The suit does not allege wrongdoing by the New Jersey-based franchiser.

- The government complaint alleges that returns the defendants prepared for Seminole Tribe members falsely claimed that the Tribe's distributions of casino gaming proceeds to tribe members were exempt from federal tax.

- Native Americans, like all Americans, must pay federal income taxes on all income they earn or receive unless there is express language in a statute or treaty exempting the income from taxation. Moreover, the federal Indian Gaming Regulatory Act, which regulates tribes' operation of casinos, allows tribes to distribute gaming proceeds to tribe members only if the tribes treat the income as taxable and advise tribe members that the income is taxable.

Contractor Sentenced for Paying Gratuities to Former U.S. Army Director of Contracting (Criminal)
A U.S. contractor pleaded guilty and has been sentenced for paying illegal gratuities to a former U.S. Army director of contracting, and for violating the Travel Act in connection with U.S. Army contracts awarded from an Army recreational facility in Germany. Alvan Vance McQueen II, 58, of Shelbyville, Ind., pleaded guilty to a two-count criminal information and was sentenced today at U.S. District Court in the Southern District of Indiana in Indianapolis, before

U.S. District Judge David F. Hamilton. The information, which was filed Dec. 15, 2005, charged McQueen with one count of paying illegal gratuities to a former U.S. Army director of contracting and an undercover agent from the U.S. Army Criminal Investigation Division Command, and one count of violating the Travel Act by traveling from Indiana to Germany, New York, Florida and Nevada to facilitate payment of the illegal gratuities.

Two Men Indicted in Arms Export Conspiracy (USA/ICE)
Two men, an Indonesian citizen and a citizen of Singapore, were arrested on charges of conspiracy to violate the Arms Export Control Act and money laundering. The indictment, unsealed Monday in federal district court, alleges that the two men were attempting to purchase and illegally export more than $500,000 worth of military equipment. The case was investigated by special agents of U.S. Immigration and Customs Enforcement, and the Department of Defense, Criminal Investigative Service. The case is being prosecuted by Assistant U.S. Attorney for the Eastern District of Michigan Bruce Judge.

Media Inquiry into Terrorist and Criminal Investigations (FBI)
Richard Willing, *USA Today*, is planning to run a story tomorrow regarding the difference between terrorist and criminal investigations and the allocation of resources.

Media Inquiry into QE2 Threat (FBI)
Associated Press issued a story on a security threat to the UK-built cruise liner Queen Elizabeth 2. The QE2 is being guarded by police in Alexandria, Egypt.

Media Inquiry into Online Child Predators (FBI)
Ken MacGuire, *Associated Press*, is working on a story regarding the increase in child online predators and "civilian" groups who expose them.

FBI Evaluation of Forensic Analysis Technology (FBI)
FOX News story regarding new technology being evaluated by the FBI for forensic analysis of digital images will air tonight at 7:30 p.m. on "The FOX Report." FBI declined participation in this story since evaluation of this new technology is still ongoing and it is too early to draw conclusions regarding its application in the investigation and prosecution of child pornography cases.

THURSDAY'S EXPECTED EVENTS/RELEASES:

Assistant Attorney General Alice S. Fisher of the Criminal Division and FBI Acting Assistant Director James (Chip) H. Burrus, Jr. of the Criminal Investigative Division will hold an on-the-record briefing on the Campaign Finance and Ballot Fraud Initiative. (Open Press)

FBI Director Robert Mueller will make remarks entitled "The FBI: A Report to the People" to the Denver Forum. (Open Press)

The Antitrust Division is tentatively scheduled to issue a press release on a merger related matter.

Today's Events In Washington 45

TERRORISM NEWS:

Moussaoui Jurors Hear Cockpit Recordings From Doomed Flight. Federal prosecutors rested their case against Zacarias Moussaoui yesterday, after playing dramatic recordings from United Airlines Flight 93 as the hijackers took over the plane and, later, as passengers attempted to break into the cockpit. Moussaoui's defense begins presenting its case tomorrow.

The story was the lead on each of the networks last night. ABC World News Tonight (4/12, lead story, 3:10, Vargas, 8.78M) reported, "The story of what happened on board…is well-known," but the tapes "reveal the chaos and the terror on board that day." The CBS Evening News (4/12, lead story, 3:45, Stewart, 7.66M) added that victims' family members "say the struggle proves their loved ones were heroes." They and jurors "all leaned forward intently" as the recording was played, but "I have to tell you it just made you feel cold and angry at the same time. It was not pleasant to hear." NBC Nightly News (4/12, lead story, 3:40, Williams, 9.87M) noted the tape was "previously considered private." NBC (P. Williams) added, "The entire courtroom was transfixed as the jurors heard for themselves."

The AP (4/13, Sniffen) reports, "The jurors couldn't take their eyes off the video screens — even during long silent periods — as prosecutors used a multimedia presentation to try to put them inside the Flight 93 cockpit. Slumped in his chair and impassive, Moussaoui, too, watched intently. … Later, the judge rejected prosecutors' request to display a running presentation of the names and photos of nearly all the 2,972 victims of Sept. 11. Prosecutors were instead allowed to show one large poster with the pictures of all but 92 of the victims." The Washington Times (4/13, A1, 90K) runs the AP story.

The New York Times (4/13, A1, Lewis, 1.19M) adds, "Although the general story of Flight 93…has been known for some time, listening to the audio seemed nonetheless a harrowing experience for the jurors. … After the recording, the prosecution presented two final witnesses before resting its case. One was Lorne Lyles, the husband of CeeCee Lyles, a flight attendant on Flight 93. Mr. Lyles testified about their last conversation, in which she used an airphone to proclaim her love and ask him to look after their children."

DOJ_NMG_0025911

The Washington Post (4/13, A1, Markon, Dwyer, 744K) notes, "The trial seemed an afterthought…amid the drama of the recording." In his testimony, Lyles "brought several jurors to the brink of tears" and "said he has been in and out of counseling for the past five years. … 'They say closure, but there's never any closure. It takes a piece of you.' Moussaoui looked bored, as he did when the cockpit voice recorder was played."

USA Today (4/13, 1A, Johnson, 2.31M) reports, "During the last four minutes…the flustered hijackers are heard urging each other to hold off the passengers' desperate attempt to take back the plane," and "the last recorded sounds are the roaring engines and the Arabic prayers of one of the hijackers: 'Allah is the greatest. Allah is the greatest. Allah is the greatest. Allah is the greatest.' Jurors appeared riveted as the recording and animation played." The Los Angeles Times (4/13, Serrano, 958K) also reports on Moussaoui's testimony.

The AP (4/13, Barakat) reports, "The judge sent the jury home for the day and the defense will begin its case on Thursday. Just after that, Moussaoui shouted, 'God curse you all!'" The AP adds, "The jury deciding Moussaoui's fate has already declared him eligible for the death penalty by determining that his actions caused at least one death on Sept. 111. He pleaded guilty in April 2005 to conspiring with al-Qaida to hijack airplanes and fly them into buildings. … Even though he was in jail in Minnesota at the time of the attacks, the jury ruled that lies told by Moussaoui to federal agents a month before the attacks kept them from identifying and stopping some of the hijackers."

Prosecution Case Fuels Debate About Fairness Of Presenting Victim Testimony. The Christian Science Monitor (4/13, Richey, 61K) reports that "the raw and gut-wrenching images of the 9/11 terror attacks" presented to Moussaoui trial jurors "has some analysts questioning whether anyone accused of involvement in the 9/11 attacks could receive a fair hearing in court. Much of the debate revolves around the appropriateness of permitting victims to testify about how the crime has affected their lives. Victim's rights advocates say such testimony helps the jurors gain a broader appreciation of the full impact of an accused criminal's actions. Opponents say graphic testimony from victims can corrupt jury deliberations by encouraging jurors to rely more on emotion than reason."

FBI Criminal Prosecutions Have Declined With Post-9/11 Counter-Terrorism Focus. Under the headline "FBI Cases Drop As It Focuses On Terror," USA Today (4/13, Willing, 2.31M) reports, "FBI criminal cases have fallen sharply since the 9/11 terrorist attacks as the bureau shifts its focus from drugs and white-collar offenses to anti-terrorism," according to Executive Office for U.S. Attorneys statistics. "Over the past five years, prosecutions in which the FBI acted as lead investigator have fallen about 25%," and "convictions in FBI cases are down roughly 11% during the same period," but "convictions in the FBI's national security and terrorism cases quadrupled, from 84 to 336." However, USA notes, "half of those convicted of terrorism or national security violations received sentences of 12 months or less," and former federal prosecutor Gregory Wallance "says those figures show that the Justice Department may be padding its numbers by labeling immigration and other low-level violations as terrorism cases."

Negroponte Says Reforms "Off To A Good Start." In a Time (4/12, Duffy, Burger) Web exclusive, DNI John Negroponte discussed his first year in the post, observing, "We're off to a good start. But I don't want to make exaggerated claims here because this is a job that's going to take some time." Time adds that "the real test…is whether he can bring the CIA, the FBI and the Pentagon to heel. … It is clear that the DNI's office has created something of a culture shock at CIA," and "at the Pentagon, there is an unmistakable feeling of satisfaction" the DNI "isn't as powerful as some in Congress had hoped. … Negroponte told TIME that the FBI is 'moving toward the idea of having officers writing up reports for their intelligence value, not only to make cases.' But he added that the G-men have not been quick to make the leap from law enforcement to intelligence analysts."

Lawsuit Documents Said To Show NSA-AT&T Data Mining Agreement. The New York Times (4/13, Markoff, Shane, 1.19M) reports that in 2002, veteran AT&T technician Mark Klein "began to see what he thought were suspicious connections between" the company and NSA, but "he kept quiet about it until news broke late last year that President Bush had approved an N.S.A. program to eavesdrop without court warrants on Americans suspected of ties to Al Qaeda. Now Mr. Klein and a few company documents he saved have emerged as key elements in a class-action lawsuit filed against AT&T" by the Electronic

DOJ_NMG_0025912

Frontier Foundation. The Times notes "technical experts all said that the documents showed that AT&T had an agreement with the federal government to systematically gather information flowing on the Internet," but one unnamed expert "said that the documents were consistent with administration assertions that the N.S.A. monitored only foreign communications and communications between foreign and United States locations, partly because of the location of the monitoring sites."

Terror Groups Increasingly Concerned About Internet Security. The Washington Post (4/13, A14, Noguchi, Goo, 744K) reports, "Terrorist groups…are paying more attention to addressing security and privacy concerns similar to those of other Web users, counterterrorism experts say. … Recently, postings on jihadist Web sites have expressed increasing concern about spyware, password protection, and surveillance on chat rooms and instant-messaging systems. … Increased sophistication among users creates a kind of cat-and-mouse game between terrorists and law enforcement, experts said." The Post notes, "There is no evidence that Internet companies…have cooperated with federal spy agencies to monitor terrorist communications," but "privacy groups point out that it would be fairly easy for the federal government to subpoena any of these companies' records or issue a national security letter to them, essentially requiring them to turn over the data.

Hiltzik Says Privacy Statutes Need To Be Updated. Michael Hiltzik writes in the Los Angeles Times (4/13, 958K) that a public interest group's lawsuit charging AT&T with complicity in the Bush Administration's domestic surveillance program "should wake us all up to how our casual reliance on new technology has turned privacy into an increasingly fragile principle." Hiltzik adds, "The NSA's vacuuming of terabytes of personal data from AT&T's network is an example of the government aggressively taking advantage of a tattered fabric of privacy protection. … The statutes are old and worn, and the one thing the NSA program tells us is that they need to be brought into the 21st century, fast."

Closing Arguments Made At Hamid Hayat Trial. In a widely-distributed story, the AP (4/13, Thompson) reports Assistant US Attorney Robert Tice-Raskin, presenting his closing argument at the trial of Hamid Hayat yesterday, said Hayat "'had a jihadi heart and a jihadi mind' long before he confessed to attending an al-Qaida training camp in Pakistan." Tice-Raskin "used his closing…to counter testimony that FBI agents and a government informant may have tricked…Hayat into making incriminating statements." Tice-Raskin said the conversations with FBI informant Naseem Khan "reveal 'the real Hamid Hayat.'" Hayat lawyer Wazhma Mojaddidi countered in her closing argument that "the government doesn't have a case because it has no proof that her client ever went to a terrorist training camp. … She said Khan was desperate to get Hayat to say something incriminating after other leads he followed in Lodi went nowhere. 'From the FBI's perspective, they had struck gold, and so had Naseem Khan. … You have Hamid Hayat being intimidated into saying things that the FBI wanted him to say." KXTV-TV Sacramento (4/12) notes Tice-Raskin said, "Hamid Hayat thought he could pull the wool over the eyes of the FBI. He lied. On one hand, he knew the cat was out of the bag. On the other hand, he tried to hide all that he'd done." But Mojaddidi asked, "If Hamid Hayat actually attended a terrorist training camp, why would he be so cooperative? He was willing to talk with the FBI without a lawyer. A terrorist would know better."

The Los Angeles Times (4/13, Tempest, 958K) reports, "Mojaddidi portrayed Khan as a longtime minimum-wage fast-food worker who saw the FBI as a meal ticket. 'Naseem Khan saw a financial future with the FBI. … All he had to do was lead conversations to anti-American sentiments and push "record,"' she said." Assistant US Attorney David Deitch "tried to repair what has been a constant problem for the prosecution: Naseem Khan's assertion…that he had seen senior Al Qaeda terrorist Ayman Zawahiri worshipping and lecturing at the mosque in Lodi." Deitch said, "It was clearly a mistake," but "there is no evidence" Khan lied.

Judge Releases FBI Interrogation Recordings. KGO-TV San Francisco (4/12) reports, "A federal judge released 10 hours of FBI videotapes today of agents interrogating" Hamid and Umer Hayat, and "in one section, Umer Hayat appears to admit his son attended a terror training camp in Pakistan. … Defense attorneys claim the two were tricked into making confessions by manipulative agents." KXTV-TV Sacramento (4/12) notes, "Both Hayats went to FBI headquarters voluntarily. In earlier interviews they denied any involvement or knowledge of terrorist training camps. It was only after the two men changed their stories that the FBI began recording the interviews. … Throughout his interrogation, Hamid Hayat appears at first willing to cooperate, but then he seems confused by the agents'

DOJ_NMG_0025913

questions." KTVU-TV San Francisco (4/12) also reports on the release of the interview recordings.

Terrorists Attempt To Use Campuses To Replace Training Camps. The Los Angeles Times (4/13, Rotella, 958K) reports that terrorist networks are attempting to use universities and the Internet "to replace former training camps in Afghanistan. … A number of top figures in Al Qaeda have academic backgrounds in the sciences. Khalid Shaikh Mohammed, the alleged mastermind of the Sept. 11 attacks, is an engineering graduate, as were Mohamed Atta and other members of the Hamburg cell that produced pilots for the attacks. Ramzi Ahmed Yousef, the convicted ringleader of the first World Trade Center bombing in 1993, is another engineer-turned-militant."

Outgoing Italian Justice Minister Drops Extradition Of CIA Agents Over Rendition. The New York Times (4/13, Kiefer, 1.19M) reports Italian Justice Minister Roberto Castelli "said he would not seek the extradition of 22 Central Intelligence Agency officers accused of kidnapping a Muslim cleric from the streets of Milan and flying him to Egypt for interrogation. The Milan prosecutor leading the investigation, however, pledged to resubmit the extradition request once Italy's new government is in place." The Times notes, "As minister of justice under Prime Minister Silvio Berlusconi — one of the Bush administration's most loyal supporters in Europe — Mr. Castelli's refusal to move forward with the extradition comes as no surprise." Prosecutor Armando Spataro "said that the investigation would conclude by the end of April and that he hoped then to try the agents in absentia."

Spanish Judge Finds Al Qaeda Inspired, But Did Not Direct Madrid Bombings. The Christian Science Monitor (4/13, Pingree, Abend, 61K) reports, "A report released this week by a Spanish judge illuminates one of the most pressing questions arising from both the bombings in Madrid and, later, in London: Did Al Qaeda operatives direct these assaults on Europe, or simply inspire them?" Judge Juan del Olmo's reports "indicates that the Madrid bombers were actually members of an independent network of Salafist radicals active in North Africa," and "while the summary does not argue for Al Qaeda's direct involvement, it does point to the organization's influence."

PATRIOT ACT:

DOJ Drops Appeal In Patriot Act Librarian Case. The AP (4/13, Christoffersen) reports, "Federal prosecutors said Wednesday they will no longer seek to enforce a gag order on Connecticut librarians who received an FBI demand for records about library patrons under the Patriot Act." The AP continues, "The American Civil Liberties Union, which filed the civil suit on behalf of the librarians, said it will identify them once court proceedings are completed in the next few weeks." The AP adds, "U.S. District Judge Janet Hall ruled last year that the gag order should be lifted, saying it unfairly prevented the librarians from participating in a debate over how the Patriot Act should be rewritten. … Prosecutors appealed, but U.S. Attorney Kevin O'Connor said Wednesday that the appeal no longer made sense." The AP notes, "One librarian has already been identified in news reports and the Patriot Act has been changed to include a procedure that will allow people to appeal requirements that they not disclose their involvement in a request, officials said. … 'In this case, exercising the discretion that Congress is now encouraging us to exercise, the FBI has determined that allowing the recipient to disclose its identity, and only its identity, will not harm the national security or interfere with an ongoing investigation,' said Brian Roehrkasse, a spokesman at the Justice Department. … Prosecutors have maintained that secrecy about demands for records is necessary to avoid alerting suspects and jeopardizing investigations. They contended the gag order prevented only the release of librarians' identities, not their ability to speak about the Patriot Act." The New York Times (4/13, O'Connor, 1.19M) adds, "It was unclear what impact the government's decision would have on the approximately 30,000 other such letters that are issued each year." US Attorney Kevin O'Connor "said yesterday that the government decided drop its case largely because the Patriot Act's secrecy provisions concerning national security subpoenas were changed to give the Federal Bureau of Investigation discretion in allowing recipients to identify themselves. The government was also under pressure to drop its fight after mistakenly disclosing in court records the very information it was fighting to keep secret."

DOJ_NMG_0025914

HOMELAND RESPONSE:

Judge Blocks Admission Of FBI Bomb Test Video At White Supremacist Trial. The AP (4/13) reports, "The defense attorney for a white supremacist accused of attempting to obtain explosives for an attack on federal buildings disputed the results of FBI tests on materials they seized from the defendant's home. … Prosecutors said FBI agents recovered a 12-inch pipe, a practice grenade shell, some fuses and a few grains of black powder in a search" at Demetrius 'Van' Crocker's home, and "FBI Supervisory Special Agent Thomas Mohnal used similar materials to build bombs that he successfully exploded on a test range in Quantico, Va. He said he first used duct tape on the ends of the devices in some of the tests and then later successfully tested the bombs without it. But on Wednesday, defense attorney Randolph Alden repeatedly pointed out that no duct tape was seized from Crocker's home, calling into question whether Crocker could have made a bomb with the seized materials. Alden's argument was enough for U.S. District Judge James Todd to dismiss a video of the FBI's explosive tests."

Tourism Council Calls For Easier Border Crossings Into US. The Wall Street Journal (4/13, D2, Keeton, 2.11M) reports that at its first summit to be held within the US, the World Travel and Tourism Council, meeting this week in Washington, "has called on the US government to make crossing US borders easier for workers and tourists." The Journal adds that in speaking at the summit Tuesday, Secretary Chertoff stressed "his concern for the safety and security of US borders." Though Chertoff's department "is working on technology to speed up the time visitors spend going through customs and immigration screening, the US has a long way to go, said James Wilson, CEO of Nakheel Hotels & Resorts, a start-up in Africa and the Middle East."

Worried By Post-9/11 Backlash, California Imam Seeks To Build Understanding Of Islam. The CBS Evening News (4/12, story 8, 3:00, Blackstone, 7.66M) profiled Imam Mohammed Azeez of the Salam mosque of Sacramento, California. Azeez "came from Egypt six years ago, graduated from Ohio State. His daughter was born here. His wife…seems no less modern." But "since September 11th, much has changed. The imam now worries about his wife" and is "afraid even little Zeyneb could be a target of intolerance. … His answer, though, is not to hide out; it's to speak out." At "interfaith gatherings, he tries to build bridges across chasms of misunderstanding," and he "declares that keeping this country safe from terrorists should be as much a priority for American Muslims as anybody else." The "challenge facing Imam Azeez is reflected in a new CBS News poll -- fewer than one in five Americans has a favorable view of Islam."

FEMA Releases New Flood Advisory Map For New Orleans. FEMA's release of flood advisory data for New Orleans yesterday is receiving widespread media coverage this morning, with most sources reporting the announcement as a relief for homeowners looking to move on. The New York Times (4/13, Nossiter, Schwartz, 1.19M) reports that yesterday's rebuilding guidelines were "unexpectedly lenient," and would potentially allow "tens of thousands of homeowners to return to their neighborhoods at costs far less than they had feared." Meanwhile, "huge swaths of homes might still have to be rebuilt at least three feet off the ground, or risk getting no federal reconstruction money or insurance. But the announcement, anxiously anticipated as a critical step in rebuilding this still-ravaged city, was nonetheless greeted with some relief by local officials and residents."

NBC Nightly News (4/12, story 4, 2:00, Mullen, 9.87M) reported, "It may sound bureaucratic and even boring, but the release of FEMA's new flood advisory map today is big news to tens of thousands of displaced New Orleans residents who will use it as a guide to decide how and even if they should rebuild in some areas." Donald Powell, Gulf Coast recovery coordinator: "This will enable people to get on with their lives." Mullen: "The new map and risk assessment assumes" the new levee "won't fail and predicts how vulnerable a neighborhood might be to flooding," potentially impacting "the availability and price of insurance, even mortgages." Meanwhile, "the government made it clear that residents…should share in the responsibility of flood prevention. Officials say many substantially damaged homes like those within the red area should be rebuilt three feet higher to qualify for flood insurance."

In an article focusing on the three foot guideline, USA Today (4/13, Konigsmark, 2.31M) reports raising a home by that amount "can cost $60,000." However, according to Sean Reilly, a member of the Louisiana Recovery Authority, "the 3-

DOJ_NMG_0025915

foot guideline 'is good news' for homeowners," some of whom had feared a requirement of 9 feet.

The Washington Post (4/13, A1, Whoriskey, Hsu, 744K) reports that the Bush administration also "proposed spending an additional $2.5 billion for New Orleans levee construction," which "would protect 98 percent of the population in the four-parish region with levees strong enough to meet flood insurance standards, officials said, and would protect them against the extreme event known as the '100-year flood.'" The announcement "brings certainty to some uncertain issues along the greater New Orleans area," said Powell.

The AP (4/13) reports "the announcement did not provide answers for thousands of residents of lower Plaquemine Parish, southeast of New Orleans in the lowest part of the Mississippi Delta. Decisions on funding for flood protection in that area are pending." The AP continues, "Powell said no decision has been made on whether to seek the final $1.6 billion" for levee improvements in "that hard-hit and vulnerable area. That decision will come after further consideration of environmental, engineering and economic issues, Powell said."

WSJ Not Surprised Private Sector Was Back In New Orleans Before US Postal Service. It was announced last week that the US Postal Service's New Orleans processing and distribution center would reopen, more than seven months after Katrina hit. The Wall Street Journal (4/13, 2.11M) editorializes, "Postal Service competitors fared better. Spokesmen for DHL, FedEx and United Parcel Service tell us that all three companies restored service in New Orleans on September 19, just three weeks after Katrina hit." While "we've heard a lot about government 'incompetence'" in Katrina's aftermath, "it seems likely that the private delivery companies would have outshone the Postal Service regardless of who was in the White House. Some things the private sector simply does better."

Chertoff Says Katrina Was "Wake-Up Call" For Local Governments. The AP (4/13, Jordan) reports that attending the National Hurricane Conference in Orlando yesterday, Homeland Security Secretary Michael Chertoff heard appeals from state emergency officials "for everything from evacuation routes to pet protection. The requests underscored what Homeland Security Secretary Michael Chertoff described as a 'great wake-up call' for state and local authorities following the devastation of Hurricane Katrina." Chertoff reiterated statements he made Tuesday to the AP that "the federal government should not be considered the first line of defense during disasters. But he acknowledged that parts of the Katrina-battered Gulf Coast would need more aggressive federal aid in readying for the June 1 start of the hurricane season."

The New York Times (4/13, Goodnough, 1.19M) reports Chertoff told the "audience of state and local disaster officials that his agency would not usurp authority but would 'work with you in training and exercising, so that if the bell rings, we've all gotten to know each other and we know how we're all going to perform our tasks.'" The Times adds that Chertoff "skipped" a portion of his speech that appeared in an advance copy for reporters, in which he said, "Things will be even more confused if we pull FEMA out of DHS." DHS spokesman Russ Knocke "said it was not unusual for Mr. Chertoff to 'stray a bit from prepared remarks,' adding, 'I wouldn't read anything into that.'"

King, Thompson Release Statement Calling For FEMA To Remain Within DHS. CQ (4/12, Starks) reported that in a bipartisan statement released yesterday, "Leaders of the House Homeland Security Committee stepped up a campaign…to keep the Federal Emergency Management Agency from being removed by Congress from the Department of Homeland Security." The statement, issued by Reps. Peter T. King and Bennie Thompson say, "There is no doubt that FEMA needs to be improved, but removing the agency from DHS is clearly not the answer." Meanwhile, Rep. Bill Shuster, who has "said he plans to mark up two bills in May" that will deal with FEMA and hurricane response, "has repeatedly said he believes FEMA must be removed from the Homeland Department."

Brown Cancels Trip To St. Bernard Parish. The AP (4/13, Callimachi) reports, "Under mounting criticism, former FEMA chief Michael Brown said Wednesday that he will not serve as a paid consultant to St. Bernard Parish, a New Orleans suburb hit hard by Hurricane Katrina." Following protests from residents, Brown called off a trip to the Parish, where he was to meet Thursday with officials "to help them navigate the recovery process." He "made the decision after meeting in Orlando, Fla., with parish President Henry 'Junior' Rodriguez, where both were attending a national hurricane preparedness conference."

DOJ_NMG_0025916

WAR NEWS:

White House Under Fire For Claims About Iraqi Weapons Trailers. The White House is again facing scrutiny for its use of intelligence on Iraq's weapons programs, this time over claims that Saddam Hussein's regime was using trailers as mobile weapons labs. After a Defense Department intelligence team found the trailers were not used for weapons purposes, Administration officials, including the President and Vice President, continued to say they were.

The story was covered on ABC World News Tonight (4/12, story 2, 3:00, Vargas, 8.78M), which reported, that on May 25th, 2003, "according to the Washington Post, the Defense Intelligence Agency sent a nine-member team of scientists and engineers to Iraq to determine whether the trailers were, in fact, biological labs." Two days later, "the team transmitted a report to Washington saying the trailers had nothing to do with biological weapons, calling them 'the biggest sand toilets in the world.' Two days after the report was sent to Washington…" President Bush (May 29, 2003): "We have found weapons of mass destruction. We have found biological laboratories." Raddatz: "The White House said today the President, at the time, believed his statement to be true." White House spokesman Scott McClellan: "The President was saying what the intelligence community assessed to be right, based on their intelligence-gathering." The Administration "continued to repeat the claim about the trailers. This is Vice President Cheney, four months after the report to the contrary." Vice President Cheney (September 14, 2003): "They are in our possession today, mobile biological facilities that can be used to produce anthrax or smallpox." Raddatz: "In fact, it wasn't until a month after that that a weapons inspector sent by the Administration raised public doubts about the trailers."

CNN's The Situation Room (4/12, Collins) reported that the White House "is steaming. And it's vigorously denying that the President declared the existence of biological weapons labs in Iraq three years ago, knowing the information was false. Back then, Mr. Bush touted the capture of two trailers in Iraq, declaring, we have found the weapons of mass destruction. The Washington Post, reports two days before Mr. Bush made that announcement. Weapons experts concluded the trailers had nothing to do with WMD." CNN (Malveaux) added, "The White House using very strong language today, calling this irresponsible and even reckless reporting by The Washington Post and ABC News, taking very strong exception to the suggestion that President Bush deliberately used and knew about inaccurate information to make the justification for the war in Iraq."

The Washington Post (4/13, A18, Warrick, 744K) reports that White House spokesman Scott McClellan dismissed the Post story as "'rehashing an old issue,' saying Bush has repeatedly acknowledged 'the intelligence was wrong.' The spokesman said Bush's comments on the trailers reflected the intelligence community's dominant view at the time."

The AP (4/12, Pickler) reported that McClellan said Bush "was relying on information from the Central Intelligence Agency and the Defense Intelligence Agency when he said the trailers seized after the 2003 invasion were mobile biological laboratories. That information was later discredited by the Iraq Survey Group in its 2004 report." The Post "did not say that Bush knew what he was saying was false. But ABC News did during a report on Good Morning America, and McClellan demanded an apology and an on-air retraction. ABC News said later in a clarification on its Web site that Charles Gibson had erred. McClellan said he had received an apology."

Another Former General Calls For Rumsfeld's Resignation. CNN's The Situation Room (4/12, Starr) reported, "For the first time, a general who commanded thousands of combat troops in Iraq has called for Defense Secretary Donald Rumsfeld to resign. Major General John Batiste commanded the 1st Infantry Division in Iraq before he retired five and a half months ago." CNN added, "Three other retired generals in the last month have called for Rumsfeld's resignation as well. They all say military advice was ignored."

A front page story in the Washington Post (4/13, A1, Ricks, 744K) reports that Batiste "noted that many of his peers feel the same way. … Batiste's comments resonate especially within the Army: It is widely known there that he was offered a promotion to three-star rank to return to Iraq and be the No. 2 U.S. military officer there but he declined because he no longer wished to serve under Rumsfeld." Batiste "said he believes that the administration's handling of the Iraq war has violated fundamental military principles, such as unity of command and unity of effort. In other interviews, Batiste has said he thinks the violation of another military principle -- ensuring there are enough forces -- helped create the Abu

DOJ_NMG_0025917

Ghraib abuse scandal by putting too much responsibility on incompetent officers and undertrained troops."

The Los Angeles Times (4/13, Spiegel, Richter, 958K) reports that the "recent surge in public criticism of Defense Secretary Donald H. Rumsfeld by retired military leaders is the culmination of months of intense but largely private debate among active duty officers about how best to voice dissent over Bush administration policies, according to officers involved in the discussions." The calls for Rumsfeld's resignation "are an unusual step for members of the military, who are acutely sensitive to the appearance of challenging civilian leadership of the armed forces."

Speaker Plans To Convene Iraqi Parliament Next Week. Sunni politician Adnan Pachachi, the acting speaker of Iraq's parliament, said yesterday that although the formation of a new Iraqi government remains stalled, he will convene the legislature next Monday. The New York Times (4/13, Semple, 1.19M) reports, "Iraqi officials have been desperate to convey a sense of forward motion in the moribund political process, and the announcement by the speaker…seemed as much a symbolic gesture as a goad to the Shiites."

The Washington Post (4/13, A17, Hernandez, 744K) reports that Pachachi said he was convening parliament "in the hope that the deadline would force rival Shiite, Sunni Arab and Kurdish parties to form a government that fairly represented all three groups."

Sunni Leaders Embracing US Policy As Never Before. The Washington Post (4/13, A17, Finer, 744K) reports, "Secretary of State Condoleezza Rice's trip here this month to pressure Iraqi leaders to form a new government sparked a slew of familiar complaints about U.S. meddling in Iraqi affairs. … Less familiar, however, was the source of the charges: Iraq's Shiite Muslim leaders, close U.S. allies since the 2003 invasion. Meanwhile, Sunni Arab politicians, some of whom dined with Rice on her only night in Baghdad, made a point of thanking her and Ambassador Zalmay Khalilzad for what they called their newfound evenhandedness." The Post notes, "In the zero-sum game of Iraqi politics, in which someone who applies pressure to one group can become the new friend of another, Sunni Arab political leaders are embracing American policy as never before."

Shiites Launch Offensive In Favor Of Jafari. Meanwhile, the Los Angeles Times (4/13, Roug, 958K) reports that Shiite Muslim leaders "have launched a new offensive in favor of beleaguered Prime Minister Ibrahim Jafari by trying to drive a wedge between Kurds and Sunni Arabs who oppose Jafari's winning a full term in office. Jafari and his supporters have suggested that Iraq's presidency could be awarded to a Sunni rather than a Kurd, sowing a potential rift between the two groups who, until now, have joined to fight Jafari."

State Department Slow To Rollout Iraq Reconstruction Teams. The Washington Post (4/13, A19, 744K) reports, "Earlier this year, the State Department began soliciting personnel for provincial reconstruction teams (PRTs) for Iraq, a new concept designed to take diplomats out of Baghdad and into the provinces." But the rollout of those teams "has been slowed by a debate between the Pentagon and State over whether the military or private contractors should provide security. As of April 7, job applications had been received for only 12 of 35 positions, according to the State Department's internal bid list. And, of all applicants, only one is deemed qualified based on grade level and previous expertise, according to the bid list."

Iranian Diplomat Suspected Of Undermining US Efforts In Iraq. Time (4/13, Ware) in a web exclusive reports, "What is Tehran's main man in Iraq up to? The U.S. military, which claims Iranian special forces and intelligence operatives have infiltrated Iraq, insinuates that Hassan Kazemi Ghomi, the charge d'affaires of the Iranian embassy, is intent on undermining Washington's mission in Baghdad. Indeed, U.S. military intelligence and the American-backed Iraqi National Intelligence Service told TIME that Ghomi is a member of the Iranian Revolutionary Guard Corps' elite Quds Force, a special forces outfit much like the Green Berets, with specialized skills in working with local forces and militias." But "Ghomi denied U.S. claims that his country's special forces were operating inside Iraq or that Iran's military was aiding the insurgency with ever more sophisticated weapons. He hinted at Iran's growing ambitions as a regional power with references to its ability to affect the security of the Persian Gulf, echoing the sentiments of top military commanders in Iran."

DOJ_NMG_0025918

Analysts Say Americans Could Lose Patience With War On Terrorism. The AP (4/13, Hefling) reports, "What are the implications if a nation goes to war and its people barely pay attention? Roughly 150 military leaders, policy analysts and academics gathered at the Army War College on Wednesday to address that question, with the U.S. beginning its fourth year of a conflict that has killed more than 2,300 American troops. A main concern, analysts say, is that Americans may lose patience with the fight against terrorism in Iraq and elsewhere, and ultimately decide that the fight is costing too much in money and lives." President Bush "has not asked for personal sacrifices on the scale of those made in World War II, when Americans bought war bonds and rationed sugar and other goods. Also, because the U.S. has an all-volunteer military, fewer people have a personal connection to a service member than was the case, for example, during the Vietnam War, when many soldiers were drafted."

Veteran Says Troops Support The War. Wade Zirkle, executive director of Vets for Freedom, writes in the Washington Post (4/13, A21, 744K) that Rep. John Murtha "undoubtedly knows full well that the greatest single thing that drags on morale in war is the loss of a buddy. But second to that is politicians questioning, in amplified tones, the validity of that loss to our families, colleagues, the nation and the world." Zirkle adds, "The morale of the trigger-pulling class of today's fighting force is strong. Unfortunately, we have not had a microphone or media audience willing to report our comments. Despite this frustration, our military continues to proudly dedicate itself to the mission at hand: a free, democratic and stable Iraq and a more secure America. All citizens have a right to express their views on this important national challenge, and all should be heard. Veterans ask no more, and they deserve no less."

Four US Troops, Forty Iraqis Killed In Attacks. ABC World News Tonight (4/12, story 3, :10, Vargas, 8.78M) reported, "The military announced the deaths of 4 more US troops and more than 40 Iraqis were killed in attacks across the country."

The CBS Evening News (4/12, story 5, 0:30, Schieffer, 7.66M) reported, "Three more American soldiers were killed today in Iraq in bombings south and east of Baghdad. Just 12 days into April, 35 servicemen and women have been killed in Iraq, more than during the entire month of March. Also today, a car bomb went off at a Shiite mosque in a village northeast of Baghdad, killing at least 22 worshipers and wounding about 60."

The AP (4/12) reported, "Casualties among US forces have risen in recent weeks. In March, 31 U.S. service members died in Iraq, the lowest monthly figure since February 2005, according to an Associated Press count. So far this month, the U.S. death toll stands at 35."

Shiite Cleric Says Mubarak Is Fueling Sectarian Tensions. A top Shiite cleric has accused Egyptian President Hosni Mubarak of fueling sectarian tensions in the Middle East by saying Arab Shiites in Iraq and elsewhere are more loyal to Iran than their home countries. The AP (4/12, Hendawi) reported that in an interview, Lebanon's Grand Ayatollah Mohammed Hussein Fadlallah "said 'some in the Muslim world' fear Shiite empowerment in any country." Fadlallah "was one of the highest-level Shiite figures in the region to speak out so far against Mubarak."

Shiite Iraqis Flee Sectarian Violence In Religiously Mixed Villages. The Christian Science Monitor (4/13, Enders, 61K) reports that Shiite Iraqis are "increasingly fleeing sectarian violence in religiously mixed villages. … Around Baghdad, Shiites coming in from outlying villages are living in tents provided by the Iraqi Red Crescent Society. IRCS President Said Hakki says the agency is preparing to aid some 50,000 families, and has requested aid from the US military to build sanitation facilities for camps and provide rations. Other Shiites are going south to predominantly Shiite cities such as Basra, Najaf, and Karbala."

Many Fear Iraq Will Follow Lebanon's Path To Civil War. The AP (4/13, Ghattas) reports that many are worried that Iraq, and specifically Baghdad, is head for the same fate as Lebanon, which endured a 15 year civil war. According to the AP, "For now, it's an unanswerable question. No one knows if Baghdad will continue falling ever-more into the sectarian violence that has broken out, or recover and move toward peace. But a look at the first days of civil war in 1975 in Beirut is instructive about how things might look in Iraq, if they get worse."

Former Saddam Crony Played Role In Release Of American Journalist. ABC World News Tonight (4/12, story 6, 2:45, Sciutto, 8.78M) reported, "Interviewed in his summer house outside of Amman, Sheikh

DOJ_NMG_0025919

Sattam al-Gaood, once one of Saddam Hussein's closest business associates says he is now a proud leader of the Iraqi insurgents." Al-Gaood: "They are defending their country. And they -- sometimes they do mistakes." Sciutto: "One mistake, kidnapping American journalist Jill Carroll. Al-Gaood said he used his influence to help free her, even refusing the kidnappers' demands for a huge ransom" of $8 million. Instead, "at the kidnapper kidnappers' request, he said he agreed payment to widows and orphans for fighters." Al-Gaood "did not specify how much. But says he was willing to arrange payment for as much as $1 million." Al-Gaood, "captured by US forces after the invasion, and freed last December, openly approves of attacks on American soldiers. But not on civilians." His "objective -- a new government, with a familiar head of state. President Hussein again."

Australian PM To Testify To Oil-For-Food Probe. Australian Prime Minister John Howard today will testify to a commission investigating alleged bribes to Saddam Hussein's regime in defiance of UN sanctions. The AP (4/13, Foley) reports that Howard "will answer questions from the commission probing whether Australia's monopoly wheat exporter illegally paid millions of dollars in bribes to win contracts from Saddam's regime. … The commission is investigating whether the Australian Wheat Board, now known as AWB Ltd., gave $220 million to Saddam to secure grain contracts worth more than $2.3 billion between 1997 and 2003 under the U.N. oil-for-food program." Howard "already has submitted a written statement to the commission. It was not published, but he said he will be questioned on it Thursday."

Afghan Bazaars Searched For Stolen Computer Files. The AP (4/132, Cooney) reported that shopkeepers in local Afghan bazaars have been selling computer memory drives containing seemingly sensitive military data stolen from inside the US-led coalition's headquarters. According to the AP, "The surfacing of the stolen computer devices has sparked an urgent American military probe for the source of the embarrassing security breach, which has led to disks with the personal letters and biographies of soldiers and lists of troops who completed nuclear, chemical and biological warfare training going on sale for $20 to $50. Five military investigators, surrounded by heavily armed plainclothes U.S. soldiers, searched many of the two-dozen rundown shops outside the sprawling base."

The Los Angeles Times (4/13, Watson, 958K) reports, "US commanders in Afghanistan said an investigation was underway into what shopkeepers at the bazaar describe as ongoing theft and resale of US computer equipment from the Bagram air base. The facility is the center of intelligence-gathering activities and includes a detention center for suspected members of Al Qaeda and other terrorist groups flown in from around the world. … The top US commander here, Army Lt. Gen. Karl Eikenberry, has ordered a review of policies and procedures for keeping track of computer hardware and software."

Spate Of Attacks Sparks Fear In Afghanistan. The Washington Post (4/13, A16, Constable, 744K) reports that a recent spate of terrorist attacks "is expanding a climate of insecurity across Afghanistan as NATO forces prepare to take over most military duties from the US-led coalition. Afghan officials vaguely blame the attacks on 'enemies of Afghanistan' and denounce neighboring Pakistan for harboring Islamic insurgents bent on destroying this fragile new democracy. … But a variety of foreign analysts and military officials here offer a different explanation: a vast canvas of weakly governed and unprotected territory in which drug traffickers, feuding tribesmen and opportunistic criminals -- as well as Taliban gunmen on motorbikes and mysterious suicide bombers -- operate with increasing ease, despite the presence of tens of thousands of foreign troops in the country."

Sheehan Launches Another Protest Near Bush Ranch. Peace activist Cindy Sheehan returned to Texas yesterday to mount another war protest near President Bush's ranch, although the President plans to spend the weekend at Camp David. The AP (4/13, Brown) reports, "The anti-war demonstrators accused Bush, who has spent every Easter at his Crawford ranch since he was elected, of running from them and their message to bring the US troops home from Iraq immediately. … But the White House said Bush's plans had nothing to do with the protesters and that he often spends holidays at Camp David with his family."

Brooks Says US Should Scale Back To More Realistic Expectations In Iraq. David Brooks writes in the New York Times (4/13, 1.19M), "Mr. Past: Your big problem is you don't understand the limits of what governments can achieve. … The central lesson of the past

DOJ_NMG_0025920

three years is that societies are not that malleable. Evils do not grow out of manageable defects in the environment that can be neatly fixed. We need to change our mentality, scale back to more realistic expectations. … The alternative is to develop a mind-set in which you don't try insanely to solve great historical problems, but you understand that history is one unexpected thing after another."

CORPORATE SCANDALS:

Skilling Testifies He, Lay Never Broke Law.

The AP (4/13, Hays) reports, "Former Enron Corp. CEO Jeffrey Skilling spoke up for company founder Kenneth Lay for the first time in the executives' fraud and conspiracy trial Wednesday, saying the two were a 'good team' that never knowingly broke the law." The AP continues, "The ex-CEO has focused on addressing prosecution testimony damaging to himself since he took the witness stand on Monday. … Even though most criminal counts pending against him and Lay allege crimes that occurred at different times before Enron crashed in scandal in December 2001, an overarching conspiracy count alleges they participated in a sprawling effort to portray Enron as strong when they knew accounting tricks hid bad news and weak ventures. … Skilling told jurors neither he nor Lay perpetuated such a ruse." The AP notes, "The ex-CEO, in his third day on the stand Wednesday in his fraud and conspiracy trial, continued addressing prosecution testimony that painted him as an earnings-obsessed leader so intent on wowing Wall Street that his subordinates resorted to fraud with his knowledge. … He addressed one of the most notorious elements of the scandal that included Enron's swift descent into bankruptcy protection in December 2001 - partnerships created and run by former Chief Financial Officer Andrew Fastow to conduct deals with the energy company."

The Christian Science Monitor (4/13, Axtman) reports, "One of the most enduring images of the Enron collapse is of a defiant Jeffrey Skilling testifying before Congress in February 2002, raising his right hand and defending the reputation of the Texas energy company he'd help build. … He did so, he told a jury in a Houston courtroom this week, against the advice of his lawyers, who urged him to exercise his constitutional right not to incriminate himself and to remain silent in front of Congress, the Securities and Exchange Commission, even "Larry King Live." … 'Someone had to get out and start explaining what had happened before someone else explained it incorrectly,' said Mr. Skilling in his first days on the stand in his criminal trial." The Monitor adds, "He still stands behind what he did and said, he testified. But now that he is in the witness box in his own defense, those prior statements make his path much harder. … 'Skilling made so many public pronouncements at the embryonic stage of the investigations, and all of that can be used against him,' says Christopher Bebel, a Houston securities lawyer and former federal prosecutor."

Prosecutors Set For Cross-Examination. The New York Times (4/13, Barrionuevo) reports, "After methodically laying out their case against Jeffrey K. Skilling and Kenneth L. Lay over nine weeks and 22 witnesses, the Enron prosecutors now have to start all over." The Times continues, "With Mr. Skilling emotionally proclaiming his innocence from the stand and Mr. Lay still an elusive target, the verdict, according to legal experts from both sides of the aisle, is likely to turn on the cross-examination of the two defendants, who ran Enron before it collapsed in 2001. … 'If the government plays their cross-examination of the defendants only to a draw, they lose,' said Robert A. Mintz, a white-collar criminal defense lawyer with McCarter & English. 'They have to do better than that.' … But for all that is riding on the coming showdown, do not look for a flashy Perry Mason moment. That is not the way Sean M. Berkowitz, who will cross-examine Mr. Skilling, and John C. Hueston, who is to take on Mr. Lay later this month if he decides to testify, like to operate. … 'This is an unprecedented challenge, but one that I relish,' Mr. Hueston said with characteristic understatement."

Skilling's Personality On Display. The Washington Post (4/13, D1, Johnson) reports, "In three days on the witness stand, former Enron Corp. chief executive Jeffrey K. Skilling has expressed many sides of his complex personality: his driving ambition, his emotional exhaustion, and on Wednesday -- his absentminded energy geek." The Post continues, "Skilling twice stepped down from the witness box Wednesday to give the jurors, who will decide whether he is guilty of fraud and other charges, a lesson in energy trading. He walked them through complicated charts designed to show that he did not break the law when he told analysts and investors that the company exuded health and had its risks under control. … Under the guidance of defense lawyer Daniel M. Petrocelli, who tried without success to urge Skilling to keep his explanations simple, Skilling appeared more confident than at any point during this 11-week-old trial."

DOJ_NMG_0025921

SEC Adopts New Policy On Journalist Subpoenas. The AP (4/13, Gordon) reports, "The Securities and Exchange Commission announced a new policy on subpoenaing journalists Wednesday, responding to controversy over the agency's demands for records from three online columnists." The AP continues, "On a case-by-case basis, the agency must try to strike a balance between two public interests, the policy says: the free flow of information and the effective enforcement of securities laws. SEC attorneys must first try to exhaust other means and sources of information in an investigation before turning to media subpoenas. … 'Freedom of the press is of vital importance to the mission of the Securities and Exchange Commission,' the agency said in a statement. 'Effective journalism complements the (SEC's) efforts to ensure that investors receive the full and fair disclosure that the law requires, and that they deserve. Diligent reporting is an essential means of bringing securities law violations to light and ultimately helps to deter illegal conduct.'"

Dow Jones (4/13, Hughes) reports, "The new policy calls for SEC enforcement attorneys to take a number of steps before issuing subpoenas, including being certain that journalist information is essential to an investigation and determining that the information isn't available from other sources. … 'The purpose of these policies that are in force as of today is to ensure both that the Securities and Exchange Commission can vigorously enforce the laws and rules that are in our jurisdiction, and also that we don't use journalists and journalism as our first resort source,' SEC Chairman Christopher Cox said at a briefing." Dow Jones adds, "The guidelines come after an uproar that followed revelations the SEC had subpoenaed two columnists for Dow Jones & Co. in connection with an SEC investigation. Cox said in February that he hadn't been told of the subpoenas and learned about them only after reports in the media."

The New York Times (4/13, Labaton) reports that the SEC will "issue subpoenas to journalists only in rare circumstances and only after exhausting other avenues of investigation" after adopting a new policy. Cox helped write the policy after he "complained in late February that he was blindsided by news accounts describing subpoenas issued in the investigation of a research firm, Gradient Analytics." Cox seeks to avoid using "journalists and journalism as our first source of information in our law enforcement function." The Wall Street Journal (4/13, Scannell) reports that " the commission won't specifically decide whether to issue subpoenas. Rather, the authority to issue subpoenas will be in the hands of the SEC enforcement chief, who after consulting with the general counsel, would make the final decision. The SEC chairman would be alerted after the decision had been made. The policy…was modeled after the media-subpoena guidelines in the Department of Justice's U.S. attorney manual."

Exxon Chairman's Retirement Package Worth At Least $398 Million. The New York Times (4/13, Mouawad) reports, "Last year's high oil prices not only helped Exxon Mobil report $36 billion in profit — the most ever for any corporation — they also allowed Lee R. Raymond to retire in style as chairman of Exxon Mobil." The Times continues, "Mr. Raymond received a compensation package worth about $140 million last year, including cash, stock, options and a pension plan. He is also still entitled to stock, options and long-term compensation worth at least another $258 million, according to a proxy statement filed by Exxon with the Securities and Exchange Commission yesterday." The Times adds, "The total sum for Mr. Raymond's golden years comes to at least $398 million, among the richest compensation packages ever. The record was the payout of $550 million to Michael D. Eisner, the former head of Walt Disney, in 1997. … Exxon's board also agreed to pick up Mr. Raymond's country club fees, allow him to use the company aircraft and pay him another $1 million to stay on as a consultant for another year. Mr. Raymond agreed to reimburse Exxon partly when he uses the company jet for personal travel."

Former CEOs Receive Medical Coverage. The Wall Street Journal (4/13, Schultz, Francis) reports, "At a time when companies are scaling back health benefits for other retirees, former top executives at many corporations are receiving partial or full lifetime medical coverage on top of pensions valued at millions of dollars, a Wall Street Journal analysis of dozens of recent securities filings indicates." The Journal continues, "The trend spans industries, and it is common at airlines, which have been among the most aggressive in scaling back retirement benefits for the rank and file. Continental Airlines, for example, provides health care "at no cost" for retired Chairman Gordon Bethune and his dependents, the company's proxy statement notes. That's in addition to other perks, including a lifetime of free flights and a decade of free office space, plus a lump-sum pension payout of $22 million. A Continental spokesman says other

DOJ_NMG_0025922

retired executives have to pay 20% of the cost of coverage but then declines further comment."

NYTimes Blasts "Cozy Arrangements" On Executive Pay. The New York Times (4/13) editorializes, "To fix something, first you have to understand what went wrong. That's especially true for a problem as complex yet pervasive as sky-high executive compensation. … Last Sunday The Times reported that in 2004, the average top executive at a big company earned 170 times the average worker's pay. These executives receive a dizzying combination of salaries, bonuses and stock grants. And their perks can go far beyond the use of a company car to even include infusions of cash to offset the taxes everyone else is expected to pay." The Times continues, "To make the decisions on executive pay, many companies create compensation committees, drawn from the board of directors. That committee in turn is advised by outside consultants, experts in how much others in the field are getting paid. It looks quite logical at first glance. It is in the details that the value of closer scrutiny becomes clear." The Times adds, "Runaway pay matters because top executives are snatching more than their fair share of corporate proceeds. More important, it also means that the board of directors is not performing its function as internal guardian of the company's health."

Small Businesses Say Sarbanes-Oxley Compliance Too Expensive. The Washington Post (4/13, Day) reports that "a government advisory group dominated by executives representing small businesses yesterday reaffirmed its intent to ask federal regulators to exempt half of the country's publicly traded companies from" a Sarbanes-Oxley rule that "requires executives of every publicly traded company to attest that their companies have internal controls in place to ensure financial statements filed with the Securities and Exchange Commission are accurate. The rule also requires that an outside auditor verify the controls are adequate." Critics of the request "point out that a majority of securities frauds involve small businesses."

Greenspan Predicts Changes To Sarbanes-Oxley. The Financial Times (4/12, Fifield) reports that former Federal Reserve chairman Alan Greenspan predicted that the US would "make 'changes' to the burdensome financial and corporate governance requirements driving companies out of US markets." Greenspan expressed concern because companies have "started favouring London over New York for their flotations" rather than "have their internal controls certified by auditors."

WSJournal Op-Ed Favors Reforms of Sarbanes-Oxley. Former SEC chairman Harvey Pitt argues in the Wall Street Journal (4/13) that Sarbanes-Oxley was "badly drafted" but "necessary." He suggests amending "SOX by making it part of the Securities Exchange Act of 1934," which would allow "the SEC to tailor SOX's requirements to the size and economic burden imposed upon public companies -- not to mention affording the SEC the opportunity to make distinctions between domestic and foreign registrants." Pitt notes "the serious concern that foreign companies are no longer interested in registering their securities on U.S. exchanges," which his proposal would address.

CRIMINAL LAW:

Fitzgerald Corrects Error In Libby Case Filing. Fox News' Special Report (4/12, Cameron) reported special prosecutor Patrick Fitzgerald "had to correct an embarrassing mistake in his own court filing" in the case of I. Lewis "Scooter" Libby, the former chief of staff to Vice President Cheney. The error "led some reporters to wrongly accuse the President of directing" Libby "to provide false information about Iraq's nuclear ambitions to New York Times reporter Judy Miller and to attribute it to the CIA's national intelligence estimate or NIE. Fitzgerald first wrote quote, 'Defendant,' meaning Libby, 'understood that he was to tell Miller, among other things that a key judgment of the NIE held that Iraq was vigorously trying to procure uranium.' The intelligence report did allege Iraq was aggressively seeking nuclear materials, but it was not among to so-called key judgments which carry significant weight and require broad agreement. Fitzgerald's misquote prompted some media, including the New York Times to suggest the President had directed aides to misrepresent and exaggerate the NIE in order to justify the invasion of Iraq."

Knight Ridder (4/13) reports Fitzgerald "corrected the allegation that Libby had described the suspected uranium purchase as a 'key judgment' of the CIA - a term of art in the intelligence community that gives the accusation high significance." The New York Times (4/13, Johnston, 1.19M) reports, "It was not known why Mr. Fitzgerald had sought the change, but he filed the letter after The New York Times and other news organizations published articles asserting that Mr. Libby had represented the uranium finding as a key judgment,

DOJ_NMG_0025923

when it had in fact been given much less prominence in the intelligence report."

Libby Attorneys Seek Broad Range Of Classified Documents. The New York Times (4/13, Johnston, 1.19M) reports Libby's attorneys "said in a court filing late Wednesday that he was entitled to a broad array of classified documents, in part because the prosecution had injected into the case the roles played by President Bush and Mr. Cheney in disclosing a prewar intelligence report on Iraq." Libby's lawyers "argued that prosecutors had improperly sought to restrict Mr. Libby's access to documents related only to Mr. Libby's actions, even while the prosecution, in its own briefs to the court, elaborated on wide ranging events including the disclosure of the 2002 National Intelligence Estimate on Iraq."

DOJ Seeks Death Penalty In New York Slayings. The NY Journal News (4/13, O'Connor) reports, "Federal prosecutors will seek the death penalty against the reputed leader of a violent Peekskill drug ring who is charged with two New York City homicides." The News continues, "Khalid 'Big Homie' Barnes, 30, of Greenburgh, was indicted along with five other reputed members of the gang dubbed the 'Barnes Brothers Organization' by law enforcement authorities. … Barnes is the only alleged member of the gang to face a death penalty prosecution." The News adds, "Members of the gang are implicated in six attempted murders and murder plots, as well as narcotics conspiracies that date to 1995, according to a 54-page indictment. … 'The continuing investigation into the Barnes Brothers Organization ensures that they will face justice for numerous additional acts of violence in their community,' U.S. Attorney Michael Garcia said. … The indictment was the third in the case by a federal grand jury in White Plains since Peekskill police and federal Drug Enforcement Administration agents arrested the reputed gang members March 1, 2004. Eight men have already pleaded guilty in connection with the case and are awaiting sentencing. .. Khalid Barnes is accused of shooting Demond Vaughan and Sergio Santana on Feb. 13, 2004, during a New York City drug deal, federal prosecutors said. Barnes killed the two drug dealers and stole three kilos of cocaine, prosecutors said. … The death penalty prosecution was approved by U.S. Attorney General Alberto Gonzales. There are 63 death penalty cases pending in federal courts, according to Kevin McNally of the Federal Death Penalty Resource Council in Frankfort, Ky. Another 242 cases are awaiting evaluation by the Justice Department."

Court Filings Reveal Inmate, FBI Agents To Testify Against DeVecchio. The New York Daily News (4/13, Katz, 729K) reports, "Court papers filed by prosecutors yesterday revealed the names of new witnesses in the case against an FBI agent accused of setting up a series of mob murders. Former G-man Lindley DeVecchio has been charged in four gangland murders, in part because he was picked out of a photo array by a witness identified as John Baran," who "was an inmate at the Nassau County Correctional Facility when prosecutors interviewed him Jan. 27. According to papers filed in Brooklyn Supreme Court, Baran identified the former agent, though it is unclear which crime he witnessed. … Three FBI agents who worked under DeVecchio also will testify against their former boss under threat of perjury, said a law enforcement source."

Nevada Commissioner's Lawyer Questions FBI Agent About Witness Inconsistencies. KLAS-TV Las Vegas (4/12, Allen) reports defense attorneys for former Clark County Commissioners Dario Herrera and Mary Kincaid-Chauncey began presenting their case yesterday, calling FBI Special Agent Chris Byers to testify about former strip club owner Michael Galardi's testimony he bribed the commissioners. "Byers explained that some of Galardi's inconsistent statements to the FBI three years ago could be attributed to Galardi's faulty memory. … Kincaid-Chauncey's attorney Richard Wright asked Byers why FBI interrogation sessions with former Clark County Commissioner Erin Kenny were recorded on tape but similar session with Galardi were not." Byers said, "FBI policy is we have to have special authority to record these types of things," but he "did not explain what authority wasn't sought during sessions with Galardi."

Testimony At Pennsylvania Bribery Trial Suggests Broader Corruption. The Philadelphia Inquirer (4/13, Shields, 423K) reports, "Ted LeBlanc's municipal corruption trial this week has revealed that LeBlanc wasn't Norristown's only mayor suspected of taking a bribe in exchange for borough contracts." At LeBlanc's trial Tuesday, former borough councilwoman Margaret Hunsicker "testified that, in 2002, she relayed to the FBI second-hand allegations that towing contractor Joseph Corropolese had bribed Salamone. In interviews yesterday, two lawyers familiar with the investigation of Corropolese - he became the federal government's chief informant in the federal probe of

DOJ_NMG_0025924

Norristown's government -- confirmed that Corropolese told prosecutors he paid Salamone, LeBlanc's predecessor, $400 to $500 a month to keep his lucrative towing contract with the borough."

Federal Investigators Launch Sweeping New Gambino Family Probe. Under the headline "Feds All Out To Nail The Gottis," The New York Post (4/13, Smith, 624K) reports, "The feds have launched a sweeping grand-jury probe into the Gambino crime family based on admissions by John 'Junior' Gotti and witnesses who testified in his defense at his most recent racketeering trial, sources said yesterday. Prosecutors have sent out at least 12 grand-jury subpoenas to Gotti's relatives and Gambino crime-family members and associates in recent weeks -- and plan to issue approximately two dozen more, a federal law-enforcement source said." A "law-enforcement source" said, "The secret society is no longer a secret anymore. The boss has acknowledged it once and for all." The Post adds, "The subpoenas read like a who's who of the Gambino crime family – 'everyone that Junior threw under the bus in his defense. Nobody's going to be let off,' the source said, speculating the probe could lead to congressional hearings examining the state of the Mafia. … Meanwhile, the FBI has also widened its investigation into possible perjury and obstruction of justice by witnesses for Gotti."

Alleged Russian Mobsters Charged In Unsolved Brooklyn Murders. The New York Times (4/13, Brick, 1.19M) reports suspected police informant Boris Roitman and high-stakes pool player Thien Diep "were killed in Brooklyn in 1992. The cases were never solved. … Now prosecutors say both killings were tied to Eastern European organized crime. In State Supreme Court in Brooklyn yesterday, they unsealed murder charges against two men described as ambitious young immigrants intent on impressing Boris Nayfeld, the legendary Brighton Beach heroin smuggler." Vitaly Ivanitsky and Marat Krivoi pleaded not guilty. The Times notes, "In the decade or so since the decline of the Italian crime syndicate La Cosa Nostra, prosecutors have confronted criminal enterprises established by immigrants from former Soviet bloc nations." The New York Post (4/13, Ginsberg, 624K) notes, "The NYPD and FBI teamed up to solve a pair of vicious Russian mob killings from 1992 -- nailing two Brooklyn men for the rubouts, prosecutors said yesterday."

Three Philadelphia Drug Gang Members Convicted Of Racketeering, Murder. The Philadelphia Inquirer (4/13, Anastasia, 423K) reports, "Three members of a Chester neighborhood drug gang known as the Boyle Street Boys were convicted yesterday in federal court of racketeering, drug dealing and homicide charges, including the execution-style slaying of a woman who had agreed to testify against the leader of the group. Brothers Vincent and Jamain Williams and Andre Cooper face possible death sentences following a penalty phase hearing set to begin Tuesday." The Inquirer notes, "The Boyle Street Boys trial began the same week the FBI launched a campaign to encourage crime witnesses to 'Step up, Speak up.'" Rodney Bradley, brother of slain witness Tracey Saunders, "said he hoped the guilty verdicts would encourage others to come forward in similar cases.

Racketeering Trial Of New York MS-13 Member Begins. Newsday (4/13, Topping) reports, "It's more than a street gang. It's a criminal enterprise. That was the message a federal prosecutor conveyed to jurors yesterday about the MS-13 gang as he outlined the case against alleged member and defendant, Leonel Mejida." Mejida "murdered because 'it gave him the opportunity to finally make his quota' of crimes initiating him into the gang, Assistant U.S. Attorney James McGovern said in his opening statement." Newsday notes Mejida "is the second prosecution nationally of an MS-13 member under the federal racketeering statute." He "is charged with killing Edgardo Sanchez, 18, an MS-13 member suspected of being a government informant."

US Will Not Seek Indictment Of Pellicano-Linked Law Firm. The Los Angeles Times (4/13, Krikorian, Weinstein, Guccione, 958K) reports, "Though still weighing charges against individual attorneys, federal prosecutors have decided not to seek an indictment against the largest law firm linked to the ongoing investigation of Hollywood private detective Anthony Pellicano, sources close to the case said Wednesday. The decision, recently conveyed to the firm by authorities, is significant because Pellicano had worked for a number of attorneys at the law firm of Greenberg, Glusker, Fields, Claman, Machtinger & Kinsella, notably partner Bert Fields." The Times notes, "To date, the FBI investigation has resulted in charges against 14

DOJ_NMG_0025925

people…on charges of racketeering, wiretapping, witness tampering and other crimes."

Former DeLay Aide Lobbied For Federal Funds For Firm In Which He Had Stake. The Los Angeles Times (4/13, Roche, 958K) reports Edwin A. Buckham, "onetime top aide to Rep. Tom DeLay (R-Texas) and organizer of the former majority leader's national fundraising arm, successfully lobbied for federal funding benefiting a firm in which Buckham held a financial stake." With the "assistance of Rep. Dave Weldon (R-Fla.), a DeLay political ally, Buckham had $1.55 million set aside in late 2003 in a federal appropriations bill for the U.S. Department of Labor to fund a program for small businesses. The money was awarded to the Florida Institute of Technology, which promptly signed a contract with Map Roi Inc., a client and partner of lobbyist Buckham. At the time, Buckham's lobby company, Alexander Strategy Group, held options on 500,000 shares of Map Roi stock, records show."

Chinese Engineer Indicted In Software Theft. The St. Paul Pioneer-Press (4/13, Suzukamo) reports, "A Chinese software engineer who's been working in Minnesota on a work visa has been indicted by a federal grand jury for allegedly stealing testing software from his former employer in Arden Hills." The Pioneer-Press continues, "Tim Hongguo Tian, 39, of Blaine, was charged Tuesday with a single count of unauthorized access to a protected computer and two counts each of wire fraud and 'deprivation of honest services,' a federal fraud charge, the U.S. Attorney's office said. … Tian will plead not guilty to all charges when he is arraigned April 19, his attorney, Frederick Goetz of Minneapolis, said. … 'We're aware of the allegations and look forward to thoroughly vetting them in court,' Goetz said." The Pioneer-Press notes, "Tian faces a maximum sentence of up to 20 years in prison and a $250,000 fine if convicted on each of the latter four fraud charges and five years in prison and a $250,000 fine for the computer break-in charge. He is being held without bail by the U.S. Marshals Service. If convicted, he could be deported. … Tian has been living and working in the United States for nearly six years. Parametric Technology Corp., which has a division in Arden Hills, hired him in May 2000 on a H-1B visa. Such visas, which are heavily used by the high-tech industry, allow companies to bring in foreign workers with special skills. PTC, based in Needham, Mass., makes software to help businesses manage product development."

Florida Man Arrested On Katrina Relief Fraud Charges. The Orlando Sentinel (4/12, Gutierrez, 265K) reported Scott Lee Robert of Orange County, Fla., "has been arrested and taken to Louisiana on charges he used false identities and Social Security numbers to secure more than $15,000 in Hurricane Katrina unemployment aid." Roberts "was indicted in Baton Rouge as part of a crackdown on suspected hurricane cheats" in which "at least 47 people have been charged by a special federal task force."

Miami Doctor Pleads Guilty To Medicare Fraud. The Miami Herald (4/13, 323K) reports Miami doctor Zabdy Westerburger "pleaded guilty in federal court to conspiracy to violate anti-kickback and false claims statutes in a case in which she was accused of participating in a scheme that resulted in Medicare paying out $2.3 million for unnecessary equipment and medications. … To date, more than 30 people have been convicted of Medicare fraud charges in connection with this scheme."

Judge Orders Medication For Texas Death Row Inmate. The AP (4/13) reports, "A judge who halted an execution because the inmate was mentally ill has agreed to force the man to take anti-psychotic medication so he can be put to death." The AP continues, "The inmate, Steven Kenneth Staley, 43, has refused to take his medication. A jury decided he should be put to death for the killing of a Fort Worth restaurant manager during a botched robbery. … Judge Wayne Salvant issued the forced-medication order Tuesday, while Staley picked at his unruly hair and mumbled nonsensical phrases in the courtroom." The AP adds, "The order, requested by prosecutors, drew a sharp argument from Staley's attorney. … 'The whole idea of holding somebody down and injecting them so that we can then say, with a straight face, this person is now competent so we can kill them, I think that smacks of an Orwellian-Soviet-style approach to criminal justice,' Jack Strickland told the Fort Worth Star-Telegram. … Prosecutors Chuck Mallin and Jim Gibson told the newspaper they requested the order partly so the jury's sentencing decision could be carried out."

Maryland Judge Holds Off Calling Witnesses In DC Sniper Trial. The AP (4/13) reports, "A judge will not immediately subpoena witnesses requested by Washington-area sniper John Allen Muhammad in his upcoming murder trial because prosecutors complained

DOJ_NMG_0025926

many were not relevant." The AP continues, "Muhammad, who is defending himself against six Maryland murder charges in the 2002 shootings, asked in a handwritten filing last week for 178 witnesses. He also wanted to subpoena the 354 potential witnesses identified by prosecutors." The AP adds, "Muhammad's list includes his accomplice, Lee Boyd Malvo, and some that appear on the prosecution's list. But he is vague on other names; some include no identifying or contact information. … Prosecutors said his long list included many people who did not appear to have a strong connection to the case. Prosecutors plan to call only about 100 witnesses. … Montgomery County Circuit Judge James L. Ryan agreed Friday to wait to issue subpoenas until a hearing on evidence April 24."

CIVIL LAW:

Tennessee Hospitals Sue US Over Medicare Payments. The AP (4/13) reports, "Fifteen Tennessee hospitals are embroiled in a court battle with the federal government over roughly $100 million that the hospitals say is owed to them." The AP continues, "The hospitals say the Department of Health and Human Services failed to reimburse them adequately during the 1990s for treating Medicare patients. The government contends it wasn't obligated to pay the portion the hospitals are seeking." The AP adds, "The dispute centers on a formula used under Medicare to reimburse hospitals that serve a high percentage of low-income patients. .. A federal judge in Washington sided with the Tennessee hospitals, but the government is citing a recently passed legislation in asking the judge to change his mind. … Justice Department lawyers arguing on behalf of HHS are supposed to submit a brief in their appeal to the judge next week, and a final decision could come about a month later, according to Murray Klein, a lawyer for the hospitals."

DOJ Argues Over Control Of National Guard Base, Planes. The AP (4/13, Haigh) reports, "The federal government argued Wednesday that while Connecticut Gov. M. Jodi Rell may control the fate of the state's Air National Guard base in East Granby, the Pentagon controls the planes. … And that means the Pentagon has the right to move those planes wherever it wants, said Carl Nichols, deputy assistant attorney general for the Department of Justice. … 'We are not talking about state airplanes. These are federal airplanes,' he said during a hearing at U.S. District Court in Hartford." The AP adds, "The state is asking a federal judge to block the Defense Department from removing the 15 A-10 Thunderbolts from the 103rd Fighter Wing at Bradley International Airport. … U.S. District Judge Alfred V. Covello did not rule on the matter Wednesday. His decision on the state's motion is expected in the coming months. …. The Justice Department is seeking to lift a temporary restraining order that has prevented it from removing the planes. Blumenthal is asking Covello for a summary judgment that would keep the base open."

CIVIL RIGHTS:

DOJ Warns States Over Election Law Compliance. The AP (4/13, Smyth) reports, "Ohio officials are scrambling to respond to a federal warning that the state hasn't complied with part of the Help America Vote Act, a measure packed with election mandates states must have in place this year." The AP continues, "Secretary of State Kenneth Blackwell said he is confident his office can satisfy the concerns that the Justice Department expressed in its March 31 letter. His office must respond to the Justice Department by Friday." The AP adds, "John Tanner, chief of the Justice Department's voting rights division, indicated in the letter that Ohio and 29 other states had yet to sign the required agreements with the Social Security Administration to match the last four digits of voters' Social Security numbers against federal records. Under HAVA, the numbers will be used to verify the identity of voters. … Other states got the same warning letter. … Alabama Secretary of State Nancy Worley says she has a conference call scheduled with Justice Department officials later this month to explain that the state is still working to link driver's license records to federal records. Maine expects to have computerized voter registration system operational later this year, Deputy Secretary of State Doug Dunbar said. Missouri expects to have its driver's license system fully compatible with SSA records by the end of the month, said Stacie Temple, a spokesman for the secretary of state's office. … Minnesota, like Ohio, has an agreement with the SSA in place but hasn't yet brought the system online. It will be operational in time for the next statewide election, the Sept. 12 primary, said Kent Kaiser, a spokesman for Minnesota Secretary of State Mary Kiffmeyer. … Oregon continues to wrestle with putting voting machines designed for people with disabilities in place by the

DOJ_NMG_0025927

May 16 primary. HAVA requires states to have a machine in every polling place that allows disabled people to vote independently and privately."

Federal Officials To Examine Mississippi Coast Voting Needs. The AP (4/13, Pettus) reports, "Secretary of State Eric Clark and members of the U.S. Election Assistance Commission will be on the Gulf Coast on Thursday to hear about south Mississippi's post-Katrina voting needs." The AP continues, "The public meeting in Bay St. Louis comes less than two months before Mississippi voters go to the polls for the first time since the massive hurricane blew ashore last August." The AP adds, "A party primary on June 6 will determine which Democrat will face Republican incumbent Trent Lott in the U.S. Senate race this fall. There are no party primaries for the 4th District U.S. House seat in south Mississippi. … Katrina destroyed precincts in all three coastal counties and caused widespread destruction more than 150 miles inland. In Harrison County alone, the storm wiped away 17 of the 65 polling places, said Circuit Clerk Gayle Parker. … The storm also destroyed voting equipment, but officials say that should not be a major problem. Seventy-seven of Mississippi's 82 counties - including all three on the coast - already were planning to buy new voting machines with federal money provided by the Help America Vote Act. The new touch-screen machines will be used in the primaries."

Rendell Criticized For Failing To Embrace Measures To Crack Down On Voter Fraud. In a piece in the Wall Street Journal (4/13, A13), columnist John Fund writes, "Over five years after the near meltdown of the Florida presidential recount, politicians are still arguing over how best to reform state election laws. Ground zero in that battle now is Pennsylvania, which features two close statewide races, for governor and U.S. senator." Pennsylvania's "GOP-controlled Legislature" recently passed two bills: one "would require voters show a form of official ID or a utility bill; another bill would end Philadelphia's bizarre practice of locating over 900 polling places in private venues, including bars, abandoned buildings and even the office of a local state senator." But Gov. Rendell "vetoed both bills last month," warning "that requiring an ID could disenfranchise the homeless, nursing-home residents and the poor." Rendell's "history doesn't inspire confidence that he takes fraud of any kind seriously." Rendell, in 1997, "admitted to the Journal's editorial board that Philadelphia judges had 'a rich history of corruption' that called into question how fairly city laws are enforced." Fund adds, "The integrity of the ballot box is just as important to the credibility of elections as access to it. In not closing off opportunities for fraud and chaos, Pennsylvania is inviting trouble in its fall elections that could rival that of Florida in 2000."

Special Master To Oversee Virgin Islands Prison. The St Croix (VI) Source (4/13, Shimel) reports, "The territory's prison system is expected to become subject to greater oversight with the court-ordered appointment of a special master. Attorney General Kerry Drue said a candidate has been chosen and the name will be submitted to a federal magistrate by Wednesday." The Source continues, "The special master was called for by a federal judge who recently declared the territory in contempt of a consent decree to correct deficiencies at the Golden Grove Adult Correctional Facility. Golden Grove has been termed one of the worst prison systems in the United States by the head of the American Civil Liberties Union National Prison Project." The Source adds, "U.S. Magistrate George Cannon gave the U.S. Justice Department's Civil Rights Division and the V.I. attorney general's office 20 days to choose a special master and present their choice to the court. If no agreement could be reached, the magistrate asked the two parties to produce a list of five potential candidates for the court's consideration. … 'Pursuant to Magistrate Cannon's order, the parties have met and conferred regarding the selection of a candidate for selection of a special master in the case, "USA v. Territory of the Virgin Islands." After conferring telephonically the parties were able to agree to a name. That name will be formally submitted to the court this afternoon,' the attorney general said Wednesday. … However, Drue said, it's not clear how soon the judge will signal his approval of the candidate."

SCOTUS To Consider Employers' Handling Of Harassment Complaints. The Wall Street Journal (4/13, Shellenbarger) reports, "While bans on sexual harassment and discrimination are posted in many employers' policies these days, just how much on-the-job protection is owed workers after they step up to make charges of bad behavior?" The Journal continues, "A Supreme Court case set for oral arguments Monday will shed new light on that question. The central issue in the case, Burlington Northern Santa Fe Railway v. Sheila White, will examine how much latitude employers have, after an employee complains about sexual harassment or race, religious or sex

DOJ_NMG_0025928

discrimination, to make transfers or changes in the employee's job duties without being subject to charges of retaliation." The Journal adds, "The case comes amid a rising tide of retaliation complaints to the Equal Employment Opportunity Commission. The decision not only has implications for how such claims may be handled in the future, but also for women's progress in nontraditional occupations."

Missouri State Tennis Players File Title IX Suit To Preserve Team. The AP (4/13) reports, "Four Missouri State women's tennis players are suing the university for cutting their program as part of a sports reduction, contending the move violates Title IX rules. The lawsuit asks a federal court to order the state's second-largest university to reinstate the women's tennis program and seeks a temporary injunction to keep the sport going after the planned shutdown at the end of this academic year." It also "seeks class-action status for all current and future female tennis players. It was filed in U.S. District Court in Springfield by the American Civil Liberties Union in the name of four players who contacted the group."

Romney Says Democrats Are Making A Mistake By Backing Gay Marriage. Massachusetts Gov. Mitt Romney said on MSNBC's Hardball (4/12), that "the Democratic Party, particularly in my state, has made an error by adopting a platform that supports gay marriage." Romney added that Democrats are "making a mistake because I think they fundamentally misunderstand the fact that in America people recognize that the primary purpose of marriage is the creation and the development of the next generation. And the ideal way to create and develop the next generation is to have homes with moms and dads. And that's something where traditional marriage is going to play such a key role."

Gay, Lesbian Families Plan To Attend White House Easter Egg Roll. In what the Washington Post (4/13, B3, Dvorak, 744K) calls an effort to "blanket the White House lawn with a realistic mosaic of their families," hundreds of gay and lesbian parents from around the country plan to line up overnight tomorrow to get tickets to Monday's White House Easter Egg Roll, Critics "have denounced the parents for politicizing such an iconic, American event." The Post adds, "There has been some hand-wringing at the White House over the planned gay and lesbian mobilization. White House spokesman Scott McClellan has been fielding questions about it since January."

ANTITRUST:

FCC Tightens Airwave Auction Rules. The AP (4/13, Miller) reports, "Under new rules designed to increase competitive bidding, companies that want to sell such wireless services as high-speed Internet and video will be able to buy a big chunk of airwaves at a government auction." The AP continues, "The Federal Communications Commission on Wednesday voted to require anonymous bidding at the June 29 auction to prevent companies from colluding to keep out competitors and to drive prices down. Bidding would be open, though, if the FCC determines that enough companies are seeking licenses to keep the auction competitive. … 'It is essential that we make an effort to foreclose anticompetitive bidding behavior in this auction,' said FCC Chairman Kevin Martin." The AP adds, "The Justice Department urged that all bids be anonymous, but the commissioners agreed to the modified proposal, which was suggested by T-Mobile USA."

Brokerage Firms Sued Over Naked Short-Selling Fees. Dow Jones (4/13, Bray) reports, "An antitrust lawsuit was filed Wednesday against the securities industry's largest brokerage firms over fees charged as a result of 'naked short selling.'" Dow Jones continues, "The lawsuit filed in federal court in Manhattan by Electronic Trading Group LLC alleges that the major broker-dealers charged unearned fees, commissions or interest on short sales where those broker-dealers failed to borrow or deliver the stock to back a short position." Dow Jones adds, "Naked short selling exists when a stock is sold before an arrangement has been put in place to borrow the shares. It's illegal for most investors, but legal for firms that make markets in stocks and bring liquidity to the market. … 'Defendants collusively condone and engage in these practices to their individual and collective enrichment, routinely alternating among themselves in the roles of prime broker who fails to deliver and third-party broker-dealer who permits the (failure to deliver) to persist,' the lawsuit says."

EU Official Blasts Credit Card Profits. The AP (4/13, White) reports, "Credit and debit cards such as Visa

DOJ_NMG_0025929

and MasterCard are racking up 'abnormal' and 'excessive' profits for banks, European Union antitrust chief Neelie Kroes said Wednesday. … 'Paradise is over,' she warned, telling the card industry to make changes or face antitrust investigations that could force them to reform their business or pay fines. … 'The more the payment card industry does on its own initiative, the less they are likely to face action under antitrust rules,' she said." The AP continues, "In its first report from a wide-ranging investigation into payment cards in Europe, the European Commission said customers are paying too much because the industry was still split along national lines and new card providers find it hard to set up shop. Credit cards are a 'very profitable' business, it said." The AP adds, "Kroes said consumers would get a better deal if there was more competition among card providers and if banks started to offer cards to customers in different countries. … She said the industry should also rethink the way it sets prices. 'Banks collectively set fees that tax businesses and ultimately all consumers for every card payment,' she said. 'As a consequence there is not enough market pressure on fees and retail prices are inflated due to card payments.'"

The Financial Times (4/13, Buck) reports, "A European Commission inquiry into the payment card sector found yesterday that little cross-border competition existed between providers. Every year 23bn card payments are made in the EU worth €1,350bn. … Ms Kroes predicted that cardholders could save hundreds of euros if the market was made fully competitive. … She praised Germany and the Netherlands as the countries with the lowest credit and debit card fees, while Portugal had the highest." The Times notes, "The Commission's investigation pointed to large discrepancies between fees charged in EU member states as evidence of the poor state of competition. It found that the fees retailers pay to credit card companies vary between countries by up to 500 per cent for Visa and by 650 per cent for MasterCard. … Fees paid by consumers can be twice as high depending on where the card is issued."

Nevada Man's Gambling Patent In Legal Limbo. The Las Vegas Sun (4/13, Benston) reports, "Mel Molnick is an unlikely adversary of the Internet gambling industry. … He is not a foe of gambling. But the retired contractor has spent the last several years suing dozens of online casinos." The Sun continues, "Molnick, 63, claims to own a method patent that governs live, electronic betting from a remote location. In other words, the process by which just about every Internet gambling site does business. … A method patent is a controversial and often litigated type of patent that covers a process rather than a particular product. Molnick's patent was filed with the U.S. Patent Office in 1995 and published in 1998. The patent has since been approved in other parts of the world, including Asia and Europe." The Sun adds, "Molnick has been called a kook and an opportunist for making the bold - some say ridiculous - claim that he invented and patented the idea for Internet gambling. Others say his patent will have little legal weight in the United States because of the quirks of Internet commerce and the complexities of patent law. … Internet gambling was a fledgling enterprise in 1995, a shadow of the $12 billion-plus business it is now. Web casinos operating at that time were primitive versions of the sophisticated, well-advertised brands they are today. … Yet Molnick has had some success with his patent by reaching pretrial settlements with several Web casinos, according to court documents. Those that didn't settle have disappeared into cyberspace - although it's possible they simply popped up elsewhere under different names. … Molnick has managed to do what some legal experts thought couldn't be done - proceed with a federal lawsuit against the world's largest Web casino company. … The lawsuit, filed in federal court last year, named London-based Sportingbet Plc along with many other Internet gambling sites. In contrast with previous suits, several defendants were larger, more profitable companies and included publicly traded entities."

ENVIRONMENT:

Offshore Drilling Debate Heating Up In Coastal States. The Christian Science Monitor (4/13, Knickerbocker, 61K) reports the "battle over oil and gas drilling in the US is heating up on a new front - or rather multiple fronts in coastal waters from Virginia to Florida to California to Alaska." The Bush Administration "sees offshore oil and gas drilling as a key element in its push toward energy independence. As with the debate over the Arctic National Wildlife Refuge, skeptics see the prospect as a potential pollution danger that would take years to produce what likely will be relatively insignificant amounts of oil and gas." Officials in coastal states "have mixed views on the subject, including whether to lift the present moratorium on offshore drilling along much of the US coast, which has been in place since 1981. With an eye toward potential royalties as well as

DOJ_NMG_0025930

environmental impact, many coastal state lawmakers and governors want to increase their control of such development."

N.J. Dump Returns To Superfund List. The New York Times (4/13, DePalma) reports that the "Ringwood Mines area in northern New Jersey, which the Ford Motor Company used as a dumping ground in the 1970's and then cleaned, is being put back on the list of the most polluted sites in the country." The unusual redesignation "follows several years of intense pressure from local residents who claimed that the area had never been properly cleaned and that dangerous material left over from the assembly of millions of automobiles in a plant in nearby Mahwah was endangering their health."

Mumps Outbreak Spreading Across Midwest. Health experts are trying to rein in a large mumps outbreak raging in Iowa that has spread to at least eight other Midwestern states. The Washington Post (4/13, A3, Stein, 744K) reports, "At least 515 cases have been reported in Iowa this year, far outpacing the five cases the state usually sees in a year and the 200 to 300 that typically occur nationally. The epidemic, the largest since a 1988 outbreak in Kansas, shows no sign of slowing, with at least 100 more cases in Nebraska, Kansas, Minnesota, Wisconsin, Indiana, Michigan, Missouri and Illinois." The Post adds, "As health officials work to break the chain of transmission of the viral infection, disease detectives are trying to puzzle out what is causing it. … The outbreak has underscored that old infectious diseases that most people rarely think about -- and doctors do not often encounter -- can suddenly reemerge."

FBI/DEA/ATF/USMS:

FBI Official Defends Supervisor Term Limit Directive. The Washington Times (4/13, Seper, 90K) FBI Executive Assistant Director Michael Mason "yesterday defended a much-criticized directive requiring field supervisors to move to the bureau's Washington headquarters after five years or step down, saying 'highly experienced' managers are needed to fight the war on terror and other crime here and abroad." Mason told The Times, "The program was borne out of an acknowledgement by the director, his senior staff and others that the bureau's need for a highly experienced management cadre and an increasingly large footprint overseas would require a management staff willing to move, relocate and exploit that knowledge across the bureau." Mason "said that although some veteran supervisors have criticized the program, the directive seeks to 'realize the hope that their experience will not be lost but exploited by the FBI to the benefit of many more agents.'"

Former FBI El Paso SAC Charged With Lying In Probe Of Drug Trafficker. The AP (4/13) reports former FBI El Paso SAC Hardrick Crawford Jr. "was indicted Wednesday on five counts of making a false statement in connection with the investigation into his relationship with a Mexican racetrack owner, whom Mexican officials alleged was a member of a drug cartel. Crawford's lawyer, Mary Stillinger, said Wednesday night that Crawford had done nothing wrong." Crawford is charged with "lying to federal investigators about what he knew of allegations that the racetrack owner, Jose Maria Guardia, was involved in drug trafficking and money laundering despite having been given that information several times. Crawford also is accused failing to report thousands of dollars worth of gifts from Guardia, a one-time FBI informant, and that his wife held a $5,000-a month job with Guardia."

Documents Reveal Alaska Police Officer Threatened FBI Agent During Weapons Probe. The Anchorage Daily News (4/12, Mauer, Demer) reported, "A longtime local cop angrily demanded that the FBI look the other way from the explosive, unexplained growth of Security Aviation, fearing an investigation would disrupt the money party that began in the summer of 2005. Stop 'putting your nose where it doesn't belong,' the unnamed cop growled at a federal law enforcement officer," and "the officer's statement, described as a 'veiled threat' and a reason for the FBI investigation to remain covert until it was sprung in a series of armed raids starting Feb. 2, was contained among more than 800 pages of search warrants, FBI affidavits, inventories of seized material and related documents unsealed this week in federal court." The Daily News notes Security Aviation's Rob Kane "and the company are charged with illegal possession and transportation of Soviet-era rocket launchers capable of being mounted on its fleet of Czech-made L-39 Albatross jets."

Former Massachusetts Narcotics Investigator Convicted Of Cocaine

DOJ_NMG_0025931

Trafficking. The AP (4/13) reports a former Malden police narcotics investigator "was one of two men convicted on Wednesday of federal cocaine trafficking charges. David Jordan, 45, of Stoneham, and Anthony Bucci, 43, of Wakefield, were convicted by a jury after a three-week trial of conspiracy to distribute and to possess with intent to distribute three kilograms of cocaine; possession with intent to distribute three kilograms of cocaine; and using or carrying a firearm during and in relation to a drug trafficking crime. … Jordan made false statements to DEA agents about his involvement."

The Boston Globe (4/13) reports June Stansbury, the special agent in charge of the Drug Enforcement Administration's New England office, "said, "It is regrettable that the lure of drugs and dirty money tempt a very few in the profession, but make no mistake, we treat criminals as they should be, even if they are in possession of a badge.'"

California City Council Approves New Rules For Marijuana Dispensaries. The San Luis Obispo Tribune (4/12, Curran) reports medical marijuana clubs "looking to take root in Atascadero will have to comply with a new city ordinance approved Tuesday. City Council members approved 3-1 a law governing the marijuana dispensaries inside the city limits. … Under the regulation, which allows for only one such business, a prospective owner would have to locate the business at least 1,000 feet away from schools, churches or parks."

California Supervisors Temporarily Disallow New Pot Clubs. The AP (4/12) is now reporting a story included in yesterday's briefing and writes that marijuana dispensaries "were temporarily banned in unincorporated parts of Contra Costa County to allow supervisors to develop new zoning regulations. The Board of Supervisors unanimously approved the measure Tuesday establishing a moratorium on new dispensaries. The ordinance is effective immediately and gives the county 45 days to study traffic congestion, noise and other effects of pot clubs."

The Tri-Valley Herald (4/12) also reported on the moratorium.

US Charges Four Men In Detroit Weapons-Shipping Plot. The Detroit Free Press (4/12, Ashenfelter) reports, "Four Asian businessmen plotted to buy hundreds of handguns, machine guns, Sidewinder missiles and aviation radar equipment for export to Indonesia, creating a threat to national security, federal prosecutors said Tuesday." The Free Press continues, "The four men -- who have been charged in Detroit and Honolulu -- were arrested Sunday after meeting in Hawaii with people they thought were representatives of a metro Detroit company, which authorities say the men believed would supply the military hardware. It was to be shipped to Indonesia through Singapore." The Free Press adds, "Court papers didn't say whether the men were buying the equipment for the Indonesian government or whether it was sting operation. The investigation was run by the U.S. Immigration and Customs Enforcement agency in Detroit, with the assistance of Defense Criminal Investigation Service agents from Ohio. … 'We consider this to be a serious and grave threat to our national security,' U.S. Attorney Stephen Murphy III of Detroit said Tuesday. 'The agencies involved in the case worked hard to arrest individuals who were ready, willing and able to buy American weapons and take them outside the country.' … Charged were Hadianto Djoko Djuliarso, 41, of Indonesia; Ibrahim Bin Amran, 46, of Singapore, and Ignatius Ferdinandus Soeharli and David Beecroft, whose ages and nationalities weren't disclosed." The Detroit News (4/11, Egan) also reports on the indictments.

Five Texas Aryan Brotherhood Members Indicted On Weapons Charges. The AP (4/13) reports, "Five members of the Aryan Brotherhood of Texas were indicted Wednesday on firearms violations, U.S. Attorney Richard B. Roper said." Matthew C. Courtney, Cory D. Daniel and Aaron Thompson "were each charged with conspiracy to possess and dispose of 26 stolen firearms and other charges. The indictment alleges that the firearms were stolen in a burglary. Daniel and Thompson are in state custody," and "an arrest warrant has been issued for Courtney." In additional indictments, Jeffrey Lynn Womack "was charged with one count of possession of an unregistered firearm" and John Arthur Clark "is accused of being a convicted felon in possession of a firearm."

Alaska's Governor Seeks To Restore Criminal Penalties For Marijuana. The Washington Times/AP (4/13) reports Alaska Gov. Frank Murkowski "says recreational use of marijuana no longer should be protected by Alaskans' right to privacy. He's pressing the Legislature to restore criminal penalties for marijuana possession. … The state's highest court

DOJ_NMG_0025932

concluded in 1975 that Alaskans' constitutional right to privacy outweighed any harm that might occur from using small amounts of marijuana in their homes." The AP adds that the Murkowski administration says marijuana is much more potent now than it was in the 1970s and 1980s.

DOJ Grant Funds Anti-Gun Violence DVD. The Dayton Daily News (4/13, Wynn) reports, "Seven years ago, the streets swallowed up Clifton Montgomery and spat him into an Ohio prison after he was convicted of aggravated robbery and burglary. … Instead of graduating and going to college, Montgomery said he was 'kicked out of school,' was about to be a father at 18 and was arrested after a 'home invasion.' … Money drove Montgomery, who was released from prison more than a month ago. Now he wants to steer youth away from the route he took." The News adds, "Montgomery is one of many local people featured in Peace by Peace, an anti-gun violence documentary that premiered Wednesday to community leaders and city and county officials in the Dayton Cultural and RTA Transit Center. … Members of Spirit of Peace, Inc., a faith-based nonprofit group, presented the DVD project designed to educate youths ages 12 and older about the effects of gun violence. The project was funded by a grant from the Justice Department's Project Safe Neighborhoods program."

U Of Georgia Student Detained By ATF Agents. The U of Georgia Red and Black (4/13, Ervin) reports, "Alcohol, Tobacco and Firearm agents, on (the University of Georgia) campus (in Athens, GA) Tuesday for Project Safe Neighborhoods training, detained a 'suspicious individual' near the Georgia Center, University Police Chief Jimmy Williamson said." The Red and Black continues, "Jeremiah Ransom, a sophomore from Macon, was leaving a Wesley Foundation pirate vs. ninja event when he was detained. … After being held in investigative detention, he was found to have violated no criminal laws and was not arrested."

The Atlanta Journal-Constitution (4/13, Simmons) reports, "ATF Special Agent in Charge Vanessa McLemore said the officers chased Ransom after seeing him peek around a stone pillar toward the cashier's booth in a nearby parking garage. 'They called for him to stop and he didn't,' she said. 'It was the totality of the circumstances.' … Ransom was released after 30 minutes when UGA police determined he was not a threat." The AP (4/13) also reports this story.

IMMIGRATION:

Reid Asks Frist To Return Immigration Bill To Senate Schedule. The AP (4/13, Gamboa) reports Senate Minority Leader Harry Reid "asked Majority Leader Bill Frist on Wednesday to return to work on immigration legislation immediately after the Senate completes a bill with more money for military operations in Iraq and hurricane relief." Reid said in a letter "to Frist that the need for an immigration bill was highlighted by rallies across the nation this week protesting a House bill that would subject illegal immigrants to prosecution as felons. Reid labeled as 'confusing' Frist's position on a compromise put together by Sens. Chuck Hagel, R-Neb., and Mel Martinez, R-Fla., that collapsed last Friday after Democrats refused to allow votes on several amendments to it."

LAT Poll Shows Support For Border Security And Guest Worker Plan. The Los Angeles Times (4/13, Brownstein, 958K) reports a Times/Bloomberg poll of 1.357 adults conducted April 4 through April 11 (+/-3%) showed, "Most Americans say the United States should confront the challenge of illegal immigration by both toughening border enforcement and creating a new guest-worker program rather than stiffening enforcement alone, a Los Angeles Times/Bloomberg poll has found." With "a solid 2-1 margin, those surveyed said they would prefer such a comprehensive approach, which a bipartisan group of senators has proposed, to an enforcement-only strategy, which the House of Representatives approved in December. Support for a comprehensive approach was about the same among Democrats, independents and Republicans, the poll found."

GOP Pledge To Drop Felony Provision Unlikely To Diminish Debate. CNN's The Situation Room (4/12, Collins) reported, "On Capitol Hill, a new about-face in the battle over immigration. Republican leaders vowing to strip a controversial provision approved last year by the House that would make it a felony to be in this country illegally. The announcement came late yesterday, one day after hundreds of thousands of people rallied across the nation for immigrants' rights."

USA Today (4/13, Kiely, 2.31M) reports lawmakers from both parties said the pledge "is unlikely to defuse opposition to proposed immigration and border security legislation." The House bill, which "called for making illegal immigration a felony offense, punishable by at least a year in jail," has

DOJ_NMG_0025933

"been a rallying cry for thousands of demonstrators." Rep. Mario Diaz-Balart of Florida, "one of five Hispanic Republicans in the House, hailed the promise to eliminate a plan that was 'offensive, excessive and demonized hard-working immigrants.' He and other Republicans accused Democrats of a Machiavellian move to retain the felony penalty." USA adds immigrant rights advocates "were not impressed by the promise from" Majority Leader Bill Frist and Speaker Dennis Hastert, while Sen. Edward Kennedy "dismissed the GOP statement as 'empty rhetoric.'"

King Says Democrats Created "Phony" Felony Issue. Rep. Peter King said on Fox News' The O'Reilly Factor (4/12) that the felony issues is a "totally phony issue created by Democrats and facilitated by Catholic bishops and liberal media. The original bill…said it would be a felony to enter the country and felony to stay in the country illegally. Republicans, we introduced an amendment to make it a misdemeanor because it's actually a lot harder to support someone and bring action under a felony than misdemeanor. You have to commit a grand jury and pay legal fees. No sense in making it a felony. 191 Democrats, over 90% of the Democrats, voted to keep it a felony. Over 160 Republicans, 70% of the Republicans, voted to make it a misdemeanor. It was Democrats who voted to keep it a felony. Republicans voted to keep it a misdemeanor and Democrats ever since have been saying this bill is no good because it makes every illegal immigrant a felon."

US, Canada Break Up Human Smuggling Ring. The CBS Evening News (4/12, story 2, 2:05, Schieffer, 7.66M) reported the government "announced it has broken up a human smuggling ring in Washington State." CBS (Whitaker) added, "A tip put US and Canadian agents on the trail of the Vancouver-based ring more than a year ago. They say the smugglers charged dozens of Pakistani and Indian nations as much as $35,000 each for fake US passports and illegal entry into Washington State. From there they'd fan out across the US." There were "no confirmed terror connections, but no one is breathing easy."

The Los Angeles Times/AP (4/13) reports a "federal grand jury in Seattle has indicted 14 U.S. and Canadian men for roles in the alleged scheme. Twelve had been arrested as of Wednesday." Leigh Winchell, "special agent in charge of U.S. Immigration and Customs Enforcement in Seattle, said about 50 people had been apprehended who had paid as much as $35,000 each to be smuggled into the U.S."

Some Military Subcontrators Using Illegal Immigrant Labor. The CBS Evening News (4/12, story 3, 3:40, Schieffer, 7.66M) reported some companies "with contracts from the government are hiring illegal immigrants, many of them near highly sensitive military bases." CBS (Keteyian) added US military subcontractor Gargiulo Construction, which is working at a site near the Trident sub base in Groton, Connecticut, "says its payroll is completely in order, but in reality, some workers' papers are fake. … These men, all born in Mexico, spoke in shadow because they are here illegally and fear talking to the press can get them fired. Talking about false papers and pay that is less than half what a union member makes." Despite "dozens of arrests at military bases around the country, government construction sites continue to be fertile ground for undocumented workers, something Centex, the government contractor in Groton was hesitant to discuss." Company president Gene Gargiulo "flatly denied hiring any undocumented workers but in the wake of this interview according to the Carpenters' Union, eight Hispanic workers were fired the very next day. Sparking a walkout by two dozen Hispanic workers on Gargiulo job sites."

Arizona Legislature Approves Bill To Use Criminal Trespassing Law Against Illegal Immigrants. The Los Angeles Times/AP (4/13) reports two days "after a big immigration march in Phoenix, the Arizona Legislature on Wednesday approved legislation to make illegal immigrants subject to the state's criminal trespassing law." The Senate "approved the bill on a 17-12 vote and the House followed with a 33-27 vote, with both Republican-led chambers voting nearly along party lines." Supporters of the bill "contend it would provide 'a second line of defense' behind the border patrol by enabling state and local law enforcement officers to arrest illegal immigrants."

Immigration A Hot Issue In 2006 Congressional Races. The Wall Street Journal (4/13, Solomon, 2.11M) reports while the "fight over illegal immigration roils Washington, the issue is spilling out into local, state and federal races across the country. But the response isn't monolithic." Even as "a number of House Republicans are expected to face a backlash from Hispanic and other voters for their tough approach, some candidates are adopting hard-line positions in a bid to portray incumbents as weak on illegal immigration. For now, the issue is percolating largely in Republican primaries but is expected to affect campaigns across the board as the November midterm elections

DOJ_NMG_0025934

approach." Many candidates "are taking a tough stance on the issue, in part because the public seems to support more aggressive measures. A recent Wall Street Journal/NBC News poll found that 56% of respondents don't back the type of guest-worker program favored by President Bush, while a Pew Research Center poll found that 53% say illegal immigrants should be forced to 'go home.'" The "desire for tougher treatment has become an issue in places like Utah, where Rep. Chris Cannon, a five-term Republican, is facing a fight for the nomination, in large part because of his position on immigration."

Rohrabacher Prison Labor Suggestion Criticized. In a Los Angeles Times column (4/13), Patt Morrison says, "He said it, all right: 'We do not need more people from foreign countries coming in taking the jobs of Americans…. I say let the prisoners pick the fruits.' That's Huntington Beach's Republican congressman Dana Rohrabacher, one of those fellows for whom the word 'colorful' seems wimpy." Morrison adds, "Prison labor? That's not 21st century America, is it? It reeks of the gulag — Siberia, China, political prisoners."

TAX:

DOJ Accuses Florida Firm Of Preparing False Tax Returns For Seminole Tribe Members. The AP (4/13) reports, "A Miami firm was accused by the U.S. Justice Department on Wednesday of preparing tax returns for Seminole Tribe members falsely claiming they were exempt from income taxes for gambling proceeds." The AP continues, "The Justice Department asked a federal judge in a lawsuit to halt the practice by Labib Baltagi Inc., which operates 20 Jackson Hewitt franchises in the Miami area. The lawsuit - filed only days before Monday's federal tax filing deadline - does not accuse Parsipanny, N.J.-based Jackson Hewitt Tax Services Inc. of any wrongdoing." The AP adds, "At least 32 tax returns of Seminole Tribe members have been identified by the IRS as falsely claiming that they were exempt from income taxes on casino gaming proceeds under a Native American treaty. The total in false claims is more than $222,000, according to the lawsuit. … There is in fact no such treaty. … 'The law is clear that income from the casino gaming activities of Native American tribes is taxable,' said Eileen J. O'Connor, assistant attorney general for the Justice Department tax division."

DOJ Sues California CPA Over Mariner Filings. The Los Angeles Times (4/13, Kristof) reports, "The Justice Department is accusing an El Segundo tax accountant of claiming a deduction for his oceangoing clients that isn't exactly seaworthy." The Times continues, "Martin A. Kapp specializes in handling tax returns for workers in the transportation industry, such as airline pilots and railroad engineers. But it's his self-devised method for claiming meal deductions for merchant sailors and tugboat captains that prompted the government to sue him in U.S. District Court in Los Angeles." The Times adds, "Kapp uses his so-called mariner's deduction to claim per diem meal and incidental expenses for each day his clients are at sea. Taxpayers who travel on business are allowed to deduct the cost of the trip using a standard per diem deduction instead of keeping track of their actual meal and incidental costs. … The government contends that Kapp's clients can't claim the deduction because they get free meals while at sea, and taxpayers can't claim deductions if they don't spend any money. … The Justice Department, which claims that Kapp is misreading both IRS rules and court rulings, wouldn't estimate how many of Kapp's clients had claimed the mariner's deduction or how much it had cost the government in uncollected taxes. The government is seeking an injunction barring him from claiming the deduction, although it isn't trying to prevent him from preparing returns, according to court papers filed Tuesday."

Reliability Of Income Tax Preparers Seen As Questionable. USA Today (4/13, A1, McCoy, 2.31M) reports as "paid preparers complete more than 60% of the individual tax returns filed by Americans, questions are increasingly being raised about the reliability of those preparers, as well as about the federal government's limited oversight of the tax-preparation field." A USA TODAY review "of scores of federal court proceedings against alleged problem preparers found that thousands of taxpayers have been hit with repayment demands and penalties since 2001 as the IRS moved to recover millions of dollars in tax losses. The victims, some of whom offered a rare inside look at their tax woes, often include immigrants, military recruits and others unfamiliar with the tax system." Many of the preparers "have been accused of using improper deductions and credits to inflate the size of tax refunds in apparent efforts to attract new clients and increase profits, the court records show. Others charged a percentage of the inflated refunds as

DOJ_NMG_0025935

their fees." In a "sign of the problems taxpayers may face, five of 19 tax-preparer offices selected for undercover tests in March by the Government Accountability Office, the investigative arm of Congress, produced returns that had up to nearly $2,000 in unwarranted refunds."

Withholding Seen As Leading To Indifference To Government Spending. In a USA Today op-ed (4/13), Laura Vanderkam says withholding has lead to taxpayer apathy: "That collective shrug is precisely the reason Congress implemented mandatory withholding in 1943. It feels relatively painless for the 131 million Americans who pay this way — especially when a refund check arrives. Consequently, few withholdees truly care what happens with their money. But others do. Nearly 12 million of us, the IRS reports, pay estimated taxes by writing checks to the government, usually every quarter. Often self-employed types, we deposit checks into our accounts, dream of the vacations those funds could finance, and then mail those funds to the U.S. Treasury instead. It's a painful process." One way to "slow out-of-control spending in Washington is to make everyone feel the same pain that quarterly payers experience . Ending withholding would do that — and it's not as crazy as it sounds."

Proposed IRS Rules Criticized For ID Theft Potential. ABC World News Tonight (4/12, story 8, 2:20, Vargas, 8.78M) reported, "This year's tax deadline is just days away. And an estimated $41 million people will pay someone else to fill out their returns. Most taxpayers have no idea that many tax preparers are sharing confidential information about their returns with other businesses. Now, consumer groups are warning protections proposed by the IRS are going to make the problem even worse." ABC (Muir) added, "Say you take your return to any of those big tax preparers. And you want your refund right away. Your tax preparer gives your information to a bank in order to get that instant refund. And then that bank can also use your information to market other products to you, as well. Few realize it's been the law since the mid-1970s. But so much has changed since then. Most notably, the risk of identity theft. So, the IRS is proposing new regulations. Requiring more explicit consent forms, even typed in larger fonts." IRS Commissioner Mark Everson: "So that when a taxpayer shares information with their preparer he or she is well aware that it can, in turn, be reshared, go overseas, or go to financial institutions." Muir: "But consumer advocates point to something else the IRS wants to do. It's trying to level the playing field with the big tax preparers by allowing even the smaller ones to get into this information sharing game. And once you sign on the dotted line, it's impossible for you to keep track of your private information."

WSJ Says Tax Code Is Unfixable. The Wall Street Journal (4/13, 2.11M) says in an editorial that the failure of tax preparation chains to properly prepare returns "sure sounds like incontrovertible evidence that the IRS tax code is unfixable. A rational conclusion on Capitol Hill would be to scrap the code for something that actually approaches common sense. Instead, Chuck Grassley and Max Baucus, the leading Republican and Democrat on the Senate's tax-writing Finance Committee, say that what is needed is more training requirements for tax preparers. Mr. Grassley declared that if you need a license to be a barber, why not for filling out taxes? Umm, well, we're not sure why anyone needs a government license to cut hair, but tax preparation standards would only raise the barriers to being a tax accountant and add to the costs of hapless taxpayers seeking help before April 15. Besides, even the top-trained professionals can't figure out the tax laws."

CONGRESS-ADMINISTRATION:

Bush Encourages Seniors To Sign Up For Medicare Rx Drug Plan. President Bush continued his campaign to encourage senior citizens to sign up for the new Medicare prescription drug plan in Northern Virginia, touting the millions who have signed up, its accessibility to non-English speakers and its affordability. Bush's remarks were carried by a few prominent media outlets, which also noted the problems people experienced with it, but ignored by the national network news programs. CNN's The Situation Room (4/12, Collins) reported, "President Bush staying on his Medicare message." He "has conceded glitches in the plan. He has been criticized for being too complicated, but a look at this new poll now: 74 percent of people who signed up for the prescription drug plan said it was actually easy to do. Just 24 percent said it was difficult."

The Washington Post (4/13, A6, Rein, 744K) reports, "If the content of the president's latest town-hall-style 'conversation' on Medicare this month was familiar, the setting was not. About 400 Korean, Chinese, Vietnamese and Filipino immigrants were in attendance at Northern Virginia Community College in Annandale." It "reflected the White House's effort to pitch a program that has drawn criticism for its cost and complexity to immigrant groups that under the

DOJ_NMG_0025936

best of circumstances labor to navigate government bureaucracies."

USA Today (4/13, Benedetto, 2.31M) reports, "Bush said he chose the audience to emphasize that many seniors do not speak English and need help navigating the system. He urged community groups and sons and daughters to pitch in." Bush said, "I'm trying to show that our government reaches out to people in all walks of life and in all neighborhoods. Bush "said that if seniors don't want to enroll they don't have to, but he said they should at least take a look at the program and its options."

The AP (4/13, Riechmann) reports Bush's "events are part of the administration's grass-roots effort to get eligible seniors to sign up. More than 1,000 enrollment seminars are being held across the country each week to educate seniors about their options." At the event with Bush, Labor Secretary Elaine Chao "said the government was working to educate people about the program with Asian-American groups, and non-English speakers can call government hot lines and speak with someone in their native language."

Scalia Proud Of Non-Recusal In Cheney Case. The AP (4/13, Reitz) reports, "Conservative U.S. Supreme Court Justice Antonin Scalia had some advice Wednesday for those who questioned his impartiality after he refused to recuse himself from a case involving his hunting buddy, Vice President Dick Cheney. … 'For Pete's sake, if you can't trust your Supreme Court justice more than that, get a life,' Scalia said." The AP continues, "Scalia, addressing an audience at the University of Connecticut's law school on Wednesday, said recusing himself from the 2004 case -- which focused on an energy task force that Cheney led -- would only have given fuel to newspaper editorial writers and other detractors who have said he is too close to the vice president. … 'I think the proudest thing I have done on the bench is not allowed myself to be chased off that case,' Scalia said." The AP adds, "The case in question involved Cheney's request to keep private the details of closed-door White House strategy sessions that produced the administration's energy policy. … The administration fought a lawsuit brought by watchdog and environmental groups that contended that industry executives, including former Enron chairman Ken Lay, helped shape that policy. The Supreme Court upheld the administration position on a 7-2 vote. … Scalia refused to recuse himself from the case, rejecting arguments by critics who questioned his impartiality because of a hunting vacation that he took with Cheney while the case was pending. … Scalia told the audience Wednesday that he would have stepped aside had the case involved Cheney personally, but that he viewed it differently because the vice president was named in his official capacity as head of the group."

Government Spending Reaches Record In March. The AP (4/13, Crutsinger) reports government spending "hit an all-time high for a single month in March, pushing the budget deficit up significantly from the red-ink level of a year ago." The Treasury Department reported "federal spending totaled $250 billion last month, up 13.7 percent from March 2005." Government receipts "also were up, rising 10.6 percent from a year ago, to $164.6 billion. That left a deficit for the month of $85.5 billion, a record imbalance for March." The March "outlay record of $250 billion surpassed the old mark of $232 billion set in February."

Broder Highlights 2005 Accrual Deficit Of $760 Billion. In his Washington Post column (4/13, A21), David Broder says Rep. Jim Cooper discussed with him "one of the most secretive documents in Washington -- the official Financial Report of the United States Government." The cover letter "in the report from Treasury Secretary John Snow contains the bad news. Whereas the budget deficit for fiscal 2005 was officially given as $319 billion, 'the government's accrual-based net operating cost . . . was $760 billion in 2005.' That $760 billion is the real difference between the money the government received and the obligations it added in the past year -- in other words, the unfunded costs being passed on to our children and grandchildren." David Walker, the head of the Government Accountability Office, "has been traveling the country trying to spread the alarm, said flatly that if the tax cuts now in effect are made permanent, as President Bush is requesting, and spending continues to rise at the current rate, 'the system blows up. More than half our debt is now financed by foreign countries, and they will exact a price.' Digging out of this mess 'will take 20 years,' Walker said, but the first step is simply to reassert the budget controls -- spending caps and a 'pay-go' rule that requires offsets for any new tax cuts or spending increases."

WSJ Says House GOP Refusal To Rein In Spending Could Cost Majority. The Wall Street Journal (4/13, 2.11M) says in an editorial that if Republicans "lose control of Congress in November, they might want to look back at last Thursday as the day it was lost. That's when the big spenders

DOJ_NMG_0025937

among House Republicans blew up a deal between the leadership and rank-in-file to impose some modest spending discipline." This is "all about Republicans and their refusal to give up their power to spend money at will and pass out 'earmarks' like a bartender offering drinks on the house. The chief culprits are the House Appropriators, led by Committee Chairman Jerry Lewis of California and his 13 subcommittee chairmen known as 'cardinals.' If Republicans lose the House -- and they are well on their way -- Mr. Lewis deserves the moniker of the minority maker."

Most States Close To Meeting NCLB Teacher Standards. The AP (4/13, Feller) reports, "Under federal pressure, most states are close" to meeting the No Child Left Behind Act's "highly qualified" teacher standards "or so they say." States must have 100 percent of core courses taught by "highly qualified" teachers or have made "a good-faith effort." At present, "thirty-three states claim 90 percent to 99 percent of their main classes" meet the standard and most others report "70 percent to 89 percent" do. Yet "skepticism remains over whether states have inflated their quality numbers by setting easy standards." The U.S. Department of Education will review the state reports and determine which states qualify by May 15. Those that have not are subject to loss of federal education funds.

GAO Report Says State Department Wasted Million On Airline Travel. The Washington Times (4/13, Kralev, 90K) reports the Government Accountability Office is "accusing the State Department of wasting 'tens of millions of dollars' a year on business-class airline travel." The GAO report "said two-thirds of 'premium' tickets that the department purchased between April 2003 and September 2004 -- most of them business-class tickets -- were not 'properly authorized, justified or both.'" The State Department "disputed the report's findings but said it would implement the auditors' recommendations." The GAO also reported "the department also paid about $6 million for tickets that were not used."

Watchdog Group Releases Ethics Complaint Against Jefferson. The Washington Times (4/13, Fagan, 90K) reports watchdog group Citizens for Responsibility and Ethics in Washington "released an ethics complaint yesterday against a congressman from Louisiana, charging that he played a role in a conspiracy and bribery scheme and misused federal resources in the wake of Hurricane Katrina." Jefferson is "the subject of an ongoing investigation in which his former aide, Brett Pfeffer, pleaded guilty to conspiracy to commit bribery of a public official and aiding an abetting such bribery, states the complaint released yesterday."

LAT Poll Shows Bush Approval Rating At 39 Percent. The Los Angeles Times (4/13, Brownstein, 958K) reports a Times/Bloomberg poll of 1.357 adults conducted April 4 through April 11 (+/-3%) showed that while "Bush's job approval rating was essentially unchanged from his 38% showing last month, the new poll found Democrats opening double-digit leads on the key measures of voters' early preferences for the November balloting." For example, "Democrats lead Republicans 49% to 35% among registered voters who were asked which party they intended to support in their congressional districts this fall. When registered voters were asked which party they hoped would control the House and Senate after the midterm election, 51% picked the Democrats and 38% the GOP. On both questions, independent voters preferred Democrats by ratios of about 3 to 1 or more."

The Financial Times (4/13, Pruzan) notes Bush's "job-performance figures represent a continued slump from earlier this year, before controversies erupted over immigration, government surveillance and a Dubai-based company's attempt to take over several US port container facilities. In early January an LA Times/Bloomberg poll showed 43 per cent job approval for Mr Bush." Bloomberg (4/13) also reports on the poll.

Several House Republicans Renege On Term-Limits Vows. USA Today (4/13, 51, Stone, 2.31M) reports that Arizona Rep. Jeff Flake (R), who "pledged during his first campaign for Congress in 2000 that if elected, he would serve three two-year terms," is "running again to keep his seat. … 'It was a mistake to limit my own terms,' says Flake," who "says the once-fashionable movement to limit terms in Congress has 'just petered out.'" Flake "is one of at least seven House Republicans who had vowed to leave Congress next year but will be on the ballot in November. They ran as citizen legislators -- antidotes for 'career politicians.' But after six or 12 years on Capitol Hill, they say they're just getting the hang of the job." University of California-San Diego political scientist Gary Jacobson said,

DOJ_NMG_0025938

"Since nobody [recently] has been punished for breaking the vow, I don't think anyone sees it as a serious threat."

Will Says Entitlements Could Suffer Same Crisis Facing GM. George Will writes in the Washington Post (4/13, A21, 744K) that "the accelerating crisis of private-sector welfare states such as GM prefigures the coming crisis of the public sector's entitlements. … Bankruptcy -- seeking judicial permission to shred contracts improvidently entered into -- should be so costly that it cannot become a routine management tool for private-sector welfare states. And America's welfare state cannot seek what is called 'bankruptcy protection.' Detroit today is having what Washington will eventually have -- a wrenching rendezvous with promises that seemed compassionate, or at least convenient, when originally made but that cannot be kept without ruinous consequences."

WPost Praises Lobby Reform Provision Requiring Disclosure Of "Bundlers." The Washington Post (4/13, A20, 744K) says in an editorial, "The House Judiciary Committee approved an amendment last week that would help shed light on the symbiotic relationship between lobbyists and lawmakers. Offered by Rep. Chris Van Hollen (D-Md.), the provision would require lobbyists to report not just the campaign contributions they gave directly to lawmakers but also the campaign checks they solicit for or deliver to lawmakers -- in other words, a measure of the real influence they wield. Astonishingly, this proposal passed the Judiciary Committee by a vote of 28 to 4 -- along with the underlying bill, a proposal that started out weak and was watered down from there." No other "disclosure requirement would be more useful in explaining the way Washington does business than this one."

USA Criticizes House Ethics Committee Failures. USA Today (4/13, 2.31M) says in an editorial, "Just when you think Congress' obtuseness about its tawdry image can't get any worse, its members manage to outdo themselves. And while Democrats might think the ethics scandals will work against Republicans this fall, betrayal of the public trust clearly knows no partisan boundaries." Ranking Democrat on the House ethics committee Alan Mollohan, "was reported, first by The Wall Street Journal, to have quietly directed at least $178 million in taxpayer funds to a network of home-district friends, business partners, contributors and former employees." In addition, the "moribund ethics panel, meeting in secret, again declined to investigate longstanding allegations of questionable or illegal conduct against at least three prominent members of the House: Republicans Bob Ney of Ohio and Tom DeLay of Texas and Democrat William Jefferson of Louisiana." Since Congress "has demonstrated that it can't do the job, a non-partisan independent panel ought to."

OTHER NEWS:

Stock Markets Rebound, Finish Higher. NBC Nightly News (4/12, story 5, 0:10, Williams, 9.87M) reported, "Now to Wall Street today, where stocks finished higher: The Dow was up more than 40 points [to close at 11,129.97]]. NASDAQ gained just over 4 points on the day's trading [to close at 2,314.68]."

The Wall Street Journal (4/13, Browning, 2.11M) reports, "Buoyed by hopes for strong corporate profits and by some positive economic news, investors shrugged off rising bond yields, permitting stocks to recoup some of Tuesday's losses." The market "benefited from news that the February trade deficit was narrower than expected, although that was partly because of the fact that Chinese exports were soft during the Chinese New Year period."

The Financial Times (4/13, Yuk) notes that while "crude oil futures ended slightly lower after the release of mixed weekly inventories data, lingering nervousness over Iran kept investors on the edge."

Rising Prices Of Commodities Not Seen As Threat To Economy. The Christian Science Monitor (4/13, Trumbull, 61K) reports, "Copper at $6,000 per ton. Gold at $600 an ounce. Oil persistently above $60 per barrel. The last time these key commodities enjoyed such a concurrent boom, inflation ruled, Ronald Reagan was headed to the White House, and the economy was in the tank." But "do today's run-ups in metals and oil prices signal trouble ahead?" The Monitor notes, "Quite the opposite, some economists say. In a humming world economy, supplies of some key raw materials are struggling to keep pace with demand. That's no surprise. Likewise, investors, seeking profits at a time when stocks and bonds lack luster, are plowing money into silver and gold."

Innovation Said To Keep US Industry "Humming." A front page story, the last in a four-part

DOJ_NMG_0025939

series, in the Washington Times (4/13, Sparshott, 90K) examines "the cutting-edge innovation necessary to maintain the country as one of the world's leading economies." Federal funding, "coupled with collaboration among leading universities and entrepreneurs, is critical to the US industrial base -- and has made areas around Boston, California's Silicon Valley and North Carolina's Research Triangle launching pads for startups trying to cash in on the latest technologies developed in the world's premier university labs." USA adds, "President Bush, in his State of the Union address in January, acknowledged the importance of scientific innovation when he announced an American Competitiveness Initiative. … Despite the dip in funding for basic science, US research and development spending accounts for more than a third of the global total, outstripping any other nation." Innovation "has kept US industry humming -- with new companies and new products -- even as old-line manufacturers that have failed to adapt have fallen by the wayside."

Ethanol Costs Adding To Gasoline Price Spike. The mandated use of ethanol to replace the additive MTBE is adding to the cost of gasoline, which has already been on an upward trend itself. NBC Nightly News (4/12, story 6, 2:20, Tibbles, 9.87M) reported, "Ethanol, the corn-based, clean air additive US refiners are scrambling to add to the nation's fuel supply" is a "boon for farmers." But "some analysts say for every gallon of gas, up to 20 cents is ethanol and that number is rising. So why is it so expensive? Last summer, Congress mandated the use of ethanol, and by May 5th, many refineries will switch. That new demand has pushed the price of ethanol above $2 a gallon." Ethanol also "can't be pumped down existing pipelines. It has to be transported by rail or by truck, overwhelming the transportation system causing delays, even causing hoarding, and driving up the price." Ethanol producers "maintain the industry is still in its infancy, and as it becomes more efficient, prices will come down while reducing reliance on foreign oil."

In addition to rising gasoline prices, the Wall Street Journal (4/13, Kilman, 2.11M) reports the "spot price of ethanol…has doubled over the past 12 months to about $2.65 a gallon," leaving "mutual-fund managers and well-heeled investors…grasping for any stock with the slimmest connection to ethanol." The Journal says the boom has left "some economists are wondering whether the ethanol industry is growing so fast that it could be faced with a glut before too long."

Study Finds Pension Reforms Could Reduce Companies' Value By 8%. The Financial Times (4/13, Beales) reports a new study shows "proposed changes to the way US companies account for pension obligations could knock an average of 8 per cent off the net worth of 100 of America's biggest companies." The findings "come as Congress negotiates rule changes designed to make companies more responsible for the pension promises they make to employees, amid growing concern about obligations being reneged upon or dumped on the federal government." Actuary firm Milliman "calculates that 100 big companies' pension plans remain underfunded by just under $100bn in aggregate when assumed future pay rises are considered, in spite of three years of better-than-expected investment returns. The companies made an average 11.3 per cent return last year against an expected return of 8.5 per cent."

Options To Employer Benefits Seen As Problematic. In his Wall Street Journal column (4/13), David Wessel says, "If employers pull out of the health and pension business, who takes their place? Ultimately, there are three options, all with problems. One is to make it cheaper for employers to offer benefits or force them to do so." Another is "to make workers fend for themselves." The third "is to have government pick up more of the tab." Business "resists the first option. Many individuals may find making wise decisions harder than advocates suggest. And moving toward individually purchased insurance can undermine the benefits of pooling risk. As for the government -- well, it hasn't any visible means of paying for the Social Security, Medicare and Medicaid benefits it already has promised."

NYTimes Says Pension Reform Bill A Special Interest "Grab Bag." The New York Times (4/13, 1.19M) says in an editorial that the pension reform bill under consideration in Congress is "laden with special interests" and "had ceased to be only about pensions. And as the lawmakers were preparing to go home, it became increasingly about tax cuts." So far, "the ploy has served only to highlight the extent to which the pension bill is already a grab bag of bad tax ideas."

SCOTUS To Allow Citations To Unpublished Opinions. The Legal Times (4/13, Mauro) reports, "The Supreme Court on Wednesday adopted a historic rule

DOJ_NMG_0025940

change that will allow lawyers to cite so-called unpublished opinions in federal courts starting next year. The new rule takes effect unless Congress countermands it before Dec. 1." The Times continues, "The justices' vote represents a major milestone in the long-running debate over unpublished opinions, the sometimes-cursory dispositions that resolve upward of 80 percent of cases in federal appeals courts nationwide. In some circuits these dispositions have no precedential value and cannot be cited. … 'Unpublished' is a misnomer, since most of these opinions are available now on legal databases. But some federal judges have argued that if this category of opinions can be cited and used as precedent, they will take more time to decide and write, sharply increasing the backlog of cases. Many sentencing appeals, for example, are resolved by unpublished opinions. The U.S. Courts of Appeals for the 2nd, 7th, 9th, and federal circuits ban the citation of unpublished opinions outright, while six other circuits discourage it." The Times adds, "Under the new rule, circuits will still be able to give varying precedential weight to unpublished opinions, but they can no longer keep lawyers from citing them -- in the same way lawyers cite rulings from other circuits or other authorities, such as law review articles."

State AGs Increasingly Going After Businesses. The National Law Journal (4/13, Post) reports, "State attorneys general, whether united or solo, are becoming national players … A combination of eased federal business regulation and corporate consolidation has dramatically transformed the role of state attorneys general, increasing their clout to shape national public policy through aggressive litigation." The Journal continues, "The shifting legal and corporate landscape has now made unified action among state attorneys general -- combined with creative individual actions -- a strategic necessity. … Recent victories by AGs working together have included: … A $295 million settlement among 49 states, the District of Columbia and Ameriquest over the mortgage loan company's allegedly predatory lending practices, reached in January. It is the second-largest consumer protection settlement, exceeded only by the 2002 predatory lending settlement between Household Finance Corp. and most states that ended litigation filed in state courts throughout the country. … In 2005, attorneys general from 47 states and the District of Columbia, Georgia and Hawaii's consumer protection offices reached a $40 million agreement with State Farm Mutual Insurance Co. The company had approached the states and said it could not confirm that it had given proper titles to a small percentage of vehicles that had been damaged or stolen, for which it had acquired title and then sold. None of the settling states sued. … In 2003, every state, the District of Columbia and the five U.S. territories resolved an antitrust suit against Bristol-Myers Squibb Co. that involved the cancer-fighting drug Taxol. A total of $55 million went to resolve claims of consumers and government agencies, and the company agreed to injunctive relief regarding its monopolization of Taxol and its generic equivalents. Vista Healthplan v. Bristol-Myers Squibb Co., No. 1:01CV01295 (D.D.C.)."

States Taking Responsibility For Issues Best Dealt With At Federal Level. In a New York Times op-ed (4/13), Cornell economist Robert Frank says, "In most of the world, for example, the primary responsibility for ensuring access to health care, regulating environmental quality and supporting basic scientific research is exercised by national governments. But in this country, these tasks are increasingly managed by state, and even local, governments." In "each case, there are compelling economic reasons for delegating the activities to national, rather than state or local, governments. Yet in each arena, the federal government has failed to act. It refuses to participate in international efforts to limit greenhouse gases. It makes further cuts in federal support for basic scientific research, even as the nation's share of world patents continues to decline. And about 46 million Americans currently lack any form of health insurance."

Nine States Considering Extending SOL For Suits Against Dioceses. USA Today (4/13, Willing) reports, "The Catholic Church is having early success in fighting proposals in state legislatures that would permit people claiming they were sexually abused as children to sue priests and other church officials long after the alleged offenses occurred." USA continues, "Measures proposed in nine states would suspend statutes of limitation and allow lawsuits to be filed regardless of when an alleged offense took place. The proposals are patterned on a 2003 California law that allowed a one-year window for suits to be filed there without regard to the statute of limitations." USA adds, "Since March, aggressive lobbying by the church helped to bottle up such a measure in a state Senate committee in Maryland, and to alter the language of an Ohio bill to rule out new

DOJ_NMG_0025941

lawsuits. A bill in Colorado's Legislature is being debated, but it's a long shot because of intense Catholic opposition, the bill's supporters say. The church is gearing up to fight proposals in Delaware, Hawaii, Michigan, New York, Pennsylvania and Wisconsin. … Mark Chopko, counsel to the U.S. Conference of Catholic Bishops, says the bills unfairly target Catholics and could add millions of dollars to the $1.38 billion the U.S. church has paid since 1950 to settle claims and for other expenses related to sexual abuse of minors by priests."

Bill Clinton Contrasts Foreign Policy Vision With Bush. Dana Milbank in his "Washington Sketch" column in the Washington Post (4/13, A2, 744K) writes that while former President Bill Clinton received the J. William Fulbright Prize for International Understanding he took the opportunity to contrast his foreign policy with President Bush's. Clinton's comments were not "the overt, I-told-you-so gloat; that would be unseemly for a former president." But Clinton's "words carried the subtle but unmistakable pleasure of sua culpa." Citing "the plummeting image of the United States in the Muslim world -- except in Indonesia, where Clinton himself has been helping with tsunami relief -- he said that 'it's a big argument for doing things in a cooperative way rather than in a unilateral way.'" Clinton said in Indonesia "Approval of bin Laden had gone from 58 percent to 28 percent. … They saw the military dropping food instead of bombs."

In contrast, the AP (4/13, Barrett) in an article titled "Bill Clinton Learns to Laugh at His Past" describes Clinton as self-effacing, reporting, "In recent days, Clinton has poked fun at his post-White House life working on global disaster relief and HIV/AIDS programs." Clinton has "also shown a willingness to mock the days his presidency was consumed by the Monica Lewinsky scandal and impeachment."

Hillary Clinton Criticizes Bush Economic Record. In a speech to the 78th annual dinner meeting of the Economic Club of Chicago Tuesday night, Sen. Hillary Clinton took a populist approach to criticizing President Bush's economic policies, saying they did not benefit working-class Americans. The Washington Times (4/13, Pfeiffer, 90K) quotes Clinton saying, "Tax cuts alone cannot secure the middle class. They are not the cure-all for everything that ails the American economy." She "voted against the 2001 and 2003 tax cuts and several other tax-cutting measures during her first term," and "marked a clear divide between herself and Republicans." But House Speaker J. Dennis Hastert "called Mrs. Clinton's claims baseless" saying, "The facts are pretty clear: Republican tax relief has sparked surging economic growth. In Illinois alone, the unemployment rate has dropped from 5.6 to 5.0 percent in the last six months."

Ahead Of '06 Elections, Voters Said To Be In An "Anti-Incumbency" Mood. The AP (4/13, Fournier) reports, "More and more, Americans are frustrated with politics as usual in Washington. … Analysts say the public may be getting angry enough to give the U.S. political system a jolt, one way or another. Voters could toss Republicans from power in Congress this fall, or turn the White House over to Democrats in 2008. Maverick reform-minded Democrats and Republicans might shake up their parties. Or perhaps voter unrest will fuel a credible third-party presidential campaign. 'There is certainly a lot of anti-incumbency out there and neither of these parties is doing swimmingly well,' said independent pollster Andrew Kohut of the Pew Research Center," whose "surveys suggest a throw-the-bums-out mentality is on the upswing, especially among independent voters." The AP notes, "Nearly half of independents say the Democratic and Republican parties are equally corrupt. An AP-Ipsos poll in December found nearly 90 percent of all voters believes political corruption is a serious problem.

Analysts Say Democrats Likely To Gain Seats In '06, But Not Win Control Of House. A front-page article in the Washington Post (4/13, A1, Weisman, 744K) reports that Democrats have "nearly a dozen strong candidates with the potential for unseating House Republicans, but probably not enough to take back control of the House absent a massive anti-incumbent wave this fall, according to House political experts." The Post notes that Tuesday's special election to fill the seat of ex-CA50 Rep. Randy "Duke" Cunningham (R) "showed that the Democrats face an uphill battle to pick up seats even in districts where the Republicans have their backs to the wall." Francine Busby (D), "running on a theme of ethics in government, finished first in a crowded field of 18 candidates to succeed Cunningham, who was sent to prison after pleading guilty to taking bribes in return for legislative favors." But Busby "garnered only 44 percent of the vote and was forced into a

DOJ_NMG_0025942

June 6 runoff." Busby may face ex-Congressman Brian P. Bilbray (R), "who finished second with 15 percent. State GOP leaders expect Republicans to coalesce around the eventual nominee in the runoff and retain the seat." The Post adds, "It will be up to lesser Democratic lights -- running in Republican districts with less-than-glowing résumés -- to help provide the 15 net victories Democrats need to take back control of the House. … In that context, Busby's performance" isn't "encouraging to Democrats, said Stuart Rothenberg, a congressional analyst and editor of the Rothenberg Political Report. 'There may be a wave building, but it's still off the shoreline,' he said."

Democrats Seen As Having Best Opportunity At Winning Back House Since '94. An article in the Christian Science Monitor (4/13, Feldmann, 61K) paints a different picture of Democrat's hopes of regaining control of the House, relating, "Privately, some GOP political handicappers, in a race-by-race assessment, predict that the Democrats will pull it off, as the national mood toward President Bush and the Republican-ruled Congress sours further. The two latest generic congressional polls -- testing which party voters want in charge -- favor the Democrats by large margins: 10 points in one, 16 in the other. This gap 'suggests something about the national mood, but whether it will be sustained through the fall or just how that will translate into seat swings is another question,'" said Gary Jacobson, a political scientist at the University of California, San Diego. Jacobson added, "But it's the best shot the Democrats have had since they lost the House in 1994. If they don't get it this time, they'll really have to worry."

Study Indicates Young "Religious Centrists" Emerging As Key Voting Bloc. The Washington Times (4/13, Harper, 90K) reports, "College students are becoming more religious, and it's affecting their political views, according to a new Harvard University survey of this potentially influential voting bloc. 'Religious centrists' rule, according to the university. A full 70 percent say religion plays an important part in their lives, with a quarter saying their spirituality has increased at college. Six out of 10 say they are concerned about the moral direction of the country, according to the poll of 1,200 students from across the country, conducted March 13 to 27 and released Tuesday." The Times notes, "The Harvard study advises political parties to woo the spiritually inclined, a demographic that the popular press mostly deemed the exclusive territory of the 'religious right' in the past two presidential elections. 'This analysis foreshadows the 2008 general election campaign for president where religious centrists, nearly a quarter of the student vote, will be the critical swing vote…and likely the most influential group in American politics for years,' according to the survey."

Kingston Says GOP Can Benefit From Increased Use Of Blogs. The Washington Times (4/13, Pfeiffer, 90K) reports that GA1 Rep. Jack Kingston (R) "says Republicans need to use the Internet better to connect with nontraditional voters and to monitor the concerns of constituents heading into this year's midterm elections. 'It's the new talk radio. We can connect with new people who will come out and vote for us,' said Mr. Kingston, vice chairman of the House Republican Conference, who has a blog and writes an occasional 'diary' for the popular conservative site redstate.com." Kingston on Monday "held an hourlong conference call with conservative bloggers," allowing "participants to address topics ranging from Iraq to illegal immigration. Popular conservative blogger Matt Margolis, who has participated in several of Mr. Kingston's conference calls, said such interactions provide insight and access to bloggers, and, ultimately, will help legislators get out an unfiltered message. 'Republicans need bloggers to help get their message out, while Democrats have been able to rely on the mainstream media,' said Mr. Margolis."

Nagin Faces 22 Challengers In New Orleans Mayor's Race. The Los Angeles Times (4/13, Simmons, 958K) reports, "The frustration, disillusionment and anger of life after Hurricane Katrina have compelled 22 people to declare that they can do a better job of running the city than Mayor C. Ray Nagin. The largest field of challengers in a modern New Orleans mayoral race includes marquee names such as Lt. Gov. Mitch Landrieu," but "most are relative unknowns." The Times notes, "Two candidates are widely seen as Nagin's chief challengers, primarily because of name recognition and financing: Landrieu, son of the city's last white mayor, Maurice Edwin 'Moon' Landrieu, and brother of Sen. Mary L. Landrieu (D-La.); and Ron Forman, president and chief executive of the Audubon Nature Institute. Four other candidates have made the cut to regularly participate in televised forums and debates: lawyer Virginia Boulet, entrepreneur Robert Couhig, former Councilwoman Peggy Wilson and the Rev. Tom Watson."

DOJ_NMG_0025943

Romney Signs Massachusetts Health Care Reform Law. Massachusetts Gov. Mitt Romeny signed into law a universal health insuranmce bill which was generally described as a "landmark" and groundbreaking.

CNN's The Situation Room (4/12, Collins) reported, "Massachusetts Governor Mitt Romney today signed a new health care reform plan into law. It is designed to insure nearly every resident of the state. Supporters say it could serve as a model for the rest of the nation and a possible platform for a Romney presidential campaign. A new ABC/Washington Post poll finds, 55 percent of Americans say they would support similar legislation in their own states."

The New York Times (4/13, Belluck, Zezima, 1.19M) reports, "In a ceremony full of pomp and political backpatting, Gov. Mitt Romney signed Massachusetts' landmark health care legislation Wednesday, setting the stage for the state to be the first to provide health coverage to virtually all of its citizens." Yet "the celebratory atmosphere was accompanied by some friction because Mr. Romney, a Republican, vetoed a provision some Democrats and health care advocates adamantly support: a requirement that employers who do not provide health insurance to their employees pay the state up to $295 per worker each year." Democrats "said they expected to override that veto in the next few weeks and were examining Mr. Romney's vetoes of seven other less controversial provisions."

Knight Ridder (4/13, Pugh) reports, "Romney signed groundbreaking universal health-care legislation Wednesday that promises to cover nearly all the state's 515,000 uninsured residents by 2010." Framing the signing as historic Kinght Ridder continues, "In a packed ceremony in the chambers where the doctrine of 'no taxation without representation' was born, Romney and the bipartisan leaders who crafted the bill sensed a watershed moment."

The AP (4/13, Leblanc) reports, "The program is a potential political coup for Romney as he weighs a possible run for the Republican presidential nomination in 2008."

Noting the pomp and ceremony the Washington Post (4/13, A6, Fahrenthold, 744K) notes, "the bloom on Massachusetts's first-of-its-kind policy was wearing off. Some observers have charged that the plan promises a huge array of low-cost, state-subsidized health-insurance policies for the uninsured to buy -- but provides few details about how this will be done."

And the Washington Times (4/13, A1, Lambro, 90K) in a front page story reports "the ambitious undertaking, the product of months of negotiations in Mr. Romney's last year in office, would cost more than $1 billion a year and has drawn sharp criticism from conservatives who called it "a big government" plan and another version of "Hillarycare," the ill-fated plan produced in 1993 by first lady Hillary Rodham Clinton."

Romney Says Health Care Requires A Republican Solution. Massachusetts Gov. Mitt Romney said on Fox News' Your World With Neil Cavuto (4/12), "I think health care and education are two issues the Democratic Party has held on to for a long time but they haven't had answers." Health care "takes a Democratic goal we share, getting everybody insured and solving the issue in a Republican way, which is applying a personal responsibility principle, reforming the market, and allowing people to buy private health care insurance they can take with them from job to job that's entirely portable. It's a Republican way of solving a problem we face as a nation."

Romney Says Aspects Of Massachusetts Plan Would Work Nationally. Romney was asked on MSNBC's Hardball (4/12) if the Massachusetts plan will work for the entire country. Romney said, "There are certain aspects of it that I think would work across the country, perhaps better in some states than others. Of course the great thing about federalism is you let a state try it and see how it works before you spread it out."

And the Wall Street Journal (4/13, Bulkeley, 2.11M) reports, "The Massachusetts bill is being watched widely as a possible pattern for other states and as a prime element in Mr. Romney's expected bid for the Republican presidential nomination in 2008. It reallocates existing federal and state funds and requires uninsured residents to buy health insurance, which the state would subsidize for poor people."

Rice Asks Security Council To Take "Strong Steps" To Counter Tehran's Enrichment Plan. Secretary of State Condoleezza Rice warned Iran after Iranian President Mahmood Ahmadinejad yesterday upped the ante in his country's pursuit of a nuclear program, saying Iran will now set the stage for large scale enrichment of uranium. The story was covered on each of the networks last night, and NBC ran it second in its lineup, as well as a follow-up about the potential for a US military response. Rice's "strong" warning was also featured prominently on the cable TV shows and in the major US newspapers.

DOJ_NMG_0025944

NBC Nightly News (4/12, story 2, 2:45, Williams, 9.87M) reported, "Even Russia and China joined the US and Europe in criticizing Iran's nuclear program. In the face of world criticisms, Iran's leader remained defiant today, telling a rally that all Iranians demand the benefits of nuclear technology." Secretary of State Condoleezza Rice "asked the UN's top nuclear inspector to tell Iran's leaders when he meets them tomorrow they have crossed a dangerous line." Condoleezza Rice, Secretary of State: "If the Iranians continue down this course there has to be some course of action by the Security Council." Mitchell: "The UN Security Council agrees now that Iran should not develop weapons, but Russia and China are still not willing to punish Iran." A lot is "going on behind the scenes." Secretary Rice has "certainly told Mohammed El-Baradei at his meetings in Tehran tomorrow and the next day that he's got to be very tough with Iran and he has credibility with them. Also, they are pressuring Russia, and finally Hu Jintao, the Chinese president, is coming next week for a summit, and as you can imagine, that is going to be a very important topic of their conversations."

The CBS Evening News (4/12, story 6, 2:00, Schieffer, 7.66M) quoted UN Ambassador John Bolton: "That is leaving a potential nuclear weapons capability in the hands of the world's largest state sponsor of terrorism and that is not a happy prospect." Axelrod: "All eyes now are on Mohammed El-Baradei, the head of the International Atomic Agency dispatched to Iran by the United Nations to verify if Iran's claims are true." Clearly, the US "speaks loudest and today most confrontationally. Deputy Chief of Staff Karl Rove said about Ahmadinejad..." Karl Rove, Deputy Chief of Staff: "He's not a rational human being to deal with and we're going to have use every diplomatic tool, the United Nations, the International Atomic Energy Agency, and our partners in Europe to bring pressure to bear to stop this."

ABC World News Tonight (4/12, story 4, :25, Vargas, 8.78M) reported, "One day after Iran's bombshell announcement it has begun to enrich uranium, it has unveiled plans to dramatically expand its nuclear program. A top official says there are plans to install 3,000 centrifuges at one atomic site this year. Despite some tough talk today from Secretary of State Condoleezza Rice, it is not clear what the next move by the international community will be."

CNN's The Situation Room (4/12, Collins) reported, "Secretary of State Condoleezza Rice says it is time to take what she calls strong steps against the Tehran government. She's responding today to Iran's announcement that it has successfully enriched uranium." Rice "has not called for an emergency meeting of the UN Security Council, but she is calling on the UN's top nuclear watchdog to intensify pressure on Iran during talks this Friday."

Fox News' Special Report (4/12, Rosen) reported, "Secretary Rice while calling for the Council to take strong steps also appeared eager to downplay recent reports that the Bush Administration is ramping up for military action against Iran. She said, and I quote, a concerted and cohesive diplomatic policy that the world is behind will convince Iranians that they have to come back in into compliance."

AFP (4/12) reported Secretary Rice "called Wednesday for the UN Security Council to take 'strong steps' to respond to Iran's announcement it had successfully enriched uranium," however, she "did not call for an emergency meeting of the 15-member Security Council." Rice: "I do think that the Security Council will need to take into consideration this move by Iran and that it will be time when it reconvenes on this case for strong steps to make certain that we maintain the credibility of the international community on this issue." The New York Times (4/13, Fathi, Hausner, 1.19M) adds, "Asked if Ms. Rice wanted sanctions, the White House spokesman, Scott McClellan, said the United States was consulting with Security Council members about a diplomatic course of action." A separate AFP (4/12) piece said, "Iran's growing militancy about its nuclear program has left US officials groping for a balance between diplomacy and a credible military threat if it gets near to building an atomic bomb." While the US "led a global chorus in condemning the Islamic republic," Washington "appeared no closer to nailing down an international consensus on how to respond."

The Los Angeles Times (4/13, Rubin, 958K) in an article titled "U.N. Response To Iran Nuclear Work Unclear" says the "sharpest response Wednesday came from the United States," but "Bush administration officials refused to spell out what the U.S. might demand by the world body."

The Financial Times (4/13, Khalaf, Smyth) keys on the Security Council's reaction, saying "members on Wednesday loudly criticised Iran's declaration" and noting, "Russia and China, the two council members most sympathetic towards Iran, added their voices to European Union governments, and told Tehran its actions ran counter to UN decisions." However, the Times says, Russian Foreign Minister Sergei Lavrov "warned on Wednesday against the use of force to deal with Tehran" and " said military strikes on nuclear

DOJ_NMG_0025945

facilities would create 'a dangerous explosive blaze in the Middle East, where there are already enough blazes.'"

USA Today (4/13, Slavin, 2.31M) notes, "The increased tensions coincide with the arrival in Iran of Mohamed ElBaradei, head of the International Atomic Energy Agency, the U.N. nuclear watchdog." And "Iran's public claims may be an effort to improve its bargaining position in future negotiations with Europe and the United States, said Najmeh Bozorgmehr, an analyst at the Brookings Institution." The AP (4/13, Schweid), the Washington Post (4/13, A18, Vick, 744K) report similar details and the Washington Times (4/13, A1, 90K) caries a front page story from combined dispatches.

In somewhat negative tones, the Wall Street Journal (4/13, A3, Robbins, 2.11M) says "there is growing anxiety in the U.S. and Europe that Tehran's technical mastery is far outpacing diplomatic efforts to stop it," and notes, "Two years of European-led negotiations and a threatened showdown with the United Nations have barely slowed Iran's drive to enrich uranium" for civilian or military purposes.

And Bloomberg (4/13, Alison) adds that U.S. Assistant Secretary of State for International Security and Nonproliferation in Moscow said, "Using those 50,000 centrifuges they could produce enough highly enriched uranium for a nuclear weapon in 16 days." Rademaker said Ahmadinejad's statement "was a deeply disappointing announcement."

Tehran Said To Still Lack Materials, Expertise. The New York Times (4/13, A1, Broad, Fathi, Brinkley, 1.19M) in a front page story reports, "Western nuclear analysts said yesterday that Tehran lacked the skills, materials and equipment to make good on its immediate nuclear ambitions." Some analysts called Tehran's "claims exaggerated. They said nothing had changed to alter current estimates of when Iran might be able to make a single nuclear weapon, assuming that is its ultimate goal. The United States government has put that at 5 to 10 years, and some analysts have said it could come as late as 2020." A similar AP (4/13, Buzbee) story says Tehran's "boast may mean little," and notes "diplomats and experts familiar with the program say Iran still is far from producing any weapons-grade material needed for bombs and may be exaggerating its own progress."

Options Seen As Narrow For Bush. An analysis piece in Washington Post (4/13, A18, Baker, 744K) says President Bush now "finds his options ever more constricted. The Iranians seem unfazed by U.N. statements. The Russians and Chinese won't go along with economic sanctions. And the generals at the Pentagon hate the idea of a military strike." Even though Europe, Russia and China "expressed disapproval of Iran's latest move, there were no signs of consensus on what to do about it." The Post says Bush's "central problem" is that Tehran has proven "impervious…to the diplomatic levers Washington and its partners have been willing to use. Some administration officials have grown increasingly skeptical that a solution can be found, raising the prospect that, like North Korea before it, a second member of the trio of rogue states Bush once dubbed the 'axis of evil' may ultimately develop a nuclear bomb over U.S. objections."

LAT Poll Shows US Divided On Action Against Iran. The Los Angeles Times (4/13, McManus, 958K) reports a Times/Bloomberg poll of 1.357 adults conducted April 4 through April 11 (+/-3%) showed "Americans are divided over the prospect of U.S. military action against Iran if the government in Tehran continues to pursue nuclear technology — and a majority do not trust President Bush to make the "right decision" on that issue, a Los Angeles Times/Bloomberg poll has found." Asked if "they would support military action if Iran continued to produce material that could be used to develop nuclear weapons, 48% of the poll's respondents, or almost half, said yes; 40% said no." And "In a telling reflection of Bush's erosion in public support, 54% said they did not trust him to 'make the right decision about whether we should go to war with Iran,' while 42% of respondents said they trusted him to do so."

Pentagon Officials Meeting To Discuss Military Contingency Plans. NBC Nightly News (4/12, story 3, 2:30, Miklaszewski, 9.87M) reported, "Defense Secretary Rumsfeld met with top Pentagon and military officials last week to review all military options against Iran. Pentagon officials stress however, this is very early in the process. No decisions have been made, but almost all options are on the table. Military officials tell NBC News air strikes using cruise missiles and stealth bombers tops the list of military options against Iran. The program targets would be Iran's nuclear sites, like the uranium enrichment plant at Natanz, but that could be expanded to include some military targets such as airfields and anti-aircraft defenses. But it's unlikely air strikes alone could destroy all of Iran's nuclear facilities." The Pentagon "has a standing contingency plan for attacking Iran called CON PLAN 1025. It does include the use of tactical nuclear weapons to destroy deeply buried targets. Military

DOJ_NMG_0025946

officials predict, however, it's highly unlikely the US would choose the nuclear option. At the same time, military officials pretty much rule out any possibility of invading Iran with American ground troops, because the mission would not be to occupy Iran, but to set back its nuclear weapons program." Although Pentagon officials "say they can't rule out any military options, they admit at the same time that the chance is almost zero the US would attack Iran in the foreseeable future."

Germany's Merkel To Discuss Iran In Visit Washington Next Month. The AP (4/13) reports that "President Bush will meet with German Chancellor Angela Merkel at the White House early next month to talk about Iran's nuclear program and other global issues." The AP notes that "the May 3 session will be the leaders' second Oval Office discussion in four months," a sign of warming ties after Gerhard Schroeder departure.

Armitage Says US Must Talk To Iran. The Financial Times (4/13, Sevastopulo) reports former Deputy Secretary Armitage "has urged the Bush administration to hold talks with Iran over its nuclear programme," saying "Washington would benefit from talking to Tehran on a range of issues, including Iran's nuclear aspirations." Armitage: "It merits talking to the Iranians about the full range of our relationship...everything from energy to terrorism to weapons to Iraq. We can be diplomatically astute enough to do it without giving anything away." Speaking of Iran's neighbor, Armitage said the rebuilding of Iraq was "going badly. We haven't been able to train the police and armed forces sufficiently quickly." The Times says Armitage "stressed that the US needed to 'stay the course' and give the Iraqi government time to 'stand on its own feet.'"

Annan Calls For Diplomatic Solution. And Knight Ridder (4/13, Landay, Strobel) reports, "Some experts said the Bush administration should consider a new strategy that recognized Iran as a regional power, embraced direct talks on the nuclear crisis and other issues, and dropped the threat of force." U.N. Secretary-General Kofi Annan called for "everyone to work more actively for a diplomatic solution and to cool down the rhetoric." Annan's "comments reflected assessments that Iran could have made only a minuscule amount of low-enriched uranium and is a long way from starting up an industrial-scale plant that's under construction in Natanz."

Former Iran President Warns Of Impact On Iraq. The AP (4/13, Dareini) reports, "Former Iranian President Hashemi Rafsanjani -- a powerful figure in the country's clerical regime -- warned in an interview with the Kuwaiti newspaper Al-Rai Al-Aam that pressuring Iran over enrichment 'might not have good consequences for the area and the world.'" He "said planned talks between Iran and the United States on stabilizing Iraq could lead to discussions on the nuclear dispute."

Attacking Iran Could Inflame Muslims Against US. And Claremont senior fellow Mark Helprin in an op-ed in the Washington Post (4/13, A21, 744K) writes that while the US may be able to defeat Iran militarily, if Ahmadinejad "could knock us back and put enough of our blood in the water, the real prize might come into reach. That is: to make such a fury in the Islamic world that, as it has done before and not long ago, it would throw over caution in favor of jihad. As simply as it can be said, were Egypt to close the canal, and Egypt, Saudi Arabia and Turkey to lock up their airspace -- which, with their combined modern air forces, they could -- the U.S. military in Iraq and the Gulf, bereft of adequate supply, would be beleaguered and imperiled."

Iranian Reaction Subdued. Knight Ridder (4/13, Allam) reports, "Apart from a few schoolyard rallies and celebratory newspaper headlines Wednesday, Iran's first day in the nuclear club was subdued, with workaday Iranians still more preoccupied with pollution and unemployment than possible retaliation from U.S.-led Western powers." President Ahmadinejad's speech was expected to provoke a patriotic response, yet "Iranians were clearly of two minds about the impact of the development." And in an interview before the speech Iranian political scientis Davoud Bavand "said he wasn't optimistic about the future of international negotiations over Iran's nuclear program."

WPost Advocates Stiffening Penalties On Iran. The Washington Post (4/13, A20, 744K) in an editorial says thus far threats of sanctions from the UN Security Council have been ignored by Iran and that "unless the diplomacy on Iran can be made to work, this administration or its successor may have to choose between war and accepting Iran as a nuclear power. A workable diplomacy will have to include sticks as well as carrots: It will have to show Iranians that defiance of the Security Council, and provocations such as those of Mr. Ahmadinejad, will have tangible consequences."

Hamas Warns West It Is Jeopardizing Own Interests. The Washington Times (4/13, Martin and Svelova, 90K) reports that "Palestinian Prime Minister Ismail Haniyeh warned yesterday that decisions by the U.S. and

DOJ_NMG_0025947

European Union to suspend aid to his Hamas-led government are jeopardizing Western strategic interests in the Arab and Muslim world." Haniyeh called the cutoff of aid "a cover, or green light, for the [Israeli] occupation." In the absence of US and EU funds, Palestinian officials are "scrambling to obtain loans from private Palestinian, Arab and Islamic banks."

Israel Expands Target Zone In Gaza. Knight Ridder (4/12, Nissenbaum) reports that "Israel has begun to fire retaliatory strikes into a larger zone that now comes within 100 yards of Palestinian towns and villages" after a series of rocket attacks. In addition, "Israeli officials have made veiled threats in the news media to send ground forces back into the Gaza Strip."

Muslim Families Keep Jesus' Site Open. Knight Ridder (4/12, Nissenbaum) describes how two Muslim men share the duties of administering the front door of the Church of the Holy Sepulcher in Jerusalem, which contains "the spot where Jesus was crucified and the tomb where he was buried."

Muslim Brotherhood Hopes To Win In Jordan.

The Washington Post (4/13, Williams, 744K) reports that "Islam as a political force is moving to center stage in Jordan." The Islamic Action Front envisions success through "municipal elections that are supposed to take place this year and balloting for parliament in 2007." It has observed "the blossoming of Islamic parties in Iraq, the success of Egypt's Muslim Brotherhood in parliamentary elections last year and, most of all, the recent victory by Hamas in Palestinian legislative elections."

Bush Urges China To Address Trade Issues.

As President Bush prepares to meet with Chinese President Hu Jintao in Washington next week he increased pressure on China to address concerns over trade imbalances. The Washington Times (4/13, Curl, 90K) reports Bush's pressure "came a day after China pledged to lift its ban on American beef, to crack down on the sale of pirated computer software and to consider allowing foreign firms to compete for Chinese government contracts during negotiations between top economic officials from both countries." Yesterday Bush met "with a Chinese vice prime minister, Wu Yi, on U.S.-Chinese trade issues. She assured the president that China soon plans to reopen its market to U.S. beef imports, White House spokesman Scott McClellan said."

And the AP (4/13, Crutsinger) notes the US "has won a string of commitments from China aimed at narrowing a record trade gap, but the White House put Beijing on notice Wednesday the promises must be followed by action." McClellan said "It's progress and...now we will look forward to seeing results." And Bush "pressed the same message Wednesday morning in a meeting with Chinese Vice Premier Wu Yi. … Bush thanked her for 'efforts to make U.S.-China trade more equitable' but pressed for Chinese President Hu Jintao, during his visit to the White House next week, to 'explain to the American people how China will meet the challenge of rectifying global economic imbalances,' McClellan said."

AFP (4/13) adds, "The Bush administration has pressed China in recent months to open up access to US products while lawmakers in Congress accuse Beijing of failing to protect intellectual property rights and allowing the sale of pirated US products."

US Trade Gap Narrows With China. Other stories on the narrowing US trade gap with China did not mention the White House's increased pressure and cautioned some experts note that the improvement could be influence by one-time factors. The New York Times (4/13, Bajaj, 1.19M) reports, "The country's trade deficit with China, the source of much concern in Washington, dropped a sharp 23 percent, to $13.8 billion, in the month, but analysts suggested that the decline was temporary and partly caused by the Chinese New Year, when many factories and businesses shut down to allow workers to celebrate the holidays in late January and early February. The trade figures supported that idea, as exports to China rose 17 percent and imports from the country fell by about 16 percent in the month."

The Wall Street Journal (4/13, Hitt, 2.11M) notes that "even with the improvements, the monthly gap is still one of the largest ever, putting the U.S. on pace this year to break 2005's record annual trade deficit of $723.61 billion. 'The trend still points to a larger deficit in coming months, especially given recent rises in oil prices,' said Nigel Gault, U.S. economist for Global Insight Inc."

US Economic Relationship To China Beneficial To Both. The Washington Times (4/13, A1, Hill, 90K) in a front page story reports, "The United States and China, the world's twin engines of economic growth, have a relationship that has worked well to keep the economy expanding -- but some analysts fear it could end badly." The Times notes, "The U.S. role has been to buy increasing quantities of Chinese-made

DOJ_NMG_0025948

consumer goods, amassing the largest trade deficit ever seen between two countries: $202 billion last year." In response, "China has kept up its share of the economic compact by accumulating a gigantic treasure chest of U.S. dollars from its export sales and reinvesting most of those dollars in U.S. Treasuries and corporate bonds." That "is just as essential in the economic relationship because it provides U.S. consumers and businesses with the credit they need to keep on buying Chinese and other goods." While "China is bad-mouthed regularly in Washington by politicians…the mutually dependent trade relations are credited with helping to keep the world economy afloat and enabling it to recover from the 2001 recession. Lately, it has inspired an economic boom in Asia."

Few Expect China To Shut Down Piracy. The Los Angeles Times (4/13, Lee, 958K) reports, "In recent weeks the Bush administration, under pressure from a Congress unhappy about the large U.S. trade deficit with China, has threatened to get tougher with Beijing by taking its complaint on intellectual property rights to the World Trade Organization." And "Chinese officials are eager to show that they are serious about reducing piracy, especially with President Hu Jintao preparing to visit the United States next week." But "Few believed piracy was the reason for the shuttering of Xiangyang Market. In fact, the announcement came after the city cut a lucrative deal with a Hong Kong developer who has plans to build apartments and offices on the site."

China Dampens Expectations For Yuan Revaluation. The Wall Street Journal (4/13, Browne, 2.11M) reports, "China again ruled out any sudden move to make its currency fully convertible, further damping expectations of a breakthrough on the issue days ahead of a visit to Washington by Chinese President Hu Jintao." Yet, "the yuan has been strengthening slightly and appears poised to break through 8.0 to the dollar. On Wednesday, it closed at 8.0084, representing a gain of 1.2% since the yuan was revalued upward 2.1% against the dollar last July."

China To Halve State Ownership Of Firms. The Wall Street Journal (4/13, Chen, 2.11M) reports, "China aims to cut the number of central government-owned enterprises by about half," mostly with mergers, "with some of the remaining companies then seeking to list their shares or sell stakes to foreign or private Chinese investors." Recent backlashes "against pitfalls of market-oriented policies, such as a growing wealth gap and environmental degradation, has also put a spotlight on Beijing's campaign to overhaul state companies. Many of those companies lose money and remain burdened by bloated work forces, outdated equipment and obligations to provide workers low-cost housing and medical care."

IAE Predicts China Demand For Oil To Decline. The Wall Street Journal (4/13, Pin, 2.11M) reports, "China's oil-demand growth for 2006 may be reined in by a slow start to the year and a continued decline in fuel-oil usage, the International Energy Agency said Wednesday." The IAE "predicts China's oil demand will grow 5.5%, or 360,000 barrels a day, from 6.59 million barrels a day in 2005 -- a negligible downward revision from last month. This is well off the 15% jump in 2004 that took global oil markets largely by surprise, but still the fastest rate forecast for major markets this year."

Google CEO Defends Decision To Cooperate With Chinese Censorship. The New York Times (4/13, Yardley, 1.19M) reports, "Google's chief executive, Eric E. Schmidt, whose company has been sharply criticized for complying with Chinese censorship, said on Wednesday that the company had not lobbied to change the censorship laws and, for now, had no plans to do so." He "defended the decision to cooperate with the censors, saying that accepting the restrictions of Chinese law were unavoidable for Google to enter the Chinese market. 'We had a choice to enter the country and follow the law,' Mr. Schmidt told the foreign reporters. 'Or we had a choice not to enter the country.'"

Knight Ridder (4/13, Johnson) adds, "Schmidt said Google's desire to help Chinese Internet users outweighed concerns about freedom of expression." Schmidt "added that China isn't the only nation in which certain information is barred, mentioning later restrictions in Germany on Internet links to neo-Nazi movements."

ABC World News Tonight (4/12, story 5, 2:35, Vargas, 8.78M) reported that in China, Google's "chief executive was promoting a new venture it calls Gu Ge, a Chinese version of its enormously popular search engine. There is a rush of Internet companies entering China. And sometimes there is a price of doing business there. China has 110 million Internet users."

Yahoo Confronted For Cooperation With Chinese Authorities. ABC World News Tonight (4/12, story 5, 2:35, Vargas, 8.78M) reported China is "still not an open society. And Internet companies are facing fierce criticism for making

DOJ_NMG_0025949

compromises in order to operate there. Yahoo! was most recently confronted by activists." ABC (Tapper) added, "Reporters Without Borders came to Yahoo!'s Silicon Valley headquarters to show the company what its cooperation with the Chinese government really means." Julien Pain of Reporters Without Borders "showed them this video, smuggled out of China. 'My brother is in jail because of you.' In it, the brother of Li Zhi says his brother's health in prison has deteriorated. He says Yahoo helped Chinese authorities identify Li Zhi, who had anonymously exposed government corruption on the Internet." Also imprisoned, "journalist Shi Tao, for writing about Chinese press censorship. His lawyer says Yahoo! helped the government trace e-mails to his computer and warns there are more cases. 'Yahoo! didn't only give information about Shi Tao. It has done the same to many others.'"

South Korea Promises To Level Playing Field For Foreign Investors. The Financial Times (4/13, Fifield) reports, "South Korea financial authorities on Wednesday pledged to create a level playing field for foreign and domestic investors, and to apply regulation in a reliable and rational way, as Asia's fourth largest economy pursues its goal of becoming a major financial centre in the region." South Korea "has identified financial services -- and asset management in particular -- as a key area of future growth for manufacturing-reliant Korea, and has begun liberalising its economy and promoting greater liquidity in its markets as a result." But "foreign investors have recently expressed doubts about the ability of Korea to become a hub while populist outrage against foreign takeovers and profits becomes increasingly loud."

Pakistan Will Buy F-16s. The Financial Times (4/13) reports that "Pakistan's cabinet on Wednesday gave clearance to the purchase of up to 77 F-16 fighter planes from the US, marking a significant expansion for the country's air force." The Times observes that "buying the aircraft could help General Musharraf politically. Pakistani nationalists have questioned his support for the US-led war on terror, saying the US often benefits more from the relationship than Pakistan."

US And Peru Sign Free Trade Deal. The AP (4/13, Gedda) reports that the US and Peru signed a free trade agreement. The AP notes that "once implemented, 80 percent of consumer and industrial products and more than two-thirds of current U.S. farm exports to Peru would become duty-free. Many products from Peru already enter the U.S. market without duties. The agreement ensures that this status would remain unchanged."

Garcia Of Peru Closes In On Runoff Spot. The New York Times (4/13, Forero, 1.19M) reports that former Peruvian President Alan Garcia "appears to be on his way to finishing second in the tally of Sunday's presidential election." The Times reports that "with about 88 percent of the ballots counted, the electoral authorities said Wednesday that Mr. García had 24.4 percent of the vote and that Lourdes Flores, a free-market proponent and former congresswoman, had 23.3 percent." The idea of his running against "fierce antiglobalization nationalist" Ollanta Humala is reportedly "alarming to the country's business class." Garcia's rule from 1985 to 1990 was "was characterized by 7,000 percent inflation, food shortages and widespread rights abuses."

Russia Will Claim Shared G-8 Values. The Washington Times (4/13, Dinan, 90K) reports that "Russia hopes to use this summer's G-8 summit in St. Petersburg to convince the United States and other industrialized nations it shares their values, and that it will be the world's politically safest source of oil and gas in the next few decades." Russia has been criticized for human rights practices, but an anonymous Russian official "said Moscow also wants to demonstrate that it plays a constructive role in the international community."

Ghanaian President Praises US Aid But Criticizes Delays. The AP (4/13) reports that Ghanaian President John Kufuor praised American assistance in "the fight against HIV/AIDS, childhood education, trade and agriculture." However, Kufuor said that "we need more help" in fully implementing the African Growth and Opportunity Act's provisions on "duty-free exports for more than 6,400 African products to U.S. markets" and in receiving promised money from the Millennium Challenge Account.

Kathmandu Consular Section Closed, Hastert Visit Cancelled. The New York Times (4/13, Sengupta, 1.19M) reports the US Embassy Kathmandu "on Wednesday announced the closing of its consular section and canceled a Congressional delegation's visit this week. The moves came as a fourth Nepali was killed during pro-democracy protests in the south of the country, according to a political party that called for the demonstrations." Speaker

DOJ_NMG_0025950

Dennis Hastert and seven other House Members were "scheduled to visit Katmandu this week as part of a swing through the region. The American Embassy in a statement on Wednesday said the visit had been canceled 'due to ongoing violence, curfews and widespread insecurity.'"

Italy Predicted To Tilt Away From US Under Prodi. In an analysis of the impact of this week's election on US-Italian relations, the AP (4/12, Simpson) says "a new center-left government led by Romano Prodi could bring changes in Italy's relationship with the United States, including a return to the 'old Europe' that opposed the war in Iraq and has worries about what it considers Washington's aggressive foreign policy." Prodi's "platform and public statements make clear he intends to focus on closer relations with other European countries and work for a joint European Union foreign policy, saying only the bloc as a whole can counterbalance American power."

In reporting on a potential source of tension in the bilateral relationship, the New York Times (4/13, Kiefer, 1.19M) notes, "Italy's justice minister said he would not seek the extradition of 22 Central Intelligence Agency officers accused of kidnapping a Muslim cleric from the streets of Milan and flying him to Egypt for interrogation. The Milan prosecutor leading the investigation, however, pledged to resubmit the extradition request once Italy's new government is in place." Prosecutors say Hassan Mustafa Osama, AKA Abu Omar, "was taken first to Germany, then to Egypt, and that he was tortured during the interrogations."

Berlusconi Backs Away From Allegations Of Fraud. The AP (4/13, Sanminiatelli) reports Italian Premier Silvio Berlusconi "appeared to back away from his allegation of fraud, releasing a statement late in the evening in which he said that the very thin margin of victory 'requires a scrupulous check to ascertain any possible error or irregularity.'" His "allegations apparently prompted a late-night phone call from Prodi to Interior Minister Giuseppe Pisanu, Apcom and ANSA reported, citing sources in the center-left coalition."

Prodi Confident Of Victory. The New York Times (4/13, Fisher, 1.19M) reports, "As judges began to recount the ballots in Italy's tight national elections, Romano Prodi said Wednesday that he expected that the provisional results giving him a narrow victory would stand and that he would replace" Berlusconi. The Times adds, "Since the voting, Italian politics have lapsed into a state of suspended animation, as Mr. Berlusconi, who waged an all-out campaign for a second term, has refused to concede defeat, saying the results are so close they require a recount." AFP (4/13) carries a similar story.

Political Environment In Italy Uncertain. Many newspapers characterized the political situation in Italy as uncertain. Typical of coverage, the Wall Street Journal (4/13, A6, Meichtry, 2.11M) says the government in Rome "remains in limbo" following this week's election. Prodi "may have succeeded in pulling off a razor-thin victory at the polls, but he faces an institutional logjam that could stall his ability to form a new government for as many as two months, further postponing the economic retooling many economists believe the country badly needs." The delay in forming a working government "threatens to add to a climate of political uncertainty and could further weaken Mr. Prodi's standing. Two days after the polls closed, Prime Minister Silvio Berlusconi has yet to concede defeat, and is contesting the outcome of the election."

The Financial Times (4/13, Barber) reports, "Italy braced itself for weeks of political uncertainty on Wednesday as Romano Prodi, the winner of this week's election, said he would not form a government until May and Silvio Berlusconi, prime minister, continued to challenge the result."

And the Christian Science Monitor (4/13, Celeste, 61K) notes, "Leading a government divided almost equally between left and right, Prodi could be hard-pressed to revive Italy's sagging economy -- let alone undo the laws that critics say Mr. Berlusconi…passed during his five-year term to benefit his interests." John Cabot University in Rome political science professor Franco Pavoncello said, "The future looks like an unstable government." And according to Pavoncello there are also divisions within Prodi.

Opinion analysis of the aftermath of Italy's election echoed that theme. Tony Barber in an op-ed in the Financial Times (4/13) says, "Italy's political, social and cultural divisions – that between Catholic believers and radical secularists is another, reaching deep into Mr Prodi's coalition – were supposed to become a mere historical memory under the political system that emerged in the early 1990s from the debris of Italy's so-called 'First Republic.'" And "with post-election gridlock gripping Italy, it may instead be this 'Second Republic' and its political and economic failures that await burial."

Roger Cohen in his column in the New York Times/IHT (4/12) says "Italy's anxiety after election results revealed a

DOJ_NMG_0025951

country so perfectly divided as to appear almost perfectly ungovernable."

Berlosconi May Lead After Recount. AEI fellow Michael Ledeen in an op-ed in the Wall Street Journal (4/13, 2.11M) suggests Berlosconi may eventually still win after a recount noting that a decade ago "Italians had to choose between two factions headed -- surprise! -- by Messrs. Prodi and Berlusconi. However long Mr. Prodi may govern, we undoubtedly know the name of his successor. Indeed, it is still technically possible for Mr. Berlusconi to remain in office, because the courts are required to check the tallies, which are reported telephonically to the interior ministry. There is normally a difference of 40,000 to 60,000 votes between the original results provided by the interior ministry and the final numbers. In 2001 the number was 57,000. So it is still possible that, when the courts announce the results on April 28, the center-right will have a stable majority in the Chamber. It would only require a shift of about 13,000 votes."

Prince Harry Receives Army Commission. ABC World News Tonight (4/12, story 9, :25, Vargas, 8.78M) reported, "Britain's Prince Harry is now a fully commissioned army officer. His grandmother, the Queen, and most of the royal family were there for his commission ceremony. His rank means that he could now be sent to Iraq or Afghanistan. He says he doesn't want any special treatment. Prince William, Harry's older brother, must now salute him, at least until Harry becomes an officer later this year."

LATimes Says US Should Help Reduce Misery, Unnecessary Death In The World. An editorial in the Los Angeles Times (4/13, 958K) says that "most Americans believe their nation is both too generous and too stingy." Those opposed to more foreign aid cite a 2000 survey finding "that a majority of Americans think the US should spend less on it. When respondents were asked how much of the federal budget goes to foreign aid, the median figure was 20%. When asked how much should be spent, the median was 10%. Those in favor of more foreign aid point out that the US actually spends about 1%." The Times adds, "The United States has the good fortune to be in a position to help reduce misery and unnecessary death in the world. If only the US were as generous as most Americans think it is."

US Said To Be Losing Influence In Africa To China. Raymond W. Copson, who recently retired from the Congressional Research Service, where he specialized on Africa, writes in the Los Angeles Times (4/13, 958K), "At the U.N. Security Council, China -- with Russia and Qatar -- is reportedly discouraging talk of US-backed sanctions targeted against Sudanese officials responsible for the carnage in Darfur." The scale of China's involvement in Africa "is unprecedented." The Times adds, "With China available as a partner, authoritarian rulers from Robert Mugabe in Zimbabwe to Sudan's Omar Hassan Bashir can turn their backs when the West demands improvements in governance and human rights." The US "can win friends at the grass roots by fulfilling our promise to eliminate the trade barriers that discriminate against African farmers. We can scale up legislative, technical and medical exchanges and support infrastructure projects where there would be direct benefit to Africa's poor. Through efforts such as these, we could regain some of the influence in Africa now being unnecessarily lost to China.

Today's Events In Washington 40

TERRORISM NEWS:

Moussaoui Jurors Hear Cockpit Recordings From Doomed Flight. Federal prosecutors rested their case against Zacarias Moussaoui yesterday, after playing dramatic recordings from United Airlines Flight 93 as the hijackers took over the plane and, later, as passengers attempted to break into the cockpit. Moussaoui's defense begins presenting its case tomorrow.

The story was the lead on each of the networks last night. ABC World News Tonight (4/12, lead story, 3:10, Vargas, 8.78M) reported, "The story of what happened on board…is well-known," but the tapes "reveal the chaos and the terror on board that day." The CBS Evening News (4/12, lead story, 3:45, Stewart, 7.66M) added that victims' family members "say the struggle proves their loved ones were heroes." They and jurors "all leaned forward intently" as the recording was played, but "I have to tell you it just made you feel cold and angry at the same time. It was not pleasant to hear." NBC Nightly News (4/12, lead story, 3:40, Williams, 9.87M) noted the tape was "previously considered private." NBC (P. Williams) added, "The entire courtroom was transfixed as the jurors heard for themselves."

The AP (4/13, Sniffen) reports, "The jurors couldn't take their eyes off the video screens — even during long silent periods — as prosecutors used a multimedia presentation to try to put them inside the Flight 93 cockpit. Slumped in his chair and impassive, Moussaoui, too, watched intently. … Later, the judge rejected prosecutors' request to display a running presentation of the names and photos of nearly all the 2,972 victims of Sept. 11. Prosecutors were instead allowed to show one large poster with the pictures of all but 92 of the victims." The Washington Times (4/13, A1, 90K) runs the AP story.

The New York Times (4/13, A1, Lewis, 1.19M) adds, "Although the general story of Flight 93…has been known for some time, listening to the audio seemed nonetheless a harrowing experience for the jurors. … After the recording, the prosecution presented two final witnesses before resting its case. One was Lorne Lyles, the husband of CeeCee Lyles, a flight attendant on Flight 93. Mr. Lyles testified about their last conversation, in which she used an airphone to proclaim her love and ask him to look after their children."

The Washington Post (4/13, A1, Markon, Dwyer, 744K) notes, "The trial seemed an afterthought…amid the drama of the recording." In his testimony, Lyles "brought several jurors to the brink of tears" and "said he has been in and out of counseling for the past five years. … 'They say closure, but there's never any closure. It takes a piece of you.' Moussaoui looked bored, as he did when the cockpit voice recorder was played."

USA Today (4/13, 1A, Johnson, 2.31M) reports, "During the last four minutes…the flustered hijackers are heard urging each other to hold off the passengers' desperate attempt to take back the plane," and "the last recorded sounds are the roaring engines and the Arabic prayers of one of the hijackers: 'Allah is the greatest. Allah is the greatest. Allah is the greatest. Allah is the greatest.' Jurors appeared riveted as the recording and animation played." The Los Angeles Times (4/13, Serrano, 958K) also reports on Moussaoui's testimony.

The AP (4/13, Barakat) reports, "The judge sent the jury home for the day and the defense will begin its case on Thursday. Just after that, Moussaoui shouted, 'God curse you all!'" The AP adds, "The jury deciding Moussaoui's fate has already declared him eligible for the death penalty by determining that his actions caused at least one death on Sept. 111. He pleaded guilty in April 2005 to conspiring with al-Qaida to hijack airplanes and fly them into buildings. … Even though he was in jail in Minnesota at the time of the attacks, the jury ruled that lies told by Moussaoui to federal agents a month before the attacks kept them from identifying and stopping some of the hijackers."

Prosecution Case Fuels Debate About Fairness Of Presenting Victim Testimony. The Christian Science Monitor (4/13, Richey, 61K) reports that "the raw and gut-wrenching images of the 9/11 terror attacks" presented to Moussaoui trial jurors "has some analysts questioning whether anyone accused of involvement in the 9/11 attacks could receive a fair hearing in court. Much of the debate revolves around the appropriateness of permitting victims to testify about how the crime has affected their lives. Victim's rights advocates say such testimony helps the jurors gain a broader appreciation of the full impact of an accused criminal's actions. Opponents say graphic testimony from victims can corrupt jury deliberations by encouraging jurors to rely more on emotion than reason."

FBI Criminal Prosecutions Have Declined With Post-9/11 Counter-Terrorism Focus. Under the headline "FBI Cases Drop As It Focuses On Terror," USA Today (4/13, Willing, 2.31M) reports, "FBI criminal cases have fallen sharply since the 9/11 terrorist attacks as the bureau shifts its focus from drugs and white-collar offenses to anti-terrorism," according to Executive Office for U.S. Attorneys statistics. "Over the past five years, prosecutions in

DOJ_NMG_0025957

which the FBI acted as lead investigator have fallen about 25%," and "convictions in FBI cases are down roughly 11% during the same period," but "convictions in the FBI's national security and terrorism cases quadrupled, from 84 to 336." However, USA notes, "half of those convicted of terrorism or national security violations received sentences of 12 months or less," and former federal prosecutor Gregory Wallance "says those figures show that the Justice Department may be padding its numbers by labeling immigration and other low-level violations as terrorism cases."

Negroponte Says Reforms "Off To A Good Start." In a Time (4/12, Duffy, Burger) Web exclusive, DNI John Negroponte discussed his first year in the post, observing, "We're off to a good start. But I don't want to make exaggerated claims here because this is a job that's going to take some time." Time adds that "the real test…is whether he can bring the CIA, the FBI and the Pentagon to heel. … It is clear that the DNI's office has created something of a culture shock at CIA," and "at the Pentagon, there is an unmistakable feeling of satisfaction" the DNI "isn't as powerful as some in Congress had hoped. … Negroponte told TIME that the FBI is 'moving toward the idea of having officers writing up reports for their intelligence value, not only to make cases.' But he added that the G-men have not been quick to make the leap from law enforcement to intelligence analysts."

Lawsuit Documents Said To Show NSA-AT&T Data Mining Agreement. The New York Times (4/13, Markoff, Shane, 1.19M) reports that in 2002, veteran AT&T technician Mark Klein "began to see what he thought were suspicious connections between" the company and NSA, but "he kept quiet about it until news broke late last year that President Bush had approved an N.S.A. program to eavesdrop without court warrants on Americans suspected of ties to Al Qaeda. Now Mr. Klein and a few company documents he saved have emerged as key elements in a class-action lawsuit filed against AT&T" by the Electronic Frontier Foundation. The Times notes "technical experts all said that the documents showed that AT&T had an agreement with the federal government to systematically gather information flowing on the Internet," but one unnamed expert "said that the documents were consistent with administration assertions that the N.S.A. monitored only foreign communications and communications between foreign and United States locations, partly because of the location of the monitoring sites."

Terror Groups Increasingly Concerned About Internet Security. The Washington Post (4/13, A14, Noguchi, Goo, 744K) reports, "Terrorist groups…are paying more attention to addressing security and privacy concerns similar to those of other Web users, counterterrorism experts say. … Recently, postings on jihadist Web sites have expressed increasing concern about spyware, password protection, and surveillance on chat rooms and instant-messaging systems. … Increased sophistication among users creates a kind of cat-and-mouse game between terrorists and law enforcement, experts said." The Post notes, "There is no evidence that Internet companies…have cooperated with federal spy agencies to monitor terrorist communications," but "privacy groups point out that it would be fairly easy for the federal government to subpoena any of these companies' records or issue a national security letter to them, essentially requiring them to turn over the data.

Hiltzik Says Privacy Statutes Need To Be Updated. Michael Hiltzik writes in the Los Angeles Times (4/13, 958K) that a public interest group's lawsuit charging AT&T with complicity in the Bush Administration's domestic surveillance program "should wake us all up to how our casual reliance on new technology has turned privacy into an increasingly fragile principle." Hiltzik adds, "The NSA's vacuuming of terabytes of personal data from AT&T's network is an example of the government aggressively taking advantage of a tattered fabric of privacy protection. … The statutes are old and worn, and the one thing the NSA program tells us is that they need to be brought into the 21st century, fast."

Closing Arguments Made At Hamid Hayat Trial. In a widely-distributed story, the AP (4/13, Thompson) reports Assistant US Attorney Robert Tice-Raskin, presenting his closing argument at the trial of Hamid Hayat yesterday, said Hayat "'had a jihadi heart and a jihadi mind' long before he confessed to attending an al-Qaida training camp in Pakistan." Tice-Raskin "used his closing…to counter testimony that FBI agents and a government informant may have tricked…Hayat into making incriminating statements." Tice-Raskin said the conversations with FBI informant Naseem Khan "reveal 'the real Hamid Hayat.'" Hayat lawyer Wazhma Mojaddidi countered in her closing argument that "the government doesn't have a case because it has no proof that her client ever went to a terrorist training camp. … She said Khan was desperate to get Hayat to say something incriminating after other leads he followed in Lodi went nowhere. 'From the FBI's perspective, they had struck gold, and so had Naseem Khan. … You have Hamid Hayat being intimidated into saying things that the FBI wanted him to say." KXTV-TV Sacramento (4/12) notes Tice-Raskin said, "Hamid Hayat thought he could pull the wool over the eyes of the FBI. He lied. On one hand, he knew the cat was out of the bag. On the other hand, he tried to hide all that he'd done." But Mojaddidi asked, "If Hamid Hayat actually attended a terrorist training camp, why would he be so cooperative? He was willing to talk with the FBI without a lawyer. A terrorist would know better."

The Los Angeles Times (4/13, Tempest, 958K) reports, "Mojaddidi portrayed Khan as a longtime minimum-wage fast-food worker who saw the FBI as a meal ticket. 'Naseem

DOJ_NMG_0025958

Khan saw a financial future with the FBI. … All he had to do was lead conversations to anti-American sentiments and push "record,"' she said." Assistant US Attorney David Deitch "tried to repair what has been a constant problem for the prosecution: Naseem Khan's assertion…that he had seen senior Al Qaeda terrorist Ayman Zawahiri worshipping and lecturing at the mosque in Lodi." Deitch said, "It was clearly a mistake," but "there is no evidence" Khan lied.

Judge Releases FBI Interrogation Recordings. KGO-TV San Francisco (4/12) reports, "A federal judge released 10 hours of FBI videotapes today of agents interrogating" Hamid and Umer Hayat, and "in one section, Umer Hayat appears to admit his son attended a terror training camp in Pakistan. … Defense attorneys claim the two were tricked into making confessions by manipulative agents." KXTV-TV Sacramento (4/12) notes, "Both Hayats went to FBI headquarters voluntarily. In earlier interviews they denied any involvement or knowledge of terrorist training camps. It was only after the two men changed their stories that the FBI began recording the interviews. … Throughout his interrogation, Hamid Hayat appears at first willing to cooperate, but then he seems confused by the agents' questions." KTVU-TV San Francisco (4/12) also reports on the release of the interview recordings.

Terrorists Attempt To Use Campuses To Replace Training Camps. The Los Angeles Times (4/13, Rotella, 958K) reports that terrorist networks are attempting to use universities and the Internet "to replace former training camps in Afghanistan. … A number of top figures in Al Qaeda have academic backgrounds in the sciences. Khalid Shaikh Mohammed, the alleged mastermind of the Sept. 11 attacks, is an engineering graduate, as were Mohamed Atta and other members of the Hamburg cell that produced pilots for the attacks. Ramzi Ahmed Yousef, the convicted ringleader of the first World Trade Center bombing in 1993, is another engineer-turned-militant."

Outgoing Italian Justice Minister Drops Extradition Of CIA Agents Over Rendition. The New York Times (4/13, Kiefer, 1.19M) reports Italian Justice Minister Roberto Castelli "said he would not seek the extradition of 22 Central Intelligence Agency officers accused of kidnapping a Muslim cleric from the streets of Milan and flying him to Egypt for interrogation. The Milan prosecutor leading the investigation, however, pledged to resubmit the extradition request once Italy's new government is in place." The Times notes, "As minister of justice under Prime Minister Silvio Berlusconi — one of the Bush administration's most loyal supporters in Europe — Mr. Castelli's refusal to move forward with the extradition comes as no surprise." Prosecutor Armando Spataro "said that the investigation would conclude by the end of April and that he hoped then to try the agents in absentia."

Spanish Judge Finds Al Qaeda Inspired, But Did Not Direct Madrid Bombings. The Christian Science Monitor (4/13, Pingree, Abend, 61K) reports, "A report released this week by a Spanish judge illuminates one of the most pressing questions arising from both the bombings in Madrid and, later, in London: Did Al Qaeda operatives direct these assaults on Europe, or simply inspire them?" Judge Juan del Olmo's reports "indicates that the Madrid bombers were actually members of an independent network of Salafist radicals active in North Africa," and "while the summary does not argue for Al Qaeda's direct involvement, it does point to the organization's influence."

PATRIOT ACT:

DOJ Drops Appeal In Patriot Act Librarian Case. The AP (4/13, Christoffersen) reports, "Federal prosecutors said Wednesday they will no longer seek to enforce a gag order on Connecticut librarians who received an FBI demand for records about library patrons under the Patriot Act." The AP continues, "The American Civil Liberties Union, which filed the civil suit on behalf of the librarians, said it will identify them once court proceedings are completed in the next few weeks." The AP adds, "U.S. District Judge Janet Hall ruled last year that the gag order should be lifted, saying it unfairly prevented the librarians from participating in a debate over how the Patriot Act should be rewritten. … Prosecutors appealed, but U.S. Attorney Kevin O'Connor said Wednesday that the appeal no longer made sense." The AP notes, "One librarian has already been identified in news reports and the Patriot Act has been changed to include a procedure that will allow people to appeal requirements that they not disclose their involvement in a request, officials said. … 'In this case, exercising the discretion that Congress is now encouraging us to exercise, the FBI has determined that allowing the recipient to disclose its identity, and only its identity, will not harm the national security or interfere with an ongoing investigation,' said Brian Roehrkasse, a spokesman at the Justice Department. … Prosecutors have maintained that secrecy about demands for records is necessary to avoid alerting suspects and jeopardizing investigations. They contended the gag order prevented only the release of librarians' identities, not their ability to speak about the Patriot Act." The New York Times (4/13, O'Connor, 1.19M) adds, "It was unclear what impact the government's decision would have on the approximately 30,000 other such letters that are issued each year." US Attorney Kevin O'Connor "said yesterday that the government decided drop its case largely because the Patriot Act's secrecy provisions concerning

DOJ_NMG_0025959

national security subpoenas were changed to give the Federal Bureau of Investigation discretion in allowing recipients to identify themselves. The government was also under pressure to drop its fight after mistakenly disclosing in court records the very information it was fighting to keep secret."

HOMELAND RESPONSE:

Judge Blocks Admission Of FBI Bomb Test Video At White Supremacist Trial. The AP (4/13) reports, "The defense attorney for a white supremacist accused of attempting to obtain explosives for an attack on federal buildings disputed the results of FBI tests on materials they seized from the defendant's home. … Prosecutors said FBI agents recovered a 12-inch pipe, a practice grenade shell, some fuses and a few grains of black powder in a search" at Demetrius 'Van' Crocker's home, and "FBI Supervisory Special Agent Thomas Mohnal used similar materials to build bombs that he successfully exploded on a test range in Quantico, Va. He said he first used duct tape on the ends of the devices in some of the tests and then later successfully tested the bombs without it. But on Wednesday, defense attorney Randolph Alden repeatedly pointed out that no duct tape was seized from Crocker's home, calling into question whether Crocker could have made a bomb with the seized materials. Alden's argument was enough for U.S. District Judge James Todd to dismiss a video of the FBI's explosive tests."

Tourism Council Calls For Easier Border Crossings Into US. The Wall Street Journal (4/13, D2, Keeton, 2.11M) reports that at its first summit to be held within the US, the World Travel and Tourism Council, meeting this week in Washington, "has called on the US government to make crossing US borders easier for workers and tourists." The Journal adds that in speaking at the summit Tuesday, Secretary Chertoff stressed "his concern for the safety and security of US borders." Though Chertoff's department "is working on technology to speed up the time visitors spend going through customs and immigration screening, the US has a long way to go, said James Wilson, CEO of Nakheel Hotels & Resorts, a start-up in Africa and the Middle East."

Worried By Post-9/11 Backlash, California Imam Seeks To Build Understanding Of Islam. The CBS Evening News (4/12, story 8, 3:00, Blackstone, 7.66M) profiled Imam Mohammed Azeez of the Salam mosque of Sacramento, California. Azeez "came from Egypt six years ago, graduated from Ohio State. His daughter was born here. His wife…seems no less modern." But "since September 11th, much has changed. The imam now worries about his wife" and is "afraid even little Zeyneb could be a target of intolerance. … His answer, though, is not to hide out; it's to speak out." At "interfaith gatherings, he tries to build bridges across chasms of misunderstanding," and he "declares that keeping this country safe from terrorists should be as much a priority for American Muslims as anybody else." The "challenge facing Imam Azeez is reflected in a new CBS News poll -- fewer than one in five Americans has a favorable view of Islam."

FEMA Releases New Flood Advisory Map For New Orleans. FEMA's release of flood advisory data for New Orleans yesterday is receiving widespread media coverage this morning, with most sources reporting the announcement as a relief for homeowners looking to move on. The New York Times (4/13, Nossiter, Schwartz, 1.19M) reports that yesterday's rebuilding guidelines were "unexpectedly lenient," and would potentially allow "tens of thousands of homeowners to return to their neighborhoods at costs far less than they had feared." Meanwhile, "huge swaths of homes might still have to be rebuilt at least three feet off the ground, or risk getting no federal reconstruction money or insurance. But the announcement, anxiously anticipated as a critical step in rebuilding this still-ravaged city, was nonetheless greeted with some relief by local officials and residents."

NBC Nightly News (4/12, story 4, 2:00, Mullen, 9.87M) reported, "It may sound bureaucratic and even boring, but the release of FEMA's new flood advisory map today is big news to tens of thousands of displaced New Orleans residents who will use it as a guide to decide how and even if they should rebuild in some areas." Donald Powell, Gulf Coast recovery coordinator: "This will enable people to get on with their lives." Mullen: "The new map and risk assessment assumes" the new levee "won't fail and predicts how vulnerable a neighborhood might be to flooding," potentially impacting "the availability and price of insurance, even mortgages." Meanwhile, "the government made it clear that residents…should share in the responsibility of flood prevention. Officials say many substantially damaged homes like those within the red area should be rebuilt three feet higher to qualify for flood insurance."

In an article focusing on the three foot guideline, USA Today (4/13, Konigsmark, 2.31M) reports raising a home by that amount "can cost $60,000." However, according to Sean Reilly, a member of the Louisiana Recovery Authority, "the 3-foot guideline 'is good news' for homeowners," some of whom had feared a requirement of 9 feet.

The Washington Post (4/13, A1, Whoriskey, Hsu, 744K) reports that the Bush administration also "proposed spending an additional $2.5 billion for New Orleans levee construction,"

DOJ_NMG_0025960

which "would protect 98 percent of the population in the four-parish region with levees strong enough to meet flood insurance standards, officials said, and would protect them against the extreme event known as the '100-year flood.'" The announcement "brings certainty to some uncertain issues along the greater New Orleans area," said Powell.

The AP (4/13) reports "the announcement did not provide answers for thousands of residents of lower Plaquemine Parish, southeast of New Orleans in the lowest part of the Mississippi Delta. Decisions on funding for flood protection in that area are pending." The AP continues, "Powell said no decision has been made on whether to seek the final $1.6 billion" for levee improvements in "that hard-hit and vulnerable area. That decision will come after further consideration of environmental, engineering and economic issues, Powell said."

WSJ Not Surprised Private Sector Was Back In New Orleans Before US Postal Service. It was announced last week that the US Postal Service's New Orleans processing and distribution center would reopen, more than seven months after Katrina hit. The Wall Street Journal (4/13, 2.11M) editorializes, "Postal Service competitors fared better. Spokesmen for DHL, FedEx and United Parcel Service tell us that all three companies restored service in New Orleans on September 19, just three weeks after Katrina hit." While "we've heard a lot about government 'incompetence'" in Katrina's aftermath, "it seems likely that the private delivery companies would have outshone the Postal Service regardless of who was in the White House. Some things the private sector simply does better."

Chertoff Says Katrina Was "Wake-Up Call" For Local Governments. The AP (4/13, Jordan) reports that attending the National Hurricane Conference in Orlando yesterday, Homeland Security Secretary Michael Chertoff heard appeals from state emergency officials "for everything from evacuation routes to pet protection. The requests underscored what Homeland Security Secretary Michael Chertoff described as a 'great wake-up call' for state and local authorities following the devastation of Hurricane Katrina." Chertoff reiterated statements he made Tuesday to the AP that "the federal government should not be considered the first line of defense during disasters. But he acknowledged that parts of the Katrina-battered Gulf Coast would need more aggressive federal aid in readying for the June 1 start of the hurricane season."

The New York Times (4/13, Goodnough, 1.19M) reports Chertoff told the "audience of state and local disaster officials that his agency would not usurp authority but would 'work with you in training and exercising, so that if the bell rings, we've all gotten to know each other and we know how we're all going to perform our tasks.'" The Times adds that Chertoff "skipped" a portion of his speech that appeared in an advance copy for reporters, in which he said, "Things will be even more confused if we pull FEMA out of DHS." DHS spokesman Russ Knocke "said it was not unusual for Mr. Chertoff to 'stray a bit from prepared remarks,' adding, 'I wouldn't read anything into that.'"

King, Thompson Release Statement Calling For FEMA To Remain Within DHS. CQ (4/12, Starks) reported that in a bipartisan statement released yesterday, "Leaders of the House Homeland Security Committee stepped up a campaign…to keep the Federal Emergency Management Agency from being removed by Congress from the Department of Homeland Security." The statement, issued by Reps. Peter T. King and Bennie Thompson say, "There is no doubt that FEMA needs to be improved, but removing the agency from DHS is clearly not the answer." Meanwhile, Rep. Bill Shuster, who has "said he plans to mark up two bills in May" that will deal with FEMA and hurricane response, "has repeatedly said he believes FEMA must be removed from the Homeland Department."

Brown Cancels Trip To St. Bernard Parish. The AP (4/13, Callimachi) reports, "Under mounting criticism, former FEMA chief Michael Brown said Wednesday that he will not serve as a paid consultant to St. Bernard Parish, a New Orleans suburb hit hard by Hurricane Katrina." Following protests from residents, Brown called off a trip to the Parish, where he was to meet Thursday with officials "to help them navigate the recovery process." He "made the decision after meeting in Orlando, Fla., with parish President Henry 'Junior' Rodriguez, where both were attending a national hurricane preparedness conference."

WAR NEWS:

White House Under Fire For Claims About Iraqi Weapons Trailers. The White House is again facing scrutiny for its use of intelligence on Iraq's weapons programs, this time over claims that Saddam Hussein's regime was using trailers as mobile weapons labs. After a Defense Department intelligence team found the trailers were not used for weapons purposes, Administration officials, including the President and Vice President, continued to say they were.

The story was covered on ABC World News Tonight (4/12, story 2, 3:00, Vargas, 8.78M), which reported, that on May 25th, 2003, "according to the Washington Post, the Defense Intelligence Agency sent a nine-member team of scientists and engineers to Iraq to determine whether the trailers were, in fact, biological labs." Two days later, "the team transmitted a report to Washington saying the trailers had nothing to do with biological weapons, calling them 'the biggest sand toilets in the world.' Two days after the report

DOJ_NMG_0025961

was sent to Washington…" President Bush (May 29, 2003): "We have found weapons of mass destruction. We have found biological laboratories." Raddatz: "The White House said today the President, at the time, believed his statement to be true." White House spokesman Scott McClellan: "The President was saying what the intelligence community assessed to be right, based on their intelligence-gathering." The Administration "continued to repeat the claim about the trailers. This is Vice President Cheney, four months after the report to the contrary." Vice President Cheney (September 14, 2003): "They are in our possession today, mobile biological facilities that can be used to produce anthrax or smallpox." Raddatz: "In fact, it wasn't until a month after that that a weapons inspector sent by the Administration raised public doubts about the trailers."

CNN's The Situation Room (4/12, Collins) reported that the White House "is steaming. And it's vigorously denying that the President declared the existence of biological weapons labs in Iraq three years ago, knowing the information was false. Back then, Mr. Bush touted the capture of two trailers in Iraq, declaring, we have found the weapons of mass destruction. The Washington Post, reports two days before Mr. Bush made that announcement. Weapons experts concluded the trailers had nothing to do with WMD." CNN (Malveaux) added, "The White House using very strong language today, calling this irresponsible and even reckless reporting by The Washington Post and ABC News, taking very strong exception to the suggestion that President Bush deliberately used and knew about inaccurate information to make the justification for the war in Iraq."

The Washington Post (4/13, A18, Warrick, 744K) reports that White House spokesman Scott McClellan dismissed the Post story as "'rehashing an old issue,' saying Bush has repeatedly acknowledged 'the intelligence was wrong.' The spokesman said Bush's comments on the trailers reflected the intelligence community's dominant view at the time."

The AP (4/12, Pickler) reported that McClellan said Bush "was relying on information from the Central Intelligence Agency and the Defense Intelligence Agency when he said the trailers seized after the 2003 invasion were mobile biological laboratories. That information was later discredited by the Iraq Survey Group in its 2004 report." The Post "did not say that Bush knew what he was saying was false. But ABC News did during a report on Good Morning America, and McClellan demanded an apology and an on-air retraction. ABC News said later in a clarification on its Web site that Charles Gibson had erred. McClellan said he had received an apology."

Another Former General Calls For Rumsfeld's Resignation. CNN's The Situation Room (4/12, Starr) reported, "For the first time, a general who commanded thousands of combat troops in Iraq has called for Defense Secretary Donald Rumsfeld to resign. Major General John Batiste commanded the 1st Infantry Division in Iraq before he retired five and a half months ago." CNN added, "Three other retired generals in the last month have called for Rumsfeld's resignation as well. They all say military advice was ignored."

A front page story in the Washington Post (4/13, A1, Ricks, 744K) reports that Batiste "noted that many of his peers feel the same way. … Batiste's comments resonate especially within the Army: It is widely known there that he was offered a promotion to three-star rank to return to Iraq and be the No. 2 U.S. military officer there but he declined because he no longer wished to serve under Rumsfeld." Batiste "said he believes that the administration's handling of the Iraq war has violated fundamental military principles, such as unity of command and unity of effort. In other interviews, Batiste has said he thinks the violation of another military principle -- ensuring there are enough forces -- helped create the Abu Ghraib abuse scandal by putting too much responsibility on incompetent officers and undertrained troops."

The Los Angeles Times (4/13, Spiegel, Richter, 958K) reports that the "recent surge in public criticism of Defense Secretary Donald H. Rumsfeld by retired military leaders is the culmination of months of intense but largely private debate among active duty officers about how best to voice dissent over Bush administration policies, according to officers involved in the discussions." The calls for Rumsfeld's resignation "are an unusual step for members of the military, who are acutely sensitive to the appearance of challenging civilian leadership of the armed forces."

Speaker Plans To Convene Iraqi Parliament Next Week. Sunni politician Adnan Pachachi, the acting speaker of Iraq's parliament, said yesterday that although the formation of a new Iraqi government remains stalled, he will convene the legislature next Monday. The New York Times (4/13, Semple, 1.19M) reports, "Iraqi officials have been desperate to convey a sense of forward motion in the moribund political process, and the announcement by the speaker…seemed as much a symbolic gesture as a goad to the Shiites."

The Washington Post (4/13, A17, Hernandez, 744K) reports that Pachachi said he was convening parliament "in the hope that the deadline would force rival Shiite, Sunni Arab and Kurdish parties to form a government that fairly represented all three groups."

DOJ_NMG_0025962

Sunni Leaders Embracing US Policy As Never Before. The Washington Post (4/13, A17, Finer, 744K) reports, "Secretary of State Condoleezza Rice's trip here this month to pressure Iraqi leaders to form a new government sparked a slew of familiar complaints about U.S. meddling in Iraqi affairs. … Less familiar, however, was the source of the charges: Iraq's Shiite Muslim leaders, close U.S. allies since the 2003 invasion. Meanwhile, Sunni Arab politicians, some of whom dined with Rice on her only night in Baghdad, made a point of thanking her and Ambassador Zalmay Khalilzad for what they called their newfound evenhandedness." The Post notes, "In the zero-sum game of Iraqi politics, in which someone who applies pressure to one group can become the new friend of another, Sunni Arab political leaders are embracing American policy as never before."

Shiites Launch Offensive In Favor Of Jafari. Meanwhile, the Los Angeles Times (4/13, Roug, 958K) reports that Shiite Muslim leaders "have launched a new offensive in favor of beleaguered Prime Minister Ibrahim Jafari by trying to drive a wedge between Kurds and Sunni Arabs who oppose Jafari's winning a full term in office. Jafari and his supporters have suggested that Iraq's presidency could be awarded to a Sunni rather than a Kurd, sowing a potential rift between the two groups who, until now, have joined to fight Jafari."

State Department Slow To Rollout Iraq Reconstruction Teams. The Washington Post (4/13, A19, 744K) reports, "Earlier this year, the State Department began soliciting personnel for provincial reconstruction teams (PRTs) for Iraq, a new concept designed to take diplomats out of Baghdad and into the provinces." But the rollout of those teams "has been slowed by a debate between the Pentagon and State over whether the military or private contractors should provide security. As of April 7, job applications had been received for only 12 of 35 positions, according to the State Department's internal bid list. And, of all applicants, only one is deemed qualified based on grade level and previous expertise, according to the bid list."

Iranian Diplomat Suspected Of Undermining US Efforts In Iraq. Time (4/13, Ware) in a web exclusive reports, "What is Tehran's main man in Iraq up to? The U.S. military, which claims Iranian special forces and intelligence operatives have infiltrated Iraq, insinuates that Hassan Kazemi Ghomi, the charge d'affaires of the Iranian embassy, is intent on undermining Washington's mission in Baghdad. Indeed, U.S. military intelligence and the American-backed Iraqi National Intelligence Service told TIME that Ghomi is a member of the Iranian Revolutionary Guard Corps' elite Quds Force, a special forces outfit much like the Green Berets, with specialized skills in working with local forces and militias." But "Ghomi denied U.S. claims that his country's special forces were operating inside Iraq or that Iran's military was aiding the insurgency with ever more sophisticated weapons. He hinted at Iran's growing ambitions as a regional power with references to its ability to affect the security of the Persian Gulf, echoing the sentiments of top military commanders in Iran."

Analysts Say Americans Could Lose Patience With War On Terrorism. The AP (4/13, Hefling) reports, "What are the implications if a nation goes to war and its people barely pay attention? Roughly 150 military leaders, policy analysts and academics gathered at the Army War College on Wednesday to address that question, with the U.S. beginning its fourth year of a conflict that has killed more than 2,300 American troops. A main concern, analysts say, is that Americans may lose patience with the fight against terrorism in Iraq and elsewhere, and ultimately decide that the fight is costing too much in money and lives." President Bush "has not asked for personal sacrifices on the scale of those made in World War II, when Americans bought war bonds and rationed sugar and other goods. Also, because the U.S. has an all-volunteer military, fewer people have a personal connection to a service member than was the case, for example, during the Vietnam War, when many soldiers were drafted."

Veteran Says Troops Support The War. Wade Zirkle, executive director of Vets for Freedom, writes in the Washington Post (4/13, A21, 744K) that Rep. John Murtha "undoubtedly knows full well that the greatest single thing that drags on morale in war is the loss of a buddy. But second to that is politicians questioning, in amplified tones, the validity of that loss to our families, colleagues, the nation and the world." Zirkle adds, "The morale of the trigger-pulling class of today's fighting force is strong. Unfortunately, we have not had a microphone or media audience willing to report our comments. Despite this frustration, our military continues to proudly dedicate itself to the mission at hand: a free, democratic and stable Iraq and a more secure America. All citizens have a right to express their views on this important national challenge, and all should be heard. Veterans ask no more, and they deserve no less."

Four US Troops, Forty Iraqis Killed In Attacks. ABC World News Tonight (4/12, story 3, :10, Vargas, 8.78M) reported, "The military announced the deaths of 4 more US troops and more than 40 Iraqis were killed in attacks across the country."

The CBS Evening News (4/12, story 5, 0:30, Schieffer, 7.66M) reported, "Three more American soldiers were killed today in Iraq in bombings south and east of Baghdad. Just 12 days into April, 35 servicemen and women have been killed in Iraq, more than during the entire month of March.

DOJ_NMG_0025963

Also today, a car bomb went off at a Shiite mosque in a village northeast of Baghdad, killing at least 22 worshipers and wounding about 60."

The AP (4/12) reported, "Casualties among US forces have risen in recent weeks. In March, 31 U.S. service members died in Iraq, the lowest monthly figure since February 2005, according to an Associated Press count. So far this month, the U.S. death toll stands at 35."

Shiite Cleric Says Mubarak Is Fueling Sectarian Tensions. A top Shiite cleric has accused Egyptian President Hosni Mubarak of fueling sectarian tensions in the Middle East by saying Arab Shiites in Iraq and elsewhere are more loyal to Iran than their home countries. The AP (4/12, Hendawi) reported that in an interview, Lebanon's Grand Ayatollah Mohammed Hussein Fadlallah "said 'some in the Muslim world' fear Shiite empowerment in any country." Fadlallah "was one of the highest-level Shiite figures in the region to speak out so far against Mubarak."

Shiite Iraqis Flee Sectarian Violence In Religiously Mixed Villages. The Christian Science Monitor (4/13, Enders, 61K) reports that Shiite Iraqis are "increasingly fleeing sectarian violence in religiously mixed villages. … Around Baghdad, Shiites coming in from outlying villages are living in tents provided by the Iraqi Red Crescent Society. IRCS President Said Hakki says the agency is preparing to aid some 50,000 families, and has requested aid from the US military to build sanitation facilities for camps and provide rations. Other Shiites are going south to predominantly Shiite cities such as Basra, Najaf, and Karbala."

Many Fear Iraq Will Follow Lebanon's Path To Civil War. The AP (4/13, Ghattas) reports that many are worried that Iraq, and specifically Baghdad, is head for the same fate as Lebanon, which endured a 15 year civil war. According to the AP, "For now, it's an unanswerable question. No one knows if Baghdad will continue falling ever-more into the sectarian violence that has broken out, or recover and move toward peace. But a look at the first days of civil war in 1975 in Beirut is instructive about how things might look in Iraq, if they get worse."

Former Saddam Crony Played Role In Release Of American Journalist. ABC World News Tonight (4/12, story 6, 2:45, Sciutto, 8.78M) reported, "Interviewed in his summer house outside of Amman, Sheikh Sattam al-Gaood, once one of Saddam Hussein's closest business associates says he is now a proud leader of the Iraqi insurgents." Al-Gaood: "They are defending their country. And they -- sometimes they do mistakes." Sciutto: "One mistake, kidnapping American journalist Jill Carroll. Al-Gaood said he used his influence to help free her, even refusing the kidnappers' demands for a huge ransom" of $8 million. Instead, "at the kidnapper kidnappers' request, he said he agreed payment to widows and orphans for fighters." Al-Gaood "did not specify how much. But says he was willing to arrange payment for as much as $1 million." Al-Gaood, "captured by US forces after the invasion, and freed last December, openly approves of attacks on American soldiers. But not on civilians." His "objective -- a new government, with a familiar head of state. President Hussein again."

Australian PM To Testify To Oil-For-Food Probe. Australian Prime Minister John Howard today will testify to a commission investigating alleged bribes to Saddam Hussein's regime in defiance of UN sanctions. The AP (4/13, Foley) reports that Howard "will answer questions from the commission probing whether Australia's monopoly wheat exporter illegally paid millions of dollars in bribes to win contracts from Saddam's regime. … The commission is investigating whether the Australian Wheat Board, now known as AWB Ltd., gave $220 million to Saddam to secure grain contracts worth more than $2.3 billion between 1997 and 2003 under the U.N. oil-for-food program." Howard "already has submitted a written statement to the commission. It was not published, but he said he will be questioned on it Thursday."

Afghan Bazaars Searched For Stolen Computer Files. The AP (4/132, Cooney) reported that shopkeepers in local Afghan bazaars have been selling computer memory drives containing seemingly sensitive military data stolen from inside the US-led coalition's headquarters. According to the AP, "The surfacing of the stolen computer devices has sparked an urgent American military probe for the source of the embarrassing security breach, which has led to disks with the personal letters and biographies of soldiers and lists of troops who completed nuclear, chemical and biological warfare training going on sale for $20 to $50. Five military investigators, surrounded by heavily armed plainclothes U.S. soldiers, searched many of the two-dozen rundown shops outside the sprawling base."

The Los Angeles Times (4/13, Watson, 958K) reports, "US commanders in Afghanistan said an investigation was underway into what shopkeepers at the bazaar describe as ongoing theft and resale of US computer equipment from the Bagram air base. The facility is the center of intelligence-gathering activities and includes a detention center for suspected members of Al Qaeda and other terrorist groups flown in from around the world. … The top US commander here, Army Lt. Gen. Karl Eikenberry, has ordered a review of

DOJ_NMG_0025964

policies and procedures for keeping track of computer hardware and software."

Spate Of Attacks Sparks Fear In Afghanistan. The Washington Post (4/13, A16, Constable, 744K) reports that a recent spate of terrorist attacks "is expanding a climate of insecurity across Afghanistan as NATO forces prepare to take over most military duties from the US-led coalition. Afghan officials vaguely blame the attacks on 'enemies of Afghanistan' and denounce neighboring Pakistan for harboring Islamic insurgents bent on destroying this fragile new democracy. … But a variety of foreign analysts and military officials here offer a different explanation: a vast canvas of weakly governed and unprotected territory in which drug traffickers, feuding tribesmen and opportunistic criminals -- as well as Taliban gunmen on motorbikes and mysterious suicide bombers -- operate with increasing ease, despite the presence of tens of thousands of foreign troops in the country."

Sheehan Launches Another Protest Near Bush Ranch. Peace activist Cindy Sheehan returned to Texas yesterday to mount another war protest near President Bush's ranch, although the President plans to spend the weekend at Camp David. The AP (4/13, Brown) reports, "The anti-war demonstrators accused Bush, who has spent every Easter at his Crawford ranch since he was elected, of running from them and their message to bring the US troops home from Iraq immediately. … But the White House said Bush's plans had nothing to do with the protesters and that he often spends holidays at Camp David with his family."

Brooks Says US Should Scale Back To More Realistic Expectations In Iraq. David Brooks writes in the New York Times (4/13, 1.19M), "Mr. Past: Your big problem is you don't understand the limits of what governments can achieve. … The central lesson of the past three years is that societies are not that malleable. Evils do not grow out of manageable defects in the environment that can be neatly fixed. We need to change our mentality, scale back to more realistic expectations. … The alternative is to develop a mind-set in which you don't try insanely to solve great historical problems, but you understand that history is one unexpected thing after another."

CORPORATE SCANDALS:

Skilling Testifies He, Lay Never Broke Law. The AP (4/13, Hays) reports, "Former Enron Corp. CEO Jeffrey Skilling spoke up for company founder Kenneth Lay for the first time in the executives' fraud and conspiracy trial Wednesday, saying the two were a 'good team' that never knowingly broke the law." The AP continues, "The ex-CEO has focused on addressing prosecution testimony damaging to himself since he took the witness stand on Monday. … Even though most criminal counts pending against him and Lay allege crimes that occurred at different times before Enron crashed in scandal in December 2001, an overarching conspiracy count alleges they participated in a sprawling effort to portray Enron as strong when they knew accounting tricks hid bad news and weak ventures. … Skilling told jurors neither he nor Lay perpetuated such a ruse." The AP notes, "The ex-CEO, in his third day on the stand Wednesday in his fraud and conspiracy trial, continued addressing prosecution testimony that painted him as an earnings-obsessed leader so intent on wowing Wall Street that his subordinates resorted to fraud with his knowledge. … He addressed one of the most notorious elements of the scandal that included Enron's swift descent into bankruptcy protection in December 2001 - partnerships created and run by former Chief Financial Officer Andrew Fastow to conduct deals with the energy company."

The Christian Science Monitor (4/13, Axtman) reports, "One of the most enduring images of the Enron collapse is of a defiant Jeffrey Skilling testifying before Congress in February 2002, raising his right hand and defending the reputation of the Texas energy company he'd help build. … He did so, he told a jury in a Houston courtroom this week, against the advice of his lawyers, who urged him to exercise his constitutional right not to incriminate himself and to remain silent in front of Congress, the Securities and Exchange Commission, even "Larry King Live." … 'Someone had to get out and start explaining what had happened before someone else explained it incorrectly,' said Mr. Skilling in his first days on the stand in his criminal trial." The Monitor adds, "He still stands behind what he did and said, he testified. But now that he is in the witness box in his own defense, those prior statements make his path much harder. … 'Skilling made so many public pronouncements at the embryonic stage of the investigations, and all of that can be used against him,' says Christopher Bebel, a Houston securities lawyer and former federal prosecutor."

Prosecutors Set For Cross-Examination. The New York Times (4/13, Barrionuevo) reports, "After methodically laying out their case against Jeffrey K. Skilling and Kenneth L. Lay over nine weeks and 22 witnesses, the Enron prosecutors now have to start all over." The Times continues, "With Mr. Skilling emotionally proclaiming his innocence from the stand and Mr. Lay still an elusive target, the verdict, according to legal experts from both sides of the aisle, is likely to turn on the cross-examination of the two defendants, who ran Enron before it collapsed in 2001. … 'If the government plays their cross-examination of the defendants only to a draw, they lose,' said Robert A. Mintz, a white-collar criminal defense lawyer with McCarter & English. 'They have to do

DOJ_NMG_0025965

better than that.' … But for all that is riding on the coming showdown, do not look for a flashy Perry Mason moment. That is not the way Sean M. Berkowitz, who will cross-examine Mr. Skilling, and John C. Hueston, who is to take on Mr. Lay later this month if he decides to testify, like to operate. … 'This is an unprecedented challenge, but one that I relish,' Mr. Hueston said with characteristic understatement."

Skilling's Personality On Display. The Washington Post (4/13, D1, Johnson) reports, "In three days on the witness stand, former Enron Corp. chief executive Jeffrey K. Skilling has expressed many sides of his complex personality: his driving ambition, his emotional exhaustion, and on Wednesday -- his absentminded energy geek." The Post continues, "Skilling twice stepped down from the witness box Wednesday to give the jurors, who will decide whether he is guilty of fraud and other charges, a lesson in energy trading. He walked them through complicated charts designed to show that he did not break the law when he told analysts and investors that the company exuded health and had its risks under control. … Under the guidance of defense lawyer Daniel M. Petrocelli, who tried without success to urge Skilling to keep his explanations simple, Skilling appeared more confident than at any point during this 11-week-old trial."

SEC Adopts New Policy On Journalist Subpoenas. The AP (4/13, Gordon) reports, "The Securities and Exchange Commission announced a new policy on subpoenaing journalists Wednesday, responding to controversy over the agency's demands for records from three online columnists." The AP continues, "On a case-by-case basis, the agency must try to strike a balance between two public interests, the policy says: the free flow of information and the effective enforcement of securities laws. SEC attorneys must first try to exhaust other means and sources of information in an investigation before turning to media subpoenas. … 'Freedom of the press is of vital importance to the mission of the Securities and Exchange Commission,' the agency said in a statement. 'Effective journalism complements the (SEC's) efforts to ensure that investors receive the full and fair disclosure that the law requires, and that they deserve. Diligent reporting is an essential means of bringing securities law violations to light and ultimately helps to deter illegal conduct.'"

Dow Jones (4/13, Hughes) reports, "The new policy calls for SEC enforcement attorneys to take a number of steps before issuing subpoenas, including being certain that journalist information is essential to an investigation and determining that the information isn't available from other sources. … 'The purpose of these policies that are in force as of today is to ensure both that the Securities and Exchange Commission can vigorously enforce the laws and rules that are in our jurisdiction, and also that we don't use journalists and journalism as our first resort source,' SEC Chairman Christopher Cox said at a briefing." Dow Jones adds, "The guidelines come after an uproar that followed revelations the SEC had subpoenaed two columnists for Dow Jones & Co. in connection with an SEC investigation. Cox said in February that he hadn't been told of the subpoenas and learned about them only after reports in the media."

The New York Times (4/13, Labaton) reports that the SEC will "issue subpoenas to journalists only in rare circumstances and only after exhausting other avenues of investigation" after adopting a new policy. Cox helped write the policy after he "complained in late February that he was blindsided by news accounts describing subpoenas issued in the investigation of a research firm, Gradient Analytics." Cox seeks to avoid using "journalists and journalism as our first source of information in our law enforcement function." The Wall Street Journal (4/13, Scannell) reports that " the commission won't specifically decide whether to issue subpoenas. Rather, the authority to issue subpoenas will be in the hands of the SEC enforcement chief, who after consulting with the general counsel, would make the final decision. The SEC chairman would be alerted after the decision had been made. The policy…was modeled after the media-subpoena guidelines in the Department of Justice's U.S. attorney manual."

Exxon Chairman's Retirement Package Worth At Least $398 Million. The New York Times (4/13, Mouawad) reports, "Last year's high oil prices not only helped Exxon Mobil report $36 billion in profit — the most ever for any corporation — they also allowed Lee R. Raymond to retire in style as chairman of Exxon Mobil." The Times continues, "Mr. Raymond received a compensation package worth about $140 million last year, including cash, stock, options and a pension plan. He is also still entitled to stock, options and long-term compensation worth at least another $258 million, according to a proxy statement filed by Exxon with the Securities and Exchange Commission yesterday." The Times adds, "The total sum for Mr. Raymond's golden years comes to at least $398 million, among the richest compensation packages ever. The record was the payout of $550 million to Michael D. Eisner, the former head of Walt Disney, in 1997. … Exxon's board also agreed to pick up Mr. Raymond's country club fees, allow him to use the company aircraft and pay him another $1 million to stay on as a consultant for another year. Mr. Raymond agreed to reimburse Exxon partly when he uses the company jet for personal travel."

Former CEOs Receive Medical Coverage. The Wall Street Journal (4/13, Schultz, Francis) reports, "At a time

DOJ_NMG_0025966

when companies are scaling back health benefits for other retirees, former top executives at many corporations are receiving partial or full lifetime medical coverage on top of pensions valued at millions of dollars, a Wall Street Journal analysis of dozens of recent securities filings indicates." The Journal continues, "The trend spans industries, and it is common at airlines, which have been among the most aggressive in scaling back retirement benefits for the rank and file. Continental Airlines, for example, provides health care "at no cost" for retired Chairman Gordon Bethune and his dependents, the company's proxy statement notes. That's in addition to other perks, including a lifetime of free flights and a decade of free office space, plus a lump-sum pension payout of $22 million. A Continental spokesman says other retired executives have to pay 20% of the cost of coverage but then declines further comment."

NYTimes Blasts "Cozy Arrangements" On Executive Pay. The New York Times (4/13) editorializes, "To fix something, first you have to understand what went wrong. That's especially true for a problem as complex yet pervasive as sky-high executive compensation. … Last Sunday The Times reported that in 2004, the average top executive at a big company earned 170 times the average worker's pay. These executives receive a dizzying combination of salaries, bonuses and stock grants. And their perks can go far beyond the use of a company car to even include infusions of cash to offset the taxes everyone else is expected to pay." The Times continues, "To make the decisions on executive pay, many companies create compensation committees, drawn from the board of directors. That committee in turn is advised by outside consultants, experts in how much others in the field are getting paid. It looks quite logical at first glance. It is in the details that the value of closer scrutiny becomes clear." The Times adds, "Runaway pay matters because top executives are snatching more than their fair share of corporate proceeds. More important, it also means that the board of directors is not performing its function as internal guardian of the company's health."

Small Businesses Say Sarbanes-Oxley Compliance Too Expensive. The Washington Post (4/13, Day) reports that "a government advisory group dominated by executives representing small businesses yesterday reaffirmed its intent to ask federal regulators to exempt half of the country's publicly traded companies from" a Sarbanes-Oxley rule that "requires executives of every publicly traded company to attest that their companies have internal controls in place to ensure financial statements filed with the Securities and Exchange Commission are accurate. The rule also requires that an outside auditor verify the controls are adequate." Critics of the request "point out that a majority of securities frauds involve small businesses."

Greenspan Predicts Changes To Sarbanes-Oxley. The Financial Times (4/12, Fifield) reports that former Federal Reserve chairman Alan Greenspan predicted that the US would "make 'changes' to the burdensome financial and corporate governance requirements driving companies out of US markets." Greenspan expressed concern because companies have "started favouring London over New York for their flotations" rather than "have their internal controls certified by auditors."

WSJournal Op-Ed Favors Reforms of Sarbanes-Oxley. Former SEC chairman Harvey Pitt argues in the Wall Street Journal (4/13) that Sarbanes-Oxley was "badly drafted" but "necessary." He suggests amending "SOX by making it part of the Securities Exchange Act of 1934," which would allow "the SEC to tailor SOX's requirements to the size and economic burden imposed upon public companies -- not to mention affording the SEC the opportunity to make distinctions between domestic and foreign registrants." Pitt notes "the serious concern that foreign companies are no longer interested in registering their securities on U.S. exchanges," which his proposal would address.

CRIMINAL LAW:

Fitzgerald Corrects Error In Libby Case Filing. Fox News' Special Report (4/12, Cameron) reported special prosecutor Patrick Fitzgerald "had to correct an embarrassing mistake in his own court filing" in the case of I. Lewis "Scooter" Libby, the former chief of staff to Vice President Cheney. The error "led some reporters to wrongly accuse the President of directing" Libby "to provide false information about Iraq's nuclear ambitions to New York Times reporter Judy Miller and to attribute it to the CIA's national intelligence estimate or NIE. Fitzgerald first wrote quote, 'Defendant,' meaning Libby, 'understood that he was to tell Miller, among other things that a key judgment of the NIE held that Iraq was vigorously trying to procure uranium.' The intelligence report did allege Iraq was aggressively seeking nuclear materials, but it was not among to so-called key judgments which carry significant weight and require broad agreement. Fitzgerald's misquote prompted some media, including the New York Times to suggest the President had directed aides to misrepresent and exaggerate the NIE in order to justify the invasion of Iraq."

Knight Ridder (4/13) reports Fitzgerald "corrected the allegation that Libby had described the suspected uranium purchase as a 'key judgment' of the CIA - a term of art in the intelligence community that gives the accusation high significance." The New York Times (4/13, Johnston, 1.19M) reports, "It was not known why Mr. Fitzgerald had sought the

DOJ_NMG_0025967

change, but he filed the letter after The New York Times and other news organizations published articles asserting that Mr. Libby had represented the uranium finding as a key judgment, when it had in fact been given much less prominence in the intelligence report."

Libby Attorneys Seek Broad Range Of Classified Documents. The New York Times (4/13, Johnston, 1.19M) reports Libby's attorneys "said in a court filing late Wednesday that he was entitled to a broad array of classified documents, in part because the prosecution had injected into the case the roles played by President Bush and Mr. Cheney in disclosing a prewar intelligence report on Iraq." Libby's lawyers "argued that prosecutors had improperly sought to restrict Mr. Libby's access to documents related only to Mr. Libby's actions, even while the prosecution, in its own briefs to the court, elaborated on wide ranging events including the disclosure of the 2002 National Intelligence Estimate on Iraq."

DOJ Seeks Death Penalty In New York Slayings. The NY Journal News (4/13, O'Connor) reports, "Federal prosecutors will seek the death penalty against the reputed leader of a violent Peekskill drug ring who is charged with two New York City homicides." The News continues, "Khalid 'Big Homie' Barnes, 30, of Greenburgh, was indicted along with five other reputed members of the gang dubbed the 'Barnes Brothers Organization' by law enforcement authorities. … Barnes is the only alleged member of the gang to face a death penalty prosecution." The News adds, "Members of the gang are implicated in six attempted murders and murder plots, as well as narcotics conspiracies that date to 1995, according to a 54-page indictment. … 'The continuing investigation into the Barnes Brothers Organization ensures that they will face justice for numerous additional acts of violence in their community,' U.S. Attorney Michael Garcia said. … The indictment was the third in the case by a federal grand jury in White Plains since Peekskill police and federal Drug Enforcement Administration agents arrested the reputed gang members March 1, 2004. Eight men have already pleaded guilty in connection with the case and are awaiting sentencing. .. Khalid Barnes is accused of shooting Demond Vaughan and Sergio Santana on Feb. 13, 2004, during a New York City drug deal, federal prosecutors said. Barnes killed the two drug dealers and stole three kilos of cocaine, prosecutors said. … The death penalty prosecution was approved by U.S. Attorney General Alberto Gonzales. There are 63 death penalty cases pending in federal courts, according to Kevin McNally of the Federal Death Penalty Resource Council in Frankfort, Ky. Another 242 cases are awaiting evaluation by the Justice Department."

Court Filings Reveal Inmate, FBI Agents To Testify Against DeVecchio. The New York Daily News (4/13, Katz, 729K) reports, "Court papers filed by prosecutors yesterday revealed the names of new witnesses in the case against an FBI agent accused of setting up a series of mob murders. Former G-man Lindley DeVecchio has been charged in four gangland murders, in part because he was picked out of a photo array by a witness identified as John Baran," who "was an inmate at the Nassau County Correctional Facility when prosecutors interviewed him Jan. 27. According to papers filed in Brooklyn Supreme Court, Baran identified the former agent, though it is unclear which crime he witnessed. … Three FBI agents who worked under DeVecchio also will testify against their former boss under threat of perjury, said a law enforcement source."

Nevada Commissioner's Lawyer Questions FBI Agent About Witness Inconsistencies. KLAS-TV Las Vegas (4/12, Allen) reports defense attorneys for former Clark County Commissioners Dario Herrera and Mary Kincaid-Chauncey began presenting their case yesterday, calling FBI Special Agent Chris Byers to testify about former strip club owner Michael Galardi's testimony he bribed the commissioners. "Byers explained that some of Galardi's inconsistent statements to the FBI three years ago could be attributed to Galardi's faulty memory. … Kincaid-Chauncey's attorney Richard Wright asked Byers why FBI interrogation sessions with former Clark County Commissioner Erin Kenny were recorded on tape but similar session with Galardi were not." Byers said, "FBI policy is we have to have special authority to record these types of things," but he "did not explain what authority wasn't sought during sessions with Galardi."

Testimony At Pennsylvania Bribery Trial Suggests Broader Corruption. The Philadelphia Inquirer (4/13, Shields, 423K) reports, "Ted LeBlanc's municipal corruption trial this week has revealed that LeBlanc wasn't Norristown's only mayor suspected of taking a bribe in exchange for borough contracts." At LeBlanc's trial Tuesday, former borough councilwoman Margaret Hunsicker "testified that, in 2002, she relayed to the FBI second-hand allegations that towing contractor Joseph Corropolese had bribed Salamone. In interviews yesterday, two lawyers familiar with the investigation of Corropolese - he became the federal government's chief informant in the federal probe of Norristown's government -- confirmed that Corropolese told prosecutors he paid Salamone, LeBlanc's predecessor, $400 to $500 a month to keep his lucrative towing contract with the borough."

DOJ_NMG_0025968

Federal Investigators Launch Sweeping New Gambino Family Probe. Under the headline "Feds All Out To Nail The Gottis," The New York Post (4/13, Smith, 624K) reports, "The feds have launched a sweeping grand-jury probe into the Gambino crime family based on admissions by John 'Junior' Gotti and witnesses who testified in his defense at his most recent racketeering trial, sources said yesterday. Prosecutors have sent out at least 12 grand-jury subpoenas to Gotti's relatives and Gambino crime-family members and associates in recent weeks -- and plan to issue approximately two dozen more, a federal law-enforcement source said." A "law-enforcement source" said, "The secret society is no longer a secret anymore. The boss has acknowledged it once and for all." The Post adds, "The subpoenas read like a who's who of the Gambino crime family – 'everyone that Junior threw under the bus in his defense. Nobody's going to be let off,' the source said, speculating the probe could lead to congressional hearings examining the state of the Mafia. … Meanwhile, the FBI has also widened its investigation into possible perjury and obstruction of justice by witnesses for Gotti."

Alleged Russian Mobsters Charged In Unsolved Brooklyn Murders. The New York Times (4/13, Brick, 1.19M) reports suspected police informant Boris Roitman and high-stakes pool player Thien Diep "were killed in Brooklyn in 1992. The cases were never solved. … Now prosecutors say both killings were tied to Eastern European organized crime. In State Supreme Court in Brooklyn yesterday, they unsealed murder charges against two men described as ambitious young immigrants intent on impressing Boris Nayfeld, the legendary Brighton Beach heroin smuggler." Vitaly Ivanitsky and Marat Krivoi pleaded not guilty. The Times notes, "In the decade or so since the decline of the Italian crime syndicate La Cosa Nostra, prosecutors have confronted criminal enterprises established by immigrants from former Soviet bloc nations." The New York Post (4/13, Ginsberg, 624K) notes, "The NYPD and FBI teamed up to solve a pair of vicious Russian mob killings from 1992 -- nailing two Brooklyn men for the rubouts, prosecutors said yesterday."

Three Philadelphia Drug Gang Members Convicted Of Racketeering, Murder. The Philadelphia Inquirer (4/13, Anastasia, 423K) reports, "Three members of a Chester neighborhood drug gang known as the Boyle Street Boys were convicted yesterday in federal court of racketeering, drug dealing and homicide charges, including the execution-style slaying of a woman who had agreed to testify against the leader of the group. Brothers Vincent and Jamain Williams and Andre Cooper face possible death sentences following a penalty phase hearing set to begin Tuesday." The Inquirer notes, "The Boyle Street Boys trial began the same week the FBI launched a campaign to encourage crime witnesses to 'Step up, Speak up.'" Rodney Bradley, brother of slain witness Tracey Saunders, "said he hoped the guilty verdicts would encourage others to come forward in similar cases.

Racketeering Trial Of New York MS-13 Member Begins. Newsday (4/13, Topping) reports, "It's more than a street gang. It's a criminal enterprise. That was the message a federal prosecutor conveyed to jurors yesterday about the MS-13 gang as he outlined the case against alleged member and defendant, Leonel Mejida." Mejida "murdered because 'it gave him the opportunity to finally make his quota' of crimes initiating him into the gang, Assistant U.S. Attorney James McGovern said in his opening statement." Newsday notes Mejida "is the second prosecution nationally of an MS-13 member under the federal racketeering statute." He "is charged with killing Edgardo Sanchez, 18, an MS-13 member suspected of being a government informant."

US Will Not Seek Indictment Of Pellicano-Linked Law Firm. The Los Angeles Times (4/13, Krikorian, Weinstein, Guccione, 958K) reports, "Though still weighing charges against individual attorneys, federal prosecutors have decided not to seek an indictment against the largest law firm linked to the ongoing investigation of Hollywood private detective Anthony Pellicano, sources close to the case said Wednesday. The decision, recently conveyed to the firm by authorities, is significant because Pellicano had worked for a number of attorneys at the law firm of Greenberg, Glusker, Fields, Claman, Machtinger & Kinsella, notably partner Bert Fields." The Times notes, "To date, the FBI investigation has resulted in charges against 14 people…on charges of racketeering, wiretapping, witness tampering and other crimes."

Former DeLay Aide Lobbied For Federal Funds For Firm In Which He Had Stake. The Los Angeles Times (4/13, Roche, 958K) reports Edwin A. Buckham, "onetime top aide to Rep. Tom DeLay (R-Texas) and organizer of the former majority leader's national fundraising arm, successfully lobbied for federal funding benefiting a firm in which Buckham held a financial stake." With the "assistance of Rep. Dave Weldon (R-Fla.), a DeLay political ally, Buckham had $1.55 million set aside in late 2003 in a federal appropriations bill for the U.S. Department of Labor to fund a program for small businesses. The money was awarded to the Florida Institute of Technology, which promptly signed a contract with Map Roi Inc., a client and partner of lobbyist Buckham. At the time, Buckham's lobby

DOJ_NMG_0025969

company, Alexander Strategy Group, held options on 500,000 shares of Map Roi stock, records show."

Chinese Engineer Indicted In Software Theft. The St. Paul Pioneer-Press (4/13, Suzukamo) reports, "A Chinese software engineer who's been working in Minnesota on a work visa has been indicted by a federal grand jury for allegedly stealing testing software from his former employer in Arden Hills." The Pioneer-Press continues, "Tim Hongguo Tian, 39, of Blaine, was charged Tuesday with a single count of unauthorized access to a protected computer and two counts each of wire fraud and 'deprivation of honest services,' a federal fraud charge, the U.S. Attorney's office said. … Tian will plead not guilty to all charges when he is arraigned April 19, his attorney, Frederick Goetz of Minneapolis, said. … 'We're aware of the allegations and look forward to thoroughly vetting them in court,' Goetz said." The Pioneer-Press notes, "Tian faces a maximum sentence of up to 20 years in prison and a $250,000 fine if convicted on each of the latter four fraud charges and five years in prison and a $250,000 fine for the computer break-in charge. He is being held without bail by the U.S. Marshals Service. If convicted, he could be deported. … Tian has been living and working in the United States for nearly six years. Parametric Technology Corp., which has a division in Arden Hills, hired him in May 2000 on a H-1B visa. Such visas, which are heavily used by the high-tech industry, allow companies to bring in foreign workers with special skills. PTC, based in Needham, Mass., makes software to help businesses manage product development."

Florida Man Arrested On Katrina Relief Fraud Charges. The Orlando Sentinel (4/12, Gutierrez, 265K) reported Scott Lee Robert of Orange County, Fla., "has been arrested and taken to Louisiana on charges he used false identities and Social Security numbers to secure more than $15,000 in Hurricane Katrina unemployment aid." Roberts "was indicted in Baton Rouge as part of a crackdown on suspected hurricane cheats" in which "at least 47 people have been charged by a special federal task force."

Miami Doctor Pleads Guilty To Medicare Fraud. The Miami Herald (4/13, 323K) reports Miami doctor Zabdy Westerburger "pleaded guilty in federal court to conspiracy to violate anti-kickback and false claims statutes in a case in which she was accused of participating in a scheme that resulted in Medicare paying out $2.3 million for unnecessary equipment and medications. … To date, more than 30 people have been convicted of Medicare fraud charges in connection with this scheme."

Judge Orders Medication For Texas Death Row Inmate. The AP (4/13) reports, "A judge who halted an execution because the inmate was mentally ill has agreed to force the man to take anti-psychotic medication so he can be put to death." The AP continues, "The inmate, Steven Kenneth Staley, 43, has refused to take his medication. A jury decided he should be put to death for the killing of a Fort Worth restaurant manager during a botched robbery. … Judge Wayne Salvant issued the forced-medication order Tuesday, while Staley picked at his unruly hair and mumbled nonsensical phrases in the courtroom." The AP adds, "The order, requested by prosecutors, drew a sharp argument from Staley's attorney. … 'The whole idea of holding somebody down and injecting them so that we can then say, with a straight face, this person is now competent so we can kill them, I think that smacks of an Orwellian-Soviet-style approach to criminal justice,' Jack Strickland told the Fort Worth Star-Telegram. … Prosecutors Chuck Mallin and Jim Gibson told the newspaper they requested the order partly so the jury's sentencing decision could be carried out."

Maryland Judge Holds Off Calling Witnesses In DC Sniper Trial. The AP (4/13) reports, "A judge will not immediately subpoena witnesses requested by Washington-area sniper John Allen Muhammad in his upcoming murder trial because prosecutors complained many were not relevant." The AP continues, "Muhammad, who is defending himself against six Maryland murder charges in the 2002 shootings, asked in a handwritten filing last week for 178 witnesses. He also wanted to subpoena the 354 potential witnesses identified by prosecutors." The AP adds, "Muhammad's list includes his accomplice, Lee Boyd Malvo, and some that appear on the prosecution's list. But he is vague on other names; some include no identifying or contact information. … Prosecutors said his long list included many people who did not appear to have a strong connection to the case. Prosecutors plan to call only about 100 witnesses. … Montgomery County Circuit Judge James L. Ryan agreed Friday to wait to issue subpoenas until a hearing on evidence April 24."

CIVIL LAW:

Tennessee Hospitals Sue US Over Medicare Payments. The AP (4/13) reports, "Fifteen Tennessee hospitals are embroiled in a court battle with the federal government over roughly $100 million that the hospitals say is owed to them." The AP continues, "The hospitals say the Department of Health and Human Services failed to reimburse them adequately during the 1990s for treating Medicare patients. The government contends it wasn't obligated to pay the portion the hospitals are seeking." The AP adds, "The dispute centers on a formula used under Medicare to reimburse hospitals that serve a high percentage

DOJ_NMG_0025970

of low-income patients. .. A federal judge in Washington sided with the Tennessee hospitals, but the government is citing a recently passed legislation in asking the judge to change his mind. … Justice Department lawyers arguing on behalf of HHS are supposed to submit a brief in their appeal to the judge next week, and a final decision could come about a month later, according to Murray Klein, a lawyer for the hospitals."

DOJ Argues Over Control Of National Guard Base, Planes. The AP (4/13, Haigh) reports, "The federal government argued Wednesday that while Connecticut Gov. M. Jodi Rell may control the fate of the state's Air National Guard base in East Granby, the Pentagon controls the planes. … And that means the Pentagon has the right to move those planes wherever it wants, said Carl Nichols, deputy assistant attorney general for the Department of Justice. … 'We are not talking about state airplanes. These are federal airplanes,' he said during a hearing at U.S. District Court in Hartford." The AP adds, "The state is asking a federal judge to block the Defense Department from removing the 15 A-10 Thunderbolts from the 103rd Fighter Wing at Bradley International Airport. … U.S. District Judge Alfred V. Covello did not rule on the matter Wednesday. His decision on the state's motion is expected in the coming months. …. The Justice Department is seeking to lift a temporary restraining order that has prevented it from removing the planes. Blumenthal is asking Covello for a summary judgment that would keep the base open."

CIVIL RIGHTS:

DOJ Warns States Over Election Law Compliance. The AP (4/13, Smyth) reports, "Ohio officials are scrambling to respond to a federal warning that the state hasn't complied with part of the Help America Vote Act, a measure packed with election mandates states must have in place this year." The AP continues, "Secretary of State Kenneth Blackwell said he is confident his office can satisfy the concerns that the Justice Department expressed in its March 31 letter. His office must respond to the Justice Department by Friday." The AP adds, "John Tanner, chief of the Justice Department's voting rights division, indicated in the letter that Ohio and 29 other states had yet to sign the required agreements with the Social Security Administration to match the last four digits of voters' Social Security numbers against federal records. Under HAVA, the numbers will be used to verify the identity of voters. … Other states got the same warning letter. … Alabama Secretary of State Nancy Worley says she has a conference call scheduled with Justice Department officials later this month to explain that the state is still working to link driver's license records to federal records. Maine expects to have computerized voter registration system operational later this year, Deputy Secretary of State Doug Dunbar said. Missouri expects to have its driver's license system fully compatible with SSA records by the end of the month, said Stacie Temple, a spokesman for the secretary of state's office. … Minnesota, like Ohio, has an agreement with the SSA in place but hasn't yet brought the system online. It will be operational in time for the next statewide election, the Sept. 12 primary, said Kent Kaiser, a spokesman for Minnesota Secretary of State Mary Kiffmeyer. … Oregon continues to wrestle with putting voting machines designed for people with disabilities in place by the May 16 primary. HAVA requires states to have a machine in every polling place that allows disabled people to vote independently and privately."

Federal Officials To Examine Mississippi Coast Voting Needs. The AP (4/13, Pettus) reports, "Secretary of State Eric Clark and members of the U.S. Election Assistance Commission will be on the Gulf Coast on Thursday to hear about south Mississippi's post-Katrina voting needs." The AP continues, "The public meeting in Bay St. Louis comes less than two months before Mississippi voters go to the polls for the first time since the massive hurricane blew ashore last August." The AP adds, "A party primary on June 6 will determine which Democrat will face Republican incumbent Trent Lott in the U.S. Senate race this fall. There are no party primaries for the 4th District U.S. House seat in south Mississippi. … Katrina destroyed precincts in all three coastal counties and caused widespread destruction more than 150 miles inland. In Harrison County alone, the storm wiped away 17 of the 65 polling places, said Circuit Clerk Gayle Parker. … The storm also destroyed voting equipment, but officials say that should not be a major problem. Seventy-seven of Mississippi's 82 counties - including all three on the coast - already were planning to buy new voting machines with federal money provided by the Help America Vote Act. The new touch-screen machines will be used in the primaries."

Rendell Criticized For Failing To Embrace Measures To Crack Down On Voter Fraud. In a piece in the Wall Street Journal (4/13, A13), columnist John Fund writes, "Over five years after the near meltdown of the Florida presidential recount, politicians are still arguing over how best to reform state election laws. Ground zero in that battle now is Pennsylvania, which features two close statewide races, for governor and U.S. senator." Pennsylvania's "GOP-controlled Legislature" recently passed two bills: one "would require voters show a form of official ID or a utility bill; another bill would end Philadelphia's bizarre practice of locating over 900 polling places in private venues, including bars, abandoned buildings and even the office of a local state senator." But Gov. Rendell "vetoed both bills last month," warning "that requiring an ID could disenfranchise the homeless, nursing-home residents and the poor." Rendell's "history doesn't

DOJ_NMG_0025971

inspire confidence that he takes fraud of any kind seriously." Rendell, in 1997, "admitted to the Journal's editorial board that Philadelphia judges had 'a rich history of corruption' that called into question how fairly city laws are enforced." Fund adds, "The integrity of the ballot box is just as important to the credibility of elections as access to it. In not closing off opportunities for fraud and chaos, Pennsylvania is inviting trouble in its fall elections that could rival that of Florida in 2000."

Special Master To Oversee Virgin Islands Prison. The St Croix (VI) Source (4/13, Shimel) reports, "The territory's prison system is expected to become subject to greater oversight with the court-ordered appointment of a special master. Attorney General Kerry Drue said a candidate has been chosen and the name will be submitted to a federal magistrate by Wednesday." The Source continues, "The special master was called for by a federal judge who recently declared the territory in contempt of a consent decree to correct deficiencies at the Golden Grove Adult Correctional Facility. Golden Grove has been termed one of the worst prison systems in the United States by the head of the American Civil Liberties Union National Prison Project." The Source adds, "U.S. Magistrate George Cannon gave the U.S. Justice Department's Civil Rights Division and the V.I. attorney general's office 20 days to choose a special master and present their choice to the court. If no agreement could be reached, the magistrate asked the two parties to produce a list of five potential candidates for the court's consideration. … 'Pursuant to Magistrate Cannon's order, the parties have met and conferred regarding the selection of a candidate for selection of a special master in the case, "USA v. Territory of the Virgin Islands." After conferring telephonically the parties were able to agree to a name. That name will be formally submitted to the court this afternoon,' the attorney general said Wednesday. … However, Drue said, it's not clear how soon the judge will signal his approval of the candidate."

SCOTUS To Consider Employers' Handling Of Harassment Complaints. The Wall Street Journal (4/13, Shellenbarger) reports, "While bans on sexual harassment and discrimination are posted in many employers' policies these days, just how much on-the-job protection is owed workers after they step up to make charges of bad behavior?" The Journal continues, "A Supreme Court case set for oral arguments Monday will shed new light on that question. The central issue in the case, Burlington Northern Santa Fe Railway v. Sheila White, will examine how much latitude employers have, after an employee complains about sexual harassment or race, religious or sex discrimination, to make transfers or changes in the employee's job duties without being subject to charges of retaliation." The Journal adds, "The case comes amid a rising tide of retaliation complaints to the Equal Employment Opportunity Commission. The decision not only has implications for how such claims may be handled in the future, but also for women's progress in nontraditional occupations."

Missouri State Tennis Players File Title IX Suit To Preserve Team. The AP (4/13) reports, "Four Missouri State women's tennis players are suing the university for cutting their program as part of a sports reduction, contending the move violates Title IX rules. The lawsuit asks a federal court to order the state's second-largest university to reinstate the women's tennis program and seeks a temporary injunction to keep the sport going after the planned shutdown at the end of this academic year." It also "seeks class-action status for all current and future female tennis players. It was filed in U.S. District Court in Springfield by the American Civil Liberties Union in the name of four players who contacted the group."

Romney Says Democrats Are Making A Mistake By Backing Gay Marriage. Massachusetts Gov. Mitt Romney said on MSNBC's Hardball (4/12), that "the Democratic Party, particularly in my state, has made an error by adopting a platform that supports gay marriage." Romney added that Democrats are "making a mistake because I think they fundamentally misunderstand the fact that in America people recognize that the primary purpose of marriage is the creation and the development of the next generation. And the ideal way to create and develop the next generation is to have homes with moms and dads. And that's something where traditional marriage is going to play such a key role."

Gay, Lesbian Families Plan To Attend White House Easter Egg Roll. In what the Washington Post (4/13, B3, Dvorak, 744K) calls an effort to "blanket the White House lawn with a realistic mosaic of their families," hundreds of gay and lesbian parents from around the country plan to line up overnight tomorrow to get tickets to Monday's White House Easter Egg Roll, Critics "have denounced the parents for politicizing such an iconic, American event." The Post adds, "There has been some hand-wringing at the White House over the planned gay and lesbian mobilization. White House spokesman Scott McClellan has been fielding questions about it since January."

ANTITRUST:

FCC Tightens Airwave Auction Rules. The AP (4/13, Miller) reports, "Under new rules designed to increase competitive bidding, companies that want to sell such

DOJ_NMG_0025972

wireless services as high-speed Internet and video will be able to buy a big chunk of airwaves at a government auction." The AP continues, "The Federal Communications Commission on Wednesday voted to require anonymous bidding at the June 29 auction to prevent companies from colluding to keep out competitors and to drive prices down. Bidding would be open, though, if the FCC determines that enough companies are seeking licenses to keep the auction competitive. … 'It is essential that we make an effort to foreclose anticompetitive bidding behavior in this auction,' said FCC Chairman Kevin Martin." The AP adds, "The Justice Department urged that all bids be anonymous, but the commissioners agreed to the modified proposal, which was suggested by T-Mobile USA."

Brokerage Firms Sued Over Naked Short-Selling Fees. Dow Jones (4/13, Bray) reports, "An antitrust lawsuit was filed Wednesday against the securities industry's largest brokerage firms over fees charged as a result of 'naked short selling.'" Dow Jones continues, "The lawsuit filed in federal court in Manhattan by Electronic Trading Group LLC alleges that the major broker-dealers charged unearned fees, commissions or interest on short sales where those broker-dealers failed to borrow or deliver the stock to back a short position." Dow Jones adds, "Naked short selling exists when a stock is sold before an arrangement has been put in place to borrow the shares. It's illegal for most investors, but legal for firms that make markets in stocks and bring liquidity to the market. … 'Defendants collusively condone and engage in these practices to their individual and collective enrichment, routinely alternating among themselves in the roles of prime broker who fails to deliver and third-party broker-dealer who permits the (failure to deliver) to persist,' the lawsuit says."

EU Official Blasts Credit Card Profits. The AP (4/13, White) reports, "Credit and debit cards such as Visa and MasterCard are racking up 'abnormal' and 'excessive' profits for banks, European Union antitrust chief Neelie Kroes said Wednesday. … 'Paradise is over,' she warned, telling the card industry to make changes or face antitrust investigations that could force them to reform their business or pay fines. … 'The more the payment card industry does on its own initiative, the less they are likely to face action under antitrust rules,' she said." The AP continues, "In its first report from a wide-ranging investigation into payment cards in Europe, the European Commission said customers are paying too much because the industry was still split along national lines and new card providers find it hard to set up shop. Credit cards are a 'very profitable' business, it said." The AP adds, "Kroes said consumers would get a better deal if there was more competition among card providers and if banks started to offer cards to customers in different countries. … She said the industry should also rethink the way it sets prices. 'Banks collectively set fees that tax businesses and ultimately all consumers for every card payment,' she said. 'As a consequence there is not enough market pressure on fees and retail prices are inflated due to card payments.'"

The Financial Times (4/13, Buck) reports, "A European Commission inquiry into the payment card sector found yesterday that little cross-border competition existed between providers. Every year 23bn card payments are made in the EU worth €1,350bn. … Ms Kroes predicted that cardholders could save hundreds of euros if the market was made fully competitive. … She praised Germany and the Netherlands as the countries with the lowest credit and debit card fees, while Portugal had the highest." The Times notes, "The Commission's investigation pointed to large discrepancies between fees charged in EU member states as evidence of the poor state of competition. It found that the fees retailers pay to credit card companies vary between countries by up to 500 per cent for Visa and by 650 per cent for MasterCard. … Fees paid by consumers can be twice as high depending on where the card is issued."

Nevada Man's Gambling Patent In Legal Limbo. The Las Vegas Sun (4/13, Benston) reports, "Mel Molnick is an unlikely adversary of the Internet gambling industry. … He is not a foe of gambling. But the retired contractor has spent the last several years suing dozens of online casinos." The Sun continues, "Molnick, 63, claims to own a method patent that governs live, electronic betting from a remote location. In other words, the process by which just about every Internet gambling site does business. … A method patent is a controversial and often litigated type of patent that covers a process rather than a particular product. Molnick's patent was filed with the U.S. Patent Office in 1995 and published in 1998. The patent has since been approved in other parts of the world, including Asia and Europe." The Sun adds, "Molnick has been called a kook and an opportunist for making the bold - some say ridiculous - claim that he invented and patented the idea for Internet gambling. Others say his patent will have little legal weight in the United States because of the quirks of Internet commerce and the complexities of patent law. … Internet gambling was a fledgling enterprise in 1995, a shadow of the $12 billion-plus business it is now. Web casinos operating at that time were primitive versions of the sophisticated, well-advertised brands they are today. … Yet Molnick has had some success with his patent by reaching pretrial settlements with several Web casinos, according to court documents. Those that didn't settle have disappeared into cyberspace - although it's possible they simply popped up elsewhere under different names. … Molnick has managed to do what some legal experts thought couldn't be done - proceed with a federal

DOJ_NMG_0025973

lawsuit against the world's largest Web casino company. … The lawsuit, filed in federal court last year, named London-based Sportingbet Plc along with many other Internet gambling sites. In contrast with previous suits, several defendants were larger, more profitable companies and included publicly traded entities."

ENVIRONMENT:

Offshore Drilling Debate Heating Up In Coastal States. The Christian Science Monitor (4/13, Knickerbocker, 61K) reports the "battle over oil and gas drilling in the US is heating up on a new front - or rather multiple fronts in coastal waters from Virginia to Florida to California to Alaska." The Bush Administration "sees offshore oil and gas drilling as a key element in its push toward energy independence. As with the debate over the Arctic National Wildlife Refuge, skeptics see the prospect as a potential pollution danger that would take years to produce what likely will be relatively insignificant amounts of oil and gas." Officials in coastal states "have mixed views on the subject, including whether to lift the present moratorium on offshore drilling along much of the US coast, which has been in place since 1981. With an eye toward potential royalties as well as environmental impact, many coastal state lawmakers and governors want to increase their control of such development."

N.J. Dump Returns To Superfund List. The New York Times (4/13, DePalma) reports that the "Ringwood Mines area in northern New Jersey, which the Ford Motor Company used as a dumping ground in the 1970's and then cleaned, is being put back on the list of the most polluted sites in the country." The unusual redesignation "follows several years of intense pressure from local residents who claimed that the area had never been properly cleaned and that dangerous material left over from the assembly of millions of automobiles in a plant in nearby Mahwah was endangering their health."

Mumps Outbreak Spreading Across Midwest. Health experts are trying to rein in a large mumps outbreak raging in Iowa that has spread to at least eight other Midwestern states. The Washington Post (4/13, A3, Stein, 744K) reports, "At least 515 cases have been reported in Iowa this year, far outpacing the five cases the state usually sees in a year and the 200 to 300 that typically occur nationally. The epidemic, the largest since a 1988 outbreak in Kansas, shows no sign of slowing, with at least 100 more cases in Nebraska, Kansas, Minnesota, Wisconsin, Indiana, Michigan, Missouri and Illinois." The Post adds, "As health officials work to break the chain of transmission of the viral infection, disease detectives are trying to puzzle out what is causing it. … The outbreak has underscored that old infectious diseases that most people rarely think about -- and doctors do not often encounter -- can suddenly reemerge."

FBI/DEA/ATF/USMS:

FBI Official Defends Supervisor Term Limit Directive. The Washington Times (4/13, Seper, 90K) FBI Executive Assistant Director Michael Mason "yesterday defended a much-criticized directive requiring field supervisors to move to the bureau's Washington headquarters after five years or step down, saying 'highly experienced' managers are needed to fight the war on terror and other crime here and abroad." Mason told The Times, "The program was borne out of an acknowledgement by the director, his senior staff and others that the bureau's need for a highly experienced management cadre and an increasingly large footprint overseas would require a management staff willing to move, relocate and exploit that knowledge across the bureau." Mason "said that although some veteran supervisors have criticized the program, the directive seeks to 'realize the hope that their experience will not be lost but exploited by the FBI to the benefit of many more agents.'"

Former FBI El Paso SAC Charged With Lying In Probe Of Drug Trafficker. The AP (4/13) reports former FBI El Paso SAC Hardrick Crawford Jr. "was indicted Wednesday on five counts of making a false statement in connection with the investigation into his relationship with a Mexican racetrack owner, whom Mexican officials alleged was a member of a drug cartel. Crawford's lawyer, Mary Stillinger, said Wednesday night that Crawford had done nothing wrong." Crawford is charged with "lying to federal investigators about what he knew of allegations that the racetrack owner, Jose Maria Guardia, was involved in drug trafficking and money laundering despite having been given that information several times. Crawford also is accused failing to report thousands of dollars worth of gifts from Guardia, a one-time FBI informant, and that his wife held a $5,000-a month job with Guardia."

Documents Reveal Alaska Police Officer Threatened FBI Agent During Weapons Probe. The Anchorage Daily News (4/12, Mauer, Demer) reported, "A longtime local cop angrily demanded that the FBI look the other way from the explosive, unexplained growth of Security Aviation, fearing an investigation would disrupt the money party that began in the summer of 2005. Stop 'putting your nose where it doesn't belong,' the unnamed cop growled at a federal law enforcement officer," and "the officer's statement,

DOJ_NMG_0025974

described as a 'veiled threat' and a reason for the FBI investigation to remain covert until it was sprung in a series of armed raids starting Feb. 2, was contained among more than 800 pages of search warrants, FBI affidavits, inventories of seized material and related documents unsealed this week in federal court." The Daily News notes Security Aviation's Rob Kane "and the company are charged with illegal possession and transportation of Soviet-era rocket launchers capable of being mounted on its fleet of Czech-made L-39 Albatross jets."

Former Massachusetts Narcotics Investigator Convicted Of Cocaine Trafficking. The AP (4/13) reports a former Malden police narcotics investigator "was one of two men convicted on Wednesday of federal cocaine trafficking charges. David Jordan, 45, of Stoneham, and Anthony Bucci, 43, of Wakefield, were convicted by a jury after a three-week trial of conspiracy to distribute and to possess with intent to distribute three kilograms of cocaine; possession with intent to distribute three kilograms of cocaine; and using or carrying a firearm during and in relation to a drug trafficking crime. … Jordan made false statements to DEA agents about his involvement."

The Boston Globe (4/13) reports June Stansbury, the special agent in charge of the Drug Enforcement Administration's New England office, "said, "It is regrettable that the lure of drugs and dirty money tempt a very few in the profession, but make no mistake, we treat criminals as they should be, even if they are in possession of a badge.'"

California City Council Approves New Rules For Marijuana Dispensaries. The San Luis Obispo Tribune (4/12, Curran) reports medical marijuana clubs "looking to take root in Atascadero will have to comply with a new city ordinance approved Tuesday. City Council members approved 3-1 a law governing the marijuana dispensaries inside the city limits. … Under the regulation, which allows for only one such business, a prospective owner would have to locate the business at least 1,000 feet away from schools, churches or parks."

California Supervisors Temporarily Disallow New Pot Clubs. The AP (4/12) is now reporting a story included in yesterday's briefing and writes that marijuana dispensaries "were temporarily banned in unincorporated parts of Contra Costa County to allow supervisors to develop new zoning regulations. The Board of Supervisors unanimously approved the measure Tuesday establishing a moratorium on new dispensaries. The ordinance is effective immediately and gives the county 45 days to study traffic congestion, noise and other effects of pot clubs."

The Tri-Valley Herald (4/12) also reported on the moratorium.

US Charges Four Men In Detroit Weapons-Shipping Plot. The Detroit Free Press (4/12, Ashenfelter) reports, "Four Asian businessmen plotted to buy hundreds of handguns, machine guns, Sidewinder missiles and aviation radar equipment for export to Indonesia, creating a threat to national security, federal prosecutors said Tuesday." The Free Press continues, "The four men -- who have been charged in Detroit and Honolulu -- were arrested Sunday after meeting in Hawaii with people they thought were representatives of a metro Detroit company, which authorities say the men believed would supply the military hardware. It was to be shipped to Indonesia through Singapore." The Free Press adds, "Court papers didn't say whether the men were buying the equipment for the Indonesian government or whether it was sting operation. The investigation was run by the U.S. Immigration and Customs Enforcement agency in Detroit, with the assistance of Defense Criminal Investigation Service agents from Ohio. … 'We consider this to be a serious and grave threat to our national security,' U.S. Attorney Stephen Murphy III of Detroit said Tuesday. 'The agencies involved in the case worked hard to arrest individuals who were ready, willing and able to buy American weapons and take them outside the country.' … Charged were Hadianto Djoko Djuliarso, 41, of Indonesia; Ibrahim Bin Amran, 46, of Singapore, and Ignatius Ferdinandus Soeharli and David Beecroft, whose ages and nationalities weren't disclosed." The Detroit News (4/11, Egan) also reports on the indictments.

Five Texas Aryan Brotherhood Members Indicted On Weapons Charges. The AP (4/13) reports, "Five members of the Aryan Brotherhood of Texas were indicted Wednesday on firearms violations, U.S. Attorney Richard B. Roper said." Matthew C. Courtney, Cory D. Daniel and Aaron Thompson "were each charged with conspiracy to possess and dispose of 26 stolen firearms and other charges. The indictment alleges that the firearms were stolen in a burglary. Daniel and Thompson are in state custody," and "an arrest warrant has been issued for Courtney." In additional indictments, Jeffrey Lynn Womack "was charged with one count of possession of an unregistered firearm" and John Arthur Clark "is accused of being a convicted felon in possession of a firearm."

Alaska's Governor Seeks To Restore Criminal Penalties For Marijuana. The Washington Times/AP (4/13) reports Alaska Gov. Frank Murkowski "says recreational use of marijuana no longer should be protected by Alaskans' right to privacy. He's pressing the Legislature to restore criminal penalties for marijuana possession. … The state's highest court concluded in 1975 that Alaskans' constitutional right to privacy outweighed any harm that might

DOJ_NMG_0025975

occur from using small amounts of marijuana in their homes." The AP adds that the Murkowski administration says marijuana is much more potent now than it was in the 1970s and 1980s.

DOJ Grant Funds Anti-Gun Violence DVD. The Dayton Daily News (4/13, Wynn) reports, "Seven years ago, the streets swallowed up Clifton Montgomery and spat him into an Ohio prison after he was convicted of aggravated robbery and burglary. … Instead of graduating and going to college, Montgomery said he was 'kicked out of school,' was about to be a father at 18 and was arrested after a 'home invasion.' … Money drove Montgomery, who was released from prison more than a month ago. Now he wants to steer youth away from the route he took." The News adds, "Montgomery is one of many local people featured in Peace by Peace, an anti-gun violence documentary that premiered Wednesday to community leaders and city and county officials in the Dayton Cultural and RTA Transit Center. … Members of Spirit of Peace, Inc., a faith-based nonprofit group, presented the DVD project designed to educate youths ages 12 and older about the effects of gun violence. The project was funded by a grant from the Justice Department's Project Safe Neighborhoods program."

U Of Georgia Student Detained By ATF Agents. The U of Georgia Red and Black (4/13, Ervin) reports, "Alcohol, Tobacco and Firearm agents, on (the University of Georgia) campus (in Athens, GA) Tuesday for Project Safe Neighborhoods training, detained a 'suspicious individual' near the Georgia Center, University Police Chief Jimmy Williamson said." The Red and Black continues, "Jeremiah Ransom, a sophomore from Macon, was leaving a Wesley Foundation pirate vs. ninja event when he was detained. … After being held in investigative detention, he was found to have violated no criminal laws and was not arrested."

The Atlanta Journal-Constitution (4/13, Simmons) reports, "ATF Special Agent in Charge Vanessa McLemore said the officers chased Ransom after seeing him peek around a stone pillar toward the cashier's booth in a nearby parking garage. 'They called for him to stop and he didn't,' she said. 'It was the totality of the circumstances.' … Ransom was released after 30 minutes when UGA police determined he was not a threat." The AP (4/13) also reports this story.

IMMIGRATION:

Reid Asks Frist To Return Immigration Bill To Senate Schedule. The AP (4/13, Gamboa) reports Senate Minority Leader Harry Reid "asked Majority Leader Bill Frist on Wednesday to return to work on immigration legislation immediately after the Senate completes a bill with more money for military operations in Iraq and hurricane relief." Reid said in a letter "to Frist that the need for an immigration bill was highlighted by rallies across the nation this week protesting a House bill that would subject illegal immigrants to prosecution as felons. Reid labeled as 'confusing' Frist's position on a compromise put together by Sens. Chuck Hagel, R-Neb., and Mel Martinez, R-Fla., that collapsed last Friday after Democrats refused to allow votes on several amendments to it."

LAT Poll Shows Support For Border Security And Guest Worker Plan. The Los Angeles Times (4/13, Brownstein, 958K) reports a Times/Bloomberg poll of 1.357 adults conducted April 4 through April 11 (+/-3%) showed, "Most Americans say the United States should confront the challenge of illegal immigration by both toughening border enforcement and creating a new guest-worker program rather than stiffening enforcement alone, a Los Angeles Times/Bloomberg poll has found." With "a solid 2-1 margin, those surveyed said they would prefer such a comprehensive approach, which a bipartisan group of senators has proposed, to an enforcement-only strategy, which the House of Representatives approved in December. Support for a comprehensive approach was about the same among Democrats, independents and Republicans, the poll found."

GOP Pledge To Drop Felony Provision Unlikely To Diminish Debate. CNN's The Situation Room (4/12, Collins) reported, "On Capitol Hill, a new about-face in the battle over immigration. Republican leaders vowing to strip a controversial provision approved last year by the House that would make it a felony to be in this country illegally. The announcement came late yesterday, one day after hundreds of thousands of people rallied across the nation for immigrants' rights."

USA Today (4/13, Kiely, 2.31M) reports lawmakers from both parties said the pledge "is unlikely to defuse opposition to proposed immigration and border security legislation." The House bill, which "called for making illegal immigration a felony offense, punishable by at least a year in jail," has "been a rallying cry for thousands of demonstrators." Rep. Mario Diaz-Balart of Florida, "one of five Hispanic Republicans in the House, hailed the promise to eliminate a plan that was 'offensive, excessive and demonized hard-working immigrants.' He and other Republicans accused Democrats of a Machiavellian move to retain the felony penalty." USA adds immigrant rights advocates "were not impressed by the promise from" Majority Leader Bill Frist and Speaker Dennis Hastert, while Sen. Edward Kennedy "dismissed the GOP statement as 'empty rhetoric.'"

King Says Democrats Created "Phony" Felony Issue. Rep. Peter King said on Fox News' The O'Reilly Factor (4/12) that the felony issues is a "totally phony issue created by Democrats and facilitated by Catholic bishops and liberal media. The original bill…said it would be a felony to

DOJ_NMG_0025976

enter the country and felony to stay in the country illegally. Republicans, we introduced an amendment to make it a misdemeanor because it's actually a lot harder to support someone and bring action under a felony than misdemeanor. You have to commit a grand jury and pay legal fees. No sense in making it a felony. 191 Democrats, over 90% of the Democrats, voted to keep it a felony. Over 160 Republicans, 70% of the Republicans, voted to make it a misdemeanor. It was Democrats who voted to keep it a felony. Republicans voted to keep it a misdemeanor and Democrats ever since have been saying this bill is no good because it makes every illegal immigrant a felon."

US, Canada Break Up Human Smuggling Ring. The CBS Evening News (4/12, story 2, 2:05, Schieffer, 7.66M) reported the government "announced it has broken up a human smuggling ring in Washington State." CBS (Whitaker) added, "A tip put US and Canadian agents on the trail of the Vancouver-based ring more than a year ago. They say the smugglers charged dozens of Pakistani and Indian nations as much as $35,000 each for fake US passports and illegal entry into Washington State. From there they'd fan out across the US." There were "no confirmed terror connections, but no one is breathing easy."

The Los Angeles Times/AP (4/13) reports a "federal grand jury in Seattle has indicted 14 U.S. and Canadian men for roles in the alleged scheme. Twelve had been arrested as of Wednesday." Leigh Winchell, "special agent in charge of U.S. Immigration and Customs Enforcement in Seattle, said about 50 people had been apprehended who had paid as much as $35,000 each to be smuggled into the U.S."

Some Military Subcontrators Using Illegal Immigrant Labor. The CBS Evening News (4/12, story 3, 3:40, Schieffer, 7.66M) reported some companies "with contracts from the government are hiring illegal immigrants, many of them near highly sensitive military bases." CBS (Keteyian) added US military subcontractor Gargiulo Construction, which is working at a site near the Trident sub base in Groton, Connecticut, "says its payroll is completely in order, but in reality, some workers' papers are fake. … These men, all born in Mexico, spoke in shadow because they are here illegally and fear talking to the press can get them fired. Talking about false papers and pay that is less than half what a union member makes." Despite "dozens of arrests at military bases around the country, government construction sites continue to be fertile ground for undocumented workers, something Centex, the government contractor in Groton was hesitant to discuss." Company president Gene Gargiulo "flatly denied hiring any undocumented workers but in the wake of this interview according to the Carpenters' Union, eight Hispanic workers were fired the very next day. Sparking a walkout by two dozen Hispanic workers on Gargiulo job sites."

Arizona Legislature Approves Bill To Use Criminal Trespassing Law Against Illegal Immigrants. The Los Angeles Times/AP (4/13) reports two days "after a big immigration march in Phoenix, the Arizona Legislature on Wednesday approved legislation to make illegal immigrants subject to the state's criminal trespassing law." The Senate "approved the bill on a 17-12 vote and the House followed with a 33-27 vote, with both Republican-led chambers voting nearly along party lines." Supporters of the bill "contend it would provide 'a second line of defense' behind the border patrol by enabling state and local law enforcement officers to arrest illegal immigrants."

Immigration A Hot Issue In 2006 Congressional Races. The Wall Street Journal (4/13, Solomon, 2.11M) reports while the "fight over illegal immigration roils Washington, the issue is spilling out into local, state and federal races across the country. But the response isn't monolithic." Even as "a number of House Republicans are expected to face a backlash from Hispanic and other voters for their tough approach, some candidates are adopting hard-line positions in a bid to portray incumbents as weak on illegal immigration. For now, the issue is percolating largely in Republican primaries but is expected to affect campaigns across the board as the November midterm elections approach." Many candidates "are taking a tough stance on the issue, in part because the public seems to support more aggressive measures. A recent Wall Street Journal/NBC News poll found that 56% of respondents don't back the type of guest-worker program favored by President Bush, while a Pew Research Center poll found that 53% say illegal immigrants should be forced to 'go home.'" The "desire for tougher treatment has become an issue in places like Utah, where Rep. Chris Cannon, a five-term Republican, is facing a fight for the nomination, in large part because of his position on immigration."

Rohrabacher Prison Labor Suggestion Criticized. In a Los Angeles Times column (4/13), Patt Morrison says, "He said it, all right: 'We do not need more people from foreign countries coming in taking the jobs of Americans…. I say let the prisoners pick the fruits.' That's Huntington Beach's Republican congressman Dana Rohrabacher, one of those fellows for whom the word 'colorful' seems wimpy." Morrison adds, "Prison labor? That's not 21st century America, is it? It reeks of the gulag — Siberia, China, political prisoners."

TAX:

DOJ Accuses Florida Firm Of Preparing False Tax Returns For Seminole Tribe Members. The AP (4/13) reports, "A Miami firm was accused by the U.S. Justice Department on Wednesday of preparing tax returns for Seminole Tribe members falsely claiming they were

DOJ_NMG_0025977

exempt from income taxes for gambling proceeds." The AP continues, "The Justice Department asked a federal judge in a lawsuit to halt the practice by Labib Baltagi Inc., which operates 20 Jackson Hewitt franchises in the Miami area. The lawsuit - filed only days before Monday's federal tax filing deadline - does not accuse Parsipanny, N.J.-based Jackson Hewitt Tax Services Inc. of any wrongdoing." The AP adds, "At least 32 tax returns of Seminole Tribe members have been identified by the IRS as falsely claiming that they were exempt from income taxes on casino gaming proceeds under a Native American treaty. The total in false claims is more than $222,000, according to the lawsuit. … There is in fact no such treaty. … 'The law is clear that income from the casino gaming activities of Native American tribes is taxable,' said Eileen J. O'Connor, assistant attorney general for the Justice Department tax division."

DOJ Sues California CPA Over Mariner Filings. The Los Angeles Times (4/13, Kristof) reports, "The Justice Department is accusing an El Segundo tax accountant of claiming a deduction for his oceangoing clients that isn't exactly seaworthy." The Times continues, "Martin A. Kapp specializes in handling tax returns for workers in the transportation industry, such as airline pilots and railroad engineers. But it's his self-devised method for claiming meal deductions for merchant sailors and tugboat captains that prompted the government to sue him in U.S. District Court in Los Angeles." The Times adds, "Kapp uses his so-called mariner's deduction to claim per diem meal and incidental expenses for each day his clients are at sea. Taxpayers who travel on business are allowed to deduct the cost of the trip using a standard per diem deduction instead of keeping track of their actual meal and incidental costs. … The government contends that Kapp's clients can't claim the deduction because they get free meals while at sea, and taxpayers can't claim deductions if they don't spend any money. … The Justice Department, which claims that Kapp is misreading both IRS rules and court rulings, wouldn't estimate how many of Kapp's clients had claimed the mariner's deduction or how much it had cost the government in uncollected taxes. The government is seeking an injunction barring him from claiming the deduction, although it isn't trying to prevent him from preparing returns, according to court papers filed Tuesday."

Reliability Of Income Tax Preparers Seen As Questionable. USA Today (4/13, A1, McCoy, 2.31M) reports as "paid preparers complete more than 60% of the individual tax returns filed by Americans, questions are increasingly being raised about the reliability of those preparers, as well as about the federal government's limited oversight of the tax-preparation field." A USA TODAY review "of scores of federal court proceedings against alleged problem preparers found that thousands of taxpayers have been hit with repayment demands and penalties since 2001 as the IRS moved to recover millions of dollars in tax losses. The victims, some of whom offered a rare inside look at their tax woes, often include immigrants, military recruits and others unfamiliar with the tax system." Many of the preparers "have been accused of using improper deductions and credits to inflate the size of tax refunds in apparent efforts to attract new clients and increase profits, the court records show. Others charged a percentage of the inflated refunds as their fees." In a "sign of the problems taxpayers may face, five of 19 tax-preparer offices selected for undercover tests in March by the Government Accountability Office, the investigative arm of Congress, produced returns that had up to nearly $2,000 in unwarranted refunds."

Withholding Seen As Leading To Indifference To Government Spending. In a USA Today op-ed (4/13), Laura Vanderkam says withholding has lead to taxpayer apathy: "That collective shrug is precisely the reason Congress implemented mandatory withholding in 1943. It feels relatively painless for the 131 million Americans who pay this way — especially when a refund check arrives. Consequently, few withholdees truly care what happens with their money. But others do. Nearly 12 million of us, the IRS reports, pay estimated taxes by writing checks to the government, usually every quarter. Often self-employed types, we deposit checks into our accounts, dream of the vacations those funds could finance, and then mail those funds to the U.S. Treasury instead. It's a painful process." One way to "slow out-of-control spending in Washington is to make everyone feel the same pain that quarterly payers experience . Ending withholding would do that — and it's not as crazy as it sounds."

Proposed IRS Rules Criticized For ID Theft Potential. ABC World News Tonight (4/12, story 8, 2:20, Vargas, 8.78M) reported, "This year's tax deadline is just days away. And an estimated $41 million people will pay someone else to fill out their returns. Most taxpayers have no idea that many tax preparers are sharing confidential information about their returns with other businesses. Now, consumer groups are warning protections proposed by the IRS are going to make the problem even worse." ABC (Muir) added, "Say you take your return to any of those big tax preparers. And you want your refund right away. Your tax preparer gives your information to a bank in order to get that instant refund. And then that bank can also use your information to market other products to you, as well. Few realize it's been the law since the mid-1970s. But so much has changed since then. Most notably, the risk of identity theft. So, the IRS is proposing new regulations. Requiring more explicit consent forms, even typed in larger fonts." IRS Commissioner Mark Everson: "So that when a taxpayer shares information with their preparer he or she is well aware

DOJ_NMG_0025978

that it can, in turn, be reshared, go overseas, or go to financial institutions." Muir: "But consumer advocates point to something else the IRS wants to do. It's trying to level the playing field with the big tax preparers by allowing even the smaller ones to get into this information sharing game. And once you sign on the dotted line, it's impossible for you to keep track of your private information."

WSJ Says Tax Code Is Unfixable. The Wall Street Journal (4/13, 2.11M) says in an editorial that the failure of tax preparation chains to properly prepare returns "sure sounds like incontrovertible evidence that the IRS tax code is unfixable. A rational conclusion on Capitol Hill would be to scrap the code for something that actually approaches common sense. Instead, Chuck Grassley and Max Baucus, the leading Republican and Democrat on the Senate's tax-writing Finance Committee, say that what is needed is more training requirements for tax preparers. Mr. Grassley declared that if you need a license to be a barber, why not for filling out taxes? Umm, well, we're not sure why anyone needs a government license to cut hair, but tax preparation standards would only raise the barriers to being a tax accountant and add to the costs of hapless taxpayers seeking help before April 15. Besides, even the top-trained professionals can't figure out the tax laws."

CONGRESS-ADMINISTRATION:

Bush Encourages Seniors To Sign Up For Medicare Rx Drug Plan. President Bush continued his campaign to encourage senior citizens to sign up for the new Medicare prescription drug plan in Northern Virginia, touting the millions who have signed up, its accessibility to non-English speakers and its affordability. Bush's remarks were carried by a few prominent media outlets, which also noted the problems people experienced with it, but ignored by the national network news programs. CNN's The Situation Room (4/12, Collins) reported, "President Bush staying on his Medicare message." He "has conceded glitches in the plan. He has been criticized for being too complicated, but a look at this new poll now: 74 percent of people who signed up for the prescription drug plan said it was actually easy to do. Just 24 percent said it was difficult."

The Washington Post (4/13, A6, Rein, 744K) reports, "If the content of the president's latest town-hall-style 'conversation' on Medicare this month was familiar, the setting was not. About 400 Korean, Chinese, Vietnamese and Filipino immigrants were in attendance at Northern Virginia Community College in Annandale." It "reflected the White House's effort to pitch a program that has drawn criticism for its cost and complexity to immigrant groups that under the best of circumstances labor to navigate government bureaucracies."

USA Today (4/13, Benedetto, 2.31M) reports, "Bush said he chose the audience to emphasize that many seniors do not speak English and need help navigating the system. He urged community groups and sons and daughters to pitch in." Bush said, "I'm trying to show that our government reaches out to people in all walks of life and in all neighborhoods. Bush "said that if seniors don't want to enroll they don't have to, but he said they should at least take a look at the program and its options."

The AP (4/13, Riechmann) reports Bush's "events are part of the administration's grass-roots effort to get eligible seniors to sign up. More than 1,000 enrollment seminars are being held across the country each week to educate seniors about their options." At the event with Bush, Labor Secretary Elaine Chao "said the government was working to educate people about the program with Asian-American groups, and non-English speakers can call government hot lines and speak with someone in their native language."

Scalia Proud Of Non-Recusal In Cheney Case. The AP (4/13, Reitz) reports, "Conservative U.S. Supreme Court Justice Antonin Scalia had some advice Wednesday for those who questioned his impartiality after he refused to recuse himself from a case involving his hunting buddy, Vice President Dick Cheney. … 'For Pete's sake, if you can't trust your Supreme Court justice more than that, get a life,' Scalia said." The AP continues, "Scalia, addressing an audience at the University of Connecticut's law school on Wednesday, said recusing himself from the 2004 case -- which focused on an energy task force that Cheney led -- would only have given fuel to newspaper editorial writers and other detractors who have said he is too close to the vice president. … 'I think the proudest thing I have done on the bench is not allowed myself to be chased off that case,' Scalia said." The AP adds, "The case in question involved Cheney's request to keep private the details of closed-door White House strategy sessions that produced the administration's energy policy. … The administration fought a lawsuit brought by watchdog and environmental groups that contended that industry executives, including former Enron chairman Ken Lay, helped shape that policy. The Supreme Court upheld the administration position on a 7-2 vote. … Scalia refused to recuse himself from the case, rejecting arguments by critics who questioned his impartiality because of a hunting vacation that he took with Cheney while the case was pending. … Scalia told the audience Wednesday that he would have stepped aside had the case involved Cheney personally, but that he viewed it differently because the vice president was named in his official capacity as head of the group."

Government Spending Reaches Record In March. The AP (4/13, Crutsinger) reports government spending "hit an all-time high for a single month in March,

DOJ_NMG_0025979

pushing the budget deficit up significantly from the red-ink level of a year ago." The Treasury Department reported "federal spending totaled $250 billion last month, up 13.7 percent from March 2005." Government receipts "also were up, rising 10.6 percent from a year ago, to $164.6 billion. That left a deficit for the month of $85.5 billion, a record imbalance for March." The March "outlay record of $250 billion surpassed the old mark of $232 billion set in February."

Broder Highlights 2005 Accrual Deficit Of $760 Billion. In his Washington Post column (4/13, A21), David Broder says Rep. Jim Cooper discussed with him "one of the most secretive documents in Washington -- the official Financial Report of the United States Government." The cover letter "in the report from Treasury Secretary John Snow contains the bad news. Whereas the budget deficit for fiscal 2005 was officially given as $319 billion, 'the government's accrual-based net operating cost . . . was $760 billion in 2005.' That $760 billion is the real difference between the money the government received and the obligations it added in the past year -- in other words, the unfunded costs being passed on to our children and grandchildren." David Walker, the head of the Government Accountability Office, "has been traveling the country trying to spread the alarm, said flatly that if the tax cuts now in effect are made permanent, as President Bush is requesting, and spending continues to rise at the current rate, 'the system blows up. More than half our debt is now financed by foreign countries, and they will exact a price.' Digging out of this mess 'will take 20 years,' Walker said, but the first step is simply to reassert the budget controls -- spending caps and a 'pay-go' rule that requires offsets for any new tax cuts or spending increases."

WSJ Says House GOP Refusal To Rein In Spending Could Cost Majority. The Wall Street Journal (4/13, 2.11M) says in an editorial that if Republicans "lose control of Congress in November, they might want to look back at last Thursday as the day it was lost. That's when the big spenders among House Republicans blew up a deal between the leadership and rank-in-file to impose some modest spending discipline." This is "all about Republicans and their refusal to give up their power to spend money at will and pass out 'earmarks' like a bartender offering drinks on the house. The chief culprits are the House Appropriators, led by Committee Chairman Jerry Lewis of California and his 13 subcommittee chairmen known as 'cardinals.' If Republicans lose the House -- and they are well on their way -- Mr. Lewis deserves the moniker of the minority maker."

Most States Close To Meeting NCLB Teacher Standards. The AP (4/13, Feller) reports, "Under federal pressure, most states are close" to meeting the No Child Left Behind Act's "highly qualified" teacher standards "or so they say." States must have 100 percent of core courses taught by "highly qualified" teachers or have made "a good-faith effort." At present, "thirty-three states claim 90 percent to 99 percent of their main classes" meet the standard and most others report "70 percent to 89 percent" do. Yet "skepticism remains over whether states have inflated their quality numbers by setting easy standards." The U.S. Department of Education will review the state reports and determine which states qualify by May 15. Those that have not are subject to loss of federal education funds.

GAO Report Says State Department Wasted Million On Airline Travel. The Washington Times (4/13, Kralev, 90K) reports the Government Accountability Office is "accusing the State Department of wasting 'tens of millions of dollars' a year on business-class airline travel." The GAO report "said two-thirds of 'premium' tickets that the department purchased between April 2003 and September 2004 -- most of them business-class tickets -- were not 'properly authorized, justified or both.'" The State Department "disputed the report's findings but said it would implement the auditors' recommendations." The GAO also reported "the department also paid about $6 million for tickets that were not used."

Watchdog Group Releases Ethics Complaint Against Jefferson. The Washington Times (4/13, Fagan, 90K) reports watchdog group Citizens for Responsibility and Ethics in Washington "released an ethics complaint yesterday against a congressman from Louisiana, charging that he played a role in a conspiracy and bribery scheme and misused federal resources in the wake of Hurricane Katrina." Jefferson is "the subject of an ongoing investigation in which his former aide, Brett Pfeffer, pleaded guilty to conspiracy to commit bribery of a public official and aiding an abetting such bribery, states the complaint released yesterday."

LAT Poll Shows Bush Approval Rating At 39 Percent. The Los Angeles Times (4/13, Brownstein, 958K) reports a Times/Bloomberg poll of 1.357 adults conducted April 4 through April 11 (+/-3%) showed that while "Bush's job approval rating was essentially unchanged from his 38% showing last month, the new poll found Democrats opening double-digit leads on the key measures of voters' early preferences for the November balloting." For example, "Democrats lead Republicans 49% to 35% among registered voters who were asked which party they intended to support in their congressional districts this fall. When registered voters were asked which party they hoped would control the House and Senate after the midterm election, 51% picked the Democrats and 38% the GOP. On both questions, independent voters preferred Democrats by ratios of about 3 to 1 or more."

DOJ_NMG_0025980

The Financial Times (4/13, Pruzan) notes Bush's "job-performance figures represent a continued slump from earlier this year, before controversies erupted over immigration, government surveillance and a Dubai-based company's attempt to take over several US port container facilities. In early January an LA Times/Bloomberg poll showed 43 per cent job approval for Mr Bush." Bloomberg (4/13) also reports on the poll.

Several House Republicans Renege On Term-Limits Vows. USA Today (4/13, 51, Stone, 2.31M) reports that Arizona Rep. Jeff Flake (R), who "pledged during his first campaign for Congress in 2000 that if elected, he would serve three two-year terms," is "running again to keep his seat. … 'It was a mistake to limit my own terms,' says Flake," who "says the once-fashionable movement to limit terms in Congress has 'just petered out.'" Flake "is one of at least seven House Republicans who had vowed to leave Congress next year but will be on the ballot in November. They ran as citizen legislators -- antidotes for 'career politicians.' But after six or 12 years on Capitol Hill, they say they're just getting the hang of the job." University of California-San Diego political scientist Gary Jacobson said, "Since nobody [recently] has been punished for breaking the vow, I don't think anyone sees it as a serious threat."

Will Says Entitlements Could Suffer Same Crisis Facing GM. George Will writes in the Washington Post (4/13, A21, 744K) that "the accelerating crisis of private-sector welfare states such as GM prefigures the coming crisis of the public sector's entitlements. … Bankruptcy -- seeking judicial permission to shred contracts improvidently entered into -- should be so costly that it cannot become a routine management tool for private-sector welfare states. And America's welfare state cannot seek what is called 'bankruptcy protection.' Detroit today is having what Washington will eventually have -- a wrenching rendezvous with promises that seemed compassionate, or at least convenient, when originally made but that cannot be kept without ruinous consequences."

WPost Praises Lobby Reform Provision Requiring Disclosure Of "Bundlers." The Washington Post (4/13, A20, 744K) says in an editorial, "The House Judiciary Committee approved an amendment last week that would help shed light on the symbiotic relationship between lobbyists and lawmakers. Offered by Rep. Chris Van Hollen (D-Md.), the provision would require lobbyists to report not just the campaign contributions they gave directly to lawmakers but also the campaign checks they solicit for or deliver to lawmakers -- in other words, a measure of the real influence they wield. Astonishingly, this proposal passed the Judiciary Committee by a vote of 28 to 4 -- along with the underlying bill, a proposal that started out weak and was watered down from there." No other "disclosure requirement would be more useful in explaining the way Washington does business than this one."

USA Criticizes House Ethics Committee Failures. USA Today (4/13, 2.31M) says in an editorial, "Just when you think Congress' obtuseness about its tawdry image can't get any worse, its members manage to outdo themselves. And while Democrats might think the ethics scandals will work against Republicans this fall, betrayal of the public trust clearly knows no partisan boundaries." Ranking Democrat on the House ethics committee Alan Mollohan, "was reported, first by The Wall Street Journal, to have quietly directed at least $178 million in taxpayer funds to a network of home-district friends, business partners, contributors and former employees." In addition, the "moribund ethics panel, meeting in secret, again declined to investigate longstanding allegations of questionable or illegal conduct against at least three prominent members of the House: Republicans Bob Ney of Ohio and Tom DeLay of Texas and Democrat William Jefferson of Louisiana." Since Congress "has demonstrated that it can't do the job, a non-partisan independent panel ought to."

OTHER NEWS:

Stock Markets Rebound, Finish Higher. NBC Nightly News (4/12, story 5, 0:10, Williams, 9.87M) reported, "Now to Wall Street today, where stocks finished higher: The Dow was up more than 40 points [to close at 11,129.97]]. NASDAQ gained just over 4 points on the day's trading [to close at 2,314.68]."

The Wall Street Journal (4/13, Browning, 2.11M) reports, "Buoyed by hopes for strong corporate profits and by some positive economic news, investors shrugged off rising bond yields, permitting stocks to recoup some of Tuesday's losses." The market "benefited from news that the February trade deficit was narrower than expected, although that was partly because of the fact that Chinese exports were soft during the Chinese New Year period."

The Financial Times (4/13, Yuk) notes that while "crude oil futures ended slightly lower after the release of mixed weekly inventories data, lingering nervousness over Iran kept investors on the edge."

Rising Prices Of Commodities Not Seen As Threat To Economy. The Christian Science Monitor (4/13, Trumbull, 61K) reports, "Copper at $6,000 per ton. Gold at $600 an ounce. Oil persistently above $60 per barrel. The last time these key commodities enjoyed such a concurrent boom, inflation ruled, Ronald Reagan was headed to the

DOJ_NMG_0025981

White House, and the economy was in the tank." But "do today's run-ups in metals and oil prices signal trouble ahead?" The Monitor notes, "Quite the opposite, some economists say. In a humming world economy, supplies of some key raw materials are struggling to keep pace with demand. That's no surprise. Likewise, investors, seeking profits at a time when stocks and bonds lack luster, are plowing money into silver and gold."

Innovation Said To Keep US Industry "Humming." A front page story, the last in a four-part series, in the Washington Times (4/13, Sparshott, 90K) examines "the cutting-edge innovation necessary to maintain the country as one of the world's leading economies." Federal funding, "coupled with collaboration among leading universities and entrepreneurs, is critical to the US industrial base -- and has made areas around Boston, California's Silicon Valley and North Carolina's Research Triangle launching pads for startups trying to cash in on the latest technologies developed in the world's premier university labs." USA adds, "President Bush, in his State of the Union address in January, acknowledged the importance of scientific innovation when he announced an American Competitiveness Initiative. … Despite the dip in funding for basic science, US research and development spending accounts for more than a third of the global total, outstripping any other nation." Innovation "has kept US industry humming -- with new companies and new products -- even as old-line manufacturers that have failed to adapt have fallen by the wayside."

Ethanol Costs Adding To Gasoline Price Spike. The mandated use of ethanol to replace the additive MTBE is adding to the cost of gasoline, which has already been on an upward trend itself. NBC Nightly News (4/12, story 6, 2:20, Tibbles, 9.87M) reported, "Ethanol, the corn-based, clean air additive US refiners are scrambling to add to the nation's fuel supply" is a "boon for farmers." But "some analysts say for every gallon of gas, up to 20 cents is ethanol and that number is rising. So why is it so expensive? Last summer, Congress mandated the use of ethanol, and by May 5th, many refineries will switch. That new demand has pushed the price of ethanol above $2 a gallon." Ethanol also "can't be pumped down existing pipelines. It has to be transported by rail or by truck, overwhelming the transportation system causing delays, even causing hoarding, and driving up the price." Ethanol producers "maintain the industry is still in its infancy, and as it becomes more efficient, prices will come down while reducing reliance on foreign oil."

In addition to rising gasoline prices, the Wall Street Journal (4/13, Kilman, 2.11M) reports the "spot price of ethanol…has doubled over the past 12 months to about $2.65 a gallon," leaving "mutual-fund managers and well-heeled investors…grasping for any stock with the slimmest connection to ethanol." The Journal says the boom has left "some economists are wondering whether the ethanol industry is growing so fast that it could be faced with a glut before too long."

Study Finds Pension Reforms Could Reduce Companies' Value By 8%. The Financial Times (4/13, Beales) reports a new study shows "proposed changes to the way US companies account for pension obligations could knock an average of 8 per cent off the net worth of 100 of America's biggest companies." The findings "come as Congress negotiates rule changes designed to make companies more responsible for the pension promises they make to employees, amid growing concern about obligations being reneged upon or dumped on the federal government." Actuary firm Milliman "calculates that 100 big companies' pension plans remain underfunded by just under $100bn in aggregate when assumed future pay rises are considered, in spite of three years of better-than-expected investment returns. The companies made an average 11.3 per cent return last year against an expected return of 8.5 per cent."

Options To Employer Benefits Seen As Problematic. In his Wall Street Journal column (4/13), David Wessel says, "If employers pull out of the health and pension business, who takes their place? Ultimately, there are three options, all with problems. One is to make it cheaper for employers to offer benefits or force them to do so." Another is "to make workers fend for themselves." The third "is to have government pick up more of the tab." Business "resists the first option. Many individuals may find making wise decisions harder than advocates suggest. And moving toward individually purchased insurance can undermine the benefits of pooling risk. As for the government -- well, it hasn't any visible means of paying for the Social Security, Medicare and Medicaid benefits it already has promised."

NYTimes Says Pension Reform Bill A Special Interest "Grab Bag." The New York Times (4/13, 1.19M) says in an editorial that the pension reform bill under consideration in Congress is "laden with special interests" and "had ceased to be only about pensions. And as the lawmakers were preparing to go home, it became increasingly about tax cuts." So far, "the ploy has served only to highlight the extent to which the pension bill is already a grab bag of bad tax ideas."

SCOTUS To Allow Citations To Unpublished Opinions. The Legal Times (4/13, Mauro) reports, "The Supreme Court on Wednesday adopted a historic rule change that will allow lawyers to cite so-called unpublished opinions in federal courts starting next year. The new rule takes effect unless Congress countermands it before Dec. 1."

DOJ_NMG_0025982

The Times continues, "The justices' vote represents a major milestone in the long-running debate over unpublished opinions, the sometimes-cursory dispositions that resolve upward of 80 percent of cases in federal appeals courts nationwide. In some circuits these dispositions have no precedential value and cannot be cited. … 'Unpublished' is a misnomer, since most of these opinions are available now on legal databases. But some federal judges have argued that if this category of opinions can be cited and used as precedent, they will take more time to decide and write, sharply increasing the backlog of cases. Many sentencing appeals, for example, are resolved by unpublished opinions. The U.S. Courts of Appeals for the 2nd, 7th, 9th, and federal circuits ban the citation of unpublished opinions outright, while six other circuits discourage it." The Times adds, "Under the new rule, circuits will still be able to give varying precedential weight to unpublished opinions, but they can no longer keep lawyers from citing them -- in the same way lawyers cite rulings from other circuits or other authorities, such as law review articles."

State AGs Increasingly Going After Businesses. The National Law Journal (4/13, Post) reports, "State attorneys general, whether united or solo, are becoming national players … A combination of eased federal business regulation and corporate consolidation has dramatically transformed the role of state attorneys general, increasing their clout to shape national public policy through aggressive litigation." The Journal continues, "The shifting legal and corporate landscape has now made unified action among state attorneys general -- combined with creative individual actions -- a strategic necessity. … Recent victories by AGs working together have included: … A $295 million settlement among 49 states, the District of Columbia and Ameriquest over the mortgage loan company's allegedly predatory lending practices, reached in January. It is the second-largest consumer protection settlement, exceeded only by the 2002 predatory lending settlement between Household Finance Corp. and most states that ended litigation filed in state courts throughout the country. … In 2005, attorneys general from 47 states and the District of Columbia, Georgia and Hawaii's consumer protection offices reached a $40 million agreement with State Farm Mutual Insurance Co. The company had approached the states and said it could not confirm that it had given proper titles to a small percentage of vehicles that had been damaged or stolen, for which it had acquired title and then sold. None of the settling states sued. … In 2003, every state, the District of Columbia and the five U.S. territories resolved an antitrust suit against Bristol-Myers Squibb Co. that involved the cancer-fighting drug Taxol. A total of $55 million went to resolve claims of consumers and government agencies, and the company agreed to injunctive relief regarding its monopolization of Taxol and its generic equivalents. Vista Healthplan v. Bristol-Myers Squibb Co., No. 1:01CV01295 (D.D.C.)."

States Taking Responsibility For Issues Best Dealt With At Federal Level. In a New York Times op-ed (4/13), Cornell economist Robert Frank says, "In most of the world, for example, the primary responsibility for ensuring access to health care, regulating environmental quality and supporting basic scientific research is exercised by national governments. But in this country, these tasks are increasingly managed by state, and even local, governments." In "each case, there are compelling economic reasons for delegating the activities to national, rather than state or local, governments. Yet in each arena, the federal government has failed to act. It refuses to participate in international efforts to limit greenhouse gases. It makes further cuts in federal support for basic scientific research, even as the nation's share of world patents continues to decline. And about 46 million Americans currently lack any form of health insurance."

Nine States Considering Extending SOL For Suits Against Dioceses. USA Today (4/13, Willing) reports, "The Catholic Church is having early success in fighting proposals in state legislatures that would permit people claiming they were sexually abused as children to sue priests and other church officials long after the alleged offenses occurred." USA continues, "Measures proposed in nine states would suspend statutes of limitation and allow lawsuits to be filed regardless of when an alleged offense took place. The proposals are patterned on a 2003 California law that allowed a one-year window for suits to be filed there without regard to the statute of limitations." USA adds, "Since March, aggressive lobbying by the church helped to bottle up such a measure in a state Senate committee in Maryland, and to alter the language of an Ohio bill to rule out new lawsuits. A bill in Colorado's Legislature is being debated, but it's a long shot because of intense Catholic opposition, the bill's supporters say. The church is gearing up to fight proposals in Delaware, Hawaii, Michigan, New York, Pennsylvania and Wisconsin. … Mark Chopko, counsel to the U.S. Conference of Catholic Bishops, says the bills unfairly target Catholics and could add millions of dollars to the $1.38 billion the U.S. church has paid since 1950 to settle claims and for other expenses related to sexual abuse of minors by priests."

Bill Clinton Contrasts Foreign Policy Vision With Bush. Dana Milbank in his "Washington Sketch" column in the Washington Post (4/13, A2, 744K) writes that while former President Bill Clinton received the J. William

DOJ_NMG_0025983

Fulbright Prize for International Understanding he took the opportunity to contrast his foreign policy with President Bush's. Clinton's comments were not "the overt, I-told-you-so gloat; that would be unseemly for a former president." But Clinton's "words carried the subtle but unmistakable pleasure of sua culpa." Citing "the plummeting image of the United States in the Muslim world -- except in Indonesia, where Clinton himself has been helping with tsunami relief -- he said that 'it's a big argument for doing things in a cooperative way rather than in a unilateral way.'" Clinton said in Indonesia "Approval of bin Laden had gone from 58 percent to 28 percent. … They saw the military dropping food instead of bombs."

In contrast, the AP (4/13, Barrett) in an article titled "Bill Clinton Learns to Laugh at His Past" describes Clinton as self-effacing, reporting, "In recent days, Clinton has poked fun at his post-White House life working on global disaster relief and HIV/AIDS programs." Clinton has "also shown a willingness to mock the days his presidency was consumed by the Monica Lewinsky scandal and impeachment."

Hillary Clinton Criticizes Bush Economic Record. In a speech to the 78th annual dinner meeting of the Economic Club of Chicago Tuesday night, Sen. Hillary Clinton took a populist approach to criticizing President Bush's economic policies, saying they did not benefit working-class Americans. The Washington Times (4/13, Pfeiffer, 90K) quotes Clinton saying, "Tax cuts alone cannot secure the middle class. They are not the cure-all for everything that ails the American economy." She "voted against the 2001 and 2003 tax cuts and several other tax-cutting measures during her first term," and "marked a clear divide between herself and Republicans." But House Speaker J. Dennis Hastert "called Mrs. Clinton's claims baseless" saying, "The facts are pretty clear: Republican tax relief has sparked surging economic growth. In Illinois alone, the unemployment rate has dropped from 5.6 to 5.0 percent in the last six months."

Ahead Of '06 Elections, Voters Said To Be In An "Anti-Incumbency" Mood. The AP (4/13, Fournier) reports, "More and more, Americans are frustrated with politics as usual in Washington. … Analysts say the public may be getting angry enough to give the U.S. political system a jolt, one way or another. Voters could toss Republicans from power in Congress this fall, or turn the White House over to Democrats in 2008. Maverick reform-minded Democrats and Republicans might shake up their parties. Or perhaps voter unrest will fuel a credible third-party presidential campaign. 'There is certainly a lot of anti-incumbency out there and neither of these parties is doing swimmingly well,' said independent pollster Andrew Kohut of the Pew Research Center," whose "surveys suggest a throw-the-bums-out mentality is on the upswing, especially among independent voters." The AP notes, "Nearly half of independents say the Democratic and Republican parties are equally corrupt. An AP-Ipsos poll in December found nearly 90 percent of all voters believes political corruption is a serious problem.

Analysts Say Democrats Likely To Gain Seats In '06, But Not Win Control Of House. A front-page article in the Washington Post (4/13, A1, Weisman, 744K) reports that Democrats have "nearly a dozen strong candidates with the potential for unseating House Republicans, but probably not enough to take back control of the House absent a massive anti-incumbent wave this fall, according to House political experts." The Post notes that Tuesday's special election to fill the seat of ex-CA50 Rep. Randy "Duke" Cunningham (R) "showed that the Democrats face an uphill battle to pick up seats even in districts where the Republicans have their backs to the wall." Francine Busby (D), "running on a theme of ethics in government, finished first in a crowded field of 18 candidates to succeed Cunningham, who was sent to prison after pleading guilty to taking bribes in return for legislative favors." But Busby "garnered only 44 percent of the vote and was forced into a June 6 runoff." Busby may face ex-Congressman Brian P. Bilbray (R), "who finished second with 15 percent. State GOP leaders expect Republicans to coalesce around the eventual nominee in the runoff and retain the seat." The Post adds, "It will be up to lesser Democratic lights -- running in Republican districts with less-than-glowing résumés -- to help provide the 15 net victories Democrats need to take back control of the House. … In that context, Busby's performance" isn't "encouraging to Democrats, said Stuart Rothenberg, a congressional analyst and editor of the Rothenberg Political Report. 'There may be a wave building, but it's still off the shoreline,' he said."

Democrats Seen As Having Best Opportunity At Winning Back House Since '94. An article in the Christian Science Monitor (4/13, Feldmann, 61K) paints a different picture of Democrat's hopes of regaining control of the House, relating, "Privately, some GOP political handicappers, in a race-by-race assessment, predict that the Democrats will pull it off, as the national mood toward President Bush and the Republican-ruled Congress sours further. The two latest generic congressional polls -- testing which party voters want in charge -- favor the Democrats by large margins: 10 points in one, 16 in the other. This gap 'suggests something about the national mood, but whether it will be sustained through the fall or just how that will translate into seat swings is another question,'" said Gary Jacobson, a political scientist at the University of California, San Diego. Jacobson added, "But it's the best shot the Democrats have had since they lost

DOJ_NMG_0025984

the House in 1994. If they don't get it this time, they'll really have to worry."

Study Indicates Young "Religious Centrists" Emerging As Key Voting Bloc. The Washington Times (4/13, Harper, 90K) reports, "College students are becoming more religious, and it's affecting their political views, according to a new Harvard University survey of this potentially influential voting bloc. 'Religious centrists' rule, according to the university. A full 70 percent say religion plays an important part in their lives, with a quarter saying their spirituality has increased at college. Six out of 10 say they are concerned about the moral direction of the country, according to the poll of 1,200 students from across the country, conducted March 13 to 27 and released Tuesday." The Times notes, "The Harvard study advises political parties to woo the spiritually inclined, a demographic that the popular press mostly deemed the exclusive territory of the 'religious right' in the past two presidential elections. 'This analysis foreshadows the 2008 general election campaign for president where religious centrists, nearly a quarter of the student vote, will be the critical swing vote…and likely the most influential group in American politics for years,' according to the survey."

Kingston Says GOP Can Benefit From Increased Use Of Blogs. The Washington Times (4/13, Pfeiffer, 90K) reports that GA1 Rep. Jack Kingston (R) "says Republicans need to use the Internet better to connect with nontraditional voters and to monitor the concerns of constituents heading into this year's midterm elections. 'It's the new talk radio. We can connect with new people who will come out and vote for us,' said Mr. Kingston, vice chairman of the House Republican Conference, who has a blog and writes an occasional 'diary' for the popular conservative site redstate.com." Kingston on Monday "held an hourlong conference call with conservative bloggers," allowing "participants to address topics ranging from Iraq to illegal immigration. Popular conservative blogger Matt Margolis, who has participated in several of Mr. Kingston's conference calls, said such interactions provide insight and access to bloggers, and, ultimately, will help legislators get out an unfiltered message. 'Republicans need bloggers to help get their message out, while Democrats have been able to rely on the mainstream media,' said Mr. Margolis."

Nagin Faces 22 Challengers In New Orleans Mayor's Race. The Los Angeles Times (4/13, Simmons, 958K) reports, "The frustration, disillusionment and anger of life after Hurricane Katrina have compelled 22 people to declare that they can do a better job of running the city than Mayor C. Ray Nagin. The largest field of challengers in a modern New Orleans mayoral race includes marquee names such as Lt. Gov. Mitch Landrieu," but "most are relative unknowns." The Times notes, "Two candidates are widely seen as Nagin's chief challengers, primarily because of name recognition and financing: Landrieu, son of the city's last white mayor, Maurice Edwin 'Moon' Landrieu, and brother of Sen. Mary L. Landrieu (D-La.); and Ron Forman, president and chief executive of the Audubon Nature Institute. Four other candidates have made the cut to regularly participate in televised forums and debates: lawyer Virginia Boulet, entrepreneur Robert Couhig, former Councilwoman Peggy Wilson and the Rev. Tom Watson."

Romney Signs Massachusetts Health Care Reform Law. Massachusetts Gov. Mitt Romeny signed into law a universal health insuranmce bill which was generally described as a "landmark" and groundbreaking.

CNN's The Situation Room (4/12, Collins) reported, "Massachusetts Governor Mitt Romney today signed a new health care reform plan into law. It is designed to insure nearly every resident of the state. Supporters say it could serve as a model for the rest of the nation and a possible platform for a Romney presidential campaign. A new ABC/Washington Post poll finds, 55 percent of Americans say they would support similar legislation in their own states."

The New York Times (4/13, Belluck, Zezima, 1.19M) reports, "In a ceremony full of pomp and political backpatting, Gov. Mitt Romney signed Massachusetts' landmark health care legislation Wednesday, setting the stage for the state to be the first to provide health coverage to virtually all of its citizens." Yet "the celebratory atmosphere was accompanied by some friction because Mr. Romney, a Republican, vetoed a provision some Democrats and health care advocates adamantly support: a requirement that employers who do not provide health insurance to their employees pay the state up to $295 per worker each year." Democrats "said they expected to override that veto in the next few weeks and were examining Mr. Romney's vetoes of seven other less controversial provisions."

Knight Ridder (4/13, Pugh) reports, "Romney signed groundbreaking universal health-care legislation Wednesday that promises to cover nearly all the state's 515,000 uninsured residents by 2010." Framing the signing as historic Kinght Ridder continues, "In a packed ceremony in the chambers where the doctrine of 'no taxation without representation' was born, Romney and the bipartisan leaders who crafted the bill sensed a watershed moment."

The AP (4/13, Leblanc) reports, "The program is a potential political coup for Romney as he weighs a possible run for the Republican presidential nomination in 2008."

Noting the pomp and ceremony the Washington Post (4/13, A6, Fahrenthold, 744K) notes, "the bloom on

DOJ_NMG_0025985

Massachusetts's first-of-its-kind policy was wearing off. Some observers have charged that the plan promises a huge array of low-cost, state-subsidized health-insurance policies for the uninsured to buy -- but provides few details about how this will be done."

And the Washington Times (4/13, A1, Lambro, 90K) in a front page story reports "the ambitious undertaking, the product of months of negotiations in Mr. Romney's last year in office, would cost more than $1 billion a year and has drawn sharp criticism from conservatives who called it "a big government" plan and another version of "Hillarycare," the ill-fated plan produced in 1993 by first lady Hillary Rodham Clinton."

Romney Says Health Care Requires A Republican Solution. Massachusetts Gov. Mitt Romney said on Fox News' Your World With Neil Cavuto (4/12), "I think health care and education are two issues the Democratic Party has held on to for a long time but they haven't had answers." Health care "takes a Democratic goal we share, getting everybody insured and solving the issue in a Republican way, which is applying a personal responsibility principle, reforming the market, and allowing people to buy private health care insurance they can take with them from job to job that's entirely portable. It's a Republican way of solving a problem we face as a nation."

Romney Says Aspects Of Massachusetts Plan Would Work Nationally. Romney was asked on MSNBC's Hardball (4/12) if the Massachusetts plan will work for the entire country. Romney said, "There are certain aspects of it that I think would work across the country, perhaps better in some states than others. Of course the great thing about federalism is you let a state try it and see how it works before you spread it out."

And the Wall Street Journal (4/13, Bulkeley, 2.11M) reports, "The Massachusetts bill is being watched widely as a possible pattern for other states and as a prime element in Mr. Romney's expected bid for the Republican presidential nomination in 2008. It reallocates existing federal and state funds and requires uninsured residents to buy health insurance, which the state would subsidize for poor people."

Rice Asks Security Council To Take "Strong Steps" To Counter Tehran's Enrichment Plan.

Secretary of State Condoleezza Rice warned Iran after Iranian President Mahmood Ahmadinejad yesterday upped the ante in his country's pursuit of a nuclear program, saying Iran will now set the stage for large scale enrichment of uranium. The story was covered on each of the networks last night, and NBC ran it second in its lineup, as well as a follow-up about the potential for a US military response. Rice's "strong" warning was also featured prominently on the cable TV shows and in the major US newspapers.

NBC Nightly News (4/12, story 2, 2:45, Williams, 9.87M) reported, "Even Russia and China joined the US and Europe in criticizing Iran's nuclear program. In the face of world criticisms, Iran's leader remained defiant today, telling a rally that all Iranians demand the benefits of nuclear technology." Secretary of State Condoleezza Rice "asked the UN's top nuclear inspector to tell Iran's leaders when he meets them tomorrow they have crossed a dangerous line." Condoleezza Rice, Secretary of State: "If the Iranians continue down this course there has to be some course of action by the Security Council." Mitchell: "The UN Security Council agrees now that Iran should not develop weapons, but Russia and China are still not willing to punish Iran." A lot is "going on behind the scenes." Secretary Rice has "certainly told Mohammed El-Baradei at his meetings in Tehran tomorrow and the next day that he's got to be very tough with Iran and he has credibility with them. Also, they are pressuring Russia, and finally Hu Jintao, the Chinese president, is coming next week for a summit, and as you can imagine, that is going to be a very important topic of their conversations."

The CBS Evening News (4/12, story 6, 2:00, Schieffer, 7.66M) quoted UN Ambassador John Bolton: "That is leaving a potential nuclear weapons capability in the hands of the world's largest state sponsor of terrorism and that is not a happy prospect." Axelrod: "All eyes now are on Mohammed El-Baradei, the head of the International Atomic Agency dispatched to Iran by the United Nations to verify if Iran's claims are true." Clearly, the US "speaks loudest and today most confrontationally. Deputy Chief of Staff Karl Rove said about Ahmadinejad..." Karl Rove, Deputy Chief of Staff: "He's not a rational human being to deal with and we're going to have use every diplomatic tool, the United Nations, the International Atomic Energy Agency, and our partners in Europe to bring pressure to bear to stop this."

ABC World News Tonight (4/12, story 4, :25, Vargas, 8.78M) reported, "One day after Iran's bombshell announcement it has begun to enrich uranium, it has unveiled plans to dramatically expand its nuclear program. A top official says there are plans to install 3,000 centrifuges at one atomic site this year. Despite some tough talk today from Secretary of State Condoleezza Rice, it is not clear what the next move by the international community will be."

CNN's The Situation Room (4/12, Collins) reported, "Secretary of State Condoleezza Rice says it is time to take what she calls strong steps against the Tehran government. She's responding today to Iran's announcement that it has successfully enriched uranium." Rice "has not called for an emergency meeting of the UN Security Council, but she is calling on the UN's top nuclear watchdog to intensify pressure on Iran during talks this Friday."

Fox News' Special Report (4/12, Rosen) reported, "Secretary Rice while calling for the Council to take strong

DOJ_NMG_0025986

steps also appeared eager to downplay recent reports that the Bush Administration is ramping up for military action against Iran. She said, and I quote, a concerted and cohesive diplomatic policy that the world is behind will convince Iranians that they have to come back in into compliance."

AFP (4/12) reported Secretary Rice "called Wednesday for the UN Security Council to take 'strong steps' to respond to Iran's announcement it had successfully enriched uranium," however, she "did not call for an emergency meeting of the 15-member Security Council." Rice: "I do think that the Security Council will need to take into consideration this move by Iran and that it will be time when it reconvenes on this case for strong steps to make certain that we maintain the credibility of the international community on this issue." The New York Times (4/13, Fathi, Hausner, 1.19M) adds, "Asked if Ms. Rice wanted sanctions, the White House spokesman, Scott McClellan, said the United States was consulting with Security Council members about a diplomatic course of action." A separate AFP (4/12) piece said, "Iran's growing militancy about its nuclear program has left US officials groping for a balance between diplomacy and a credible military threat if it gets near to building an atomic bomb." While the US "led a global chorus in condemning the Islamic republic," Washington "appeared no closer to nailing down an international consensus on how to respond."

The Los Angeles Times (4/13, Rubin, 958K) in an article titled "U.N. Response To Iran Nuclear Work Unclear" says the "sharpest response Wednesday came from the United States," but "Bush administration officials refused to spell out what the U.S. might demand by the world body."

The Financial Times (4/13, Khalaf, Smyth) keys on the Security Council's reaction, saying "members on Wednesday loudly criticised Iran's declaration" and noting, "Russia and China, the two council members most sympathetic towards Iran, added their voices to European Union governments, and told Tehran its actions ran counter to UN decisions." However, the Times says, Russian Foreign Minister Sergei Lavrov "warned on Wednesday against the use of force to deal with Tehran" and " said military strikes on nuclear facilities would create 'a dangerous explosive blaze in the Middle East, where there are already enough blazes.'"

USA Today (4/13, Slavin, 2.31M) notes, "The increased tensions coincide with the arrival in Iran of Mohamed ElBaradei, head of the International Atomic Energy Agency, the U.N. nuclear watchdog." And "Iran's public claims may be an effort to improve its bargaining position in future negotiations with Europe and the United States, said Najmeh Bozorgmehr, an analyst at the Brookings Institution." The AP (4/13, Schweid), the Washington Post (4/13, A18, Vick, 744K) report similar details and the Washington Times (4/13, A1, 90K) caries a front page story from combined dispatches.

In somewhat negative tones, the Wall Street Journal (4/13, A3, Robbins, 2.11M) says "there is growing anxiety in the U.S. and Europe that Tehran's technical mastery is far outpacing diplomatic efforts to stop it," and notes, "Two years of European-led negotiations and a threatened showdown with the United Nations have barely slowed Iran's drive to enrich uranium" for civilian or military purposes.

And Bloomberg (4/13, Alison) adds that U.S. Assistant Secretary of State for International Security and Nonproliferation in Moscow said, "Using those 50,000 centrifuges they could produce enough highly enriched uranium for a nuclear weapon in 16 days." Rademaker said Ahmadinejad's statement "was a deeply disappointing announcement."

Tehran Said To Still Lack Materials, Expertise. The New York Times (4/13, A1, Broad, Fathi, Brinkley, 1.19M) in a front page story reports, "Western nuclear analysts said yesterday that Tehran lacked the skills, materials and equipment to make good on its immediate nuclear ambitions." Some analysts called Tehran's "claims exaggerated. They said nothing had changed to alter current estimates of when Iran might be able to make a single nuclear weapon, assuming that is its ultimate goal. The United States government has put that at 5 to 10 years, and some analysts have said it could come as late as 2020." A similar AP (4/13, Buzbee) story says Tehran's "boast may mean little," and notes "diplomats and experts familiar with the program say Iran still is far from producing any weapons-grade material needed for bombs and may be exaggerating its own progress."

Options Seen As Narrow For Bush. An analysis piece in Washington Post (4/13, A18, Baker, 744K) says President Bush now "finds his options ever more constricted. The Iranians seem unfazed by U.N. statements. The Russians and Chinese won't go along with economic sanctions. And the generals at the Pentagon hate the idea of a military strike." Even though Europe, Russia and China "expressed disapproval of Iran's latest move, there were no signs of consensus on what to do about it." The Post says Bush's "central problem" is that Tehran has proven "impervious…to the diplomatic levers Washington and its partners have been willing to use. Some administration officials have grown increasingly skeptical that a solution can be found, raising the prospect that, like North Korea before it, a second member of the trio of rogue states Bush once dubbed the 'axis of evil' may ultimately develop a nuclear bomb over U.S. objections."

LAT Poll Shows US Divided On Action Against Iran. The Los Angeles Times (4/13, McManus, 958K) reports a Times/Bloomberg poll of 1.357 adults conducted April 4 through April 11 (+/-3%) showed "Americans are divided over the prospect of U.S. military action against Iran if the government in Tehran continues to pursue nuclear

DOJ_NMG_0025987

technology — and a majority do not trust President Bush to make the "right decision" on that issue, a Los Angeles Times/Bloomberg poll has found." Asked if "they would support military action if Iran continued to produce material that could be used to develop nuclear weapons, 48% of the poll's respondents, or almost half, said yes; 40% said no." And "In a telling reflection of Bush's erosion in public support, 54% said they did not trust him to 'make the right decision about whether we should go to war with Iran,' while 42% of respondents said they trusted him to do so."

Pentagon Officials Meeting To Discuss Military Contingency Plans. NBC Nightly News (4/12, story 3, 2:30, Miklaszewski, 9.87M) reported, "Defense Secretary Rumsfeld met with top Pentagon and military officials last week to review all military options against Iran. Pentagon officials stress however, this is very early in the process. No decisions have been made, but almost all options are on the table. Military officials tell NBC News air strikes using cruise missiles and stealth bombers tops the list of military options against Iran. The program targets would be Iran's nuclear sites, like the uranium enrichment plant at Natanz, but that could be expanded to include some military targets such as airfields and anti-aircraft defenses. But it's unlikely air strikes alone could destroy all of Iran's nuclear facilities." The Pentagon "has a standing contingency plan for attacking Iran called CON PLAN 1025. It does include the use of tactical nuclear weapons to destroy deeply buried targets. Military officials predict, however, it's highly unlikely the US would choose the nuclear option. At the same time, military officials pretty much rule out any possibility of invading Iran with American ground troops, because the mission would not be to occupy Iran, but to set back its nuclear weapons program." Although Pentagon officials "say they can't rule out any military options, they admit at the same time that the chance is almost zero the US would attack Iran in the foreseeable future."

Germany's Merkel To Discuss Iran In Visit Washington Next Month. The AP (4/13) reports that "President Bush will meet with German Chancellor Angela Merkel at the White House early next month to talk about Iran's nuclear program and other global issues." The AP notes that "the May 3 session will be the leaders' second Oval Office discussion in four months," a sign of warming ties after Gerhard Schroeder departure.

Armitage Says US Must Talk To Iran. The Financial Times (4/13, Sevastopulo) reports former Deputy Secretary Armitage "has urged the Bush administration to hold talks with Iran over its nuclear programme," saying "Washington would benefit from talking to Tehran on a range of issues, including Iran's nuclear aspirations." Armitage: "It merits talking to the Iranians about the full range of our relationship...everything from energy to terrorism to weapons to Iraq. We can be diplomatically astute enough to do it without giving anything away." Speaking of Iran's neighbor, Armitage said the rebuilding of Iraq was "going badly. We haven't been able to train the police and armed forces sufficiently quickly." The Times says Armitage "stressed that the US needed to 'stay the course' and give the Iraqi government time to 'stand on its own feet.'"

Annan Calls For Diplomatic Solution. And Knight Ridder (4/13, Landay, Strobel) reports, "Some experts said the Bush administration should consider a new strategy that recognized Iran as a regional power, embraced direct talks on the nuclear crisis and other issues, and dropped the threat of force." U.N. Secretary-General Kofi Annan called for "everyone to work more actively for a diplomatic solution and to cool down the rhetoric." Annan's "comments reflected assessments that Iran could have made only a minuscule amount of low-enriched uranium and is a long way from starting up an industrial-scale plant that's under construction in Natanz."

Former Iran President Warns Of Impact On Iraq. The AP (4/13, Dareini) reports, "Former Iranian President Hashemi Rafsanjani -- a powerful figure in the country's clerical regime -- warned in an interview with the Kuwaiti newspaper Al-Rai Al-Aam that pressuring Iran over enrichment 'might not have good consequences for the area and the world.'" He "said planned talks between Iran and the United States on stabilizing Iraq could lead to discussions on the nuclear dispute."

Attacking Iran Could Inflame Muslims Against US. And Claremont senior fellow Mark Helprin in an op-ed in the Washington Post (4/13, A21, 744K) writes that while the US may be able to defeat Iran militarily, if Ahmadinejad "could knock us back and put enough of our blood in the water, the real prize might come into reach. That is: to make such a fury in the Islamic world that, as it has done before and not long ago, it would throw over caution in favor of jihad. As simply as it can be said, were Egypt to close the canal, and Egypt, Saudi Arabia and Turkey to lock up their airspace -- which, with their combined modern air forces, they could -- the U.S. military in Iraq and the Gulf, bereft of adequate supply, would be beleaguered and imperiled."

Iranian Reaction Subdued. Knight Ridder (4/13, Allam) reports, "Apart from a few schoolyard rallies and celebratory newspaper headlines Wednesday, Iran's first day in the nuclear club was subdued, with workaday Iranians still more preoccupied with pollution and unemployment than possible retaliation from U.S.-led Western powers." President Ahmadinejad's speech was expected to provoke a patriotic response, yet "Iranians were clearly of two minds about the impact of the development." And in an interview before the speech Iranian political scientis Davoud Bavand "said he wasn't optimistic about the future of international negotiations over Iran's nuclear program."

DOJ_NMG_0025988

WPost Advocates Stiffening Penalties On Iran. The Washington Post (4/13, A20, 744K) in an editorial says thus far threats of sanctions from the UN Security Council have been ignored by Iran and that "unless the diplomacy on Iran can be made to work, this administration or its successor may have to choose between war and accepting Iran as a nuclear power. A workable diplomacy will have to include sticks as well as carrots: It will have to show Iranians that defiance of the Security Council, and provocations such as those of Mr. Ahmadinejad, will have tangible consequences."

Hamas Warns West It Is Jeopardizing Own Interests. The Washington Times (4/13, Martin and Svelova, 90K) reports that "Palestinian Prime Minister Ismail Haniyeh warned yesterday that decisions by the U.S. and European Union to suspend aid to his Hamas-led government are jeopardizing Western strategic interests in the Arab and Muslim world." Haniyeh called the cutoff of aid "a cover, or green light, for the [Israeli] occupation." In the absence of US and EU funds, Palestinian officials are "scrambling to obtain loans from private Palestinian, Arab and Islamic banks."

Israel Expands Target Zone In Gaza. Knight Ridder (4/12, Nissenbaum) reports that "Israel has begun to fire retaliatory strikes into a larger zone that now comes within 100 yards of Palestinian towns and villages" after a series of rocket attacks. In addition, "Israeli officials have made veiled threats in the news media to send ground forces back into the Gaza Strip."

Muslim Families Keep Jesus' Site Open. Knight Ridder (4/12, Nissenbaum) describes how two Muslim men share the duties of administering the front door of the Church of the Holy Sepulcher in Jerusalem, which contains "the spot where Jesus was crucified and the tomb where he was buried."

Muslim Brotherhood Hopes To Win In Jordan. The Washington Post (4/13, Williams, 744K) reports that "Islam as a political force is moving to center stage in Jordan." The Islamic Action Front envisions success through "municipal elections that are supposed to take place this year and balloting for parliament in 2007." It has observed "the blossoming of Islamic parties in Iraq, the success of Egypt's Muslim Brotherhood in parliamentary elections last year and, most of all, the recent victory by Hamas in Palestinian legislative elections."

Bush Urges China To Address Trade Issues. As President Bush prepares to meet with Chinese President Hu Jintao in Washington next week he increased pressure on China to address concerns over trade imbalances. The Washington Times (4/13, Curl, 90K) reports Bush's pressure "came a day after China pledged to lift its ban on American beef, to crack down on the sale of pirated computer software and to consider allowing foreign firms to compete for Chinese government contracts during negotiations between top economic officials from both countries." Yesterday Bush met "with a Chinese vice prime minister, Wu Yi, on U.S.-Chinese trade issues. She assured the president that China soon plans to reopen its market to U.S. beef imports, White House spokesman Scott McClellan said."

And the AP (4/13, Crutsinger) notes the US "has won a string of commitments from China aimed at narrowing a record trade gap, but the White House put Beijing on notice Wednesday the promises must be followed by action." McClellan said "It's progress and...now we will look forward to seeing results." And Bush "pressed the same message Wednesday morning in a meeting with Chinese Vice Premier Wu Yi. … Bush thanked her for 'efforts to make U.S.-China trade more equitable' but pressed for Chinese President Hu Jintao, during his visit to the White House next week, to 'explain to the American people how China will meet the challenge of rectifying global economic imbalances,' McClellan said."

AFP (4/13) adds, "The Bush administration has pressed China in recent months to open up access to US products while lawmakers in Congress accuse Beijing of failing to protect intellectual property rights and allowing the sale of pirated US products."

US Trade Gap Narrows With China. Other stories on the narrowing US trade gap with China did not mention the White House's increased pressure and cautioned some experts note that the improvement could be influence by one-time factors. The New York Times (4/13, Bajaj, 1.19M) reports, "The country's trade deficit with China, the source of much concern in Washington, dropped a sharp 23 percent, to $13.8 billion, in the month, but analysts suggested that the decline was temporary and partly caused by the Chinese New Year, when many factories and businesses shut down to allow workers to celebrate the holidays in late January and early February. The trade figures supported that idea, as exports to China rose 17 percent and imports from the country fell by about 16 percent in the month."

The Wall Street Journal (4/13, Hitt, 2.11M) notes that "even with the improvements, the monthly gap is still one of the largest ever, putting the U.S. on pace this year to break 2005's record annual trade deficit of $723.61 billion. 'The trend still points to a larger deficit in coming months, especially given recent rises in oil prices,' said Nigel Gault, U.S. economist for Global Insight Inc."

US Economic Relationship To China Beneficial To Both. The Washington Times (4/13, A1, Hill, 90K) in a front page story reports, "The United States and China, the world's twin engines of economic growth, have a relationship that has worked well to keep the economy expanding -- but some analysts fear it could end badly." The Times notes, "The U.S.

DOJ_NMG_0025989

role has been to buy increasing quantities of Chinese-made consumer goods, amassing the largest trade deficit ever seen between two countries: $202 billion last year." In response, "China has kept up its share of the economic compact by accumulating a gigantic treasure chest of U.S. dollars from its export sales and reinvesting most of those dollars in U.S. Treasuries and corporate bonds." That "is just as essential in the economic relationship because it provides U.S. consumers and businesses with the credit they need to keep on buying Chinese and other goods." While "China is bad-mouthed regularly in Washington by politicians…the mutually dependent trade relations are credited with helping to keep the world economy afloat and enabling it to recover from the 2001 recession. Lately, it has inspired an economic boom in Asia."

Few Expect China To Shut Down Piracy. The Los Angeles Times (4/13, Lee, 958K) reports, "In recent weeks the Bush administration, under pressure from a Congress unhappy about the large U.S. trade deficit with China, has threatened to get tougher with Beijing by taking its complaint on intellectual property rights to the World Trade Organization." And "Chinese officials are eager to show that they are serious about reducing piracy, especially with President Hu Jintao preparing to visit the United States next week." But "Few believed piracy was the reason for the shuttering of Xiangyang Market. In fact, the announcement came after the city cut a lucrative deal with a Hong Kong developer who has plans to build apartments and offices on the site."

China Dampens Expectations For Yuan Revaluation. The Wall Street Journal (4/13, Browne, 2.11M) reports, "China again ruled out any sudden move to make its currency fully convertible, further damping expectations of a breakthrough on the issue days ahead of a visit to Washington by Chinese President Hu Jintao." Yet, "the yuan has been strengthening slightly and appears poised to break through 8.0 to the dollar. On Wednesday, it closed at 8.0084, representing a gain of 1.2% since the yuan was revalued upward 2.1% against the dollar last July."

China To Halve State Ownership Of Firms. The Wall Street Journal (4/13, Chen, 2.11M) reports, "China aims to cut the number of central government-owned enterprises by about half," mostly with mergers, "with some of the remaining companies then seeking to list their shares or sell stakes to foreign or private Chinese investors." Recent backlashes "against pitfalls of market-oriented policies, such as a growing wealth gap and environmental degradation, has also put a spotlight on Beijing's campaign to overhaul state companies. Many of those companies lose money and remain burdened by bloated work forces, outdated equipment and obligations to provide workers low-cost housing and medical care."

IAE Predicts China Demand For Oil To Decline. The Wall Street Journal (4/13, Pin, 2.11M) reports, "China's oil-demand growth for 2006 may be reined in by a slow start to the year and a continued decline in fuel-oil usage, the International Energy Agency said Wednesday." The IAE "predicts China's oil demand will grow 5.5%, or 360,000 barrels a day, from 6.59 million barrels a day in 2005 -- a negligible downward revision from last month. This is well off the 15% jump in 2004 that took global oil markets largely by surprise, but still the fastest rate forecast for major markets this year."

Google CEO Defends Decision To Cooperate With Chinese Censorship. The New York Times (4/13, Yardley, 1.19M) reports, "Google's chief executive, Eric E. Schmidt, whose company has been sharply criticized for complying with Chinese censorship, said on Wednesday that the company had not lobbied to change the censorship laws and, for now, had no plans to do so." He "defended the decision to cooperate with the censors, saying that accepting the restrictions of Chinese law were unavoidable for Google to enter the Chinese market. 'We had a choice to enter the country and follow the law,' Mr. Schmidt told the foreign reporters. 'Or we had a choice not to enter the country.'"

Knight Ridder (4/13, Johnson) adds, "Schmidt said Google's desire to help Chinese Internet users outweighed concerns about freedom of expression." Schmidt "added that China isn't the only nation in which certain information is barred, mentioning later restrictions in Germany on Internet links to neo-Nazi movements."

ABC World News Tonight (4/12, story 5, 2:35, Vargas, 8.78M) reported that in China, Google's "chief executive was promoting a new venture it calls Gu Ge, a Chinese version of its enormously popular search engine. There is a rush of Internet companies entering China. And sometimes there is a price of doing business there. China has 110 million Internet users."

Yahoo Confronted For Cooperation With Chinese Authorities. ABC World News Tonight (4/12, story 5, 2:35, Vargas, 8.78M) reported China is "still not an open society. And Internet companies are facing fierce criticism for making compromises in order to operate there. Yahoo! was most recently confronted by activists." ABC (Tapper) added, "Reporters Without Borders came to Yahoo!'s Silicon Valley headquarters to show the company what its cooperation with the Chinese government really means." Julien Pain of Reporters Without Borders "showed them this video, smuggled out of China. 'My brother is in jail because of you.' In it, the brother of Li Zhi says his brother's health in prison has deteriorated. He says Yahoo helped Chinese authorities identify Li Zhi, who had anonymously exposed government corruption on the Internet." Also imprisoned, "journalist Shi Tao, for writing about Chinese press censorship. His lawyer says Yahoo! helped the government trace e-mails to his

DOJ_NMG_0025990

computer and warns there are more cases. 'Yahoo! didn't only give information about Shi Tao. It has done the same to many others.'"

South Korea Promises To Level Playing Field For Foreign Investors. The Financial Times (4/13, Fifield) reports, "South Korea financial authorities on Wednesday pledged to create a level playing field for foreign and domestic investors, and to apply regulation in a reliable and rational way, as Asia's fourth largest economy pursues its goal of becoming a major financial centre in the region." South Korea "has identified financial services -- and asset management in particular -- as a key area of future growth for manufacturing-reliant Korea, and has begun liberalising its economy and promoting greater liquidity in its markets as a result." But "foreign investors have recently expressed doubts about the ability of Korea to become a hub while populist outrage against foreign takeovers and profits becomes increasingly loud."

Pakistan Will Buy F-16s. The Financial Times (4/13) reports that "Pakistan's cabinet on Wednesday gave clearance to the purchase of up to 77 F-16 fighter planes from the US, marking a significant expansion for the country's air force." The Times observes that "buying the aircraft could help General Musharraf politically. Pakistani nationalists have questioned his support for the US-led war on terror, saying the US often benefits more from the relationship than Pakistan."

US And Peru Sign Free Trade Deal. The AP (4/13, Gedda) reports that the US and Peru signed a free trade agreement. The AP notes that "once implemented, 80 percent of consumer and industrial products and more than two-thirds of current U.S. farm exports to Peru would become duty-free. Many products from Peru already enter the U.S. market without duties. The agreement ensures that this status would remain unchanged."

Garcia Of Peru Closes In On Runoff Spot. The New York Times (4/13, Forero, 1.19M) reports that former Peruvian President Alan Garcia "appears to be on his way to finishing second in the tally of Sunday's presidential election." The Times reports that "with about 88 percent of the ballots counted, the electoral authorities said Wednesday that Mr. García had 24.4 percent of the vote and that Lourdes Flores, a free-market proponent and former congresswoman, had 23.3 percent." The idea of his running against "fierce antiglobalization nationalist" Ollanta Humala is reportedly "alarming to the country's business class." Garcia's rule from 1985 to 1990 was "was characterized by 7,000 percent inflation, food shortages and widespread rights abuses."

Russia Will Claim Shared G-8 Values. The Washington Times (4/13, Dinan, 90K) reports that "Russia hopes to use this summer's G-8 summit in St. Petersburg to convince the United States and other industrialized nations it shares their values, and that it will be the world's politically safest source of oil and gas in the next few decades." Russia has been criticized for human rights practices, but an anonymous Russian official "said Moscow also wants to demonstrate that it plays a constructive role in the international community."

Ghanaian President Praises US Aid But Criticizes Delays. The AP (4/13) reports that Ghanaian President John Kufuor praised American assistance in "the fight against HIV/AIDS, childhood education, trade and agriculture." However, Kufuor said that "we need more help" in fully implementing the African Growth and Opportunity Act's provisions on "duty-free exports for more than 6,400 African products to U.S. markets" and in receiving promised money from the Millennium Challenge Account.

Kathmandu Consular Section Closed, Hastert Visit Cancelled. The New York Times (4/13, Sengupta, 1.19M) reports the US Embassy Kathmandu "on Wednesday announced the closing of its consular section and canceled a Congressional delegation's visit this week. The moves came as a fourth Nepali was killed during pro-democracy protests in the south of the country, according to a political party that called for the demonstrations." Speaker Dennis Hastert and seven other House Members were "scheduled to visit Katmandu this week as part of a swing through the region. The American Embassy in a statement on Wednesday said the visit had been canceled 'due to ongoing violence, curfews and widespread insecurity.'"

Italy Predicted To Tilt Away From US Under Prodi. In an analysis of the impact of this week's election on US-Italian relations, the AP (4/12, Simpson) says "a new center-left government led by Romano Prodi could bring changes in Italy's relationship with the United States, including a return to the 'old Europe' that opposed the war in Iraq and has worries about what it considers Washington's aggressive foreign policy." Prodi's "platform and public statements make clear he intends to focus on closer relations with other European countries and work for a joint European Union foreign policy, saying only the bloc as a whole can counterbalance American power."

In reporting on a potential source of tension in the bilateral relationship, the New York Times (4/13, Kiefer, 1.19M) notes, "Italy's justice minister said he would not seek the extradition of 22 Central Intelligence Agency officers accused of kidnapping a Muslim cleric from the streets of

DOJ_NMG_0025991

Milan and flying him to Egypt for interrogation. The Milan prosecutor leading the investigation, however, pledged to resubmit the extradition request once Italy's new government is in place." Prosecutors say Hassan Mustafa Osama, AKA Abu Omar, "was taken first to Germany, then to Egypt, and that he was tortured during the interrogations."

Berlusconi Backs Away From Allegations Of Fraud. The AP (4/13, Sanminiatelli) reports Italian Premier Silvio Berlusconi "appeared to back away from his allegation of fraud, releasing a statement late in the evening in which he said that the very thin margin of victory 'requires a scrupulous check to ascertain any possible error or irregularity.'" His "allegations apparently prompted a late-night phone call from Prodi to Interior Minister Giuseppe Pisanu, Apcom and ANSA reported, citing sources in the center-left coalition."

Prodi Confident Of Victory. The New York Times (4/13, Fisher, 1.19M) reports, "As judges began to recount the ballots in Italy's tight national elections, Romano Prodi said Wednesday that he expected that the provisional results giving him a narrow victory would stand and that he would replace" Berlusconi. The Times adds, "Since the voting, Italian politics have lapsed into a state of suspended animation, as Mr. Berlusconi, who waged an all-out campaign for a second term, has refused to concede defeat, saying the results are so close they require a recount." AFP (4/13) carries a similar story.

Political Environment In Italy Uncertain. Many newspapers characterized the political situation in Italy as uncertain. Typical of coverage, the Wall Street Journal (4/13, A6, Meichtry, 2.11M) says the government in Rome "remains in limbo" following this week's election. Prodi "may have succeeded in pulling off a razor-thin victory at the polls, but he faces an institutional logjam that could stall his ability to form a new government for as many as two months, further postponing the economic retooling many economists believe the country badly needs." The delay in forming a working government "threatens to add to a climate of political uncertainty and could further weaken Mr. Prodi's standing. Two days after the polls closed, Prime Minister Silvio Berlusconi has yet to concede defeat, and is contesting the outcome of the election."

The Financial Times (4/13, Barber) reports, "Italy braced itself for weeks of political uncertainty on Wednesday as Romano Prodi, the winner of this week's election, said he would not form a government until May and Silvio Berlusconi, prime minister, continued to challenge the result."

And the Christian Science Monitor (4/13, Celeste, 61K) notes, "Leading a government divided almost equally between left and right, Prodi could be hard-pressed to revive Italy's sagging economy -- let alone undo the laws that critics say Mr. Berlusconi…passed during his five-year term to benefit his interests." John Cabot University in Rome political science professor Franco Pavoncello said, "The future looks like an unstable government." And according to Pavoncello there are also divisions within Prodi.

Opinion analysis of the aftermath of Italy's election echoed that theme. Tony Barber in an op-ed in the Financial Times (4/13) says, "Italy's political, social and cultural divisions – that between Catholic believers and radical secularists is another, reaching deep into Mr Prodi's coalition – were supposed to become a mere historical memory under the political system that emerged in the early 1990s from the debris of Italy's so-called 'First Republic.'" And "with post-election gridlock gripping Italy, it may instead be this 'Second Republic' and its political and economic failures that await burial."

Roger Cohen in his column in the New York Times/IHT (4/12) says "Italy's anxiety after election results revealed a country so perfectly divided as to appear almost perfectly ungovernable."

Berlosconi May Lead After Recount. AEI fellow Michael Ledeen in an op-ed in the Wall Street Journal (4/13, 2.11M) suggests Berlosconi may eventually still win after a recount noting that a decade ago "Italians had to choose between two factions headed -- surprise! -- by Messrs. Prodi and Berlusconi. However long Mr. Prodi may govern, we undoubtedly know the name of his successor. Indeed, it is still technically possible for Mr. Berlusconi to remain in office, because the courts are required to check the tallies, which are reported telephonically to the interior ministry. There is normally a difference of 40,000 to 60,000 votes between the original results provided by the interior ministry and the final numbers. In 2001 the number was 57,000. So it is still possible that, when the courts announce the results on April 28, the center-right will have a stable majority in the Chamber. It would only require a shift of about 13,000 votes."

Prince Harry Receives Army Commission. ABC World News Tonight (4/12, story 9, :25, Vargas, 8.78M) reported, "Britain's Prince Harry is now a fully commissioned army officer. His grandmother, the Queen, and most of the royal family were there for his commission ceremony. His rank means that he could now be sent to Iraq or Afghanistan. He says he doesn't want any special treatment. Prince William, Harry's older brother, must now salute him, at least until Harry becomes an officer later this year."

LATimes Says US Should Help Reduce Misery, Unnecessary Death In The World. An editorial in the Los Angeles Times (4/13, 958K) says that "most Americans believe their nation is both too generous and too stingy." Those opposed to more foreign aid cite a 2000 survey finding "that a majority of Americans think the US should spend less on it. When respondents were asked how much of the federal budget goes to foreign aid, the median figure was 20%. When asked how much should be spent, the

DOJ_NMG_0025992

median was 10%. Those in favor of more foreign aid point out that the US actually spends about 1%." The Times adds, "The United States has the good fortune to be in a position to help reduce misery and unnecessary death in the world. If only the US were as generous as most Americans think it is."

US Said To Be Losing Influence In Africa To China. Raymond W. Copson, who recently retired from the Congressional Research Service, where he specialized on Africa, writes in the Los Angeles Times (4/13, 958K), "At the U.N. Security Council, China -- with Russia and Qatar -- is reportedly discouraging talk of US-backed sanctions targeted against Sudanese officials responsible for the carnage in Darfur." The scale of China's involvement in Africa "is unprecedented." The Times adds, "With China available as a partner, authoritarian rulers from Robert Mugabe in Zimbabwe to Sudan's Omar Hassan Bashir can turn their backs when the West demands improvements in governance and human rights." The US "can win friends at the grass roots by fulfilling our promise to eliminate the trade barriers that discriminate against African farmers. We can scale up legislative, technical and medical exchanges and support infrastructure projects where there would be direct benefit to Africa's poor. Through efforts such as these, we could regain some of the influence in Africa now being unnecessarily lost to China.

Subject: Association of Corporate Counsel Meeting
Attachments: USSC Statement 060405.pdf

In advance of this afternoon's meeting, I thought if may be helpful for you to have a copy of the statement I read during the Sentencing Commission's public meeting earlier this month regarding the amendment to the organizational guidelines. That amendment, effective November 1, 2006, merely removes the language discussing the waiver of the attorney-client privilege from the guideline.

Let me know if you need any additional information.

Thanks,
Mike

Michael J. Elston
Chief of Staff and Counselor
to the Deputy Attorney General
950 Pennsylvania Avenue, N.W., Room 4210

(202) 514-9368 (fax)

Statement of Commissioner Michael J. Elston*
to the United States Sentencing Commission
on the Proposed Amendment to the Organizational Sentencing Guidelines
April 5, 2006

As I have said during previous meetings, the Department of Justice opposed the language at issue when it was first proposed, and the Commission adopted it over the Department's objection. I am pleased that the Department's original position may now prevail – however belatedly.

The Department appreciates the discussion about this change that has occurred over the past few months. This change today, however, does not have any impact on the standards by which the Department evaluates a company's cooperation in a criminal investigation as set forth in former Deputy Attorney General Larry Thompson's January 2003 memorandum, and I do not understand it to be the Commission's intention to advocate or promote changes in the Department's policies or practices through this amendment. The Thompson memorandum states that it is appropriate for the government to consider the company's timely and complete cooperation with the government during a criminal investigation as one factor in reviewing whether the entity itself should be charged. A company's decision to waive the attorney-client privilege is one manner in which the company can demonstrate its cooperation with the government's investigation, but, as indicated in the Thompson memorandum, it is not the only factor to be considered. It is certainly appropriate for the government to take such a waiver into account with the other factors outlined in the Thompson memorandum.

The Department of Justice fully respects the values embodied in the attorney-client privilege. The privilege, however, is not absolute, and it may be waived by the client when it is in the client's interest to do so. In many circumstances, it is in the best interests of justice -- not to mention the best interests of defrauded shareholders and other victims of the corporation's crimes -- for a company to decide that full cooperation with the government, including a waiver, where necessary, is in the best interests of the company.

The Department remains committed to using all of the tools at its disposal to investigate and prosecute corporate fraud. The hopes and dreams of millions of Americans are tied to their ownership of shares in publicly traded companies or mutual funds invested in those shares. Small and large investors alike, as well as Congress, expect vigorous enforcement of the law in this area in order to protect the integrity of the markets. We will continue to meet that expectation.

---

STATEMENT OF
PETER D. KEISLER
ASSISTANT ATTORNEY GENERAL
CIVIL DIVISION
DEPARTMENT OF JUSTICE

BEFORE THE
SUBCOMMITTEE ON COMMERCIAL AND ADMINISTRATIVE LAW
COMMITTEE ON THE JUDICIARY
UNITED STATES HOUSE OF REPRESENTATIVES

CONCERNING
BUDGET AND RESOURCE NEEDS
OF THE JUSTICE DEPARTMENT CIVIL DIVISION
FOR FISCAL YEAR 2007

APRIL 26, 2006

Chairman Cannon, Congressman Watt, and Members of the Subcommittee:

I appreciate the opportunity to discuss the work of the Civil Division of the Department of Justice and our budget and resource needs for Fiscal Year 2007.

The Division represents the interests of the United States in a wide range of civil matters. Our cases encompass virtually every aspect of the Federal government – from defending the constitutionality of Federal statutes to recovering money defrauded from Government programs, to the administration of national compensation programs, to the representation of Federal agencies and Government employees in a host of matters that arise as part and parcel of Government operations – contract disputes, allegations of negligence and discrimination, loan defaults, and immigration matters. The Division employs 660 attorneys and 295 full and part time employees who provide essential paralegal, administrative, and clerical support.

In FY 2005, the Civil Division accomplished the following:

DOJ_NMG_0025999

- Worked with the United States Attorneys to recover more than $1 billion dollars lost through fraud against Government programs;

- Protected the public fisc from billions of dollars in claims arising from the Government's commercial activities;

- Protected the public fisc from over $1 billion dollars in tort claims arising from the Government's past and current operational programs and activities;

- Defended against challenges to Congressional and Executive exercises of power;

- Played a major role in the administration of the Vaccine Injury Compensation Program, which was established by Congress;

- Represented individual Government employees sued in connection with their performance of official duties; and

- In the period since the September 11th attacks, defended the Federal government's coordinated response to those attacks and the Administration's policies designed to prevent future acts of terrorism.

NATIONAL SECURITY

Among the laws and policies of greatest importance to the Administration, the Congress, and the public are those intended to protect our nation's security. Our leadership has committed itself to devoting all resources necessary to disrupt, weaken, and eliminate terrorist networks; to prevent terrorist operations; and to bring to justice perpetrators of terrorist attacks. And we in the Civil Division are privileged to contribute to this mission through our representation of the United States in litigation that relates to the Federal government's efforts to protect against threats to our national security. In fulfilling our litigation responsibilities, we take seriously the Attorney General's charge to address terrorism and other threats to the United States with integrity and devotion to our nation's highest ideals.

Civil cases related to the war on terrorism often raise complex issues. And the consequences are large, as litigation losses in this area could undercut policies of crucial importance to the security of our citizens. By way of example, Civil Division attorneys have defended the Government in the following matters: challenges to the USA PATRIOT Act; decisions to freeze the assets of terrorist organizations; enforcement actions involving the detention and removal of suspected alien terrorists; and designations of Specially Designated Global Terrorists.

* * * * *

While national security cases are paramount, they nonetheless represent a small fraction of the cases and matters pending with the Civil Division in FY 2006. This vast and diverse workload is handled by our trial attorneys who spend their time on the front lines of litigation – preparing motions, taking depositions, negotiating settlements, conducting trials, and pursuing

DOJ_NMG_0026000

appeals.

WORKLOAD TRENDS

Over the past four years, the Civil Division's caseload has increased by more than 70 percent. In FY 2002, we handled about 31,000 cases and matters, but by FY 2005, our caseload exceeded 52,000. This increase is attributable to two main factors: (1) significant growth in the number of claims filed with the compensation programs; and (2) a dramatic rise in appellate cases resulting from increased challenges to immigration enforcement actions.

IMMIGRATION LITIGATION

The Office of Immigration Litigation ("OIL") defends the Government's immigration laws and policies and handles challenges to immigration enforcement actions. At no time in history has this mission been so important, and never before has it consumed as many of the Department's resources as it does today.

Immigration attorneys defend the Government's efforts to detain and remove terrorists and criminal aliens. Since 9/11, OIL has handled and assisted in hundreds of cases involving aliens of national security interest. On average, OIL defends the detention and removal of approximately 1,500 criminal aliens each year. Vigorous defense of these cases is critical to our national security and the safety of our communities. OIL also provides liaison and training to all of the Government's immigration agencies, enabling enforcement efforts at and within our borders to enjoy dependable support before the courts.

Immigration litigation has been, by far, the fastest growing component of the Civil Division's docket. The Division is responsible for handling or overseeing all Federal court challenges to decisions of the Board of Immigration Appeals ("BIA"), and the number of these challenges has grown significantly in recent years. OIL's docket of pending cases has nearly tripled in the past four years, growing from 6,200 cases in FY 2002 to over 17,000 cases in FY 2005.

This growth stems from several factors. In 2003, much of the growth was attributed to the Department's streamlining reforms, which increased the productivity of the BIA and thus helped clear a sizable backlog of cases. The backlog has since been cleared. Now, the growth stems primarily from heightened immigration enforcement activities pursued by the Department of Homeland Security and the rapid increase in the rate at which aliens appeal BIA decisions to the Federal courts, which has increased from 6 percent to 29 percent over the past four years. There is no reason to expect this rate to subside. Aliens now must turn to the courts to get the delay in removal that was once reliably provided simply by an administrative appeal to the BIA.

This enormous growth has driven OIL's caseload per attorney to over 155 in FY 2005, more than doubling the historic caseload of 60 cases per attorney. Even with the Congress' favorable approval of the Division's FY 2006 request, OIL's rising caseload has negated whatever gains might have been achieved with this increase. Without additional resources in FY 2007, the attorney caseload is expected to remain at the untenable level of 155 cases per attorney. The Division and the Department have responded to this crisis, assigning immigration cases to other attorneys throughout the Department. These stopgap measures, which task attorneys who lack OIL's experience and efficiency in handling immigration matters, are not a permanent

DOJ_NMG_0026001

solution.

The Office of Immigration Litigation will continue to face an overwhelming workload in FY 2007. Therefore, the President requests in his FY 2007 budget a program increase of 114 positions (86 attorneys), 57 FTEs, and $9,566,000 for immigration litigation.

PROTECTING THE PUBLIC FISC

Our dockets are filled with cases that involve substantial monetary claims against the Government. The significance of these claims cannot be overstated.

Our responsibilities have included: (1) the 122 *Winstar* suits in which hundreds of financial institutions have sought tens of billions of dollars for alleged losses that occurred in the wake of banking reforms enacted in the 1980s; (2) the *Cobell* class action – perhaps the largest ever filed against the Government; and (3) numerous complex, sensitive, and challenging tort cases based on Federal programs and activities, including defense and national security programs, law enforcement activities, and other Government operations, in which the Civil Division has successfully protected the public fisc from approximately $1 billion in unmeritorious tort claims in the last fiscal year.

In thousands of other defensive monetary matters, our mission is to ensure that the will of Congress and the actions of the Executive branch are vigorously and fairly defended, and that meritless claims are not paid from the public fisc. Thus far, we have been largely successful. For example, seventy of the original 122 *Winstar* suits have been resolved without the Government paying any money whatsoever. And in 2005 alone, we defeated over $3.9 billion in groundless *Winstar* claims asserted against the United States.

RECOVERING FEDERAL FUNDS

In any given year, about 15 percent of our cases involve affirmative litigation on which we work with United States Attorneys to enforce Government regulations and policies, and to recover money owed the Government from commercial transactions, bankruptcy proceedings, and fraud. The bulk of affirmative monetary recoveries stem from fraud suits. As in the last several years, health care in FY2005 accounted for the lion's share of the Department's fraud settlements and judgments – more than $1.1 billion was recovered in that year alone. This number includes both whistleblower claims and those initiated by the United States in independent fraud investigations. Most of the recoveries in this area are returned to the Medicare and Medicaid programs, but substantial recoveries also are returned to the Federal Employees Health Benefits Program, the Department of Defense TRICARE program, the Department of Veterans Affairs, and the Railroad Retirement Board. The coming fiscal year promises to continue, if not exceed, this trend. Health care fraud recoveries in the first four months of this fiscal year already exceed $600 million. The following recent recoveries illustrate our efforts in this area:

We obtained $325 million from HealthSouth Corporation, the Nation's largest provider of rehabilitative medicine services. Allegations against HealthSouth included false claims for outpatient physical therapy services that were not properly supported by certified plans of care, administered by licensed physical therapists, or for one-on-one therapy as represented. Of similar magnitude was a recent settlement with Gambro Healthcare for $310 million to resolve allegations of false claims for Medicare and Medicaid in connection with dialysis

DOJ_NMG_0026002

services. Gambro Supply Corporation, the sham durable medical equipment company and a wholly owned subsidiary of Gambro Healthcare, paid a $25 million criminal fine and agreed to permanent exclusion from the Medicare program in a case handled collaboratively by our office and both the civil and criminal divisions in the Eastern District of Missouri.

One of the largest areas of the Department's health care fraud caseload are matters against pharmaceutical companies or other related entities, charging various kinds of fraud on the Medicare and Medicaid programs in the pricing or delivery of drugs. To date, there have been more than more than $4.7 billion in criminal fines and civil recoveries in these cases, much of it returned to the Medicare and Medicaid programs. Indeed, there now are more than 150 *qui tam* cases filed by whistleblowers under the False Claims Act that allege various schemes associated with government drug plans.

Just this past December, in a case jointly prosecuted with the United States Attorney's Office for the District of Massachusetts, Serono S.A., a Swiss biotechnical corporation, and its United States subsidiaries, entered into a global criminal, civil, and administrative settlement for $704 million, making it one of the largest health care fraud settlements the Department has reached. Serono Labs, one of the subsidiaries, pled guilty to two counts of conspiracy: the first, conspiring to introduce and deliver for introduction into interstate commerce, with intent to defraud or mislead, adulterated medical devices; the second, conspiring to knowingly and willfully pay illegal remuneration to health care providers to induce them to refer patients to pharmacies for the furnishing of the drug Serostim, for which payments were made in whole or in part by the Medicaid program. Serono Labs paid a criminal fine of $136.9 million and reached a civil settlement of its False Claims Act liability of $567 million. This amount was paid to the United States and to State Medicaid programs (the Federal share of which was $305 million).

Finally, in the first settlement of its kind, the pharmacy benefit manager AdvancePCS agreed in 2005 to pay $137.5 million to resolve its civil liability in connection with soliciting and receiving kickbacks from pharmaceutical manufacturers and paying kickbacks to potential customers to induce them to contract with AdvancePCS. This investigation exposed the hidden financial relationships maintained by pharmacy benefits managers with drug manufacturers and health plans that ultimately influenced the nature and the brand of drugs prescribed to Medicare beneficiaries. We think the lessons learned in this case, which was handled with the United States Attorney's Office for the Eastern District of Pennsylvania, and its progeny will be particularly instructive as we monitor potential fraudulent conduct in the Medicare prescription drug program now coming on line.

The Government's ability to handle these cases is directly linked to available resources. These cases are highly complex and resource intensive. Investigative work includes massive document collections, witness interviews, research, and interagency coordination. Millions of taxpayer dollars are lost each year to health care fraud, and any effective effort to contain the cost of Medicare and Medicaid must also incorporate strategies aimed at stopping such fraud.

ALTERNATIVES TO LITIGATION

In addition to its litigation work, the Civil Division also helps to administer alternatives to litigation. The Vaccine Injury Compensation Program, for example, was created in 1986 by the National Childhood Vaccine Injury Act to encourage childhood vaccination by providing a streamlined system for compensation in rare instances where an injury results. The Vaccine

DOJ_NMG_0026003

Injury Compensation Trust Fund, from which compensation awards are paid to eligible claimants, derives its funding from an excise tax on vaccine manufacturers and provides reimbursement to the Departments of Justice and Health and Human Services, as well as to the Court of Federal Claims, for expenses related to the administration of the Program. To date, over 1,960 families or individuals have been paid $1.58 billion.

Similarly, Congress passed the Radiation Exposure Compensation Act ("RECA") in 1990 to offer an apology and compensation to individuals who suffered disease or death as a result of the Nation's nuclear weapons testing program during the Cold War Era. In July 2000, RECA Amendments were enacted which significantly expanded the scope of the Act. Major changes included new categories of beneficiaries, expansion of eligible diseases, and geographic areas. Annual capped mandatory appropriations did not keep pace with the increased number of new claim filings and resulted in shortfalls of funds for eligible claimants. However, I am pleased to report that the Trust Fund is currently solvent. In FY 2005, Congress ensured adequate long-term funding by requiring that payments to certain RECA claimants be made from the Energy Employees Occupational Illness Trust Fund. Additional legislation conferred mandatory and indefinite funding status for the remaining RECA claimants beginning in FY 2006. To date, over 15,200 claims have been approved, representing over $1 billion paid to eligible claimants or their surviving beneficiaries.

PERFORMANCE

By concentrating on the Civil Division's top priorities, this testimony provides little elaboration on the thousands of cases and matters that form the traditional core of our work.

The Civil Division has a longstanding commitment to maximizing the effectiveness of scarce Government resources. It is with pride that I can report that performance targets across the board were met or exceeded in FY 2005, as we succeeded in recovering substantial funds owed to the Government, defeating unmeritorious claims, and prevailing in the vast majority of cases involving challenges to the programs of some 200 client agencies.

PRESIDENT'S BUDGET REQUEST

The President's FY 2007 request seeks 1,208 positions (834 attorneys); 1,176 FTEs; and $213,286,000, which includes a program increase of 114 positions (86 attorneys) and $9,566,000 for immigration litigation. Also included in this request are the base resources required to maintain the superior legal representation services that have yielded such tremendous success, and additional funds to support the Office of Immigration Litigation's important mission.

At this time, Mr. Chairman, I would be happy to address any questions you or Members of the Subcommittee may have.

Prosecutors drop appeal in Patriot Act librarian case

Thursday, April 13, 2006

STAMFORD— Federal prosecutors said Wednesday they will no longer seek to enforce a gag order on Connecticut librarians who received an FBI demand for records about library patrons under the Patriot Act.

The American Civil Liberties Union, which filed the civil suit on behalf of the librarians, said it will identify them once court proceedings are completed in the next few weeks.

U.S. District Judge Janet Hall ruled last year that the gag order should be lifted, saying it unfairly prevented the librarians from participating in a debate over how the Patriot Act should be rewritten.

Prosecutors appealed, but U.S. Attorney Kevin O'Connor said Wednesday that the appeal no longer made sense.

One librarian has already been identified in news reports and the Patriot Act has been changed to include a procedure that will allow people to appeal requirements that they not disclose their involvement in a request, officials said.

“In this case, exercising the discretion that Congress is now encouraging us to exercise, the FBI has determined that allowing the recipient to disclose its identity, and only its identity, will not harm the national security or interfere with an ongoing investigation,” said Brian Roehrkasse, a spokesman at the Justice Department.

Prosecutors have maintained that secrecy about demands for records is necessary to avoid alerting suspects and jeopardizing investigations. They contended the gag order prevented only the release of librarians’ identities, not their ability to speak about the Patriot Act.

The change followed Congress’ reauthorization of the Patriot Act, the ACLU noted.

“Here is yet another example of how the Bush administration uses the guise of national security to play partisan politics,” said ACLU Executive Director Anthony D. Romero. “The American public should keep this in mind the next time a government official invokes national security in defense of secrecy.”

The Patriot Act, passed shortly after the Sept. 11, 2001, attacks, allows expanded surveillance of terror suspects, increased use of material witness warrants to hold suspects incommunicado and secret proceedings in immigration cases.

It also removed a requirement that any records sought in a terrorism investigation be those of someone under suspicion. Now, anyone’s records can be obtained if the FBI considers them relevant to a terrorism or spying investigation.

The FBI can issue national security letters without a judge’s approval in terrorism and espionage cases. They require telephone companies, Internet service providers, banks, credit bureaus and others to produce highly personal records about customers or subscribers.

People who receive the letters are prohibited by law from disclosing to anyone that they did so.

The Washington Post and The New York Times have reported that the FBI issued a national security letter to George Christian, executive director of Library Connection, a Windsor, Conn.-based cooperative of 26 libraries that share an automated library system.

In those letters, the FBI certifies that phone or Internet records are “relevant to an authorized investigation to protect against international terrorism or clandestine intelligence activities.”

Christian did not return telephone calls placed Wednesday.

Federal prosecutors are pursuing an appeal of a New York decision in which a U.S. District judge ruled that a similar letter received by an internet access firm violated the Constitution because it amounted to unreasonable search and seizure. He also found that the nondisclosure requirement of the Patriot Act violated free speech.

The ACLU argues that the amended Patriot Act still allows the FBI to gag recipients of the national security letters.

END

The New York Times

Documents Show Link Between AT&T And Agency In Eavesdropping Case

By John Markoff And Scott Shane

Thursday, April 13, 2006

SAN FRANCISCO— Mark Klein was a veteran AT&T technician in 2002 when he began to see what he thought were suspicious connections between that telecommunications giant and the National Security Agency.

But he kept quiet about it until news broke late last year that President Bush had approved an N.S.A. program to eavesdrop without court warrants on Americans suspected of ties to Al Qaeda.

Now Mr. Klein and a few company documents he saved have emerged as key elements in a class-action lawsuit filed against AT&T on Jan. 31 by a civil liberties group, the Electronic Frontier Foundation. The suit accuses the company of helping the security agency invade its customers' privacy.

Mr. Klein's account and the documents provide new details about how the agency works with the private sector in intercepting communications for intelligence purposes.

The documents, some of which Mr. Klein had earlier provided to reporters, describe a mysterious room at the AT&T Internet and telephone hub in San Francisco where he worked.

The documents, which were examined by four independent telecommunications and computer security experts at the request of The New York Times, describe equipment capable of monitoring a large quantity of e-mail messages, Internet phone calls, and other Internet traffic.

The equipment, which Mr. Klein said was installed by AT&T in 2003, was able to select messages that could be identified by keywords, Internet or e-mail addresses or country of origin and divert copies to another location for further analysis.

The security agency began eavesdropping without warrants on international phone calls and e-mail messages of people inside the United States suspected of terrorist links soon after the Sept. 11 attacks.

After disclosing the program last December, The New York Times also reported that the agency had gathered data from phone and e-mail traffic with the cooperation of several major telecommunications companies.

The technical experts all said that the documents showed that AT&T had an agreement with the federal government to systematically gather information flowing on the Internet through the company's network.

The gathering of such information, known as data mining, involves the use of sophisticated computer programs to detect patterns or glean useful intelligence from masses of information.

"This took expert planning and hundreds of millions of dollars to build," said Brian Reid, director of engineering at the Internet Systems Consortium in Redwood City, Calif. "This is the correct way to do high volume Internet snooping."

Another expert, who had designed large federal and commercial data networks, said that the documents were consistent with administration assertions that the N.S.A. monitored only foreign communications and communications between foreign and United States locations, partly because of the location of the monitoring sites. The network designer was granted anonymity because he believed that commenting on the operation could affect his ability to work as a consultant.

The documents referred to a second location, in Atlanta, and suggested similar rooms might exist at other AT&T switching sites.

Mr. Klein said other AT&T technicians had told him of such installations in San Jose, Calif.; Los Angeles; San Diego; and Seattle.

The Internet hubs there carry a significant amount of international traffic. The network designer and other experts said it would be a simple technical matter to reprogram the equipment to intercept purely domestic Internet traffic.

The Department of Justice initially asked the Electronic Frontier Foundation not to file Mr. Klein's documents in court, but a review determined that they were not classified and the government dropped its objection. The foundation filed the documents under seal because of concern about releasing proprietary information.

On Monday, AT&T filed a motion with a federal judge in San Francisco asking the court to order the foundation to return the documents because they were proprietary.

The documents showed that the room in San Francisco, which Mr. Klein says was off-limits to most employees but serviced by a company technician working with the security agency, contained computerized equipment that could sift through immense volumes of traffic as it passed through the cables of AT&T's WorldNet Internet service.

According to the documents, e-mail messages and other data carried by 16 other commercial Internet providers reached AT&T customers through the San Francisco hub.

One piece of filtering equipment described in the documents was manufactured by Narus, based in Mountain View, Calif.

The equipment could be programmed to identify and intercept voice or data conversations between e-mail, telephone or Internet addresses, said Steve Bannerman, the company's vice president for marketing.

Buyers included companies trying to comply with the Communications Assistance for Law Enforcement Act of 1994, which requires that communications systems have a wiretapping capability built in.

Typically, law enforcement interceptions are done on a case by case basis and require warrants.

Mr. Bannerman said he could not comment further because Narus had not announced any sales to the federal government. William P. Crowell, a former deputy director of the N.S.A, is on the Narus board.

In an interview, Mr. Klein said he did not have a security clearance but had witnessed interactions between colleagues who did have clearances and the highly secretive N.S.A. "It was strange and sort of suspicious," he said.

Mr. Klein said he learned of an agency connection to the mysterious room in 2002 when a company manager told him to expect a visit from an N.S.A. official who wanted to speak with another senior company technician about "a special job." That technician later installed the equipment in the room, he said.

Based on his observations and technical knowledge, Mr. Klein concluded that the equipment permitted "vacuum-cleaner surveillance" of Internet traffic. Mr. Klein, 60, who retired in 2004 after 23 years with AT&T and lives near Oakland, Calif., said he decided to make his observations known because he believed the government's monitoring was violating Americans' civil liberties.

An AT&T spokesman at the company's corporate headquarters in San Antonio declined to comment on Mr. Klein's statements.

"AT&T does follow all laws with respect to assistance offered to government agencies," said Walt Sharp, the AT&T spokesman. "However, we are not in a position to comment on matters of national security."

Asked to comment, Don Weber, a spokesman for the N.S.A., said, "It would be irresponsible of us to discuss actual or alleged operational issues as it would give those wishing to do harm to the United States the ability to adjust and potentially inflict harm."

European state admits handed over terror suspects

Thursday April 13, 2006

By Gilbert Reilhac

STRASBOURG, France - At least one European state has admitted to handing over terrorism suspects to foreign agents, the Council of Europe said on Wednesday citing a clear breach of the country's human rights duties.

Council Secretary General Terry Davis refused to say which of the 46 members had secretly transferred suspects and said it was up to national authorities or the European Court of Human Rights to take action.

Last November, Davis gave member states a three-month deadline to hand over information relating to suspicions that the U.S. Central Intelligence Agency had run a network of secret jails in Europe for al Qaeda suspects.

He also asked them to reveal any details they had about secret CIA flights across Europe in which prisoners are alleged to have been transferred to jails in third countries where they faced torture and other abuses, a process known as rendition.

"I am now in position to say that we no longer need to speak about 'alleged' cases of rendition," Davis told a news conference in the eastern French city of Strasbourg where the human rights watchdog is based.

"I am not in a position to go into any further detail at the moment, but we have received official acknowledgment of 'handing over' individuals to foreign officials" in ways that flouted European Convention on Human Rights and other legal standards.

Davis spokesman Matjas Gruden said it was not for the council to take action.

The council had decided not to name the state that had admitted to wrongdoing in isolation, he said, but "everything will be very transparent. We will publish the responses" once all responses have been collated over the next two weeks.

Italian and German prosecutors are investigating the case of an Egyptian man they believe was snatched on a Milan street by a team of CIA agents in February 2003 and flown via Germany to Egypt, where he later said he was tortured.

A German national, Khaled el-Masri, is suing the former head of the CIA over his alleged rendition from Macedonia to Afghanistan , where he says the United States held him in jail for months as a terrorist suspect in 2004. German prosecutors are also probing that case.

And in Sweden, a parliamentary ombudsman has criticized the security services over the expulsion of two Egyptian terrorism suspects who were handed over to U.S. agents and flown home aboard a U.S. government-leased plane in 2001.

Durbin Blocking Ambassadorial Nomination

By Pete Yost

WASHINGTON - A Democratic senator is blocking Associate Attorney General Robert McCallum's nomination to be ambassador to Australia over allegations he improperly influenced the government's lawsuit against the tobacco industry.

In a letter to President Bush, Sen. Dick Durbin of Illinois said it was premature to place McCallum in a new position of trust as long as the Justice Department's Office of Professional Responsibility is conducting an ethics inquiry into the handling of the tobacco case.

Any senator may place a hold on an executive branch nominee, an act that can be overcome with 60 votes.

The civil racketeering tobacco case, filed during the Clinton administration, alleges the cigarette companies knowingly engaged in deception for decades by denying that nicotine was addictive and downplaying the dangers of smoking.

At the end of the tobacco trial last year, the Justice Department bypassed the position of one of its own witnesses and reduced the amount the Bush administration was seeking from the tobacco industry from $130 billion to $10 billion.

At that time, McCallum, the No. 3 official at the department, defended the reduction against Democrats and anti-smoking groups who said the Bush administration had caved in to the tobacco lobby.

McCallum said lowering the figure was dictated by a court ruling that went against the government.

He also said the $10 billion for a smoking cessation program could be increased if court-appointed monitors found the industry committed acts of fraud.

The controversy led the Justice Department's Office of Professional Responsibility to launch an ethics inquiry.

On Thursday, Durbin spokesman Nadeam Elshami confirmed that the senator had placed a hold on McCallum's nomination. A Justice Department spokesperson indicated that the ethics inquiry continues.

"It appears that the dramatic change in course by the Department of Justice was not the result of any new evidence about smoking cessation or the facts of the case but the result of political pressure on the career prosecutors," Durbin wrote the president. "Senators should be given an independent, unbiased assurance that he did not take any improper actions in the tobacco lawsuit before we are asked to consider his nomination."

U.S. District Judge Gladys Kessler has not yet ruled in the tobacco case.

Last July, after the department abandoned the $130 billion figure, the judge granted the request of six anti-smoking groups to join the lawsuit, saying the government "no longer adequately represents" their interests.

The government witness who proposed the $130 billion, Dr. Michael Fiore, has called it "a tragedy that the Justice Department backed away from their original cessation remedy. Can you imagine what would happen if, as we projected with this plan, 1 million additional smokers quit each year - 33 million over time?"

Another government witness, Harvard University business professor Max Bazerman, said he'd been told before he testified that McCallum and another Justice lawyer wanted him to change his testimony.

A third witness, Matt Myers, president of the Campaign for Tobacco-Free Kids, said the lead trial attorney told him that the Justice Department hierarchy wanted him to drop a proposed ban on tobacco industry marketing to young people.

Bazerman and Myers said they refused to make changes, and both testified.

Government Can't Monitor All AT&T Traffic, Lawsuit Says

Friday, April 14, 2006

SAN FRANCISCO -- AT&T Inc. and an Internet advocacy group are waging a privacy battle in federal court that could expose the reach of the Bush administration's secretive domestic wiretapping program. The Electronic Frontier Foundation said it obtained documents from a former AT&T technician showing that the National Security Agency is capable of monitoring all communications on AT&T's network.

"It appears the NSA is capable of conducting what amounts to vacuum-cleaner surveillance of all the data crossing the Internet, whether that be people's e-mail, Web surfing or any other data," whistle-blower Mark Klein, who worked for the company for 22 years, said in a statement released by his lawyers.

U.S. District Judge Vaughn Walker is considering whether to unseal documents that Klein provided and AT&T wants kept secret. EFF filed the documents under seal as a courtesy to the phone company, but is seeking to unseal them.

The EFF lawsuit, filed in U.S. District Court, seeks to stop the surveillance program that started shortly after the 2001 terror attacks. The suit is based in large part on the Klein documents, which detail secret spying rooms and electronic surveillance equipment in AT&T facilities.

The suit claims AT&T company not only provided direct access to its network, which carries voice and data, but also to its massive databases of stored telephone and Internet records that are updated constantly.

AT&T violated U.S. law and the privacy of its customers as part of the "massive and illegal program to wiretap and data-mine Americans' communications" without warrants, the EFF alleged.

Klein said the NSA built a secret room at the company's San Francisco central office in 2003, adjacent to a "switch room where the public's phone calls are routed." One of the documents under seal, Klein said, shows that a device was installed with the "ability to sift through large amounts of data looking for preprogrammed targets."

Other so-called secret rooms were constructed at AT&T sites in Seattle, San Jose, Los Angeles and San Diego, the statement said.

Other documents under seal show that fiber optic cables from the secret room tapped into WorldNet Internet subscribers, Klein said. The documents also instructed technicians how to connect cables to the secret room. Klein said he was required to connect circuits that fed information to the secret room.

The NSA declined directly to address the lawsuit or Klein's allegations, which covered activities at AT&T Corp. before SBC Communications Inc. bought it and became AT&T Inc. late last year.

"Any discussion about actual or alleged operational issues would be irresponsible as it would give our adversaries insight that would enable them to adjust and potentially inflict harm to the U.S.," NSA spokesman Don Weber said.

Michael Balmoris, an AT&T spokesman, said the San Antonio-based telecommunications company "follows all laws with respect to assistance offered to government agencies." He declined further elaboration, saying AT&T is "not in a position to comment on matters of national security or litigation." President George W. Bush confirmed in December that the NSA has been conducting the surveillance when calls and e-mails, in which at least one party is outside the United States, are thought to involve al-Qaida terrorists.

In congressional hearings last week, Attorney General Alberto Gonzales suggested the president could order the NSA to listen in on purely domestic calls without first obtaining a warrant from a secret court established nearly 30 years ago to consider such issues.

He said the administration, assuming the conversation related to al-Qaida, would have to determine if the surveillance were crucial to the nation's fight against terrorism, as authorized by Congress following the Sept. 11 attacks.

Patriot Act case

Friday, April 14, 2006

It was a limited victory, scored by just one target of the Patriot Act against just one aspect of just one of the law's overreaching provisions. Nevertheless, we can applaud while hoping for a larger celebration later.

In a few weeks, the American Civil Liberties Union will publicly introduce a client now officially known only as "Doe." The client last year received an FBI demand for information along with a Patriot Act-imposed order not to reveal that demand to anyone . . . ever. "Doe" went to the ACLU but otherwise obeyed the nondisclosure rule.

The victory came when the Justice Department, in a court filing made public this week, gave up its effort to continue silencing the recipient of what is called a "national security letter." It dropped its appeal of a federal judge's ruling that the gag order violated the First Amendment.

Actually, the Justice Department itself had already helped to out "Doe" when it failed to thoroughly edit court papers made public. The papers confirmed earlier press reports that "Doe" was the Library Connection, a 26-library consortium based in Windsor, Conn. The organization had gone to court to resist the demand that it help stifle free inquiry by supplying information about a patron's library use. More immediately, it pressed for its right to join the public debate over the extension of the Patriot Act.

That debate is over — or at least dormant — because Congress gave new life to the Patriot Act last month. In doing so, it made slight improvements to the national security letter section, which led to the government's decision to relent in the Connecticut case. The law now allows an NSL recipient to challenge the FBI's demand, and it also allows the FBI to use its own judgment about whether it is necessary to impose silence on the recipient.

Applying that newfound judgment, a Justice Department spokesman said, the FBI decided after all that disclosure of the recipient's identity "will not harm the national security or interfere with an ongoing investigation." Kevin O'Connor, U.S. attorney in Connecticut, acknowledged that the government's goof when the court papers were released contributed to the turnaround, The New York Times reported.

So, expect representatives of the library group to take a bow, and to lodge their protests against the Patriot Act, as soon as the ACLU wraps up some court paperwork.

The librarians' comments may come too late to affect the recently concluded congressional Patriot Act debate. But they will be of value if they help fuel a resolve to continue working for a better balance between security and civil liberty. Senators and representatives who were dissatisfied with the scant amount of Patriot Act reform have promised to keep fighting.

There's still plenty to fight for. The law may allow for disclosure and challenge regarding national security letters, for example, but the objectionable core of the provision remains: The government, without court approval, may fish for computer, business, health and other personal records concerning an American even though the citizen is not suspected of terrorist activity or even of associating with someone suspected of terrorist activity. The FBI need only declare that the information it wants is relevant to an undescribed anti-terrorism investigation — period — and the intrusive search is on.

A more immediate prospect for a fuller victory against that abuse-ridden authority is still alive in court.

A federal court in New York is hearing a government appeal of two lower court rulings. One is the portion of the Connecticut case involving the gag order. The other is a broader decision that struck down the entire national security letter provision, not only because the gag orders violated the First Amendment's freedom of expression, but because the probes offended other Bill of Rights protections against unwarranted investigation. The appeals court has yet to rule. Once it does, the ACLU says, the loser is sure to take this case to the Supreme Court.

The top court has previously slapped down a government grown overzealous in the post-9/11 era. Whether it will continue to detect threats to the Bill of Rights in this case will be an important test of the court's new lineup.

Indian Country Today

Cobell Trust Case Enters Critical Phase

Friday, April 14, 2006

WASHINGTON - The issues before the court in the *Cobell v. Norton* class action lawsuit over the Individual Indian Money trust are accounting issues. The plaintiff class has demanded that the government account for deposits and withdrawals for approximately 500,000 accounts over as many as 119 years. The accounts have been established by the federal government for individual Indians over the years.

The accounts receive revenue from the lease of property assets - oil, water, land, timber - that are also held in trust for individual Indians by the government. Billions of dollars flow through the accounts annually, depending on economic factors. The government's much-criticized management of the property assets is not before the court in *Cobell*.

Many Indians use their IIM account as a kind of bank, much as a shareholder uses stock dividends: relying on it, with plans to spend it once it comes in. But tales of delays in IIM check issuance are legion. The holders of multiple trust property assets have no way of knowing from lump-sum checks what the separate assets have produced in revenue, masking the lease rates settled on by the government. But again, while the government's mismanagement of trust assets has generated a world of media attention, the issues before the court in *Cobell* are issues of accounting for balances in the IIM trust.

The government and its delegate agency, the Department of Interior, must reform the IIM accounting systems for the future and reconcile its accounting from the past. The past or historical accounting cannot be performed in full because of missing records. The plaintiffs have therefore asked the courts for a restatement of the accounts that would restore a considerable sum to Indian beneficiaries - $27.5 billion if the plaintiffs get their way. An independent accounting firm estimated in 2002 that the government owes IIM account holders between $10 and $40 billion for its mismanagement of the accounts. Legislation now before Congress to settle the accounts may weigh in with a lesser figure, if the warning of one of its

sponsors that Indians will be disappointed by a legislated restatement of accounts holds true.

For 10 calendar years now, Judge Royce Lamberth of the District of Columbia federal circuit has presided over the case. He has held two Interior secretaries in contempt, ordered a full historical accounting, forbade the statistical accounting methods favored by Interior, ordered the disconnection of Interior computers over security concerns, ordered Interior to notify IIM beneficiaries that the figures recorded in their accounts may not be credible and routinely scolded the government for the conduct of defense attorneys, as well as Interior, for the actions (and inaction) of employees. He has been overturned on appeal on the contempt citations, the order for a historical accounting and the ban on sampling.

On April 11 in appeals court, government attorneys argued their motions to reconnect Interior computers, end the notifications and hold Lamberth accountable for his aggressive language - in other words, the government hopes to remove him from the case because his language in court orders and opinions suggests he cannot be impartial. The government made especially much of a passage from a decision in which Lamberth characterized Interior as "the morally and culturally oblivious hand-me-down of a disgracefully racist and imperialist government that should have been buried a century ago."

Keith Harper, the Native American Rights Fund attorney who has logged marathon hours on the case, argued that Lamberth's language is simply suitable to the government's conduct in the case. Dismissing the judge would send a message of exoneration for Interior, he added.

The court has not established a date for its decision, but Department of Justice attorneys said the government hopes for an urgent disposition of its three motions.

Outside the courtroom, following a march to the nearby National Museum of the American Indian, Three Affiliated Tribes Chairman Tex Hall, an IIM account holder, also brought up practical concerns, among them: How can any other judge get up to speed on the long-running case with its many complexities and almost countless documents?

"It was real difficult," he said of the hours in court, "and especially the motions to remove a judge. A judge that's been there for 10 years and understands the *Cobell* case better than ... [any] other legal person in America perhaps. And so I just think it's a bad precedent ... Judge Silberman, you know, kept reading over and over the inflammatory remarks [of Lamberth] on not being impartial [the government's allegation], and then of course Keith Harper got up and I thought did a tremendous job. And being an attorney, and stating they've lost several cases themselves, so it is a balance, he does have balanced decisions ... So again in closing I just thought that Keith just did a wonderful job as being an attorney, but also being an American Indian. When he started using the word 'we' - you know, 'we have been wronged for all this time' - and maybe the judge felt a certain reason because of all of the not complying with the court orders, that he had to use the language that he did."

He said if the judge is removed from the case, 10 years of work would be for nothing and litigation would have to begin all over again. "And also there's a piece of legislation ... before Congress. That [Lamberth's removal] could move the dollar figure [of a legislated settlement] a lot further down. There's a tremendous amount of stakes here ... But I'm hopeful. I hope and pray. I hope Indian country does the same. This is a serious time for the case ... Every Indian in America needs to get up on this, this case, because it's coming down to the fourth quarter ... fourth quarter of the game."

At the same gathering before the museum, Victoria Graves, an IIM account holder from Oklahoma, said she hopes to see Lamberth retained on the case. She also hopes Congress will pass a legislated settlement, and she's not overly particular about the settlement amount. "I think more importantly I want a healthier future, with mutual respect between governments - government to government. Native Americans' government and the federal government, state and local government ... We need justice for people. We need to set a precedent. We need to make an example of this."

At a Center for American Progress forum on *Cobell*, the case's namesake, lead plaintiff Elouise Cobell, said she supports the legislative settlement effort going forward in Congress. She renewed a call to put

Interior's IIM accounts in temporary receivership. "Drastic mismanagement, as in this case, really needs drastic measures to fix ... I'm a banker. I know how financial institutions are fixed. When there's a big problem with financial institutions, they bring in somebody from the outside to fix the system and put the other players on the bench until that is fixed. That's how it's done in the real world."

Emphasizing, however, the unreal world of IIM trust accounting, Harper said there is no accounts receivable system in place for the accounts; no way to know if lease payments have been made. It's an accounts receivable system based on trust, he said with heavy irony.

Hall related one of the heartbreaking cases of delayed trust payments from the IIM trust - an older woman with diabetes wanted to put her IIM check into the purchase of a van with a hydraulic lift to enable her to get around a little, the one thing she wanted most, according to Hall. She waited and waited as diabetes increasingly immobilized her. The long-delayed check arrived, Hall said, but not until after she had passed away.

Harper said one of the best things about a legislated settlement is that all living IIM beneficiaries would see an immediate *per capita* payment of some amount, meaning no one else would pass away without getting at least some of the money that should have been theirs all along.

END

Chicago Tribune

Federal court revives lawsuit involving ND

Friday April 14, 2006

By Jodi S. Cohen

CHICAGO -- A federal lawsuit alleging the University of Notre Dame and the U.S. Department of Education used federal money for religious purposes was ordered to proceed Wednesday by the 7th U.S. Circuit Court of Appeals in Chicago.

In a 2-1 decision to send the case back to a lower court in Indiana, a panel of judges found that the case was prematurely dismissed without deciding issues such as whether the university appropriately tracked how the money was spent.

The lawsuit sought to prevent Notre Dame from spending the money, but the district court ruled that the issue was moot and threw out the case because Notre Dame already had received and spent the grant.

Without ruling on the merits of the case, the appeals court panel said that the money could be returned to the government if the lower court finds in favor of the plaintiffs.

The $462,500 grant, given by Congress in 2000, was used by Notre Dame to expand its Alliance for Catholic Education program to four other colleges and universities. In the two-year master's degree in education program, students spend their summers at Notre Dame and two years teaching in poor Catholic schools.

The teacher-training program has both secular and religious components, including encouraging teachers to live and work "in accordance with the tenets of the Catholic faith," according to Wednesday's decision. The program is funded by government and private funds.

With the help of the federal funding, the program was expanded to Providence College in Rhode Island,

Loyola Marymount University in California, the University of Portland and Valparaiso University in Indiana.

The plaintiffs, Indiana residents Joan Laskowski and Daniel Cook, filed the taxpayer lawsuit in December 2003 against the Department of Education. The lawsuit alleges that the grant did not restrict the use of the money to nonreligious purposes, and therefore violated the First Amendment's requirement of the separation between church and state.

Notre Dame later intervened as a defendant.

"The real problem is that the money wasn't tracked in any way so you could tell that it wasn't used for religious purposes," said Jacquelyn Suess, an attorney for the American Civil Liberties Union of Indiana, who is representing the plaintiffs.

According to a legal brief from the government, Notre Dame said in its grant application that it planned to use the money for staff salaries and benefits, travel costs and to hold an annual meeting for the colleges involved. The brief also says that in applying for the grant, Notre Dame agreed not to use the money for religious purposes.

A Notre Dame spokesman and a Justice Department attorney declined to comment. The defendants could appeal the decision to the full 7th Circuit.

the money was spent. *(error on the webpage)*

US judge hears arguments in case of barred Islamic scholar

Friday, April 14, 2006

US FEDERAL judge heard arguments in the case of Tariq Ramadan, a Swiss-based Islamic scholar forced to turn down a tenured position at a prestigious US university when his visa was revoked in 2004.

The case, filed by the American Civil Liberties Union (ACLU), the country`s leading civil rights organization, claims that US officials wrongfully blocked Ramadan`s entry using the US Patriot Act`s ideological exclusion provision.

The US State Department revoked the visa in July 2004 on the recommendation of officials in the Department of Homeland Security.

The move prevented him from taking up a post at Indiana`s Notre Dame University`s Kroc Institute for International Peace Studies.

According to the ACLU, Ramadan was kept out for criticizing US Mideast policy. They say there was no evidence to allegations that he was a terrorist supporter.

The 43-year-old scholar, whose grandfather founded the Muslim Brotherhood Movement, an Islamist group banned in many Arab countries, was due to teach a course on Islamic philosophy and ethics.

Ramadan is "one of Europe`s most prominent scholars" on Islamic issues, said ACLU attorney Jameel Jaffer, arguing that the government is violating the rights of Americans to hear constitutionally protected speech.

Representing the government, attorney David Jones refused to tell Judge Paul Crotty why Ramadan`s visa was revoked. Border control was the executive`s prerogative, not a legal issue, he said.

"The government is actively working on the case," said Jones, but added that he was "still unable to predict" when there would be a response to Ramadan`s second visa request.

Judge Crotty seemed unimpressed. "You`re denying those people their rights by not making a decision," he told Jones, then ruled that the government had two weeks to come up with an answer.

The author of several books, including "Western Muslims and the Future of Islam," Ramadan has called for greater assimilation of European Muslims and has been an outspoken critic of the Muslim community`s inclination towards insularity.

He has also been accused of anti-Semitism, however, notably his criticism of France`s Jewish intellectuals for what he called "blind support for Israel."

Miami doctor pleads guilty to Medicare kickback scheme

Friday, April 14, 2006

A local doctor has admitted to participating in a massive kickback scheme involving pharmacies, medical equipment companies and Medicare beneficiaries, the federal authorities said.

Zabdy Westerburger of Miami pleaded guilty, Wednesday, in federal court to one count of conspiracy to violate the anti-kickback and false claims statutes and one count of tax evasion

The plea and details of the scheme was announced by the United States Attorney for the Southern District of Florida, U.S. Department of Health and Human Services and the Federal Bureau of Investigation.

According to authorities, Westerburger had agreed to provide bogus prescriptions in return for cash kickbacks.

Since April 1999, the doctor established referral relationships with the owners of numerous medical equipment companies.

The owners would bring "patients" to Westerburger's office and specify which types of equipment and medications they wanted her to prescribe.

Westerburger would conduct a cursory examination of the patients and then sign the requested prescriptions, regardless of whether they were medically necessary.

After signing the prescriptions, Westerburger collected cash kickbacks, ranging from $50 to $200 per prescription, from the owners. The amount of the kickback was based on the reimbursement rate for the items and medications prescribed, so the higher the reimbursement rate, the bigger the kickback.

The owners would deliver the equipment prescribed by Westerburger, then submit Medicare claims seeking reimbursement for the cost of such items. The medication prescriptions were referred to Miami pharmacies in return for a referral fee. The pharmacies would provide the medications to the "patients," obtain payment from Medicare for the cost of such medications, then kickback 50 percent of the monthly Medicare payment to the owners.

As a result of this scheme, Medicare paid more than $2.3 million for unnecessary equipment and medications.

To date, more than 30 people have been convicted of Medicare fraud charges in connection with this scheme.

Sentencing is scheduled for Aug. 11 before U.S. District Court Judge James I. Cohn. Westerburger faces a maximum statutory sentence of 10 years in prison. Assistant U.S. Attorney Adrienne Rabinowitz is prosecuting this case.

Importance: High

All-

Today is expected to be our last meeting of the working group. The modeling questions have been prioritized and categorized. There is a planned telecon between the epi modelers to go over technical issues about the epi models. At that point, we will present a prioritized list of modeling questions to Dr. Runge for review and approval regarding the consequence of pandemic influenza based on the input of this group.

Please note the attached documents.

* The compiled Modeling Questions matrix dated today contains additions for the epidemiological modeling efforts and as such I have added a new column called "Models Capable Information". For those who submitted the epi information, please review to ensure I captured your input as I changed the verbiage slightly. If there are questions/comments, please let me know.

* The Non-Modeling Questions reflects additions by USDA including recommendations for referral to DOI for answers.

* Treasury and Commerce prioritized the economic impact questions and they are in the third matrix.

* My thanks to Jonathan Wolfson for finding information regarding OMB's regard for the valuation of life. This is the pdf file and the OMB discussion can be found on page 31.

Thanks again to our friends in Commerce for hosting most of our meetings.

Thanks much!!!

-Jenny

Office of Management and Budget

Draft 2003 Report to Congress on the Costs and Benefits of Federal Regulations; Notice

OFFICE OF MANAGEMENT AND BUDGET

Draft 2003 Report to Congress on the Costs and Benefits of Federal Regulations

AGENCY: Office of Management and Budget, Executive Office of the President.

ACTION: Notice and request for comments.

SUMMARY: OMB requests comments on the attached Draft Report to Congress on the Costs and Benefits of Federal Regulation. The Draft Report is divided into two chapters. Chapter I presents estimates of the costs and benefits of Federal regulation and paperwork with an emphasis on the major regulations issued between October 1, 2001 and September 31, 2002. Chapter II requests comments from the public in three areas: (1) Guidelines for regulatory analysis; (2) Analysis and management of emerging risks; and (3) Improving analysis of regulations to homeland security.

DATES: To ensure consideration of comments as OMB prepares this Draft Report for submission to Congress, comments must be in writing and received by OMB no later than April 3, 2003.

ADDRESSES: We are still experiencing delays in the regular mail, including first class and express mail. To ensure that your comments are received, we recommend that comments on this draft report be electronically mailed to *OIRA_BC_RPT@omb.eop.gov,* or faxed to (202) 395–7245. Comments on the OMB Draft Guidelines for the Conduct of Regulatory Analysis and the Format of Accounting Statements (Appendix C) should be e-mailed to *OIRA_ECON_GUIDE@omb.eop.gov*, or faxed, with the title ''Comments on Draft Guidelines'' identified in the transmittal page, to (202) 395–7245.

You may also submit comments to Lorraine Hunt, Office of Information and Regulatory Affairs, Office of Management and Budget, NEOB, Room 10202, 725 17th Street, NW., Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Lorraine Hunt, Office of Information and Regulatory Affairs, Office of Management and Budget, NEOB, Room 10202, 725 17th Street, NW., Washington, DC 20503. Telephone: (202) 395–3084.

SUPPLEMENTARY INFORMATION: Congress directed the Office of Management and Budget (OMB) to prepare an annual Report to Congress on the Costs and Benefits of Federal Regulations. Specifically, Section 624 of the FY2001 Treasury and General Government Appropriations Act, also know as the ''Regulatory Right-to-Know Act,'' (the Act) requires OMB to submit a report on the costs and benefits of Federal regulations together with recommendation for reform. The Act says that the report should contain estimates of the costs and benefits of regulations in the aggregate, by agency and agency program, and by major rule, as well as an analysis of impacts of Federal regulation on State, local, and tribal government, small business, wages, and economic growth. The Act also states that the report should go through notice and comment and peer review.

John D. Graham,
Administrator, Office of Information and Regulatory Affairs.

Draft 2003 Report to Congress on the Costs and Benefits of Federal Regulation

Executive Summary

This Draft Report to Congress on regulatory policy was prepared pursuant to the Regulatory Right-to-Know Act (Section 624 of the Treasury and General Government Appropriations Act, 2001), which requires such an account each year. It provides a statement of the costs and benefits of federal regulations and recommendations for regulatory reforms. The report will be published in its final form after revisions to this draft are made based on public comment, external peer review, and interagency review.

The major feature of this report is the estimates of the total costs and benefits of regulations reviewed by OMB. Major federal regulations reviewed by OMB from October 1, 1992 to September 30, 2002 were examined to determine their quantifiable benefits and costs. The estimated annual benefits range from $135 billion to $218 billion while the estimated annual costs range from $38 billion to $44 billion.

OMB seeks public comment on all aspects of this Draft Report. OMB is specifically interested in public comment in the following three areas:

- Guidelines for regulatory analysis. In order to make continued improvements in the quality of the regulatory analyses prepared by agencies, OIRA initiated in 2002 a process to refine the OMB guidelines for regulatory analysis. The OIRA Administrator and a member of the Council of Economic Advisers (CEA) are serving as co-chairs of this effort. OMB and CEA staff have drafted proposed revised guidelines which are presented in Appendix C of this report. We are requesting comment on these draft guidelines for regulatory analysis.
- Analysis and management of emerging risks. An Interagency Work Group on Risk Management, co-chaired by the OIRA Administrator and the Chairman of the White House Council on Environmental Quality has been formed to foster Administration-wide dialogue and coordination on the management of emerging risks to public health, safety and the environment. To assist in the Work Group's efforts, OMB requests comments on current U.S. approaches to analysis and management of emerging risks.
- Improving analysis of regulations related to homeland security. In light of the significant interest in regulations related to homeland security, OMB is seeking public comment on how to more effectively evaluate the benefits and costs of these proposals, including how agencies might better forecast the anti-terrorism benefits and the direct and indirect costs of such rules, including time, convenience, privacy, and economic productivity.

Chapter I: The Costs and Benefits of Federal Regulations

Section 624 of the FY 2001 Treasury and General Government Appropriations Act, the ''Regulatory Right-to-Know Act,'' [1] requires OMB to submit ''an accounting statement and associated report'' including:

(1) An estimate of the total annual costs and benefits (including quantifiable and nonquantifiable effects) of Federal rules and paperwork, to the extent feasible:

(A) In the aggregate;

(B) By agency and agency program; and

(C) By major rule;

(2) An analysis of impacts of Federal regulation on State, local, and tribal government, small business, wages, and economic growth; and

(3) Recommendations for reform.[2]

This chapter presents the accounting statement. It revises the benefit-cost estimates in last year's report by updating the estimates to the end of fiscal year 2002 (September 30, 2002) and including new estimates from Ocotober 1, 1992 to March 31, 1995. Our new estimates are now based on the major regulations reviewed by OMB over the last ten years. All of the

[1] 31 U.S.C. 1105 note, Pub. L. 106–554, Section 1(a)(3) [Title VI, section 624], Dec. 21, 2000, 114 Stat. 2763, 2763A–161 (see Appendix F).

[2] Recommendations for reform are discussed in Chapter II.

estimates presented in this chapter are based on agency information or transparent modifications of agency information performed by OIRA. We have not provided new information on the impacts of Federal regulation on State, local, and tribal government, small businesses, wages, and economic growth in this draft report. The 2002 Report issued in December 2002 includes discussions of these issues (see pages 41 to 46). We request public comment and any additional information on these impacts for this year's final report.

We also include in this chapter a discussion of major rules issued by independent regulatory agencies, although OMB does not review these rules under Executive Order 12866. This discussion is based on data provided by these agencies to the General Accounting Office (GAO) under the Congressional Review Act.

A. Estimates of the Total Benefits and Costs of Regulations Reviewed by OMB [3]

Table 1 presents estimates by agency of the costs and benefits of major rules reviewed by OMB over the period October 1, 2001 to September 30, 2002. We reviewed 31 final major rules over that period. These 31 rules represent less than ten percent of the 330 final rules reviewed by OMB and less than one percent of the 4,153 final rules documents published in the **Federal Register** during this 12-month period. However, OIRA believes that the costs and benefits of major rules are quantitatively more important than all other rules combined.

Of the 31 rules, 25 implemented Federal budgetary programs, which caused income transfers from one group to another. The remaining six regulations were ''social regulations'', requiring substantial additional private expenditures and/or providing new social benefits.[4] Four of these six ''social regulations'' imposed mandates on State and local entities or the private sector. The other two ''social regulations'' were enabling regulations that did not impose mandates.

Of the six ''social regulations,'' we are able to present estimates of both monetized costs and benefits for three rules.[5] We did not include the 3 other rules that did not have monetized estimates for either costs or benefits or both. Three agencies, DOE, DOT, and EPA issued 3 major regulations adding a combined $2.0 billion to $6.5 billion in annual benefits and $1.6 billion to $2.0 billion in annual costs.

TABLE 1.—ESTIMATES OF THE ANNUAL BENEFITS AND COSTS OF MAJOR FEDERAL RULES, OCTOBER 1, 2001 TO SEPTEMBER 30, 2002

[Millions of 2001 dollars]

Agency	Benefits	Costs
Energy	710	636.
Transportation	409 to 944	749 to 1,206.
Environmental Protection Agency	913 to 4,818	192.
Total	2,032 to 6,472	1,577 to 2,034.

Table 2 presents an estimate of the total costs and benefits of all regulations reviewed by OMB over the ten-year period from October 1, 1992 to September 30, 2002 that met two conditions.[6] Each rule generated costs or benefits of at least $100 million annually, and a substantial portion of its costs and benefits were quantified and monetized by the agency or, in some cases, monetized by OMB. The estimates are therefore not a complete accounting of all the costs and benefits of all regulations issued by the Federal government during this period. We have expanded the number of years covered by our estimates to ten from the six and half years presented in last year's report. We provide estimates of the cost and benefits of social regulation (health, safety and environmental regulation) for each rule for the periods covering October 1, 1992 to March 31, 1995 and October 1, 2001 to September 30, 2002 in Appendix A.[7] OMB has chosen a 10-year period for aggregation because pre-regulation estimates prepared for rules adopted more than ten years ago are of questionable relevance today. The estimates of the costs and benefits of Federal regulations over the period October 1, 1992 to September 30, 2002 are based on agency analyses subject to public notice and comments and OMB review under E.O. 12866.

In last year's report, the aggregate costs of regulations fell within the range of the estimated benefits—albeit at the lower end of the range. The aggregate benefits reported in Table 2, however, are roughly three to five times the aggregate costs and are substantially larger than the aggregate benefits reported in our 2002 report. There are two reasons for this. First, the additional rules added to cover a 10-year period included EPA's rule implementing the sulfur dioxide limits of the acid rain provisions in the 1990 Amendments to the Clean Air Act. This rule adds calculated benefits of over $70 billion per year to the aggregate benefits estimate. Second, in reviewing our estimates, we inadvertently subtracted incorrect cost estimates for EPA's rules establishing National Ambient Air Quality Standards for Ozone and Particulate Matter. This correction reduces the aggregate cost of the rules covered over the 10-year period by roughly $20 billion per year.

It is important to note that four EPA rules—two rules limiting particulate matter and NO_X emissions from heavy duty highway engines, the Tier 2 rule limiting the emissions from light duty vehicles, and the Acid Rain rule cited above—account for a substantial fraction of the aggregate benefits reported in Table 2. These four EPA rules have estimated benefits of $96 to $113 billion per year and costs of $8 to

[3] In previous reports, we presented detailed discussions about the difficulty of estimating and aggregating the costs and benefits of different regulations over long time periods and across many agencies. We do not repeat those discussions here. Our previous reports are on our Web site at <*http://www.whitehouse.gov/omb/inforeg/regpol.html*>.

[4] Rules that transfer Federal dollars among parties are not included because transfers are not social costs or benefits. If included, they would add equal amounts to benefits and costs.

[5] We used agency estimates where available. If an agency quantified estimates but did not monetize, we used standard assumptions to monetize as explained in Appendix A.

[6] We calculated Table 2 estimates by adding the estimates in Table 1 above and the estimates from Table 6 in Appendix A to Table 8 of the 2002 OMB report.

[7] Agency estimates of the cost and benefits of major regulations for October 1, 1992 to March 31, 1995 are provided in Appendix B. Appendix A contains revised estimates.

$8.8 billion per year.[8] The aggregate benefits and costs for the other 103 rules are $38 to $104 billion and $30 to $35 billion, respectively. Table 3 provides additional information on aggregate benefits and costs for select agency programs.

Based on the information released in previous reports, the total costs and benefits of all Federal rules now in effect (major and non-major, including those adopted more than 10 years ago) could easily be a factor of ten or more larger than the sum of the costs and benefits reported in Table 2. More research is necessary to provide a stronger analytic foundation for comprehensive estimates of total costs and benefits by agency and program. OMB's examination of the benefits and costs of Federal regulation supports the need for a common-sense approach to modernizing Federal regulation that involves the expansion, modification, and rescission of regulatory programs as appropriate.

TABLE 2.—ESTIMATES OF THE ANNUAL BENEFITS AND COSTS OF MAJOR FEDERAL RULES, OCTOBER 1, 1992 TO SEPTEMBER 30, 2002

[Millions of 2001 dollars]

Agency	Benefits	Costs
Agriculture	3,108 to 6,203	1,649 to 1,679.
Education	658 to 816	363 to 612.
Energy	4,704 to 4,722	2,473.
Health & Human Services	8,733 to 11,724	3,168 to 3,337.
Housing & Urban Development	527 to 601	796.
Labor	1,808 to 4,200	1,057.
Transportation	6,150 to 9,465	4,313 to 6,812.
Environmental Protection Agency	108,858 to 179,757	23,867 to 27,028.
Total	134,547 to 217,539	37,686 to 43,794.

TABLE 3.—ESTIMATES OF ANNUAL BENEFITS AND COSTS OF MAJOR FEDERAL RULES: SELECT PROGRAMS AND AGENCIES, OCTOBER 1, 1992–SEPTEMBER 30, 2002

[Millions of 2001 dollars]

Agency	Benefits	Costs
Energy: Energy Efficiency and Renewable Energy	4,704 to 4,772	2,473.
Health & Human Services: Food and Drug Administration	2,021 to 4,558	482 to 651.
Labor: Occupational Safety and Health Administration	1,808 to 4,200	1,057.
Transportation:		
National Highway Traffic Safety Administration	4,330 to 7,645	2,795 to 5,295.
Coast Guard	68	1,282.
Environmental Protection Agency:		
Office of Air	106,010 to 163,893	18,362 to 20,978.
Office of Water	891 to 8,103	2,424 to 2,937.

In order for comparisons or aggregation to be meaningful, benefit and cost estimates should correctly account for all substantial effects of regulatory actions, including potentially offsetting effects, which may or may not be reflected in the available data. We have not made any changes to agency monetized estimates other than connecting them to annual equivalents. Any comparison or aggregation across rules should also consider a number of factors which our presentation does not address. To the extent that agencies have adopted different methodologies—for example, different monetized values for effects, different baselines in terms of the regulations and controls already in place, different treatments of uncertainty—these differences remain embedded in the table 2. While we have relied in many instances on agency practices in monetizing costs and benefits, our citation of or reliance on agency data in this report should not be taken as an endorsement of all the

[8] These four EPA rules will reduce ambient levels of fine particulate matter by reducing direct PM emissions and/or the emissions of precursor pollutants like SO_2 and NO_X that contribute to the formation of fine PM. Many studies show an association between both short- and long-term exposure to fine PM and a variety of adverse health effects ranging from increases in the frequency of hospital admissions to premature mortality. There are, however, important uncertainties associated with these benefit estimates. For example key assumptions underlying the benefit estimates associated with premature mortality include the following: (1) The benefits analysis assumes there is a causal association between inhalation of fine particles and such health effects as premature mortality at exposure levels near those experienced by most Americans on a daily basis. While the biological mechanisms for this effect have not yet been definitively established, EPA has concluded that the weight of the available epidemiological and toxicological evidence supports an assumption of causality; (2) The benefits analysis assumes that all fine particles, regardless of their chemical composition, are equally toxic. This is an important assumption because fine particles from power plant emissions are chemically different from those emitted from both mobile sources and other industrial facilities. However, no clear scientific grounds exist for supporting differential effects estimates by particle type; (3) The benefits analysis assumes that the concentration-response function for fine particles is approximately linear within the range of ambient concentrations under consideration. Thus, the estimates include health benefits from reducing fine particles in areas that are in attainment with the fine particle standard and those that do not meet the standard; (4) The benefits analysis assumes that the forecasts for future emissions and associated air quality modeling are valid. The EPA's analyses are based on peer-reviewed scientific literature and up-to-date assessment tools. However such models are themselves based on an evolving understanding and research continues to provide the data necessary for model evaluation; and (5) The valuation of estimated reduction in mortality risk is largely taken from studies of the tradeoff associated with the willingness to accept risk in labor markets. Alternative estimates may, however, be more relevant for rules addressing air pollution. Further information on these benefits estimates can be found at *http://www.epa.gov/air/clearskies/tech_adden.pdf, http://www.whitehouse.gov/omb/inforeg/costbenefitreport1998.pdf, http://www.whitehouse.gov/omb/inforeg/2000fedreg-report.pdf.*

varied methodologies used to derive benefits and cost estimates.

B. Estimates of Benefits and Costs of This Year's ''Major'' Rules

In this section, we examine in detail the benefits and costs of each ''major'' rule, as required by section 624(a)(1)(C). We have included in our review those final regulations on which OMB concluded review during the 12-month period October 1, 2001 through September 30, 2002.

The statutory language that categorizes the rules we consider for this report differs from the definition of ''economically significant'' in Executive Order 12866 (section 3(f)(1)). It also differs from similar statutory definitions in the Unfunded Mandates Reform Act and subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996—Congressional Review of Agency Rulemaking. Given these varying definitions, we interpreted section 624(a)(1)(C) broadly to include all final rules promulgated by an Executive branch agency that meet any one of the following three measures:

- Rules designated as ''economically significant'' under section 3(f)(1) of Executive Order 12866;
- Rules designated as ''major'' under 5 U.S.C. 804(2) (Congressional Review Act); and
- Rules designated as meeting the threshold under Title II of the Unfunded Mandates Reform Act (2 U.S.C. 1531–1538)

Of the 31 rules received by OMB, USDA submitted four; the Veterans Administration, DOE, EPA, OMB, the Social Security Administration, and SBA each submitted one; HHS eight; The Departments of Interior, Justice, Defense, and FEMA each submitted two; and DOT five.

Social Regulation

Of the 31 economically significant rules reviewed by OMB, six are regulations requiring substantial additional private expenditures and/or providing new social benefits. Table 4 summarizes the costs and benefits of these rules and provides other information taken from rule preambles and agency RIAs. Of the six regulations received by OMB, EPA and DOE each submitted one, and DOI and DOT each submitted two. Agency estimates and discussion are presented in a variety of ways, ranging from a mostly qualitative discussion—for example, the NHTSA light truck corporate average fuel economy (CAFE) standard—to a more complete benefit-cost analysis, such as DOE's central air conditioner rule.

1. Benefits Analysis

Agencies monetized at least some benefit estimates for five of the six rules. In the case of EPA's recreational engines rule, the agency provides some monetized benefit estimates, but discusses other benefits qualitatively. In one case—NHTSA's tire pressure monitoring systems (TPMS) rule—the agency did not monetize all of the quantified benefits. In another case—NHTSA's CAFE rule—the agency did not report any quantified or monetized benefit estimates.

2. Cost Analysis

For three of the six rules, agencies provided monetized cost estimates. These include DOE's air conditioner rule, NHTSA's TPMS rule and EPA's recreational vehicle rule. For the remaining three rules, both DOI migratory bird hunting rules and NHTSA's CAFE rule, the agencies did not estimate costs.

3. Net Monetized Benefits

Three of the six rules provided at least some monetized estimates of both benefits and costs. Of these, the estimated monetized benefits of both the DOE air conditioner rule and the EPA recreational engine rule exceed the estimated monetized costs. The magnitude of the net benefits varies from $75 million per year for the air conditioner rule to as much as $4.6 billion for the recreational engine rule. One rule, NHTSA's TPMS rule, has negative net monetized benefits ranging from approximately $706 to $862 million per year.

4. Rules Without Quantified Effects

One rule, NHTSA's CAFE rule, is classified as economically significant even though the agency did not provide any quantified estimates of their effects.

TABLE 4.—SUMMARY OF AGENCY ESTIMATES FOR FINAL RULES 10/01/2001–9/30/02

[As of Date of Completion of OMB Review]

Agency	Rule	Benefits	Costs	Other Information
DOE	Energy Conservation Standards for Central Air Conditions and Heat Pumps.	$9.1 billion (present value) in energy savings between 2006 and 2030.	$7.3 billion (present value) for purchases between 2006 and 2030.	Monetized benefit and cost values are obtained from the ''National Energy Savings/Net Present Value/Shipments'' spreadsheet, available on DOE's web site: *http://www.eren.doe.gov/buildings/codes_standards/applbrf/central_air_conditioner_3.html* DOE projects a cumulative reduction in nitrogen oxide emissions of 119.3 thousand metric tons (undiscounted) over the period 2006–2030 and a cumulative reduction in carbon dioxide equivalent emissions of 53.8 million metric tons (undiscounted) over the period 2006–2030 [DOE Technical Support Document Appendix M, Table M.9].
DOI	Early Season Migratory Bird Hunting Regulations 2002–2003.	$50 million to $192 million/yr.	Not estimated	The analysis was based on the 1996 National Hunting and Fishing Survey and the U.S. Department of Commerce's County Business Patterns, from which it was estimated that migratory bird hunters would spend between $429 million and $1,084 million at small businesses [67 FR 54704]. The listed benefits represent estimated consumer.
DOI	Late-Season Migratory Bird Hunting Regulations 2002–2003.	$50 million to $192 million/yr.	Not estimated	The analysis was based on the 1996 National Hunting and Fishing Survey and the U.S. Department of Commerce's County Business Patterns, from which it was estimated that migratory bird hunters would spend between $429 million and $1,084 million at small businesses [67 FR 54704]. The listed benefits represent estimated consumer.

TABLE 4.—SUMMARY OF AGENCY ESTIMATES FOR FINAL RULES 10/01/2001–9/30/02—Continued

[As of Date of Completion of OMB Review]

Agency	Rule	Benefits	Costs	Other Information
DOT	Light Truck Average Fuel Economy Standard, Model Year 2004.	Not estimated	Not estimated	''* * * [T]he agency has been operating under a restriction on the use of appropriations for the last six fiscal years. The restriction has prevented the agency from gathering and analyzing data relating to fuel economy capabilities and the costs and benefits of improving the level of fuel economy. Particularly since that restriction was lifted only on December 18, 2001, the agency has been unable to prepare a separate economic analysis for this rulemaking. The agency notes, however, that the standard it is setting for the 2004 model year will not make it necessary for the manufacturers with a substantial share of the market to change their product plans.'' [67 FR 16059]
DOT	Tire Pressure Monitoring Systems (TPMS).	79–124 fatalities and 5,176– 8,722 injuries prevented per year; $43–$344 million per year in fuel savings and reduced tire wear.	$749–$1,206 million/yr	Unquantified Benefits: ''The agency cannot quantify the benefits from a reduction in crashes associated with hydroplaning and overloading vehicles. The primary reason that the agency has been unable to quantify these benefits is the lack of crash data indicating tire pressure and how often these conditions are the cause or contributing factors in a crash. The agency does not collect tire pressure in its crash investigations. NHTSA also has not been able to quantify the benefits associated with reductions in property damage and travel delays that will result from fewer crashes or reductions in the severity of crashes.'' [67 FR 38739] Unquantified Costs: ''The agency anticipates that there may be other maintenance costs for both direct and indirect TPMS. For example, with indirect TPMSs, there may be problems with wheel speed sensors and component failures. With direct TPMSs, the pressure sensors may be broken off when tires are changed. The agency requested comments on this issue in the NPRM, but received none. Without estimates of these maintenance problems and costs, the agency is unable to quantify their impact. The agency also notes that in order to benefit from the TPMS, drivers must respond to a warning by re-inflating their tires. To accomplish this, most drivers will either make a separate trip to a service station or take additional time to inflate their tires when they are at a service station for fuel. The process of checking and re-inflating tires is relatively simple, and probably would take from three to five minutes. The time it would take to make a separate trip to a service station would vary depending on the driver's proximity to a station at the time he or she was notified.'' 67 FR 38741]
EPA	Control of Emissions From Nonroad Large Spark-Ignition Engines, and Recreational Engines.	$410 million/yr. in reduced engine operation costs; $900 million to $7.88 billion in air quality benefits in calendar year 2030.	$192 million/yr	EPA also lists a variety of other benefit categories which it was not able to quantify or monetize, ranging from infant mortality to damage to urban ornamental plants. [67 FR 68328].

Transfer Regulations

Of the 31 economically significant rules reviewed by OMB, Table 5 lists the 25 that implement Federal budgetary programs. The budget outlays associated with these rules are ''transfers'' to program beneficiaries. Of the transfer rules, HHS promulgated eight rules, most of which implement Medicare and Medicaid policy. Four are USDA rules. Of the four, three are crop assistance and disaster aids for farmers and one is a food stamp program rule. The Department of Transportation issued three transfer rules. The Departments of Defense, Justice, and the Federal Emergency Management Administration issued two each. The Social Security Administration, Veterans Administration, Small Business Administration and Office of Management and Budget each promulgated one rule.

TABLE 5.—AGENCY TRANSFER RULES: 10/01/01 TO 9/30/02

[As of date of completion of OMB review]

Office of Management and Budget (OMB)
Regulation for Air Carrier Guaranteed Loan Program.
Dept. of Agriculture (USDA)
2000 Crop Agricultural Disaster and Market Assistance.
2002 Farm Bill Regulations: Sugar Program.
Peanut Quota Buyout Program.
Work Provisions of the PRWORA of 1996 and the Food Stamp Provisions of the Balance Budget Act of 1997.
Dept. of Defense
CHAMPUS/TRICARE: Partial Implementation of Pharmacy Benefits Programs; NDAA for FY 2001.
TRICARE: Sub-Acute Care Program; Uniform Skilled Nursing Benefit; Home Healthcare Benefit; Medicare Payment Methods for Skilled Nursing Facilities.
Dept. of Health and Human Services (HHS)
Contraception and Infertility Research Loan Repayment Program.
Medicare Program: Revisions to Payment Policies and 5-Year Review and Adjustments to the Relative Value Units Under the Physician Fee Schedule for CY 2002.
Medicare Program: Prospective Payment System for Hospital Outpatient Services for CY 2002 and Pro Rata Reduction on Transitional Pass-Through Payments.
Medicaid Program: Modification of the Medicaid Upper Payment Limit for Non-State, Government-Owned or Operated Hospitals.
Medicare Program: Modifications to Managed Care Rules Based on Payment Provisions in BIPA and Technical Corrections.
Medicare Program: Notice of Modification of Beneficiary Assessment Requirements for Skilled Nursing Facilities.
Changes to Hospital Inpatient Prospective Payment Systems and FY 2003 Rate.
Medicaid Managed Care; New Provisions.
Social Security Administration
Revised Medical Criteria for Determination of Disability Musculoskeletal System and Related Criteria.
Department of Justice
Claims Under the Radiation Exposure Compensation Act Amendments of 2000.
September 11 Victim Compensation Fund of 2001.
Dept. of Transportation
Procedures for Compensation of Air Carriers.
Imposition and Collection of Passenger Civil Aviation Security Fees in the Wake of September 11.
Aviation Security Infrastructure Fees.
Veterans Administration
Diseases Specific to Radiation-Exposed Veterans.
Federal Emergency Management Administration
Assistance to Firefighters Grant Program.
Disaster Assistance; Federal Assistance to Individuals and Households.
Small Business Administration
Disaster Loan Program.

Major Rules for Independent Agencies

The congressional review provisions of the Small Business Regulatory Enforcement Fairness Act (SBREFA) require the General Accounting Office (GAO) to submit reports on major rules to the committees of jurisdiction, including rules issued by agencies not subject to Executive Order 12866 (the ''independent'' agencies). We reviewed the information on the costs and benefits of major rules contained in GAO reports for the period of October 1, 2001 to September 30, 2002. GAO reported that three independent agencies issued eight major rules during this period. Two agencies did not conduct benefit-cost analyses. One agency considered benefits and costs of the rules. OIRA lists the agencies and the type of information provided by them (as summarized by GAO) in Table 6. The Securities and Exchange Commission consistently considered benefits and costs in their rulemaking processes while the Federal Communications Commission and the Nuclear Regulatory Commission did not prepare benefit-cost analyses.

In comparison to the agencies subject to E.O. 12866, the independent agencies provided relatively little quantitative information on the costs and benefits of the major rules. As Table 6 indicates, three of the eight rules included some discussion of benefits and costs. Three of the eight regulations had monetized cost information; one regulation monetized benefits. It is difficult to discern, however, whether the rigor and the extent of the analyses conducted by the independent agencies are similar to those of the analyses performed by agencies subject to the Executive Order.

TABLE 6.—RULES FOR INDEPENDENT AGENCIES (OCTOBER, 2001–SEPTEMBER, 2002)

Agency	Rule	Information on benefits or costs	Monetized benefits	Monetized Costs
FCC	Broadcast Services; Digital Television	No	No	No.

TABLE 6.—RULES FOR INDEPENDENT AGENCIES (OCTOBER, 2001–SEPTEMBER, 2002)—Continued

Agency	Rule	Information on benefits or costs	Monetized benefits	Monetized Costs
FCC	Ultra-Wideband Transmission Systems	No	No	No.
FCC	Assessment and Collection of Regulatory Fees for Fiscal Year 2002	No	No	No.
FCC	Order to Permit Operation of NGSO FSS Systems Co-Frequency with GSO and Terrestrial Systems in the Ku-Band Frequency Range; Authorize Subsidiary Terrestrial Use of the 12.2–12.7 GHz Band by Direct Broadcast Satellite Licensees and Their Affiliates; and in Re-Applications of Broadwave USA, PDC Broadband Corporation, and Satellite Receivers, Ltd. in the 12.2–12.7 GHz Band.	No	No	No.
NRC	Revision of Fee Schedules; Fee Recovery for FY 2002	No	No	No.
SEC	Books and Records Requirements for Brokers and Dealers Under the Securities Exchange Act of 1934.	Yes	Yes	Yes.
SEC	Certification of Disclosure in Companies' Quarterly and Annual Reports	Yes	No	Yes.
SEC	Acceleration of Periodic Report Filing Dates and Disclosure Concerning Web Site Access to Reports.	Yes	No	Yes.

Chapter II. Developing Better Regulation

In addition to estimates of the cost and benefits of Federal rules and paperwork, the Regulatory Right-to-Know Act requires OMB to publish ''recommendations for reform.'' In response to this requirement, OMB seeks public comment in the following three areas.

A. Guidelines for Regulatory Analysis

The evaluation of both the benefits and costs of alternative options through regulatory analysis helps agency policymakers arrive at sound regulatory decisions and also helps the public, Congress, and the courts understand those decisions. Although the preparation of such an analysis may require significant investments of agency staff and resources, carefully completed analyses will result in well-designed regulations and larger net benefits to society as a whole. To help support the development of better analysis, OMB has provided guidance to the agencies since the 1980s on how to conduct regulatory analysis. The current OMB guidelines were issued in 1996 as a ''best practices'' document and were revised and issued as guidance in 2000.

In order to make continued improvements in the quality of the regulatory analyses prepared by agencies, OIRA initiated in 2002 a process to refine these guidance documents. The OIRA Administrator and a member of the Council of Economic Advisers (CEA) are serving as co-chairs of this effort. OMB and CEA staff have drafted proposed revised guidelines which are presented in Appendix C. Through these proposed guidelines, we seek to establish more uniform analytic guidance for the agencies to follow in preparing their regulatory analysis. We will also incorporate new insights and recent innovations in what constitutes a good analysis. Finally, we expect the guidelines to increase the transparency of the analysis of prospective regulations to both technical and nontechnical readers.

While these proposed guidelines include some additional requirements on the agencies in performing RIAs, we believe that adherence to the proposed revisions will yield improvements in the information provided by these analyses. Improved analyses will strengthen the regulatory development process, resulting in better designed regulations and potentially large net benefits to society as a whole.

The key changes in the proposed guidelines include the following:

- The proposal encourages agencies to perform both cost-effectiveness analysis and benefit-cost analysis of major rules because the two techniques offer regulators somewhat different but useful perspectives. In addition, however, we recognize that cost-effectiveness analysis will be feasible in certain situations where a benefit-cost analysis may not be feasible.
- The proposal recommends that agencies report analytic results based on two discount rates—3 percent and 7 percent—for major rules whose effects will be felt primarily within this generation (*i.e.*, the next 20 or 30 years). If benefits and costs are expected to last beyond the current generation, the proposal permits additional sensitivity analysis with discount rates as low as 1 percent.
- The proposal requires agencies to support rulemakings with formal probabilistic analysis of the key scientific and economic uncertainties regarding costs and benefits for rules with economic effects that exceed more than $1 billion per year. In particular, the analysis must present a probability distribution for the estimated benefits and costs, unless the benefits and costs are known with a high degree of certainty.

The draft guidelines are being released today for a 60-day public comment period as well as independent peer review by leading academic experts in the field of regulatory analysis. We also plan to conduct an interagency review of the draft guidelines following public and peer review comments.

We will continue to use our current guidance until we complete this review process and publish revised guidelines.

B. Request for Comment on U.S. Approaches to Analysis and Management of Emerging Risks

Regulators often must decide on an appropriate course of action to protect public health, safety or the environment before science has resolved all the key factual questions about a potential hazard. The appropriate level of precaution in risk assessment and management is complicated by the need to balance efforts to mitigate these potential risks with countervailing risks that may arise from other sources. For example, policies to facilitate the growth of the diesel-engine market may be desirable from a global environmental and energy security perspective since diesel offers significant fuel efficiency advantages over gasoline-powered vehicles, and would likely lead to less reliance on importation of foreign oil and reduce the emission of greenhouse gases. However, diesel fuels pose greater risk to public health and environment from smog and soot caused by relatively higher emission of particles and nitrogen dioxide than conventional gasoline.

U.S. regulators rely on various science-based precautionary approaches in assessing potential hazards and taking protective actions. These

approaches have evolved over time and reflect statutory requirements, agency specific policy decisions, and advancements in scientific understanding. For purposes of collecting and analyzing current risk assessment and management practices in federal agencies, with an emphasis on the role of precaution in risk policy and regulation, the Administration has formed an Interagency Work Group on Risk Management co-chaired by James L. Connaughton, Chairman of the White House Council on Environmental Quality and John D. Graham, Administrator, Office of Information and Regulatory Affairs, Office of Management and Budget. The Work Group includes representatives from the Department of Agriculture, the Department of Commerce, the Department of Health and Human Services, the Department of Interior, the Environmental Protection Agency, and the Office of Science and Technology Policy.

To assist in the Work Groups efforts, OMB requests comments for the next 60 days on current U.S. approaches to analysis and management of emerging risks. Specifically, we seek public input on:

- Ways in which ''precaution'' is embedded in current risk assessment procedures through ''conservative'' assumptions in estimation of risk, or through explicit ''protective'' measures in management decisions as required by statutory requirements as well as agency judgments.
- Examples of approaches in human and ecological risk assessment and management methods addressed by U.S. regulatory agencies (*e.g.*, consumer product safety, drug approval, pesticide registration, protection of endangered species) which appear unbalanced.
- How the U.S. balances precautionary approaches to health, safety and environmental risks with other interests such as economic growth and technological innovation.

C. Request for Comment on Improving the Analysis of Regulations Related to Homeland Security

In last year's final Report to Congress, OMB noted that 58 significant new federal regulations had been enacted in the aftermath of September 11th to protect national security and provide post-attack assistance. As an integral part of the expedited issuance of these rules, OIRA conducted its full regulatory review and coordination function under Executive Order 12866. These efforts made sure that all the rules related to September 11th received priority attention from the appropriate reviewers, and that the Administration's best solutions to respond to potential terrorist attacks were implemented.

Looking to the future, OMB expects additional homeland-security proposals from federal agencies covering concerns ranging from airline safety and immigration to food safety. For example, USDA and HHS will propose new regulations required to implement the Bioterrorism Preparedness and Control Act of 2002. Similarly, the Department of Homeland Security will face major challenges in developing sensible regulations covering many facets of American society. In light of the significant interest in these regulations, OMB is seeking public comment for the next 60 days on how to more effectively evaluate the benefits and costs of these proposals. OMB seeks comment on how agencies might assess the probability of future terrorist attacks and the likely damages, and the resulting effectiveness of new federal regulations in preventing future attacks, reducing America's vulnerability, or mitigating the damage of attacks which do occur. OMB seeks comment on how agencies might better identify, quantify and weigh the direct and indirect costs of such rules, including impacts on time, convenience, privacy and economic productivity. OMB also seeks comment on how evaluation of such regulation could include auxiliary benefits not directly related to the homeland security purpose of the regulation. OMB's request for comment is concerned with these issues as they apply to future rulemakings and is not intended to address a specific rulemaking.

Appendix A.—Calculations of Benefits and Costs: Explanation

Chapter I presents estimates of the annual costs and benefits of selected final major regulations reviewed by OMB between October 1, 1992 and September 30, 2002. The explanation of the calculations for the major rules reviewed by OMB between April 1, 1995 and March 31, 1999 can be found in Chapter IV of our 2000 report (OMB 2000). Table 19, Appendix E, of the 2002 Report presents OIRA's estimates of the benefits and costs of the 20 individual rules reviewed between April 1, 1999 and September 30, 2001. All benefit and cost estimates were adjusted to 2001 dollars.

In assembling estimates of benefits and costs, OIRA has:

(1) Applied a uniform format for the presentation of benefit and cost estimates in order to make agency estimates more closely comparable with each other (for example, annualizing benefit and cost estimates); and

(2) Monetized quantitative estimates where the agency has not done so (for example, converting Agency projections of quantified benefits, such as, estimated injuries avoided per year or tons of pollutant reductions per year to dollars using the valuation estimates discussed below).

The adoption of a uniform format for annualizing agency estimates allows, at least for purposes of illustration, the aggregation of benefit and cost estimates across rules. While OIRA has attempted to be faithful to the respective agency approaches, the reader should be cautioned that agencies have used different methodologies and valuations in quantifying and monetizing effects. Thus, this aggregation involves the assemblage of benefit and cost estimates that are not comparable.

TABLE 7.—ESTIMATE OF BENEFITS AND COSTS OF 47 MAJOR RULES OCTOBER 1, 1992 TO MARCH 31, 1995

[Millions of 2001 dollars]

Regulation	Agency	Benefits	Costs	Explanation
Nutrition Labeling of Meat and Poultry Products.	USDA—FSIS	205	25–32	Present value estimates amortized over 20 years.
Food Labeling (combined analysis of 23 individual rules).	HHS—FDA	438–2,637	159–249	Present value estimates amortized over 20 years.
Real Estate Settlement Procedures	HUD	258–332	135	
Manufactured Housing Wind Standards	HUD	79	511	
Confined Spaces	DOL–OSHA	540	250	We valued each fatality at $5 million and each lost-workday injury at $50,000. We did not value non-lost-workday injuries.

TABLE 7.—ESTIMATE OF BENEFITS AND COSTS OF 47 MAJOR RULES OCTOBER 1, 1992 TO MARCH 31, 1995—Continued

[Millions of 2001 dollars]

Regulation	Agency	Benefits	Costs	Explanation
Occupational Exposure to Asbestos	DOL–OSHA	92	448	We assumed a 20-year latency period between exposure and the onset of cancer or asbestosis and valued each death and each case of asbestosis at $5 million.
Vessel Response Plans	DOT–Coast Guard.	8	324	Present values amortized over 30 years. We valued each barrel of oil not spilled at $2,000.
Double-Hull Standards	DOT–Coast Guard.	15	641	Present values amortized over 30 years. We valued each barrel of oil not spilled at $2,000.
Controlled Substances and Alcohol Use and Testing.	DOT–FHWA	1,539	114	
Prevention of Prohibited Drug Use in Transit Operations.	DOT	107	37	Present values amortized over 10 years.
Stability Control of Medium and Heavy Vehicles During Braking.	DOT–NHTSA	1,650–2,539	694	We valued each ''equivalent fatality'' at $3 million.
Oil and Gas Extraction	EPA	35–129	35	First-year costs amortized costs over 15 years and added to annual (15th year) costs.
Acid Rain Permits Regulations	EPA	76,854–77,206	1,109–1,871	We valued SO_2 reductions at $7,300 per ton.
Vehicle Inspection and Maintenance (I/M)	EPA	219–992	671	We used the estimates of and cost and emission reductions of the new I/M program compared to the baseline of no I/M program. We valued VOC reductions at $520–$2360 per ton. We did not assign a value to CO reductions.
Evaporative Emissions from Light-Duty Vehicles, Light-Duty Trucks, and Heavy-Duty Vehicles..	EPA	243–1,104	161–248	We assumed the VOC emission reductions began in 1995 and rise linearly until 2020, after which point they remain at the 2020 level. Annualizing this stream results in an average of 468,000 tons per year. We valued these tons at $520–$2360 per ton.
Onboard Diagnostic Systems	EPA	421–2,383	226	Emission reductions and costs amortized over 15 years. We valued VOC reductions at $520–$2360 per ton and NO_X reductions at $700–$4900 per ton.
Phase II Land Disposal Restrictions	EPA	26	240–272	We valued each cancer case at $5 million.
Phase-out of Ozone-Depleting Chemicals and Listing of Methyl Bromide.	EPA	1,260–3,993	1,681	Present values amortized over 16 years.
Reformulated Gasoline	EPA	184–637	1,085–1,395	Estimates are for Phase II, which include Phase I benefits and costs. We used the benefit estimates that assume the enhanced I/M program is in place. We valued VOC reductions at $520–$2360 per ton and NO_X reductions at $700–$4900 per ton. We valued each cancer case at $5 million. We assumed the phase II aggregate costs are an additional 25 percent of the Phase I costs based on EPA's reported per-gallon cost estimates.
Acid Rain NO_X Title IV CAAA	EPA	661–4,725	372	Values are for Phase II. We valued NO_X reductions at $350–$2500 per ton.
Hazardous Organic NESHAP	EPA	520–2,360	292–333	We valued VOC emissions at $520–$2360 per ton and NO_X emissions (which are a cost in this instance) at $350–$2500 per ton. We did not value changes in CO emissions.
Refueling Emissions from Light-Duty Vehicles.	EPA	148–673	33	We assumed Stage II controls will remain in place and valued VOC emissions at $520–$2360 per ton.

TABLE 7.—ESTIMATE OF BENEFITS AND COSTS OF 47 MAJOR RULES OCTOBER 1, 1992 TO MARCH 31, 1995—Continued

[Millions of 2001 dollars]

Regulation	Agency	Benefits	Costs	Explanation
Non-Road Compression Ignition Engines	EPA	412–2,881	29–70	We annualized the NO_X emissions which yielded an average annual emission reduction of 588,000 tons beginning in 2000. We valued NO_X emissions at $700–$4900 per ton.
Bay/Delta Water Quality Standards	EPA	2–26	37–248	
Deposit Control Gasoline	EPA	374–1,480	197	We valued estimates of combined emission reductions at $520–$2360 per ton. Present value cost estimates amortized over 5 years.
Total		86,290–106,708	9,506–11,087	

TABLE 8.—ESTIMATE OF BENEFITS AND COSTS OF 3 MAJOR RULES, OCTOBER 1, 2001 TO SEPTEMBER 30, 2002

[Millions of 2001 dollars]

Regulation	Agency	Benefits	Costs	Explanation
Energy Conservation Standards for Central Air Conditioners and Heat Pumps.	DOE	710	636	Present value estimates amortized over 24 years. We valued NO_X emission reductions at $350–$2500 per ton.
Tire Pressure Monitoring Systems (TPMS)	DOT	409–944	749–1,206	We valued each equivalent fatality (see p. iv of the Executive Summary of the Final Economic Assessment) at $3 million.
Control of Emissions From Nonroad Large Spark-Ignition Engines, and Recreational Engines.	EPA	913–4,818	192	We amortized the benefit estimates in proportion to the estimated NO_X emission reductions. The lower end of the range reflects the alternative approach to valuing benefits of EPA rules discussed elsewhere.
Total		2,032–6,472	1,577–2,034	

Assumptions: 7 percent discount rate unless another rate explicitly identified by the agency. For DOL: $5 million VSL assumed for deaths averted when not already quantified. Injuries averted valued at $50,000 from Viscusi.[9] All values converted to 2001 dollars. All costs and benefits stated on a yearly basis.

[9] W. Kip Viscusi, Fatal Tradeoffs: Public & Private Responsibilities for Risk. New York, NY, Oxford University Press, 1992, p. 65.

Valuation Estimates for Regulatory Consequences [10]

Agencies continue to take different approaches to monetizing benefits for rules that affect small risks of premature death. As a general matter, we continue to defer to the individual agencies' judgment in this area. In cases where the agency both quantified and monetized fatality risks, we have made no adjustments to the agency's estimate. In cases where the agency provided a quantified estimate of fatality risk, but did not monetize it, we have monetized these estimates in order to convert these effects into a common unit.

The following is a brief discussion of OIRA's valuation estimates for other types of effects that agencies identified and quantified, but did not monetize. As a practical matter, the aggregate benefit and cost estimates are relatively insensitive to the values we have assigned for these rules because the aggregate benefit estimates are dominated by those rules where EPA provided quantified and monetized benefit and cost estimates.

Injury. For NHTSA's rules, we adopted NHTSA's approach of converting nonfatal injuries to ''equivalent fatalities.'' These ratios are based on NHTSA's estimates of the value individuals place on reducing the risk of injury of varying severity relative to that of reducing risk of death.[11] For the OSHA rules, we monetized only lost workday injuries using a value of $50,000 per injury averted.

I. Change in Gasoline Fuel Consumption. We valued reduced gasoline consumption at $.80 per gallon pre-tax. This equates to retail (at-the-pump) prices in the $1.10–$1.30 per gallon range.

II. Reduction in Barrels of Crude Oil Spilled. OIRA valued each barrel prevented from being spilled at $2,000. This is double the sum of the most likely estimates of environmental damages plus cleanup costs contained in a published journal article [Brown and Savage, ''The Economics of Double-Hulled Tankers,'' Maritime Policy and Management, Volume 23(2), 1996, pages 167–175].

III. Change in Emissions of Air Pollutants. We used estimates of the benefits per ton for reductions in hydrocarbon and nitrogen oxide emissions derived from recent EPA regulatory analyses, as follows (1996$):

Hydrocarbon: $520 and $2360 per ton

Nitrogen Oxide (stationary): $350 and $2500 per ton

Nitrogen Oxide (mobile): $700 and $4900 per ton

Sulfur Dioxide: $7300 per ton

The estimates for reductions in hydrocarbon emissions were obtained from EPA's RIA for the 1997 rule revising the primary NAAQS for ozone and fine PM. OIRA has revised the estimates for reductions in NO_X emissions to reflect a range of estimates from recent EPA analyses for several rules and for proposed legislation. In particular, OIRA has adopted different benefit transfer estimates for NO_X reductions from stationary sources (*e.g.*, electric utilities) and from mobile sources. EPA believes that there are a number of reasons to expect that reductions in NO_X emissions from utility sources achieve different air quality

[10] The following discussion updates the monetization approach used in previous reports and draws on examples from this and previous years.

[11] National Highway Traffic Safety Administration, *The Economic Cost of Motor Vehicle Crashes, 1994,* Table A–1. *http://www.nhtsa.dot.gov/people/economic/ecomvc1994.html.*

improvements relative to reductions from ground-level mobile sources. For example, mobile source tailpipe emissions are located in urban areas at ground level (with limited dispersal) while electric utilities emit NO_X from ''tall stacks'' located in rural (remote) locations with substantial geographic dispersal (Letter to Don Arbuckle, Deputy Administrator, OIRA from Tom Gibson, Associate Administrator, Office of Policy, Economics and Innovation, EPA, May 16, 2002.) There remain considerable uncertainties with the development of these estimates. The discussion below outlines the various EPA analyses serving as the basis for the NO_X benefit transfer values presented above and discusses the uncertainties that attend these estimates.

Analysis of recent EPA rules yield several estimates for the NO_X benefits per ton from electric utility sources. (See the Regulatory Impact Analyses for the ''NO_X SIP Call'' and the Section 126 rules, available on the Web at *http://www.epa.gov/ttn/ecas/econguid.html*. In addition, see Memo to NSR Docket from Bryan Hubbell, Senior Economist, Innovative Strategies and Economics Group, EPA.) Based on these studies, the upper end of the range for the benefits of NO_X reductions from stationary sources (electric utilities) is $2500 per ton. These studies also developed estimates for the benefits associated with reductions in SO_2 from electric utilities. Based on an analysis outlined in a June 20, 2001 EPA memo to the file, ''Benefits Associated with Electricity Generating Emissions Reductions Realized Under the NSR Program,'' we used $7300 per ton SO_2 emissions for the 1992 EPA Acid Rain rule.

For mobile sources, EPA recently published the final Tier 2/Gasoline Sulfur rule RIA (EPA, 1999) and Heavy Duty Engine/Diesel Fuel RIA (EPA, 2000). For the Tier 2 rule, which affects light-duty vehicles, NO_X reductions account for around 90 percent of PM precursor emissions and 86 percent of ozone precursor emissions. Based on the final Tier 2/Gasoline Sulfur RIA, EPA estimates that NO_X reductions will yield benefits of $4,900/ton (1996$). EPA believes this analysis provides a more appropriate source for the NO_X benefit transfer value for mobile sources. (Letter from Tom Gibson, pp. B2 and B3, May 16, 2002.) Additional details on the Tier 2 benefits analysis are available in the Tier 2/Sulfur Final Rulemaking RIA, available on the Web at *http://www.epa.gov/oms/fuels.htm*.

The Heavy Duty Engine/Diesel Fuel benefits analysis examined the impacts in 2030 of reducing SO_2 emissions by 141,000 tons and NO_X emissions by 2,750 thousand tons, as well as a 109,000 ton reduction in direct PM emissions. Based on this analysis, EPA estimates a value for NO_X reductions of $10,200/ton in 2030. (Letter from Tom Gibson, p. B3, May 16, 2002.) Complete details of the emissions, air quality, and benefits modeling conducted for the HD Engine/Diesel Fuel Rule can be found at *http://www.epa.gov/otaq/diesel.htm* and *http://www.epa.gov/ttn/ecas/regdata/tsdhddv8.pdf*. Because the Heavy Duty Engine/Diesel Fuel estimate includes an adjustment for income growth out to 2030 and involves reductions in several PM-related pollutants, OIRA has adopted a value of $4900 per ton from EPA's analysis of the Tier 2 rule as a benefits transfer value for reductions in NO_X emissions from mobile sources.

Reductions in the risk of premature mortality dominate the benefits estimates in all of these analyses. The size of the mortality risk estimates from the underlying epidemiological studies, the serious nature of the effect itself, and the high monetary value ascribed to prolonging life make mortality risk reduction the most important health endpoint quantified in these analyses.[12] Because of the importance of this endpoint and the considerable uncertainty among economists and policymakers as to the appropriate way to value reductions in mortality risks, EPA has developed alternative estimates for its ''Clear Skies'' legislation that show the potential importance of some of the underlying assumptions. (See ''Human Health and Environmental Benefit Achieved by the Clear Skies Initiative'' at *http://www.epa.gov/clearskies*.) OIRA has used this analysis to identify an alternative estimate of the benefits from NO_X reductions. In its Clear Skies analysis, EPA presented alternative benefits estimates of $14 billion and $96 billion per year in 2020, or a difference in the estimates of roughly a factor of seven.[13] Using this ratio, an alternative estimate of the benefits of NO_X reductions from stationary sources would be $350 per ton from stationary sources and $700 per ton from mobile sources.

OIRA recognizes that there are potential problems and significant uncertainties that are inherent in any benefits analysis based on $/ton benefit transfer techniques. The extent of these problems and the degree of uncertainty depends on the divergence between the policy situation being studied and the basic scenario providing the benefits transfer estimate. Examples of other factors include sources of emissions, meteorology, transport of emissions, initial pollutant concentrations, population density, and population demographics, such as the proportion of elderly and children and baseline incidence rates for health effects. Because of the uncertainties associated with benefits transfer, OIRA decided not to include three mobile source rules that are projected to achieve substantial reductions in SO_2 and PM emissions that OIRA included in previous years in the monetized estimates presented in Tables 5 and 6 of the 2002 Report.[14]

Adjustment for Differences in Time Frame Across These Analyses

Agency estimates of benefits and costs cover widely varying time periods. The differences in the time frames used for the various rules evaluated generally reflect the specific characteristics of individual rules such as expected capital depreciation periods or time to full realization of benefits. In order to allow us to provide an aggregate estimate of benefits and costs, we developed benefit and cost time streams for each of the rules. Where agency analyses provide annual or annualized estimates of benefits and costs, we used these estimates in developing streams of benefits and costs over time. Where the agency estimate provided only annual benefits and costs for specific years, we used a linear interpolation to represent benefits and costs in the intervening years.[15]

Further Caveats

In order for comparisons or aggregation to be meaningful, benefit and cost estimates should correctly account for all substantial effects of regulatory actions, including potentially offsetting effects, which may or may not be reflected in the available data. We have not made any changes to agency monetized estimates. To the extent that agencies have adopted different monetized values for effects—for example, different values for a statistical life or different discounting methods—these differences remain embedded in the tables. Any comparison or aggregation across rules should also consider a number of factors which our presentation does not address. For example, these analyses may adopt different baselines in terms of the regulations and controls already in place. In addition, the analyses for these rules may well treat uncertainty in different ways. In some cases,

[12] There are several key assumptions underlying the benefit estimates for reductions in NO_X emissions, including:

1. Inhalation of fine particles is causally associated with premature death at concentrations near those experienced by most Americans on a daily basis. While no definitive studies have yet established any of several potential biological mechanisms for such effects, the weight of the available epidemiological evidence supports an assumption of causality.

2. All fine particles, regardless of their chemical composition, are equally potent in causing premature mortality. This is an important assumption, because fine particles from power plant emissions are chemically different from directly emitted fine particles from both mobile sources and other industrial facilities, but no clear scientific grounds exist for supporting differential effects estimates by particle type.

3. The concentration-response function for fine particles is approximately linear within the range of outdoor concentrations under policy consideration. Thus, the estimates include health benefits from reducing fine particles in both attainment and non-attainment regions.

4. The forecasts for future emissions and associated air quality modeling are valid.

5. The valuation of the estimated reduction in mortality risk is largely taken from studies of the tradeoff associated with the willingness to accept risk in the labor market.

[13] The difference between the estimates reflects several assumptions, including differences in the estimation and valuation of mortality risk and the valuation of a reduction in the incidence of chronic bronchitis.

[14] These are: Municipal Waste Combustors (1995), Emission Standards for New Locomotives (1997) and Emission Standards for Non-Road Diesel Engines (1998).

[15] In other words, if hypothetically we had costs of $200 million in 2000 and $400 million in 2020, we would assume costs would be $250 million in 2005, $300 million in 2010, and so forth. For example, for the Regional Haze rule, EPA provided only an estimate of benefits and costs in 2015. To develop benefit and cost streams, we used a linear extrapolation of benefits and costs beginning in 2009 and scaling up to the reported 2015 estimates.

agencies may have developed alternative estimates reflecting upper- and lower-bound estimates. In other cases, the agencies may offer a midpoint estimate of benefits and costs. In still other cases the agency estimates may reflect only upper-bound estimates of the likely benefits and costs. While we have relied in many instances on agency practices in monetizing costs and benefits, our citation of or reliance on agency data in this report should not be taken as an OIRA endorsement of all the varied methodologies used to derive benefits and cost estimates.

Appendix B. Agency Estimates of Benefits and Costs

TABLE 9.—AGENCY ESTIMATES OF BENEFITS AND COSTS OF MAJOR RULES

[October 1, 1992 to September 30, 1993]

Rule	Agency	Benefits	Costs	Other information
Nutrition labeling of meat and poultry products.	USDA–FSIS	$1.75 billion (NPV)	$218–272 million (NPV)	20-year NPV discounted at 7%.
Food Labeling: Use of Nutrient Content Claims for Butter.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.
Food Labeling: Declaration of Ingredients.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.
Food Labeling, Declaration of Ingredients: Common or Usual Name Declaration for Protein Hydrolysates and Vegetable Broth in Canned Tuna ''and/or'' Labeling for Soft Drinks.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.
Food Labeling: Declaration of Ingredients for Dairy Products and Maple Syrup.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.
Food Labeling: Nutrient Content Claims, Definition of Term Healthy.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.
Food Labeling: Label Statements on Foods for Special Dietary Use.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.
Food Labeling: Health Claims, Zinc and Immune Function in the Elderly.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.
Food Labeling, Reference Daily Intakes and Daily Reference Values (Decision).	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.
Food Labeling: Health Claims and Label Statements, Sodium and Hypertension.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.
Food Labeling: Health Claims and Label Statements: Omega-3 Fatty Acids and Coronary Heart Disease.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.
Food Labeling: Health Claims and Label Statements, Dietary Fat and Cancer.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.
Food Labeling: Health Claims, Calcium and Osteoporosis.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.
Food Labeling: Health Claims and Label Statement, Antioxidant Vitamins and Cancer.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.

TABLE 9.—AGENCY ESTIMATES OF BENEFITS AND COSTS OF MAJOR RULES—Continued

[October 1, 1992 to September 30, 1993]

Rule	Agency	Benefits	Costs	Other information
Food Labeling: Health Claims and Label Statements, Dietary Saturated Fat and Cholesterol and Coronary Heart Disease.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.
Regulation Impact Analysis of the Final Rules to Amend the Food Labeling Regulations.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS-FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS-FDA rules in this table related to food labeling.
Food Labeling: Health Claims and Label Statements, Folic Acid and Neural Tube Defects.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS–FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS–FDA rules in this table related to food labeling.
Food Labeling: Health Claims and Label Statements, Dietary Fiber and Cardiovascular Disease.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS-FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS-FDA rules in this table related to food labeling.
Food Labeling: Health Claims and Label Statements, Dietary Fiber and Cancer.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS-FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS-FDA rules in this table related to food labeling.
Food Labeling, General Requirements for Health Claims for Food.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS-FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS-FDA rules in this table related to food labeling.
Food Labeling, Mandatory Status of Nutrition Labeling and Nutrient Content Revision, Form for Nutrition Label.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS-FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS-FDA rules in this table related to food labeling.
Food Labeling, Nutrient Content Claims, General Principles, Petitions, Definition of Terms, Definitions of Nutrient Content Claims for the Fat, Fatty Acid, and Cholesterol.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS-FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS-FDA rules in this table related to food labeling.
Food Labeling Regulation Implementing the Nutrition Labeling and Education Act of 1990, Opportunity for Comments.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS-FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS-FDA rules in this table related to food labeling.
Food Labeling—Metric Labeling Requirements.	HHS–FDA	$4.4–$26.5 billion	$1.4–$2.3 billion plus $163 million in costs to Federal government.	HHS-FDA performed one analysis for the food labeling requirements imposed by this rule and the other 22 HHS-FDA rules in this table related to food labeling.
Real Estate Settlement Procedures Act (Regulation X), FR–1942.	HUD	$119,014,950 annually in greater competition in title insurance business; $89.1–148.5 million net benefit annually in reducing transaction costs by packaging services with affiliated services.	Cost of duplicate good-faith estimates: $56,824,627 per year; Cost of new disclosure for controlled business arrangements: $48,147,000 per year; Cost of computerized loan originations: $3,607,890 per year; Cost of two additional years for storage (discount rate = 6%): $24,305.	
Manufactured Housing Construction and Safety Standards.	HUD	Net Benefit: $300 million per year present value in energy savings; $50–160 million per year present value in reduced NO_X, SO_X, and PM emission.		

TABLE 9.—AGENCY ESTIMATES OF BENEFITS AND COSTS OF MAJOR RULES—Continued

[October 1, 1992 to September 30, 1993]

Rule	Agency	Benefits	Costs	Other information
Final frameworks for early-season migratory bird hunting regulations.	DOI	Not Estimated	Not Estimated.	
Migratory bird hunting, final frameworks for late-season migratory bird hunting regulations.	DOI	Not Estimated	Not Estimated.	
The Family and Medical Leave Act of 1993.	DOL-ESA	Not Estimated	$674 million annually	Estimate provided by U.S. General Accounting Office (Parental Leave: Estimated Costs of H.R. 925, the Family and Medical Leave Act of 1987—GAO/HRD–88–34, Nov. 10, 1987).
Permit Required Confined Spaces.	DOL–OSHA	Reduced annually: 54 fatalities; 5,931 lost-workday injury and illness cases; 5,908 non-lost-workday cases.	$202.4 million annually	''OSHA anticipates that improved worker productivity as a result of the standard will help to lower production costs and contribute to higher quality output. Although OSHA did not quantify these cost offsets, the Agency believes they will be substantial'' (RIA, pp. I–10, I–13). ''OSHA anticipates that greater use of mechanical ventilation to reduce atmospheric hazard in permit spaces may result in additional release of hazardous substances to the air. Incremental release quantities related to the permit space standard are not determinable at present, but are expected to be minor relative to current overall releases'' (RIA, pp. I–17—I–18).
Lead Exposure in Construction.	DOL–OSHA	Near-term avoided annual health effects; Reduced nerve conduction velocity: 16,199–22,831 cases; Reduced blood ALA–D levels: 130,056–164,044 cases; Increased urinary ALA: 60,389–78,676 cases; Gastrointestinal disturbances: 1,135–4,413 cases; Detected blood-lead levels above MRP trigger: 24,262–35,163 cases. Long-term avoided health effects over 10 years; Fatal/nonfatal infractions: 2,164–2,322 cases; Fatal/nonfatal stroke: 644–698 cases; Renal disease: 1,258–2,157 cases.	$365–445 million annually plus one-time start-up costs of $150–$183 million.	
Response Plans for Marine Transportation-Related Facilities.	DOT-USCG	58,838 barrels of oil not spilled (NPV).	$176,105,666 (NPV)	Timeline of the analysis: 1996–2025 Discount Rate: 7%; $1996.
Vessel Response Plans	DOT–USCG	50,312 barrels of oil not spilled (NPV).	$3,245,869,985 (NPV)	Timeline of the analysis: 1996–2025 Discount Rate: 7%; $1996.
Light Truck Average Fuel Economy Standard for Model Year 1995.	DOT	Not Estimated	Not Estimated.	

TABLE 9.—AGENCY ESTIMATES OF BENEFITS AND COSTS OF MAJOR RULES—Continued

[October 1, 1992 to September 30, 1993]

Rule	Agency	Benefits	Costs	Other information
Water quality standards regulation: Compliance with CWA Section 303(C)(2)(B) Amendments.	EPA	Not Estimated	Not Estimated	''The analysis performed was limited to assessing only the potential reduction in cancer risk; no assessment of potential reductions in risks due to reproductive, developmental, or other chronic and subchronic toxic effects was conducted. However, given the number of pollutants, there could be: (1) Decreased incidence of systemic toxicity to vital organs such as liver and kidney; (2) decreased extent of learning disability and intellectual impairment due to the exposure to such pollutants as lead; and (3) decreased risk of adverse reproductive effects and genotoxity.'' (57 FR 60848–). ''The ecological benefits that can be expected from today's rule include protection of both fresh and salt water organisms, as well as wildlife that consume aquatic organisms * * * In addition, the rule would result in the propagation and productivity of fish and other organisms, maintaining fisheries for both commercial and recreational purposes. Recreational activities such as boating, water skiing, and swimming would also be preserved along with the maintenance of an aesthetically pleasing environment'' (57 FR 60848–). ''EPA acknowledges that there will be a cost to some dischargers for complying with new water quality standards as those standards are translated into specific NPDES permit limits * * * Revised wasteload allocations may result in adjustments to individual NPDES permit limits for point source dischargers, and these adjustments could result in increased wastewater treatment costs or other pollution control activities such as recycling or process changes. The magnitude of these costs depends on the types of treatment or other pollution control, the number and type of pollutants being treated, and the level of control that can be achieved by technology-based effluent limits for each industry. Similar sources of costs and the variables affecting costs may also apply to indirect industrial dischargers to the extent that the industrial discharger is a source of toxic pollutants discharged by the POTW * * * Nonpoint sources of toxic pollutants may also incur increased costs to the extent that best management practices need to be modified or applied to more sources to reflect the revised water quality standards. Although there is no Federal permit program for nonpoint sources comparable to that for point sources, there are State regulatory programs to control nonpoint source discharges. Monitoring programs are another source of potential incremental costs to dischargers and States.'' (57 FR 60848–).

TABLE 9.—AGENCY ESTIMATES OF BENEFITS AND COSTS OF MAJOR RULES—Continued

[October 1, 1992 to September 30, 1993]

Rule	Agency	Benefits	Costs	Other information
Coastal nonpoint pollution control program development and approval guidance (EPA, NOAA), guidance specifying management measures for sources of nonpoint * * * Section 6217.	EPA	Not Estimated	$389,940,000–$590,640,000 (annualized).	The RIA identified generally the types of ''off-site benefits'' that could be related to water quality improvements, including 4 use benefits (in-stream, near stream, option value, and diversionary) and 3 non-use (intrinsic) benefits (aesthetic, bequest, and existence).
Oil and Gas Extraction Point Source Category, Offshore Subcategory, Effluent Limitations Guidelines and New Source Performance Standards (Final Rule).	EPA	$28.2–103.9 million per year.	Total annualized BAT and NSPS costs: 1st year = $122 million, 15th year = $32 million.	''Other benefits that are quantified, to the extent possible, but not monetized due to lack of appropriate data, include: (1) Human health risk reductions associated with systemics other than lead, pH-dependent leach rates, carcinogens for which there are no risk factors available, exposure to pollutants via sediment or food chair; (2) ecological risk reductions; (3) fishery benefits; and (4) intrinsic benefits * * * The non-quantified, non-monetized benefits assessed in this RIA include increased recreational fishing, increased commercial fishing, improved aesthetic quality of waters near the platform, and benefits to threatened or endangered species [the Kemp's Ridley Turtle and the Brown Pelican] in the Gulf of Mexico.'' (58 FR 12454–).
Acid Rain Permits, Allowance System, Emissions Monitoring, Excess Emissions and Appeals Regulations Under Title IV of the Clean Air Act Amendments of 1990.	EPA	10 million tons/year reduction in SO_2 emission (mandated by Title IV); Cost savings: $689–973 million (annualized).	$894–1,509 million (annualized).	SO_2 emission reductions are expected to: (1) reduce acidification of surface waters, thereby increasing the presence and diversity of aquatic species; (2) improve visibility by reducing haze; (3) may improve human health as lower SO_2 emissions reduce air concentrations of acid sulfate aerosols and thus acute and chronic exposure to the acid aerosols that adversely affect human health may even affect even mortality; (4) eliminate damage to forest soils and foliage, especially of high-elevation spruce trees in the eastern U.S. and allow recovery of previously damaged tree populations; (5) may reduce damage to auto paint, reduce soiling of buildings and monuments, and thus the life of some materials and structures may be extended and the costs of maintenance or repair reduced (RIA, pp. 1–5 to 1–6, and 6–1 to 6–3). Engineering costs associated with CEM retrofit were not analyzed (RIA, pp. 4–18). ''The annualized costs of the implementation regulations are estimated to increase the annual costs of generating electricity by 0.5 to 1.2 percent.'' (58 FR 3590–).

TABLE 9.—AGENCY ESTIMATES OF BENEFITS AND COSTS OF MAJOR RULES—Continued

[October 1, 1992 to September 30, 1993]

Rule	Agency	Benefits	Costs	Other information
Vehicle Inspection and Maintenance Requirements for State Implementation Plan (Final Rule).	EPA	Emission reductions from continuing current I/M program unchanged (baseline = no I/M program) in 2000: 116016 tons VOC, 1566395 tons CO (annual tons in 2000); Emission reductions from new I/M program in 2000 (baseline = no I/M program): 420415 tons VOC, 2845754 tons CO (annual tons in 2000).	Continuing current I/M program: NET COST = $894 million ($2000); New I/M program: NET COST = $541 million ($2000).	''These repairs have been found to produce fuel economy benefits that will at least partially offset the cost of repairs. Fuel economy improvements of 6.1% for repair of pressure test failures and 5.7% for repair of purge test failures were observed. Vehicles that failed the transient short test at the established cutpoints were found to enjoy a fuel economy improvement of 12.6% as a result of repairs.'' (57 FR 52950–). ''In conclusion, today's action may cause significant shifts in business opportunities. Small businesses that currently do both inspections and repairs in decentralized I/M programs may have to choose between the two. Significant new opportunities will exist in these areas for small businesses to continue to participate in the inspection and repair industry. This will mean shifts in jobs but an overall increase in jobs in the repair sector and a small to potentially large increase in the inspection sector, depending on state choices.'' (57 FR 52950–).
Evaporative emission regulations for gasoline-fueled and methanol-fueled light duty vehicles, light-duty trucks, and heavy-duty vehicles—SAN 2969.	EPA	Total VOC Reduction in 2020: 1,120,000 metric tons.	Annual total program cost without fuel savings: $130–200 million ($1992, NPV to the year of the sale).	''[Emission] projections are made for the year 2020 in order to provide benefit predictions for a fully turned-over fleet and to factor in other known trends, such as the effects of other new Clean Air Act programs. These new programs include high-technology inspection and maintenance and reformulated gasoline. Reformulated gasoline achieving a 25 percent overall VOC emission reduction standard is assumed to be used in 40 percent of the nation.'' (58 FR 16002–). ''[The cost] estimate does not include the offsetting fuel savings.'' (58 FR 16002–).
Control of air pollution from new motor vehicles and new motor vehicle engines, regulations requiring on-board diagnostic systems on 1994 and later model year light-duty vehicles.	EPA	4.0 million tons HC, 30.8 million tons CO, 2.5 million tons NO_X (NPV).	$16.6 billion (NPV) ($1993).	Discount rate: 7% (58 FR 9468–) Timeline: 2005–2020 (58 FR 9468–).''EPA has not been able to adequately quantify some potential cost savings not included in these estimates. Potential cost savings can accrue due to early repairs of malfunction which, if left undetected and unrepaired, could result in the need for even more costly repairs in the future. Also, improved repair effectiveness should reduce the potential for a part to be unnecessarily replaced in attempting to fix a problem. Repair facilities should also benefit from the availability of generic tools for accessing and using the OBD system in problem diagnosis and repair. These service facility benefits could be passed along to the consumer in the form of lower repair costs.'' (58 FR 9468–).

TABLE 10.—AGENCY ESTIMATES OF BENEFITS AND COSTS OF MAJOR RULES

[October 1, 1993 to September 30, 1994]

Rule	Agency	Benefits	Costs	Other information
Manufactured Home Construction and Safety Standards on Wind Standards.	HUD	$63,726,314 annually	$412,106,180 annually	The cost estimates do not include costs associated with ''out of pocket expenses related to deductibles or non-covered losses'' (RIA, pp. 1–2). Non-quantified benefits include: ''purchasers will experience less dislocation caused by damage to or destruction of their manufactured homes. Fourth, residents who choose to remain in their units during storms will suffer fewer injuries and deaths'' (RIA, p. 1) Discount rate used = 6.64 percent (RIA, p. 8) Basis for public benefit assessment: Hurricane Andrew (RIA, p. 9).
Designate critical habitat for four endangered Colorado River fishes.	DOI	Net benefit: $7.92 million.		Increase employment by 710 jobs, increase earnings by $6.62 million, increase government revenue by $3.20 million from 1995–2020 (59 FR 13374–).
Occupational Exposure to Asbestos.	DOL–OSHA	Reduction in annual cancer risk: 2.12 cancer deaths in general industry, 40.48 cancer deaths in construction industry, 14.2 cancers among building occupants. Reduction in asbestosis: 14 cases annually.	$361.4 million annually	Non-quantified benefits include: avoided cases of asbestosis for building occupants and others secondarily exposed, reduced risks of cancer and fires (from rages contaminated with solvent), more rapid building reoccupation, reduced probability of asbestos-related lawsuits (RIA, pp 52–57).
Financial Responsibility for Water Pollution (Vessels).	DOT–USCG	525,316 barrels of oil not spilled (NPV).	$451,440,918 (NPV)	Timeline of the analysis: 1996–2025; Discount Rate: 7%; $1996.
Antidrug Program for Personnel Engaged in Specified Aviation Activities.	DOT–FAA	$206.64 million (NPV)	$138.13 million (NPV)	Timeline of the analysis: 1994–2003 (RIA, p. 12); $1992 (RIA, p. 12); Discount rate = 7% (RIA, p. 20).
Controlled Substances and Alcohol Use and Testing.	DOT–FHWA	Reduced fatal accidents: $680 million in 1st year, $952 million per year in 2nd and subsequent years. Reduced injury cost: $152.4 million in 1st year, $213.4 million per year in 2nd and subsequent years assuming the highest deterrence scenario. Reduced property damage: $47.5 million in 1993, $66.5 million per year from 1994–2002. Reduced traffic delays: $3.5 million in 1993, $4.9 million per year thereafter assuming highest deterrence rate; Reduced other costs of freeway accidents: $1.9 million in 1995 and $2.7 million thereafter.	$93,947,750 in 1995, and $92,453,950 per year in 1996 and thereafter.	
Light Truck Average Fuel Economy standards, Model Years 1996–1997.	DOT	Not Estimated	Not Estimated.	
Prevention of Prohibited Drug Use in Transit Operations.	DOT	$608,520,643 (NPV)	$208,970,087 (NPV)	Timeline: 1995–2004; Discount rate: 7%; $1991.

TABLE 10.—AGENCY ESTIMATES OF BENEFITS AND COSTS OF MAJOR RULES—Continued

[October 1, 1993 to September 30, 1994]

Rule	Agency	Benefits	Costs	Other information
Land disposal restrictions phase II, universal treatment standards and treatment standards for organic toxicity, characteristic wastes, and newly listed wastes.	EPA	0.22 cancer cases per year avoided from groundwater, 0.037 cancer cases per year avoided from air; $20 million avoided property value damage (annualized).	$194–219 million (annualized).	''The timeframe to which these benefits are attributable begins 30 years following promulgation of the rule.'' (59 FR 47982–). ''However, there are some benefits which the Agency has not attempted to quantify which are potentially attributable to today's rule. For example, the agency has not attempted to quantify any potential non-use-value benefits from protection of resources through treatment of hazardous wastes. Furthermore, the risk analysis performed by the Agency for today's rule does not account for many other potential benefits from today's rule. Ecological risk reduction from treatment of wastes under today's rule has not been quantified. Nor do the Agency's air and groundwater benefit estimates account for karst terrain, complex flow situations, or other factors which could contribute to underestimates of benefits.'' (59 FR 47982–).
Accelerated phase-out of ozone depleting chemicals and listing and phase-out of methyl bromide.	EPA	Ozone depleting chemicals: $8–24 billion (NPV) Methyl Bromide: $1.6–6.4 billion (NPV).	Ozone depleting chemicals: $12 billion (NPV); Methyl Bromide: $0.8 billion (NPV).	Discount rate: 7% (58 FR 65018–). Timeline for methyl bromide cost: 1994–2010 (58 FR 65018–). Timeline for methyl bromide benefits: 1994–2001 (58 FR 65018–).
Fuel and fuel additives: standards for reformulated gasoline.	EPA	Phase I—Summertime VOC emission reduction: 90–140 thousand tons per year; Reduction in cancer incidence: 16 per year (assuming enhanced I/M in place) or 24 per year (assuming basic I/M in place). Phase II—(incremental to Phase I): Summertime VOC emission reduction: approximately 42,000 tons Summer time NO_x emission reduction: approximately 22,000 tons Number of cancer avoided: 3–4 fewer cancer incidence per year.	Phase I—Annual costs: $700–940 million. Phase II—(incremental to Phase I): Increase gasoline production cost by 1.2 cents/gallon during the VOC control period, since only the toxics standard changes, and there is not expected to be a cost for year-round toxics control above that required for Phase I; EPA doesn't expect non-production related costs, such as distribution costs, recordkeeping and reporting costs, etc., to increase isgnificantly relative to Phase I.	''Reductions in mobile source emissions of the air toxics addressed in the reformulated gasoline program (benzene, 1,3-butadiene, formaldehyde, acetaldehyde and POM) may result in fewer cancer incidences. A number of adverse noncancer health effects have also been associated with exposures experience in particular microenvironments such as parking garages and refueling stations. These other health effects include blood disorders, heart and lung diseases, and eye, nose and throat irritation. Some of the toxics may also be developmental and reproductive toxicants, while very high exposure can cause effects on the brain leading to respiratory paralysis and even death. The uses of reformulated gasoline meeting the Phase II standards will likely help to reduce some of these health effects as well.'' (59 FR 7716–). Phase I: The cost of producing reformulated gasoline is expected to increase by approximately 3–5 cents per gallon in 1995. (59 FR 7716–). The cost of testing, enforcement, and recordkeeping not reflected in the annual cost estimate. (59 FR 7716–).

TABLE 10.—AGENCY ESTIMATES OF BENEFITS AND COSTS OF MAJOR RULES—Continued

[October 1, 1993 to September 30, 1994]

Rule	Agency	Benefits	Costs	Other information
Acid Rain NO_X Regulations under Title IV of the Clean Air Act Amendments of 1990.	EPA	Phase I: 400,000 tons NO_X reduced Phase II: 1.89 million tons NO_X reduced.	Phase I: $77 million/year Phase II: $300 million/year.	Qualitative human health benefits: Lower ambient levels of NO_X (and associated lower PM and lower ozone levels) may mean fewer lost school days, fewer disability days for children; for all, less eye irritation and its associated acute and chronic health effects; for exercising asthmatics, improved pulmonary function. Also ambient concentrations of nitrates will be lower and fewer toxic nitrogenous compounds will be formed. (RIA, pp. 9–1 to 9–4) Qualitative welfare effects: reduced materials damage, increased visibility that is associated with enhanced enjoyment of vistas and fewer aircraft and motor vehicle accidents. The potential ecological effect include minimizing the adverse effects of excess nitrogen deposition in forest soils and surface waters, including the ''acid pulses'' that precede fish kills and consequently, reduced biodiversity. (RIA, pp. 9–1 to 9–4) ''Moreover, EPA expects that most or all utility expenses from meeting NO_X requirements will be passed along to ratepayers * * * Under today's rule the cost to ratepayers is very small, relative to their current expenditures on electricity. The average increase in electric rates across the United States is estimated to be only 0.03 and 0.13 percent under Phases I and II respectively.'' (59 FR 13538–).
Hazardous Organic NESHAP (HON) for the Synthetic Organic Chemical Manufacturing Industry (SOCMI) and Other Processes Subject to the Negotiated Regulation for Equipment Leaks.	EPA	HAP reduction: 510,000 tons/year; VOC reduction: 1,000,000 tons/year.	Total nationwide annual cost: $230 million/year ($1989); CO emission increase: 1,900 tons/year; NO_x emission increase: 19,000 tons/year.	''Thus, the estimates represent annual impacts occurring in the fifth year.'' (59 FR 19402–). ''As discussed in section III.B.3 of this preamble, the EPA has deferred the final decision regarding control of medium-sized storage vessels at existing sources. Therefore, emission reductions for storage vessels shown in Table 1, and consequently the total, may be slightly overstated.'' (59 FR 19402–). ''Because of the EPA's deferral of a final decision on control of medium-sized storage vessels at existing sources, as discussed in section III.B.3 of this preamble, the cost impacts for storage vessels, and consequently the total cost impact, may be slightly overstated.'' (59 FR 19402–). ''Market analyses for a subset of 21 of the chemicals estimated price increases from 0.1 percent to 3.9 percent and quantity decreases from 0.1 percent to 4 percent.'' (59 FR 19402–).
Control of air pollution from new motor vehicles and new motor vehicle engines, refueling emission regulations for light-duty vehicles and trucks and heavy-duty vehicles.	EPA	Without Stage II controls, average VOC annual emission reductions: over 420,000 tons per year; With Stage II phase-out when ORVR and Stage II would cover the same percent of fuel, average annual emission reduction: 378,000 tons; If retain Stage H controls, an incremental emission reduction: 285,000 tons.	Without Stage II controls, the average annual cost: −$6 million (1998–2020); With Stage II and phasing out at 2010, the average annual cost: $2 million (1998–2020); With Stage II and no phase out, the average annual cost: $27 million (1998–2020); In 1998 NPV, costs are $102 million, $264 million and $435 million respectively.	''It should be noted that the RIA was completed prior to EPA's decision to delay the requirements for LDTs and to exclude HDVs. These controls were included in the analysis and were assumed to begin in 1998. EPA expects that inclusion of these items in the analysis has no significant effect on the results and does not affect the conclusions which are based on the analysis.'' (59 FR 16262–). ''In the cases where costs are negative, it is because the value of the recovery credits exceeds the hardware and R, D, & T costs.'' (59 FR 16262–).

TABLE 10.—AGENCY ESTIMATES OF BENEFITS AND COSTS OF MAJOR RULES—Continued

Determination of significance for nonroad sources and emission standards for new nonroad compression ignition engines at or above 37 kilowatts, control of air pollution * * *—SAN 3112.	EPA	NO_X annual reduction in 2010: 800,000 tons; NO_x annual reduction in 2025: over 1,200,000 tons.	Average annual cost: $29–70 million (59 FR 31306).	''EPA maintains that the impact of this rule on fleet average fuel consumption will be minimal.'' (59 FR 31306–).

TABLE 11.—AGENCY ESTIMATES OF BENEFITS AND COSTS OF MAJOR RULES

Rule	Agency	Benefits	Costs	Other information
The Family and Medical Leave Act of 1993.	DOL–ESA	Not Estimated	$674 million annually	Estimate provided by U.S. General Accounting Office (Parental Leave: Estimated Costs of H.R. 925, the Family and Medical Leave Act of 1987—GAO/HRD–88–34, Nov. 10, 1987).
Double Hull Standards for Vessels Carring Oil in bulk.	DOT–USCG	94,172 barrels of oil not spilled (NPV).	$6,413,027,637 (NPV)	Timeline of the analysis: 1996–2025.
FMVSS: Stablity and Control of Medium and Heavy Vehicles During Braking.	DOT–NHTSA	Equivalent fatalities forgone: 415–683 per year; Forgone property damage: $327–394.9 million annually.	Total consumer cost = $560.5 million annually.	Discount rate: 7%.
Bay/Delta water quality standards.	EPA	$2.1–21.5 million annually in economic benefits to commercial and recretional fisheries and have associated employment gains of an estimated 145–1585 full-time equivalent jobs annually (RIA ES–7).	For the urban sector, $4.3 million/yr on average and $15.8 million/yr during dry years; $28.3 million/yr on average gains $165.3 million/yr during dry years without water transfers or waterbanks. For agriculture sector, $27 million/yr on average, $43 million/year in the driest 10% of years (RIA ES–5) If using sharing approach (spread water supply impacts to entities diverting water from the Sacramento and San Joaquin River systems), −$0.5 million/yr average years, −$5.5 million/yr for dry years for agricultural sector, −$10.5 million/yr for average years and −$54 million/yr for day years (RIA ES–6).	''Important benefits of the water quality regulations include the following: Biological productivity and health for many estuarine species are expected to increase. The decline of species is expected to be reversed and the existence of species unique to the Bay/Delta, such as Delta smelt, winter-run Chinook salmon, long fin smelt, and Sacramento splittail, will be protected. Populations of a variety of estuarine species are expected to increase; although the extent of the population increases has not been determined for all species, the increases are anticipated to benefit the recreational and commercial fisheries.'' (60 FR 4703–)

TABLE 11.—AGENCY ESTIMATES OF BENEFITS AND COSTS OF MAJOR RULES—Continued

Rule	Agency	Benefits	Costs	Other information
Water quality guidance for Great Lakes system.	EPA	Given the site-specific nature of water quality benefits and the unavailability of site-specific data across the Great Lakes Basin, only case study monetized benefits are estimated in the RIA. Average monetized benefits across the three case studies evaluated are $0.3 million per year to $6.2 million per year, with a midpoint of $2.9 million per year (in 1996 dollars); average annual costs across case studies are also $2.8 million per year (1996 dollars)..	$64.0–394.6 million ($1996, annualized).	''The benefit analysis is based on a case study approach, suing benefits transfer applied sources to three case studies . . . The case studies include: (1) the lower Fox River drainage, including Green Bay, located on Lake Michigan in northeastern Wisconsin; (2) the Saginaw River and Saginaw Bay, located on Lake Huron in Northeastern Michigan; and (3) the Black River, located on Lake Erie in north-central Ohio . . . EPA did attempt to calculate longer-term benefits to human health, wildlife, and aquatic life once the final Guidance provisions are fully implemented by nonpoint sources as well as point sources and the minimum protection levels are attained in the ambient water.'' (60 FR 15382). ''The three case studies combine to account for nearly 14 percent of the total cost of the final Guidance, nearly 17 percent of the loadings reductions, and from four percent to 10 percent of the benefits proxies (i.e.,. basin-wide population, recreational angling, nonconsumptive recreation, and commercial fishery harvest.'' (60 FR 15382). ''In addition to the cost estimates described above, EPA estimated the cost to comply with requirements consistent with the antidegradation provisions of the final Guidance. This potential future cost is expressed as a 'lost opportunity' cost for facilities impacted by the antigradation requirements. This cost could result in the addition of about $22 million each year.'' (60 FR 15381).
Interim Requirements for Deposit Control Gasoline Additives, Regulations of Fuels and Fuel Additives.	EPA	HC, CO and NO_X reduction during the 18-month interim period: 700,000 tons (59 FR 54678–); HC, CO and NO_X reduction after the interim period: 600,000 tons per year (59 FR 54678–) Fuel economy savings: 390 million gallons in 1995–2000 (59 FR 54678–).	$650 million (NPV, discount rate = 7%, 1995–2000 (59 FR 54678–)).	

Appendix C. OMB Draft Guidelines for the Conduct of Regulatory Analysis and the Format of Accounting Statements

Preface

This Circular provides OMB's guidance to federal agencies on the development of regulatory analysis as required under Executive Order No. 12866 and a variety of related authorities. The Circular also provides guidance to agencies on the regulatory accounting statements that are required under the Regulatory Right-to-Know Act.

This draft Circular refines OMB's ''best practices'' document of 1996 *http://www.whitehouse.gov/omb/inforeg/riaguide.html,* which was issued as a guidance in 2000 *http://www.whitehouse.gov/omb/memoranda/m00–08.pdf,* and reaffirmed in 2001 *http://www.whitehouse.gov/omb/memoranda/m01–23.html.* It will replace both the 1996 ''best practices'' and the 2000 guidance. Before issuing the Circular, this draft will go through a process of peer review, public comment and interagency review.

Introduction

These guidelines are designed to help analysts in the regulatory agencies by encouraging good regulatory impact analysis—called either ''regulatory analysis'' or ''analysis'' for brevity—and standardizing the way benefits and costs of Federal regulatory actions are measured and reported.

Why Analysis of Proposed[16] Regulatory Actions Is Needed

Regulatory analysis is a tool regulatory agencies use to anticipate and evaluate the likely consequences of their actions. It provides a formal way of organizing the evidence on the key effects—good and bad—of the various alternatives that should be considered in developing regulations. The motivation is to (1) learn if the benefits of an action are likely to justify the costs or (2) discover which of various possible alternatives would be the most cost-effective. By choosing actions that maximize net

[16] We use the term ''proposed'' to refer to any regulatory actions under consideration regardless of the stage of the regulatory process.

benefits, agencies direct resources to their most efficient use.

A good regulatory analysis informs the public and other parts of the Government as well as the agency conducting the analysis of the effects of alternative actions. Regulatory analysis will sometimes show that a proposed action is misguided, but it can also demonstrate that well-conceived actions are reasonable and justified.

Where all significant benefits and costs can be quantified and expressed in monetary units, benefit-cost analysis provides decisionmakers with a clear indication of the most efficient alternative, that is, the alternative that generates the largest net benefits to society ignoring distributional effects. This is useful information for the public to receive, even when economic efficiency is not the only or the overriding public policy objective.

It will not always be possible to assign monetary values to all of the important benefits and costs, and when it is not, the most efficient alternative will not necessarily be the one with the largest net-benefit estimate. In such cases, you should exercise professional judgment in determining how important the non-quantifiable benefits or costs may be in tipping the analysis one way or the other, but you should not use non-quantifiables as ''trump cards,'' especially in cases where the measured net benefits overwhelmingly favor a particular alternative. When there are other competing public policy objectives, as there often are, they must be balanced with efficiency objectives.

What Should Go Into a Regulatory Analysis?

A good regulatory analysis should include the following three basic elements:

(1) A statement of the need for the proposed action.

(2) An examination of alternative approaches.

(3) An evaluation of the benefits and costs of the proposed action and the main alternatives identified by the analysis.

To properly evaluate the benefits and costs of regulations and their alternatives, you will need to do the following:

- Explain how the actions required by the rule are linked to the expected benefits. For example, indicate how additional safety equipment will reduce safety risks. A similar analysis should be done for each of the alternatives.
- Identify a baseline. Benefits and costs are defined in comparison with a clearly stated alternative. This is normally a ''no action'' baseline, what the world would be like if the proposed rule was not adopted.
- Identify the expected undesirable side-effects and ancillary benefits of the proposed regulatory action and the alternatives. These should be added to the direct costs and benefits as appropriate.

With this information, you should be able to assess quantitatively the benefits and costs of the proposed rule and its alternatives. When your analysis is complete, you should present a summary of the benefit and cost estimates for each alternative, sometimes called a ''regulatory accounting statement,'' so that readers can evaluate them.

As you proceed through your regulatory analysis, you should seek out the opinions of those who will be directly affected by the regulation you are considering as well as the views of those individuals and organizations with special knowledge or insight into the regulatory issues. Consultation can be useful in making sure your analysis addresses all of the relevant issues and that you have access to all the pertinent data. Early consultation can be especially helpful. You should not limit consultation to the final stages of your analytical efforts.

A good analysis is transparent. It should be possible for anyone reading the report to see clearly how you arrived at your estimates and conclusions. For transparency's sake, you should state in your report what assumptions were used, such as the discount rates or the monetary value of a statistical life. It is usually helpful to provide a sensitivity analysis to reveal whether, and to what extent, the results of the analysis are influenced by plausible changes in the main assumptions.

You will find that you cannot conduct a good regulatory analysis according to a formula. The conduct of high-quality analysis requires competent professional judgment. Different regulations may call for different emphases in the analysis, depending on the nature and complexity of the regulatory issues and the sensitivity of the benefit and cost estimates to the key assumptions.

I. Why Regulatory Action is Needed

Before proceeding with a regulatory action, you must demonstrate that the proposed action is necessary. Executive Order 12866 states that ''Each agency shall identify the problem that it intends to address (including, where applicable, the failures of private markets or public institutions that warrant new agency action) as well as assess the significance of that problem.'' This means that you should try to explain whether the action is intended to address a significant market failure or to meet some other compelling public need such as improving governmental processes or promoting distributional fairness, privacy, or personal freedom. If you are trying to correct a significant market failure, the failure should be described both qualitatively and (where feasible) quantitatively, and you should show that a government intervention is likely to do more good than harm. For other interventions, you should also provide a demonstration of compelling social purpose and the likelihood of effective action.

If your regulatory intervention results from a statutory or judicial directive, you should describe the specific authority for your action, the extent of discretion available to you, and the regulatory instruments you might use.

A. There Is a Market Failure or Other Social Purpose To Address

The major types of market failure include: externality, market power, and inadequate or asymmetric information. Correcting market failures is a reason for regulation, but it is not the only reason. Other possible justifications include improving the functioning of government, removing distributional unfairness, or promoting privacy and personal freedom.

1. Externality

An externality occurs when one party's actions impose uncompensated benefits or costs on another. Environmental problems are a classic case of externality—for example, the smoke from a factory may adversely affect the health of local residents while soiling the property in nearby neighborhoods. Common property resources that may become congested or overused, such as fisheries or the broadcast spectrum, represent a second example. ''Public goods,'' such as defense or basic scientific research, provide a positive externality, where provision of the good to some individuals cannot occur without providing the same benefits free of charge to other individuals.

2. Market Power

Firms exercise market power when they reduce output below what would be offered in a competitive industry. They may exercise market power collectively or unilaterally. Government action can be a source of market power, for example, if regulatory actions exclude low-cost imports. Generally, regulations that increase market power should be avoided. However, there are some circumstances in which government may choose to validate a monopoly. If a market can be served at lowest cost only when production is limited to a single producer—local gas and electricity distribution services, for example—a natural monopoly is said to exist. In such cases, the government may choose to approve the monopoly and to regulate its prices and production decisions.

3. Inadequate or Asymmetric Information

Market failures may also result from inadequate or asymmetric information. The market will often supply less than the appropriate level of information because it is infeasible to exclude people from reaping the benefits from the information others have provided even though they have not paid for the information. The providers will not willingly supply the socially optimal quantity of information, unless they are paid for it, and that may not be possible.

Because information, like other goods, is costly, your evaluation will need to do more than demonstrate the possible existence of less than optimal or asymmetric information. Even though the market may supply a less than an optimal amount of information, the amount it does supply may be reasonably adequate and therefore not require government regulation. Sellers do have an incentive to provide information through advertising that can increase sales by highlighting distinctive characteristics of their products. Buyers may also obtain reasonably adequate information about product characteristics through other channels, for example, if a buyer's search costs are low (as when the quality of a good can be determined by inspection at the point of sale), if a buyer has previously used the product, if the seller offers a warranty, or if adequate information is provided by third parties.

In the case of uncertain information about low-probability high-consequence events,

markets may underreact or overreact depending on the rules-of-thumb and other mental assumptions that people use to cope with difficult issues. Regulators should be aware of such mental quirks and not adopt policies based on a misunderstanding of the underlying reality.

4. Other Social Purposes

There are justifications for regulations in addition to correcting market failures. A regulation may be appropriate when you have a clearly identified measure that can make government operate more efficiently. In other cases, regulation may be used to reduce unfairness. Regulatory action may also be appropriate to protect privacy or to promote civil rights or permit more personal freedom.

B. Showing That Regulation at the Federal Level Is the Best Way To Solve the Problem

Even where a market failure clearly exists, you should consider other means of dealing with the failure before turning to regulation. Alternatives to regulation include the courts acting through the product liability system, antitrust enforcement, consumer-initiated litigation, or workers' compensation systems.

In assessing whether Federal regulation is the best solution, you should also consider the possibility of regulation at the State or local level. In some cases, the nature of the market failure may itself suggest the most appropriate governmental level of regulation. For example, problems that spill across State lines (such as acid rain whose precursors are transported widely in the atmosphere) are probably best addressed by Federal regulation. More localized problems, including those that are common to many areas, may be more efficiently addressed locally.

A diversity of regulation may generate gains for the public as governmental units compete with each other to serve the public, but duplicative regulations can also be costly. Where Federal regulation is clearly appropriate, for example, to address interstate commerce issues, you should try to examine whether it would be more efficient to reduce State and local regulation. For example, the burdens on interstate commerce arising from different State and local regulations such as compliance costs for firms operating in several States, may exceed any advantages associated with the diversity of State and local regulation. Your analysis should consider the possibility of reducing as well as expanding State and local rulemaking.

The role of federal regulation in facilitating U.S. participation in global markets should also be considered. Harmonization of U.S. and international rules may require a strong Federal regulatory role. Concerns that new U.S. rules could act as non-tariff barriers to imported goods should be evaluated carefully.

C. The Presumption Against Economic Regulation

Government actions can be unintentionally harmful, and even useful regulations can impede the efficiency with which markets function. For this reason, there is a presumption against certain types of regulatory action. In light of both economic theory and actual experience, a particularly demanding burden of proof is required to demonstrate the need for any of the following types of regulations:

- Price controls in competitive markets;
- Production or sales quotas in competitive markets;
- Mandatory uniform quality standards for goods or services if the potential problem can be adequately dealt with through voluntary standards or by disclosing information of the hazard to buyers or users; or
- Controls on entry into employment or production, except (a) where indispensable to protect health and safety (*e.g.,* FAA tests for commercial pilots) or (b) to manage the use of common property resources (*e.g.,* fisheries, airwaves, Federal lands, and offshore areas).

II. Alternative Approaches To Consider

Once you have determined that Federal regulatory action is appropriate, you will need to consider alternative regulatory approaches. Ordinarily, it will be possible to eliminate some alternatives through a preliminary analysis, leaving a manageable number of alternatives to be evaluated according to the formal principles of the Executive Order. The number and choice of alternatives selected for detailed analysis is a matter of judgment. There must be some balance between thoroughness and the practical limits on your analytical capacity. With this qualification in mind, you should nevertheless explore modifications of some or all of a regulation's attributes or provisions to identify appropriate alternatives. The following is a list of alternative regulatory actions that you should consider:

A. Different Choices Defined by Statute

When a statute establishes a specific regulatory requirement and the agency plans to exercise its discretion to adopt a more stringent standard, you should examine the benefits and costs of reasonable alternatives that reflect the range of the agency's statutory discretion, including the specific statutory requirement.

B. Different Compliance Dates

The timing of a regulation may also have an important effect on its net benefits. For example, costs of a regulation may vary substantially with different compliance dates for an industry that requires a year or more to plan its production runs efficiently. In this instance, a regulation that provides sufficient lead time is likely to achieve its goals at a much lower overall cost than a regulation that is effective immediately, although delay would also typically lower the value of the benefits.

C. Different Enforcement Methods

Compliance alternatives for Federal, State, or local enforcement include on-site inspections, periodic reporting, and compliance penalties structured to provide the most appropriate incentives. When alternative monitoring and reporting methods vary in their costs and benefits, you should consider promising alternatives in identifying the most appropriate enforcement framework. For example, in some circumstances random monitoring or parametric monitoring will be less expensive and nearly as effective as continuous monitoring in achieving compliance.

D. Different Degrees of Stringency

In general, both the benefits and costs associated with a regulation will increase with the level of stringency (although marginal costs generally increase with stringency, whereas marginal benefits may decrease). You should study alternative levels of stringency to understand more fully the relationship between stringency and the size and distribution of benefits and costs among different groups.

E. Different Requirements for Different Sized Firms

You should consider setting different requirements for large and small firms basing any difference in the standards on perceptible differences in the costs of compliance or in the expected benefits. The balance of costs and benefits can shift depending on the size of the firms being regulated. Small firms may find it more costly to comply with regulation, especially if there are large fixed costs required for regulatory compliance. On the other hand, it is not efficient to place a heavier burden on one segment of a regulated industry solely because it can better afford the higher cost; this has the potential to load costs on the most productive firms, costs that are disproportionate to the damages they create.

You should also remember that a rule with a significant impact on a substantial number of small entities will trigger the requirements set forth in the Regulatory Flexibility Act.

F. Different Requirements for Different Geographic Regions

Rarely do all regions of the country benefit uniformly from government regulation and it is also unlikely that costs will be uniformly distributed across the country. Where there are significant regional variations in costs and/or benefits, you should consider the possibility of setting different requirements for the different regions.

G. Performance Standards Rather Than Design Standards

Performance standards are generally superior to engineering or design standards because performance standards give the regulated parties the flexibility to achieve regulatory objectives in the most cost-effective way. This is only possible, of course, if there is more than one feasible way to meet the performance standard. In general, you should consider setting a performance standard if performance can be measured or reasonably imputed and where controlling performance provides a scope appropriate to the problem the regulation seeks to address. For example, compliance with air emission standards can be allowed on a plant-wide, firm-wide, or region-wide basis rather than vent by vent, provided this does not produce unacceptable local air quality outcomes (such as ''hot spots'' from local pollution concentration).

H. Market-Oriented Approaches Rather Than Direct Controls

Market-oriented approaches that use economic incentives should be explored. These alternatives include fees, penalties, subsidies, marketable permits or offsets, changes in liability or property rights (including policies that alter the incentives of insurers and insured parties), and required bonds, insurance or warranties.

I. Informational Measures Rather Than Regulation

If intervention is contemplated to address a market failure that arises from inadequate or asymmetric information, informational remedies will often be the preferred approach. Measures to improve the availability of information include government establishment of a standardized testing and rating system (the use of which could be made mandatory or left voluntary), mandatory disclosure requirements (*e.g.*, by advertising, labeling, or enclosures), and government provision of information (*e.g.*, by government publications, telephone hotlines, or public interest broadcast announcements). A regulatory measure to improve the availability of information (particularly about the concealed characteristics of products) provides consumers a greater choice, than a mandatory product standard or ban.

Specific informational measures should be evaluated in terms of their benefits and with a comprehensive view of their costs. Some effects of informational measures are easily overlooked. For example, the costs of a mandatory disclosure requirement for a consumer product will include not only the cost of gathering and communicating the required information, but also the loss of net benefits of any information displaced by the mandated information, the effect of providing too much information that is ignored or information that is misinterpreted, and inefficiencies arising from the incentive that mandatory disclosure may give to overinvest in a particular characteristic of a product or service.

Where information on the benefits and costs of alternative informational measures is insufficient to provide a clear choice between them, you should consider the least intrusive informational alternative sufficient to accomplish the regulatory objective. For example, to correct an informational market failure it may be sufficient for government to establish a standardized testing and rating system without mandating its use, because competing firms that score well according to the system should thereby have an incentive to publicize the fact.

III. Analytical Approaches

Both benefit-cost analysis (BCA) and cost-effectiveness analysis (CEA) provide a systematic framework for identifying and evaluating the likely outcomes of alternative regulatory choices. A major rulemaking should be supported by both types of analysis wherever possible. Specifically, you should prepare a CEA for all major rulemakings for which the primary benefits are improved public health and safety. You should also perform a BCA for major health and safety rulemakings to the extent that valid monetary values can be assigned to the expected health and safety outcomes. For all other major rulemakings, you should carry out a BCA. If some of the primary benefit categories cannot be expressed in monetary units, you should also conduct a CEA.

A. Benefit-Cost Analysis

The distinctive feature of BCA is that both benefits and costs are expressed in monetary units, which allows you to evaluate different regulatory options with a variety of attributes using a common measure. This can be especially helpful in choosing the appropriate scope for your regulatory intervention. By measuring incremental benefits and costs of successively more stringent regulatory alternatives, you can identify the alternative that maximizes societal net benefits.

The size of net benefits, the absolute difference between total benefits and total costs, is the key to determining whether one policy is more efficient than another. That will be achieved at the point where the cost of a marginal increment in regulatory stringency is just matched by the marginal benefit. The ratio of total benefits to total costs is not a meaningful indicator of net benefits and should not be used for that purpose. It is well known that considering such ratios alone can yield misleading results.

Even when a benefit or cost cannot be expressed in monetary units, you should still try to measure it in terms of its physical units, and if it is not possible to measure the physical units, you should still describe the benefit or cost qualitatively. When important benefits and costs cannot be expressed in monetary units, BCA is less useful, and it can even be misleading, because the calculation of net benefits in such cases does not provide a full evaluation of all relevant benefits and costs.

You should exercise professional judgment in identifying the importance of non-quantifiable factors, where they exist, and assess as best you can how they might change the ranking of alternatives based on estimated net benefits. Non-quantifiable benefits or costs may be important in tipping an analysis one way or the other, but you should not use non-quantifiables as ''trump cards,'' especially in cases where the measured net benefits overwhelmingly favor a particular alternative.

B. Cost-Effectiveness Analysis (CEA)

Cost-effectiveness analysis provides a rigorous way to identify options that achieve the most effective use of the resources available without requiring you to monetize all of the relevant benefits or costs. Generally, cost-effectiveness analysis is most helpful for comparing a set of regulatory actions with the same primary outcome (*e.g.*, an increase in the acres of wetlands protected) or multiple outcomes that can be integrated into a single numerical index (*e.g.*, units of health improvement).

Cost-effectiveness results based on averages need to be treated with great care. They suffer from the same drawbacks as benefit-cost ratios. The alternative that exhibits the smallest cost-effectiveness ratio may not be the one that maximizes net benefits, just as the alternative with the highest benefit-cost ratio is not always the one that maximizes net benefits. Incremental cost-effectiveness analysis (discussed below) can help to avoid mistakes that can occur when policy choices are based on average cost-effectiveness.

CEA can also be misleading when the ''effectiveness'' measure does not weight appropriately the consequences of each of the alternatives. For example, when effectiveness is measured in tons of reduced pollutant emissions, cost-effectiveness estimates will be misleading unless the reduced emissions of diverse pollutants result in the same health and environmental benefits.

When you have identified a range of alternatives (*e.g.*, different levels of stringency), you should determine the cost-effectiveness of each option compared with the baseline as well as its incremental cost-effectiveness compared with successively more stringent requirements. Ideally, your CEA would present an array of cost-effectiveness estimates that would allow comparison across different alternatives. However, analyzing all possible combinations is not practical where there are many options (including possible interaction effects). In these cases, you should use your judgment to choose reasonable alternatives for careful consideration.

Accuracy of CEA depends on the consistency of analysis across a diverse set of possible regulatory actions. To achieve consistency, you need to construct very carefully the two key components of any CEA: The cost and the ''effectiveness'' or performance measures for the alternative policy options.

With regard to measuring costs, you should be sure to include all the relevant costs to society—whether public or private. Rulemakings may also yield cost savings (*e.g.*, energy savings associated with new technologies). The numerator in the cost-effectiveness ratio should reflect net costs, defined as the gross cost incurred in meeting the requirements (sometimes called ''total'' costs) minus any cost savings.

Where regulation may yield several different beneficial outcomes, a cost-effectiveness comparison becomes more difficult to interpret because there is more than one measure of effectiveness to incorporate in the analysis. To arrive at a single measure you will need to weigh the value of disparate benefit categories, but this computation raises some of the same difficulties you will encounter in BCA. If you can assign a reasonable monetary value to all of the regulation's different benefits, then you should do so, but in that case you will be doing BCA not CEA.

When you can estimate the monetary value of some but not all of the ancillary benefits of a regulation, but cannot assign a monetary value to the primary measure of effectiveness, you should subtract the monetary estimate of the ancillary benefits from the gross cost estimate to yield an estimated net cost. This net cost estimate for the rule may turn out to be negative—that is, the other benefits exceed the cost of the rule. If you are unable to estimate the value of

some of the ancillary benefits, the cost-effectiveness ratio will be overstated, and this should be acknowledged in your analysis. CEA does not yield an unambiguous choice when there are benefits that have not been incorporated in the net cost estimates.

You also may use CEA to compare regulatory alternatives in cases where the statute specifies the level of benefits to be achieved.

C. The Effectiveness Metric for Public Health and Safety Rulemakings

The validity of cost-effectiveness analysis depends on the application of appropriate ''effectiveness'' or performance measures that permit comparison of the regulatory options being considered. Agencies currently use a variety of methods for determining effectiveness, including number of lives saved, number of equivalent lives saved, and number of quality-adjusted life years saved. It is difficult for OMB to draw meaningful cost-effectiveness comparisons between rulemakings that employ different cost-effectiveness measurements. As a result, agencies should provide OMB with the underlying data, including mortality and morbidity data, the age distribution of the affected population, and the severity and duration of disease conditions or trauma, so that OMB can make apples-to-apples comparisons between rulemakings that employ different measures.

D. Evaluating Distributional Effects

Both benefit-cost analysis and cost-effectiveness analysis tend to focus on economic efficiency. Decision-makers may desire (or be required) to consider other values as well such as fairness. Your regulatory analysis should provide a separate description of distributional effects (*i.e.*, how both benefits and costs are distributed among sub-populations of particular concern) so that decisionmakers can properly consider them along with the effects on economic efficiency. E.O. 12866 authorizes this approach. The presentation of distributional effects is especially important when you have reason to believe that there will be significant disparities in how your regulatory actions may affect different groups of people. Effects that fall most heavily on those least able to bear the cost should be highlighted for policymakers' attention. Actions that benefit small groups at the expense of the larger public also deserve special scrutiny.

IV. Identifying and Measuring Benefits and Costs

This Section provides guidelines for your preparation of the benefit and cost estimates required by Executive Order No. 12866 and the ''Regulatory Right-to-Know Act.'' The preliminary analysis described in Sections I, II and III will help you identify a workable number of alternatives for consideration in your analysis and an appropriate analytical approach to use.

A. How To Develop a Baseline

1. General Issues

You need to measure the benefits and costs of a rule against a baseline. This baseline should be the best assessment of the way the world would look absent the proposed action. The choice of a proper baseline may require consideration of a wide range of potential factors, including:

- Evolution of the market,
- Changes in external factors affecting expected benefits and costs,
- Changes in regulations promulgated by the agency or other government entities, and the degree of compliance by regulated entities with other regulations.

You may often find it reasonable to forecast that the world absent the regulation will resemble the present. If this is the case, however, your baseline should reflect the future effect of current programs and policies. For review of an existing regulation, a baseline assuming ''no change'' in the regulatory program generally provides an appropriate basis for evaluating reasonable regulatory alternatives. When more than one baseline is reasonable and the choice of baseline will significantly affect estimated benefits and costs, you should consider measuring benefits and costs against alternative baselines. In doing so you can analyze the effects on benefits and costs of making different assumptions about other agencies' regulations, or the degree of compliance with your own existing rules. In all cases, you must evaluate benefits and costs against the same baseline. You should also discuss the reasonableness of the baselines used in these sensitivity analyses.

EPA's 1998 final PCB disposal rule provides a good example. EPA used several alternative baselines, each reflecting a different interpretation of existing regulatory requirements. In particular, one baseline reflected a literal interpretation of EPA's 1979 rule and another the actual implementation of that rule in the year immediately preceding the 1998 revision. The use of multiple baselines illustrated the substantial effect changes in EPA's implementation policy could have on the cost of a regulatory program. In the years after EPA adopted the 1979 PCB disposal rule, changes in EPA policy—especially allowing the disposal of automobile ''shredder fluff'' in municipal landfills—reduced the cost of the program by more than $500 million per year.

In some cases, substantial portions of a rule may simply restate statutory requirements that would be self-implementing even in the absence of the regulatory action. In these cases, you should use a pre-statute baseline. If you are able to separate out those areas where the agency has discretion, you may also use a post-statute baseline to evaluate the discretionary elements of the action.

2. Evaluation of Alternatives

You should decide on and describe the number and choice of alternatives available to you and discuss the reasons for your choice. Alternatives that rely on incentives and offer increased flexibility are often more cost-effective than more prescriptive approaches. For example, user fees and information dissemination may be good alternatives to direct command-and-control regulation. Within a command-and-control regulatory program, performance-based standards generally offer advantages over standards specifying design, behavior, or manner of compliance.

You should carefully consider all appropriate alternatives for the key attributes or provisions of the rule. Section II above outlines examples of appropriate alternatives.

Where there is a ''continuum'' of alternatives for a standard (for example, the level of stringency), you should generally analyze at least three options:

- The option serving as a focus for the Agency or program office regulatory initiative;
- A more stringent option that achieves additional benefits (and presumably costs more) beyond those realized by the preferred option; and
- A less stringent option that costs less (and presumably generates fewer benefits) than the preferred option.

You should choose options that are reasonable alternatives deserving careful consideration. In some cases, the regulatory program will focus on an option that is near or at the limit of technical feasibility or that fully achieves the objectives of the regulation. In these cases, the analysis would not need to examine a more stringent option. For each of the options analyzed, you should compare the anticipated benefits to the corresponding costs. It is not adequate to simply compare the Agency's preferred option to a ''do nothing'' or ''status quo'' option.

Whenever you can compare the benefits and costs of alternative options, you should present them in terms of both total and incremental benefits and costs. You must measure total benefits and costs against the same baseline. By contrast, you should present incremental benefits and costs as differences from the corresponding estimates associated with the next less-stringent alternative.[17] It is important to emphasize incremental effects are simply differences between successively more stringent alternatives.

In some cases, you may decide to analyze a wide array of options. For example, DOE's 1998 rule setting new energy efficiency standards for refrigerators and freezers analyzed a large number of options and produced a rich amount of information on their relative effects. This analysis—examining more than 20 alternative performance standards for one class of refrigerators with top-mounted freezers—enabled DOE to select an option that produced $200 more in net benefits per refrigerator than the least attractive option.

You should analyze the benefits and costs of different regulatory provisions separately when a rule includes a number of distinct provisions. If the existence of one provision affects the benefits or costs arising from another provision, the analysis becomes more complicated, but the need to examine provisions separately remains. In this case, you should evaluate each specific provision by determining the net benefits of the proposed regulation with and without it.

[17] For the least stringent alternative, you should estimate the incremental benefits and costs relative to the baseline. Thus, for this alternative, the incremental effects would be the same as the corresponding totals.

Analyzing all possible combinations of provisions in this way is impractical if their number is large and interaction effects are widespread. You need to use judgment to select the most significant or relevant provisions for such analysis.

You should also discuss the statutory requirements that affect the selection of regulatory approaches. If legal constraints prevent the selection of a regulatory action that best satisfies the philosophy and principles of Executive Order No. 12866, you should identify these constraints and estimate their opportunity cost.

B. How To Develop Benefit and Cost Estimates

1. Some General Considerations

You should discuss the expected benefits and costs of the selected regulatory option and any reasonable alternatives for each rule. How is the proposed action expected to provide the anticipated benefits and costs? What are the monetized values of the potential real incremental benefits and costs to society? To present your results, you should:

- Include separate schedules of the monetized benefits and costs that show the type and timing of benefits and costs and express the estimates in this table in constant, undiscounted dollars (for more on discounting see part C below).
- List the benefits and costs you can quantify, but cannot monetize, including their timing.
- Describe benefits and costs you cannot quantify.
- Identify or cross-reference the data or studies on which you base the benefit and cost estimates.

Similarly, you should discuss the expected cost of the selected regulatory option and any reasonable alternatives.

When benefit and cost estimates are uncertain (for more on this see part D below):

- You should calculate benefits (including benefits of risk reductions) and costs that reflect the full probability distribution of potential consequences. Where possible, present probability distributions of benefits and include the upper and lower bound estimates as complements to central tendency and other estimates.
- If fundamental scientific disagreement or lack of knowledge prevents construction of a scientifically defensible probability distribution, you should describe benefits under plausible assumptions and characterize the evidence underlying each alternative.

2. The Key Concepts Needed To Estimate Benefits and Costs

''Opportunity cost'' is the appropriate concept for valuing both benefits and costs. The principle of ''willingness-to-pay'' (WTP) captures the notion of opportunity cost by measuring what individuals are willing to forgo to enjoy a particular benefit. In general, economists tend to view WTP as the most appropriate measure of opportunity cost, but an individual's ''willingness-to-accept'' (WTA) compensation for not receiving the improvement can also provide a valid measure of opportunity cost. WTP and WTA are comparable measures when the change being evaluated is small and especially where there are reasonably close substitutes available. WTP is generally considered to be more readily measurable and to provide a more conservative measure of benefits. Adoption of WTP as the measure of value implies that individual preferences of the affected population should be a guiding factor in the regulatory decision and that the existing distribution of income is acceptable.

Market prices provide the richest data for estimating benefits based on willingness-to-pay if the goods and services affected by the regulation trade in well-functioning free markets. The opportunity cost of an alternative includes the value of the benefits forgone as a result of choosing that alternative. The opportunity cost of banning a product—a drug, food additive, or hazardous chemical—is the forgone net benefit (*i.e.*, lost consumer and producer surplus [18]) of that product, taking into account the mitigating effects of potential substitutes. The use of any resource has an opportunity cost regardless of whether the resource is already owned or has to be purchased. That opportunity cost is equal to the net benefit the resource would have provided in the absence of the requirement. For example, if regulation of an industrial plant affects the use of additional land or buildings within the existing plant boundary, the cost analysis should include the opportunity cost of using the additional land or facilities. To the extent possible, you should monetize any such forgone benefits and add them to the other costs of that alternative. You should also try to monetize any costs averted as a result of an alternative and either add it to the benefits or subtract it from the costs of that alternative.

Estimating benefits and costs when market prices are hard to measure or markets do not exist is more difficult. In these cases, regulatory analysts need to develop appropriate proxies that simulate market exchange. Estimates of willingness-to-pay based on observable and replicable behavior generally are the most reliable. As one example, analysts sometimes use ''hedonic price equations'' based on multiple regression analysis of market behavior to simulate market prices for the commodity of interest.[19] Going through the analytical process of deriving benefit estimates by simulating markets may also suggest alternative regulatory strategies that create such markets.

Other approaches may be necessary when a commodity is not directly or indirectly traded in markets. Valuation estimates developed using these approaches are less certain than estimates derived from market transactions or based on behavior that is observable and replicable. While innovative estimation methods are sometimes necessary, they increase the need for quality control to ensure that estimates conform closely to what would be observed if markets did exist.

Ultimately, the method selected to develop a monetized estimate should focus on a value for the specific attribute or end-point of interest (for example, lost school-days). As a cautionary note, the transfer of a valuation estimate from an unrelated context (say, for example, the valuation of lost work-days from labor market studies) as a measure of the value of the attribute (lost school-days) may yield an incorrect benefits estimate.

You also need to guard against double-counting, since some attributes are embedded in other broader measures. For example, when a regulation improves the quality of the environment in a community, the value of real estate in the community generally rises to reflect the greater attractiveness of living in a better environment. Simply adding the increase in property values to the estimated value of improved public health would be double counting if the increase in property values reflects the improvement in public health. To avoid this problem you should separate the embedded effects on the value of property arising from improved public health. At the same time, of course, valuation estimates that fail to incorporate the consequence of land use changes will not capture the full effects of regulation.

3. How To Use Market Data Directly

Economists ordinarily consider market prices as the most accurate measure of the value of goods and services to society. In some instances, however, market prices may not reflect the true value of goods and services. If a regulation involves changes to goods or services where the market price is not a good measure of the value to society, you should use an estimate that reflects the true value to society (often called the ''shadow price''). For example, suppose a particular air pollutant damages crops. One of the benefits of controlling that pollutant is the value of the increase in crop yield as a result of the controls. That value is typically measured by the price of the crop. If the price is held above the market price by a government program that affects supply, however, a value estimate based on this price would overstate the true benefits of controlling the pollutant. In this case, you should calculate the value to society of the increase in crop yields by estimating the

[18] Consumers' surplus is the difference between what a consumer pays for a unit of a good and the maximum amount the consumer would be willing to pay for that unit. It is measured by the area between the price and the demand curve for that unit. Producers' surplus is the difference between the amount a producer is paid for a unit of a good and the minimum amount the producer would accept to supply that unit. It is measured by the area between the price and the supply curve for that unit.

[19] The hedonic technique allows analysts to develop an estimate of the price for specific attributes associated with a product. For example, houses are a product characterized by a variety of attributes including the number of rooms, total floor area, and type of heating and cooling. If there are enough data on transactions in the housing market, it is possible to develop an estimate of the implicit price for specific attributes, such as the implicit price of an additional bathroom or for central air conditioning. This technique can be extended, as well, to develop an estimate for the implicit price of public goods that are not directly traded in markets. For example, the analyst can develop implicit price estimates for public goods like air quality and access to public parks by adding measures for these attributes to the hedonic price equation for housing.

shadow price, which reflects the value to society of the marginal use of the crop. If the marginal use is for exports, you should use the world price. If the marginal use is to add to very large surplus stockpiles, you should use the value of the last units released from storage minus storage cost. If stockpiles are large and growing, the shadow price may be low or even negative.

4. Indirect Uses of Market Data

Some benefits or costs correspond to goods or services that are indirectly traded in the marketplace. Their value is reflected in the prices of related goods that are directly traded. Examples include reductions in health and safety risks, the use-values of environmental amenities (for example, recreational fishing or hiking and camping), and the value of improved scenic visibility. You should use willingness-to-pay measures as the basis for estimating the monetary value of such indirectly traded goods. When practical obstacles prevent the use of direct ''revealed preference'' methods based on actual market behavior to measure willingness-to-pay, you may consider the use of alternative ''stated preference'' methods based on survey techniques. As discussed below, you may use alternative methods where there are practical obstacles to the accurate application of direct willingness-to-pay methodologies.

A variety of methods have been developed for estimating indirectly traded goods or services. Examples include estimates of the value of environmental amenities derived from travel-cost studies, hedonic price models that measure differences or changes in the value of land, and statistical studies of occupational-risk premiums in wage rates. Under each of these methods, care is needed in designing protocols for reliably estimating the value of these attributes. For example, the use of occupational-risk premiums can be a source of bias because the risks, when recognized, may be voluntarily rather than involuntarily assumed,[20] and the sample of individuals upon which premium estimates are based may be skewed toward more risk-tolerant people.

Many goods that are affected by regulation—such as preserving environmental or cultural amenities—are not traded directly in markets. These ''non-market'' values arise both from use and non-use. Estimation of these values is difficult because of the absence of an organized market. However, overlooking or ignoring these values in your regulatory analysis may significantly understate the benefits of regulatory actions.

a. Use Values—the value an individual derives from directly using the resource now (or in the future). Use values are associated with activities such as swimming, hunting, and hiking where the individual comes into direct contact with the environment. These values also include commercial uses of natural resources, such as fishing, and consumptive uses, such as clean air and drinking water.

[20] Distinctions between ''voluntary'' and ''involuntary'' are arbitrary and should be treated with care. These terms are merely a proxy for differences in the cost of avoiding risks.

b. Nonuse Values—the value an individual places on an environmental resource even though the individual will not use the resources now or in the future. Non-use value includes bequest, existence and option values.

Use values are typically estimated through ''revealed'' preference models, which rely on observed behavior. It is important that you utilize revealed preference models that adhere to economic criteria that are consistent with utility maximizing behavior [example of RUM study]. Examining averting or defensive expenditures (as distinct from avoided cost of compliance with other regulatory requirements) is another way to estimate use values. This approach may reveal a minimum willingness to pay, particularly if there is reason to believe the market for averting behavior is not in equilibrium.

5. Contingent Valuation

Contingent valuation (CV) methods have become increasingly common for estimating indirectly traded benefits. However, the reliance of these methods on stated preferences regarding hypothetical scenarios and the complexities of the goods being valued by this technique raise issues about its accuracy in estimating willingness to pay compared to methods based on (indirect) revealed preferences. Accordingly, value estimates derived from contingent-valuation studies require greater analytical care than studies based on observable behavior. For example, the contingent valuation instrument must portray a realistic choice situation for respondents—where the hypothetical choice situation corresponds closely with the policy context to which the estimates will be applied. Below we provide a more complete list of important criteria that affect the reliability of results from contingent valuation surveys. The practice of contingent valuation is rapidly evolving, and agencies relying upon this tool for valuation should judge the reliability of their estimates using this technique in light of advances in the state of the art.

Some types of goods, such as preserving environmental or cultural amenities apart from their use and direct enjoyment by people, are not traded directly or indirectly in markets. The practical obstacles to accurate measurement are similar to (but generally more severe than) those arising with respect to indirectly traded goods and services, principally because there are no related market transactions to provide data for willingness-to-pay estimates.

For many of these goods, particularly goods providing a substantial ''nonuse'' component of value, contingent-valuation methods may provide the only analytical approaches currently available for estimating values. The absence of observable and replicable behavior with respect to the good or service, combined with the complex and often unfamiliar nature of the goods being valued, argues for great care in the design and execution of surveys, rigorous analysis of the results, and a full characterization of the uncertainties in the estimates to meet best practices in the use of this method. Current ''best practices'' for CV surveys include the following:

Sampling, etc.

- Probability sampling: this usually requires the guidance of a professional sampling statistician;
- Low non-response rate: high non-response rates would make the results unreliable;
- Personal interview: face-to-face and telephone interviews may elicit more reliable information.

Survey Instrument Design

- Accurate description: adequate information must be provided to respondents about the good or amenity they are being asked to value;
- Reminder of substitute commodities: respondents must be reminded of substitute commodities, and this reminder should be introduced forcefully and directly prior to the main valuation question;
- Reminder of alternative expenditure possibilities: respondents must be reminded that their willingness to pay would reduce their expenditures for other goods;
- Deflection of transaction value: the survey should be designed to deflect the general ''warm glow'' of giving or a particular dislike of the source of the problem being addressed.

Transparency and Replicability of Results

- Reporting: CV studies should make clear the definition of population sampled, sampling frame used, overall sample non-response rate, and item non-response rate on all important questions; the report should also include the exact wording and sequence of questionnaire and other communications to respondents;
- Data quality: special care should be taken to ensure compliance with OMB's ''Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies' (''data quality guidelines'') *http://www.whitehouse.gov/omb/fedreg/reproducible.html;*
- Since there is no economic theory that can describe hypothetical behavior, it is important to assure the respondents that their decisions are consequential and may influence policy.

As with all other estimates of benefits and costs, your CV results should be consistent with economic theory. First, as price increases and the amount of the good is held constant, the number of respondents willing to pay a particular price should fall. This is akin to negative own-price elasticity for a marketed good. Second, respondents should be willing to pay more for a larger amount (or higher quality) of the good. This is often referred to as being sensitive to scope. If your only test of consistency with economic theory is a scope test, it should be an external (split sample) test rather than an internal (within sample) test.

6. Benefit Transfer Methods

In many cases, conducting an original study may not be possible due to the time and expense involved. The alternative to an original study is the use of benefit transfer methods. Benefit transfer is defined as the practice of transferring existing estimates of

non-market values from the context of study to a new context.

Although benefit transfer offers a quick, low cost approach for establishing values for goods and attributes of goods, you should consider it as a last resort option. Several studies have documented difficulties in applying benefit transfer methods. If a benefit transfer approach is necessary, you should adopt the approach of transferring the entire demand function (referred to as benefit function transfer) rather than adopting a single point estimate (referred to as benefit point transfer). The former approach has been shown to yield more precise estimates than the latter approach.

In conducting benefit transfer, the first step is to specify the value to be estimated at the policy site. The analyst should identify the relevant measure of the policy change at this initial stage. For instance, you can derive the relevant willingness-to-pay measure by specifying an indirect utility function. This identification allows an analyst to ''zero in'' on key aspects of the benefit transfer.

The next step is to identify appropriate studies to conduct benefit transfer. In selecting transfer studies for either point transfers or function transfers, you should base your choices on the following criteria:

a. The selected studies should be based on adequate data, sound empirical methods and defensible empirical techniques.

b. The selected studies should document parameter estimates of the valuation function.

c. The study context and policy context should have similar populations (*e.g.*, demographic characteristics, target population size).

d. The good, and the magnitude of change in that good, should be similar in the study and policy contexts.

e. The relevant characteristics of the study and the policy contexts should be similar. For example, are they similar in the following respects?

- The reversibility of the policy change
- The degree of embedding of other values
- The order in which the good is supplied
- The functional relationship between the consumer surplus and its determinants.

f. The distribution of property rights should be similar so that the analysis uses the same welfare measure. If the property rights in the study context support the use of willingness-to-accept (WTA) measures while the rights in the policy context support the use of willingness-to-pay (WTP) measures, benefit transfer is not appropriate.

g. The availability of substitutes across study and policy contexts should be similar.

Clearly, all of these criteria are difficult to meet. However, you should attempt to satisfy as many as possible when choosing studies from the existing economic literature. In addition to the above criteria, an analyst should keep in mind some of the difficulties in transferring benefit estimates or functions from one context to another:

- Is the policy change irreversible?
- Does the order in which the good is supplied affect valuation?
- Is the embedding problem significant?
- Is the assumed functional relationship between the consumer surplus measure and its determinants explicit and appropriate?

Finally, you should not use benefit transfer in estimating benefits if:

- Resources are unique or have unique attributes.
- If the study examines a resource that is unique or has unique attributes, you should not transfer benefit estimates or functions to value a different resource and vice versa. For example, if a study values visibility improvements at the Grand Canyons, these results should not be used to value visibility improvements in urban areas.
- There are significant problems with applying an ex ante valuation estimate to an ex post policy context. If a policy yields a significant change in the attributes of the good, you should not use the study estimates to value the change using a benefit transfer approach.
- You also should not use a value developed from a study involving, small marginal changes in a policy context involving large changes in the quantity of the good.

7. Methods for Treating Nonmonetized Benefits and Costs

Sound quantitative estimates of benefits and costs are preferable to qualitative descriptions of benefits and costs to help decision-makers understand the full effects of alternative actions. Although we prefer that agencies use acceptable monetized benefit and cost estimates, we recognize that monetizing some of the effects of regulations is difficult, and even quantifying some effects may not be feasible.

a. What To Do With Benefits and Costs That Are Difficult To Monetize?

You should monetize quantitative estimates whenever possible. Use sound and defensible values or procedures to monetize costs and benefits, and ensure that key analytical assumptions are defensible. If monetization is impossible, explain why and present all available quantitative information. For example, if you can quantify, but cannot monetize, improvements in water quality and increases in fish populations resulting from water quality regulation, you can describe benefits in terms of stream miles of improved water quality for boaters and increases in game fish populations for anglers. You should describe the timing and likelihood of such effects and avoid double-counting of benefits when estimates of monetized and physical effects are mixed in the same analysis. You should also apply the discounting procedures described above to all quantified effects, whether or not you are able to monetize them.

b. What To Do With Benefits and Costs That Are Difficult To Quantify?

If you are not even able to quantify the effects, you should present any relevant quantitative information along with a description of the unquantifiable effects. Such descriptions could include ecological gains, improvements in quality of life, and aesthetic beauty. For cases in which the presence of unquantifiable benefits or costs affects a policy choice, you should provide a clear explanation of the rationale behind the choice. Such an explanation could include detailed information on the nature, timing, likelihood, location, and distribution of the unquantified benefits and costs. Also, please include a summary table that lists all the unquantifiable benefits and costs, ordered by expected magnitude, if possible.

8. Monetizing Health and Safety Benefits and Costs

We expect you to provide a benefit and cost analysis of major health and safety rulemakings in addition to a CEA. The BCA provides additional insight because (a) it provides some indication of what the public is willing to pay for improvements in health and safety and (b) it offers additional information on preferences for health using a different research design than is used in CEA. Since the health-preference methods used to support CEA and BCA have some different strengths and drawbacks, it is important that you provide decision makers with both perspectives.

In monetizing health benefits, a willingness-to-pay measure is the conceptually appropriate measure as compared to other alternatives (*e.g.*, cost of illness or lifetime earnings), in part because it attempts to capture pain and suffering and other quality-of-life effects. Using the willingness-to-pay measure for health and safety allows you to directly compare your results to the other costs and benefits in your analysis, which will also typically be based on willingness to pay.

If well-conducted, revealed-preference studies of relevant health and safety risks are available, you should consider using them in developing your monetary estimates. If appropriate revealed-preference data are not available, you may consider whether valid and relevant data from stated-preference studies are available. You will need to use your professional judgement when you are faced with limited information on revealed preference and substantial information based on stated preference studies.

A key advantage of stated-preference and health-utility methods (compared to revealed preference) is that they can be tailored in their design to address ranges of probabilities, types of health risks and specific populations affected by your rule. In many rulemakings there will be no relevant information from revealed-preference studies. In this situation you should consider commissioning a stated-preference study or using values from published stated-preference studies. For the reasons discussed in the section above IVB5, you should be cautious about using values from stated-preference studies and describe in the analysis some of the inherent drawbacks of this approach.

a. Nonfatal Health and Safety Risks

With regard to nonfatal health and safety risks, there is enormous diversity in the nature and severity of impaired health states. A minor traumatic injury that can be treated effectively in the emergency room without hospitalization or long-term care is different from a traumatic injury resulting in paraplegia. Severity differences also are important in evaluation of chronic diseases. A severe bout of bronchitis, though perhaps less frequent, is far more painful and debilitating than the more frequent bouts of

mild bronchitis. The duration of an impaired health state, which can range from a day or two to several years or even a lifetime (*e.g.*, birth defects inducing mental retardation), need to be considered carefully. Information on both the severity and duration of an impaired health state are necessary before the task of monetization can be performed.

When monetizing nonfatal health effects, it is important to consider two components: (1) The private demand for prevention of the nonfatal health effect, to be represented by the preferences of the target population at risk, and (2) the net financial externalities associated with poor health such as net changes in public medical costs and any net changes in economic production. Revealed-preference or stated-preference studies are necessary to estimate the private demand; health economics data from published sources can typically be used to estimate the financial externalities of poor health. If you use literature values to monetize nonfatal health and safety risks, it is important to make sure that the values you have selected are appropriate for the severity and duration of health effects to be addressed by your rule.

If data are not available to support monetization, you might consider an alternative approach that makes use of health-utility studies. Although the economics literature on the monetary valuation of impaired health states is growing, there is a much larger clinical literature on how patients, providers and community residents value diverse health states. This literature typically measures health utilities based on the standard gamble, the time tradeoff or the rating scale methods. This health utility information may be combined with known monetary values for well-defined health states to estimate monetary values for a wide range of health states of different severity and duration. If you use this approach, you should be careful to acknowledge your assumptions and the limitations of your estimates.

b. Premature Mortality Risks

The adoption of a monetary value for projected reductions in premature mortality is the subject of continuing research and discussion within the economics and policy analysis communities. Although there is a substantial academic literature on this topic, the methods used and resulting estimates vary substantially. The two most widely used measures consider the number of statistical lives saved and the number of expected years of life saved and their associated monetary values. Both of these measures are applicable to settings where a rule changes small probabilities of death faced by the public.

The phrase ''statistical life'' is widely used in the technical literature but it can be misleading and easily misinterpreted. Unlike an identified life, whose name and background are known (*e.g.*, a trapped coal miner or patient dying of kidney failure), a statistical life refers to the sum of risks experienced by a population. For example, if 10,000 people each face a risk of 1 in 10,000 of immediate death, one statistical life is expected to be lost. Statistical lives that are lost are real people but, given the background rate of fatal events in the population, it is not feasible to determine which actual lives will be saved or lost by a specific rule.

The monetary value of saving a statistical life (VSL) is derived by assessing the public's willingness to pay to avert one statistical fatality. The bulk of the studies in the literature, which address wage premiums for hazardous jobs, are based on revealed preference. A small but growing number of stated-preference studies have also been used to derive VSLs. The estimates of VSL in the literature vary considerably but this is not surprising because VSL is not expected to be a universal constant. Economic theory predicts that VSLs may vary in different lifesaving contexts depending upon factors such as the magnitude of the probabilities and the health preferences of the target population.

You should not use a VSL estimate without considering whether it is appropriate for the size and type of risks addressed by your rule. Studies aimed at deriving VSL values for middle-aged populations are not necessarily applicable to rules that address lifesaving among children or the elderly. Moreover, VSL values based on fatal cancers or heart attacks are not necessarily relevant to a rule that prevents fatal causes of trauma, violence, or infectious disease. If you choose to apply a VSL derived in one setting to a different setting, you should disclose the salient differences in the lifesaving contexts and, where feasible, make appropriate quantitative adjustments to the VSL value.

Since everyone is expected to die sooner or later, it has been suggested that the VSL be replaced or augmented by the monetary value of a statistical life year (VSLY). The assumption is that the public is willing to pay more money for a rule that saves an average of 10 life years per person than a rule that saves one life year per person. A key assumption implicit in this approach is that public willingness to pay for risk reduction is strictly proportional to the number of life years at risk. This may not always be the case. For example, the elderly may have substantial willingness to pay for reductions in their mortality risk precisely because they have relatively few life years remaining. Where there is good reason to believe that these values are not strictly proportional, you should attempt to develop appropriate estimates. In all instances, whether or not you are able to develop ideal estimates, agencies should consider providing estimates of both VSL and VSLY, while recognizing the developing states of knowledge in this area.

In summary, you should use valid, relevant data and methods to assign monetary values to changes in the risk of premature death, illness or injury. Some of the key issues include:

- Whether the monetary valuations have been shown to be appropriately sensitive to the scope of the health change, considering probability, severity and longevity.
- Whether the specific data and methods used for monetization are relevant to the specific health change induced by a proposed regulation.

The valuation of fatal and nonfatal risk reduction is an evolving area in terms of research design, methods and results. You should utilize valuation methods that you consider appropriate for the regulatory circumstances. You should present estimates based on alternative approaches, and if you monetize mortality risk reduction, you should do so on a consistent basis to the extent feasible. You should clearly indicate your methodology and document your choice of a particular methodology. If you use different methodologies in different rules, you should clearly disclose the fact and explain your reasons.

C. What Discount Rate To Use

Benefits and their associated costs do not always take place in the same time period, and when they do not, it is usually incorrect simply to add up all of the expected benefits or costs without taking account of when they actually occur. If benefits or costs are delayed or otherwise separated in time from each other, the difference in timing should be reflected in your analysis.

As a first step, you should present the annual time stream of benefits and costs expected to result from the rule, clearly identifying when the benefits and costs are expected to occur. The beginning point for your stream of estimates should be the year in which the final rule will begin to have effects, even if that is expected to be some time in the future. In presenting the stream of benefits and costs, it is important to measure them in constant dollars. That way you avoid the misleading effects of inflation on your estimates. If the benefits or costs are initially measured in prices reflecting expected future inflation, you can convert them to constant dollars by dividing through by an appropriate inflation index, one that corresponds to the inflation rate underlying the initial estimates of benefits or costs.

Once these preliminaries are out of the way, you can begin to adjust your estimates for differences in timing. This is a separate calculation from the adjustment needed to remove the effects of future inflation. Whether or not inflation is expected, it is generally true that the sooner benefits occur the more valuable they are. Resources that are invested will normally earn a positive return, so current consumption is more expensive than future consumption, because you are giving up that expected return when you consume today. Looking at it another way, postponed benefits have a cost because people are impatient and generally prefer present to future consumption. Also, if consumption continues to increase over time, as it has for most of U.S. history, an increment of consumption will be less valuable in the future than it would be today, because as total consumption increases, its marginal value tends to decline. These are all reasons for valuing future costs and benefits less than those occurring in the present.

A discount factor should be used to adjust the estimated costs and benefits for differences in timing . The further in the future the costs and benefits are expected to occur, the larger is this discount factor. The discount factor can be calculated given a discount rate. The formula is $1/(1+\text{the discount rate})^t$ where ''t'' measures the number of years in the future that the benefits or costs are expected to occur. Benefits or costs that have been adjusted in

this way are called discounted present values. Once the estimated benefits and costs have been discounted, they can be combined to determine the overall value of net benefits.

OMB's basic guidance on the discount rate is provided in OMB Circular A–94. This Circular states that a real discount rate of 7 percent should be used as a base-case for regulatory analysis. The 7 percent rate is an estimate of the average before-tax rate of return to private capital in the U.S. economy. It is a broad measure that reflects the returns to real estate and small business capital as well as corporate capital. It approximates the opportunity cost of capital and is the appropriate discount rate whenever the main effect of a regulation is to displace or alter the use of capital in the private sector. OMB revised Circular A–94 in 1992 after extensive internal review and following public comment. The average rate of return to capital remains near the 7 percent rate estimated in 1992. Circular A–94 also recommends using other discount rates to show the sensitivity of the estimates to the discount rate assumption.

The effects of regulation do not always fall exclusively on the allocation of capital. When regulation primarily affects private consumption (*e.g.*, through higher consumer prices for goods and services), a lower discount rate may be appropriate. The alternative most often used is called the ''social rate of time preference.'' This simply means the rate at which ''society'' discounts future consumption flows to their present value. Economic distortions, including taxes on capital, create a divergence between this social rate and the private rate of return to capital. If we take the rate that the average saver uses to discount future consumption as our measure of the social rate of time preference, then the real rate of return on long-term government debt may provide a fair approximation. This rate has averaged around 3 percent since the mid-1950s.

For regulatory analysis, you should provide estimates of net benefits using both 7 percent and 3 percent. An example of this approach is EPA's analysis of its 1998 rule setting both effluent limits for wastewater discharges and air toxic emission limits for pulp and paper mills. In this analysis, EPA developed its present discounted value estimates using real discount rates of 3 and 7 percent applied to benefit and cost streams that extended forward for 30 years. (*See* EPA, Economic Analysis, October 1997, pages 10–3 and 10–4.) You should present a similar sensitivity analysis in your own work.

In some instances, if there is reason to expect that the regulation will cause resources to be reallocated away from private investment in the corporate sector, then the opportunity cost may be appreciably greater than the 3 to 7 percent discount rate. For example, Tresch suggests that rates in the range of 10 to 25 percent may be appropriate to reflect this opportunity cost, depending on the sector affected by the regulation. If you are uncertain about the nature of the opportunity cost, then you should present benefit and cost estimates using a higher discount rate as a sensitivity analysis as well as using 3 percent and 7 percent.

Circular A–94 points out that the analytically preferred method of handling timing differences between benefits and costs would be to adjust all the benefits and costs to reflect their value in equivalent units of consumption.[21] Due to distortions in the economy such calculations require you to value the costs and benefits using shadow prices, especially for capital goods. If all costs and benefits are measured in terms of consumption equivalents, it is appropriate to discount them using the social rate of discount. Any agency that wishes to tackle this challenging analytical task should check with OMB before proceeding.

When future benefits or costs are health-related, some have questioned whether discounting is appropriate. Although some of the rationales for discounting money may not seem to be applicable to health (*e.g.*, lives saved today cannot be invested in the bank to save more lives in the future, although the resources that would have been used to save those lives can often be saved with a higher pay-off in future lives saved). However, people do prefer health gains that occur immediately to identical health gains that occur only in the future, which would justify discounting the future gains. Also, if future health gains are not discounted while future costs are, then the following perverse result occurs: an attractive investment today in future health improvement can always be made more attractive by delaying the investment. For such reasons, there is a professional consensus that future health effects, including both benefits and costs, should be discounted at the same rate as generally used in both BCA and CEA.

A common challenge in health-related analyses is to quantify the time lag between when a rule takes effect and when the resulting physical improvements in health status will be observed in the target population. In such situations, you must carefully consider the timing of health benefits before present-value calculations are performed. It is not reasonable to assume that all of the benefits of reducing chronic diseases such as cancer and cardiovascular disease will occur immediately when the rule takes effect. For rules addressing traumatic injury, this lag period may be short while for chronic diseases it may take years or even decades for a rule to induce its full beneficial effects in the target population. When a time period between exposure to a toxin and increased probability of disease is likely (*e.g.*, a so-called latency period), it is also likely that there will be a lag between exposure reduction and reduced probability of disease. This latter period has sometimes been referred to as a ''cessation lag'' and it may or may not be the same as the latency period. As a general matter, cessation lags will apply only to populations with at least some higher-level exposure (*i.e.*, before the rule takes effect). For populations with no such prior exposure, such as those born after the rule takes effect, only the latency period will be relevant.

Ideally, your exposure-risk model would allow calculation of reduced risk for each year following exposure cessation, perhaps incorporating total cumulative exposure and age at the time of exposure reduction into the calculation as well. The present value calculation of benefits could then reflect an appropriate discount factor for each year's risk reduction. Recent analyses of the cancer benefits of reducing public exposure to radon in drinking water have adopted this approach, supported by formal risk-assessment models that allow estimates of how the timing of lung cancer incidence and mortality are affected by different radon exposure levels. In many cases, you will not have the benefit of such detailed risk assessment modeling. You will need to use your professional judgement as to the average cessation lag for the chronic diseases affected by your rule. In situations where information exists on latency but not on cessation lags, it may be reasonable to use latency as a proxy for the cessation lag, unless there is reason to believe, based on data, modeling, or knowledge of the mechanism of action, that the two are different. When the average lag time between exposures and disease is unknown, a range of alternative yet plausible values for the time lag should be used in your analysis.

Special ethical considerations arise when comparing benefits and costs across generations. Although most people demonstrate in their own consumption behavior a preference for consumption now rather than in the future, it may not be appropriate for society to demonstrate a similar preference when deciding between the well-being of current and future generations. Future citizens who are affected by such choices cannot take part in making them, and today's society must act in their interest. One way to do this would be to follow the same discounting techniques described above, but to supplement the analysis with an explicit discussion of the intergenerational concerns and how they will be affected by the regulatory decision. Policymakers would be provided with additional information when the analysis covers many generations, but without changing the general approach to discounting.

Some have argued, however, that it is ethically impermissible to discount the utility of future generations. On this view, government should treat all generations equally. Even under this approach, it would still be correct to discount future costs and consumption benefits, although perhaps at a lower rate than for intragenerational analysis. There are two reasons for thinking that a nonzero discount rate is the appropriate assumption for intergenerational analysis, even when all generations are to be treated equally. First, future generations are likely to be wealthier than those currently living, so a marginal dollar of benefits or costs will be worth less to them than it would be to those alive today, at least on average. If that holds true, it is appropriate to discount future benefits and costs relative to currently consumed benefits and costs even if the welfare of future generations is not being discounted. Estimates of the discount rate

[21] A thorough discussion of this approach to discounting is provided in Robert C. Lind (ed.), Discounting for Time and Risk in Energy Policy, Baltimore: The Johns Hopkins University Press for Resources for the Future, 1982.

appropriate in this case made in the 1990s ranged from 1 to 3 percent per annum.[22]

A second reason for discounting the benefits and costs accruing to future generations at a lower rate is increased uncertainty about the appropriate value of the discount rate, the longer the horizon for the analysis. Aversion to uncertainty discourages any such long-term investments. Private market rates provide a reliable reference for determining how society values time within a generation, but for extremely long time periods no comparable private rates exist. Symmetric uncertainty would have the effect of lowering the discount factor applied to future costs and benefits. Again the reasonable range might be expanded to include rates as low as 1 percent per annum.

If you choose to use a lower discount rate for intergenerational analysis, you should still be sure to show the calculated net benefits using discount rates of 3 and 7 percent as well. Discounting is appropriate whether you are doing a BCA or a CEA. Even costs and benefits that are not expressed in monetary units should be discounted if they are separated in time. This also includes health benefits for reasons discussed above. For example, in its 1998 rule, ''Control of Emissions from Nonroad Diesel Engines,'' EPA estimated cost-effectiveness by discounting both the monetary costs and the emission reduction benefits over the useful expected life of the engines at the 7 percent real rate recommended in OMB Circular A–94.

It may be possible in some cases to avoid discounting non-monetized benefits, if the expected flow of benefits begins as soon as the cost is incurred and if it is expected to be constant over time. In such cases, annualizing the cost stream is sufficient, and further discounting of benefits is unnecessary. As an example, such an analysis might produce an estimate of the annualized cost per ton of reducing emissions of a pollutant.

D. Treatment of Uncertainty

The precise consequences (benefits and/or costs) of regulatory options are not always known for certain, but the probability of their occurrence can often be predicted. The important uncertainties connected with your regulatory decisions need to be analyzed and presented as part of the overall regulatory analysis. Your analysis of uncertainty should consider both the quantifiable risk associated with the potential outcomes of alternative regulatory actions (for example, the expected change in the distribution of automobile accidents that might result from a change in automobile safety standards) and the incomplete knowledge or uncertainty about the relevant relationships (for example, the uncertain science of how some economic activities might affect future climate change).

The treatment of uncertainty must be guided by the same principles of full disclosure and transparency that apply to other elements of your regulatory analysis. Any data and models that you use to analyze uncertainty should be fully identified. Inferences and assumptions used in your analysis should also be identified, and your analytical choices should be explicitly evaluated and adequately justified. Your presentation should explain how your analytical choices have affected your analysis.

Uncertainty arises from various and fundamentally different sources. These include the fundamental unpredictability of various natural and social phenomena, but they also include lack of data and the lack of knowledge about key relationships resulting from limitations in fundamental scientific knowledge (both social and natural). The different sources of uncertainty suggest different approaches for dealing with it. For example, when the uncertainty is due to a lack of data, you might consider deferring the decision, as an explicit regulatory alternative, pending further study to obtain sufficient data. We recognize that delaying a decision will also have costs, as will further efforts at data gathering and analysis. You will need to weigh the benefits of delay against these costs in making your decision. Formal tools for assessing the value of additional information are now well developed in the applied decision sciences and can be used to help resolve this type of complex regulatory question.

In some cases, the level of scientific uncertainty may be so large that you can only present discrete alternative scenarios without assessing the relative likelihood of each scenario quantitatively. For example, in assessing the potential outcomes of an environmental effect, there may be a limited number of scientific studies with strongly divergent results. In such cases, you might present results from a range of plausible scenarios, together with any available information that might help in qualitatively determining which scenario is most plausible.

Your analysis should include two fundamental components: A quantitative analysis characterizing the probabilities of the relevant outcomes and an assignment of economic value to the projected outcomes. It is essential that both parts be conceptually consistent. In particular, the quantitative analysis should be conducted in a way that permits it to be applied within a more general analytical framework, such as BCA. Similarly, the general framework needs to be flexible enough to incorporate the quantitative analysis without oversimplifying the results. For example, you should address explicitly the implications for benefits and costs of any probability distributions developed in your analysis.

1. Quantitative Analysis of Uncertainty

Examples of quantitative analysis, broadly defined, would include formal estimates of the probabilities of environmental damage to soil or water, the possible loss of habitat, or risks to endangered species as well as probabilities of harm to human health and safety. There are also uncertainties associated with estimates of economic benefits and costs, *e.g.*, the cost savings associated with increased energy efficiency. Your analysis should be credible, objective, realistic, and scientifically balanced. In your presentation, you should delineate its strengths along with any lingering uncertainties about its conclusions. You should describe the assumptions and the models you used and their impact on the overall analysis. You should also discuss the quality of the available data used.

As with other elements of regulatory analysis, you will need to balance thoroughness with the practical limits on your analytical capabilities. Your analysis does not have to be exhaustive, nor is it necessary to evaluate each alternative at every step. In the absence of adequate data, you will need to make assumptions. These should be clearly identified and consistent with the relevant science. Your analysis should provide sufficient information for decision-makers to grasp the degree of scientific uncertainty and the robustness of estimated probabilities, benefits, and costs to changes in key assumptions. For major rules involving threshold costs of $1 billion, you should present a formal quantitative analysis of the relevant uncertainties.

In your analysis, you should try to provide some estimate of the probability distribution of risks with and without the regulation, and you must do this for rules that exceed the $1 billion threshold. In characterizing the probability distributions quantitatively, you should provide some estimate of the central tendency (*e.g.*, mean and median) along with any other information you think will be useful such as ranges, variances, specified low-end and high-end percentile estimates, and other characteristics of the distribution.

Your estimates cannot be more precise than their most uncertain component. Thus, your analysis should report estimates in a way that reflects the degree of uncertainty and not create a false sense of precision. Your analysis should not reflect any unstated or unsupported preferences, even for such worthy objectives as protecting public health or the environment. Unstated assumptions can affect the analysis in unsuspected ways, making it difficult for decision-makers to evaluate the true magnitude of the uncertainties involved.

Acceptable Analytical Approaches: Whenever possible, you should use appropriate statistical techniques to determine a probability distribution of the relevant outcomes, and for rules that exceed the $1 billion threshold a formal quantitative analysis is required.

You may consider the following analytical approaches. They entail increasing levels of complexity:

- Disclose qualitatively the main uncertainties in each important input to the calculation of benefits and costs. These disclosures should address the uncertainties in the data as well as in the analytical results. However, major rules above the $1 billion threshold require a formal treatment.
- Use a numerical sensitivity analysis to examine how the results of your analysis vary with plausible changes in assumptions, choices of input data, and alternative analytical approaches. Sensitivity analysis is especially valuable when the information is

[22] Approaches to discounting across generations are discussed in a recent symposium volume published by Resources for the Future. Paul R. Portney and John P. Weyant (eds.), Discounting and Intergenerational Equity, Washington, DC: Resources for the Future, 1999.

lacking to carry out a formal probabilistic simulation. Sensitivity analysis can be used to find ''switch points''—critical parameter values at which estimated net benefits change sign or the low cost alternative switches. Sensitivity analysis usually proceeds by changing one variable or assumption at a time, but it can also be done by varying a combination of variables simultaneously to learn more about the robustness of your results to widespread changes. Again, however, major rules above the $1 billion threshold require a formal treatment.

- Apply a formal probabilistic analysis of the relevant uncertainties—possibly using simulation models and/or expert judgment as revealed, for example, through Delphi methods. Such a formal analytical approach is appropriate for complex rules where there are large multiple uncertainties whose analysis raises technical challenges, or where the effects cascade, and it is required for rules that exceed the $1 billion threshold. For example, in the analysis of regulations addressing air pollution, there is uncertainty about the effects of the rule on future emissions, uncertainty about how the change in emissions will affect air quality, uncertainty about how changes in air quality will affect health, and finally uncertainty about the economic and social value of the change in health outcomes. You should make a special effort to portray the probabilistic results—in graphs and/or tables—clearly and meaningfully.
- New methods may become available in the future. This document is not intended to discourage or inhibit their use, but rather to encourage and stimulate their development.

2. Assigning Economic Values to Uncertain Outcomes

Uncertainty affects the values that you assign to the costs and benefits of regulatory actions. Because the outcome of regulatory action is not certain, but is instead best represented by a probability distribution of potential outcomes, the value assigned to the expected outcome from this probability distribution may be different from that for an expected outcome of the same magnitude that is certain to occur. In the financial world, for example, riskier instruments must generally earn a higher rate of return, and investors receive a higher expected reward for bearing uncertainty. This principle can carry over to the analysis of regulations depending on who bears the uncertainties from regulatory decisions.

When reporting benefit and cost estimates, where there is a distribution of outcomes, you will often find it useful to emphasize summary statistics or figures that can be readily understood and compared to achieve the broadest public understanding of your findings. It is a common practice to compare the ''best estimates'' of both benefits and costs with those of competing alternatives. These ''best estimates'' are usually the average or the expected value of benefits and costs. Emphasis on these expected values is appropriate as long as society is ''risk neutral'' with respect to the regulatory alternatives. This, however, may not always be the case. For a risk-averse individual, the certainty equivalent of an uncertain net benefit stream is less than its expected cash value, because the uncertainty itself is valued negatively.

E. Other Key Considerations

1. Other Cost Considerations

You should include these effects in your analysis and provide estimates of their monetary values wherever possible.

- Private-sector compliance costs;
- Government administrative costs;
- Losses in consumers' or producers' surpluses;
- Discomfort or inconvenience; and
- Loss of time.

Estimates of costs should be based on credible changes in technology over time. For example, a slowing in the rate of innovation or of adoption of new technology because of delays in the regulatory approval process or the setting of more stringent standards for new facilities than existing ones may entail significant costs. On the other hand, a shift to regulatory performance standards and incentive-based policies may lead to cost-saving innovations that should be taken into account. The weight you give to a study of past rates of cost savings resulting from innovation (including ''learning curve'' effects) should depend on both their timeliness and their direct relevance to the processes affected by the regulatory alternative under consideration. In some cases agencies are limited under statute to considering only technologies that have been demonstrated to be feasible. In these situations, it may also be useful to estimate costs and cost savings assuming a wider range of technical possibilities.

Occasionally, one or more components of the analysis address cost savings to one of the parties directly affected by the rule. For example, a requirement that manufacturers reduce emissions from engines they produce may lead to technologies that improve fuel economy. These fuel savings will normally accrue to the purchasers of the engines. There is no apparent market failure with regard to the market value of fuel saved because one would expect that consumers would be willing to pay for increased fuel economy that exceeded the cost of providing it. When these cost savings are substantial, and particularly when you estimate them to be greater than the cost associated with achieving them, it is incumbent on you to demonstrate convincingly why the market has not already captured these gains. As a general matter, any costs that are averted as a result of an alternative should be monetized wherever possible and either added to the benefits or subtracted from the costs of that alternative.

2. The Difference Between Costs (or Benefits) and Transfer Payments

Distinguishing between real costs and transfer payments is an important, but sometimes difficult, problem in cost estimation. Cost and benefit estimates should reflect real resource use. Transfer payments are monetary payments from one group to another that do not affect total resources available to society. For example, a regulation that restricts the supply of a good, causing its price to rise, produces a transfer of income from buyers to sellers. The reduction in the total value of the supply of the good is a real cost to society, but the transfer of income from buyers to sellers resulting from the higher price is not. You should not include transfers in the estimates of the benefits and costs of a regulation.[23] Instead, address them in a separate discussion of the regulation's distributional effects.

Examples of transfer payments include the following:

- Scarcity rents and monopoly profits.
- Insurance payments.
- Indirect taxes and subsidies.
- Distribution expenses.

3. Alternative Assumptions

If benefit or cost estimates depend heavily on certain assumptions, you should make those assumptions explicit and carry out sensitivity analyses using plausible alternative assumptions. If the value of net benefits changes from positive to negative (or vice versa) or if the relative ranking of regulatory options changes with alternative plausible assumptions, you should conduct further analysis to determine which of the alternative assumptions is more appropriate. Because different estimation methods may have hidden assumptions, you should analyze estimation methods carefully to make any hidden assumptions explicit.

V. Specialized Analytical Requirements

In preparing analytical support for your rulemaking, you should be aware that there are a variety of analytic requirements imposed by law and Executive order. In addition to the regulatory impact analysis requirements of E.O. 12866, you should also consider whether your rule will need specialized analysis of any of the following issues.

A. Impact on Small Businesses and Other Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. chapter 6), agencies must prepare a proposed and final ''regulatory flexibility analysis'' (RFA) if the rulemaking could ''have a significant impact on a substantial number of small entities.'' Your agency should have guidelines on how to prepare an RFA and you are encouraged to consult with the Chief Counsel for Advocacy of the Small Business Administration on expectations concerning what is an adequate RFA. Executive Order 13272 (67 FR 53461, August 16, 2002) requires you to notify the Chief Counsel for Advocacy of any draft rules that might have a significant economic impact on a substantial number of small entities. E.O. 13272 also directs agencies to give every appropriate consideration to any comments provided by the Advocacy Office.

B. Analysis of Unfunded Mandates

Under the Unfunded Mandates Act (2 U.S.C. 1532), you must prepare a written statement about costs and benefits prior to issuing a proposed or final rule (for which

[23] However, transfers from the United States to other nations should be included as costs, and transfers from other nations to the United States as benefits.

your agency published a proposed rule) that may result in expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more in any one year (adjusted annually for inflation). Your analytical requirements under Executive Order 12866 are similar to the analytical requirements under this Act, and thus the same analysis may permit you to comply with both analytical requirements.

C. Information Collection, Paperwork and Recordkeeping Burdens

Under the Paperwork Reduction Act (44 U.S.C. chapter 35), you will need to consider whether your rulemaking (or other actions) will create any additional information collection, paperwork or recordkeeping burdens. These burdens are permissible only if you can justify the practical utility of the information for the implementation of your rule. OMB approval will be required of any new requirements for a collection of information imposed on 10 or more persons and a valid OMB control number must be obtained for any covered paperwork. Your agency's CIO should be able to assist you in complying with the Paperwork Reduction Act.

D. Information Quality Guidelines

Under the Information Quality Law, agency guidelines, in conformance with the OMB government-wide guidelines (67 FR 8452, February 22, 2002), have established basic quality performance goals for all information disseminated by agencies, including information disseminated in support of proposed and final rules. The data and analysis that you use to support your rule must meet these agency and OMB quality standards. Your agency's CIO should be able to assist you in assessing information quality. The Statistical and Science Policy Branch of OMB's Office of Information and Regulatory Affairs can provide you assistance.

E. Environmental Impact Statements

The National Environmental Policy Act (42 U.S.C. 4321–4347) and related statutes and executive orders require agencies to consider the environmental impacts of agency decisions, including rulemakings. An environmental impact statement must be prepared for ''major federal actions significantly affecting the quality of the human environment.'' You must complete NEPA documentation before issuing a final rule. The White House Council on Environmental Quality has issued regulations (40 CFR 1500–1508) and associated guidance for implementation of NEPA, available through CEQ's Web site (see NEPANet).

F. Impacts on Children

Under Executive Order 13045, ''Protection of Children from Environmental Health Risks and Safety Risks,'' each agency must, with respect to its rules, ''to the extent permitted by law and appropriate, and consistent with the agency's mission,'' each agency must ''address disproportionate risks to children that result from environmental health risks or safety risks.'' For any substantive rulemaking action that ''is likely to result in'' an economically significant rule that concerns ''an environmental health risk or safety risk that an agency has reason to believe may disproportionately affect children,'' the agency must provide OMB/OIRA ''an evaluation of the environmental health or safety effects of the planned regulation on children,'' as well as ''an explanation of why the planned regulation is preferable to other potentially and reasonably feasible alternatives considered by the agency.''

G. Energy Impacts

Under Executive Order 13211 (66 FR 28355, May 22, 2001), agencies are required to prepare and submit to OMB a Statement of Energy Effects for significant energy actions, to the extent permitted by law. This Statement is to include a detailed statement of ''any adverse effects on energy supply, distribution, or use (including a shortfall in supply, price increases, and increased use of foreign supplies)'' for the action and reasonable alternatives and their effects. You need to publish the Statement or a summary in the related NPRM and final rule. For further ''Guidance on Implementing E.O. 13211,'' see OMB Memorandum 01–27 (July 13, 2001), available on OMB's Web site.

VI. Accounting Statement

You need to provide an accounting statement with tables reporting benefit and cost estimates for each major final rule for your agency. You should use the guidance outlined above to report these estimates. We have included a suggested format for your consideration.

Categories of Benefits and Costs

To the extent feasible, you should quantify all potential incremental benefits and costs. You should report benefit and cost estimates within the following three categories:

- Monetized
- Quantified, but not monetized; and
- Qualitative, but not quantified.

These categories are mutually exclusive and exhaustive. Throughout the process of listing preliminary estimates of costs and benefits, agencies should avoid double-counting. This problem may arise if more than one way exists to express the same change in social welfare.

Quantifying and Monetizing Benefits and Costs

Yes, you should develop quantitative estimate and covert them to dollar amounts if possible. In many cases, quantified estimates are readily convertible, with a little effort, into dollar equivalents.

Treatment of Benefits and Costs Over Time

You should monetize and quantify effects as real, undiscounted streams of estimates for each year over the entire period for which you have estimated them. You should also annualize these same effects using real discount rates of 3 and 7 percent. The stream of annualized estimates should begin in the year the final rule is published even if the rule does not take effect immediately. Please report all monetized effects in 2000 dollars. You may convert dollars expressed in different years to 2000 dollars using the GDP deflator.

Treatment of Risk and Uncertainty

You should provide central tendency or primary estimates as well as distributions about the estimates, where such information exists. When you provide only upper and lower bounds (in addition to best estimates), you should, if possible, use the 95 and 5 percent confidence bounds. Although we encourage you to develop estimates that capture the distribution of plausible outcomes for a particular alternative, detailed reporting of such distributions is not required.

The principles of full disclosure and transparency apply to the treatment of uncertainty. Where there is significant uncertainty and the resulting inferences and/or assumptions have a critical effect on the benefit and cost estimates, you should describe the benefits and costs under plausible alternative assumptions. You may add footnotes to the table as needed to provide documentation and references, or to express important warnings.

In our discussion in Section I above, we identified some of the issues associated with developing estimates of the value of reductions in premature mortality risk. Based on this discussion, you should present alternative primary estimates where you use alternative estimates for valuing reductions in premature mortality risk.

Precision of Estimates

Reported estimates should reflect, to the extent feasible, the precision in the analysis. For example, an estimate of $220 million implies rounding to the nearest $10 million and thus a precision of ±$5 million; similarly, an estimate of $222 million implies rounding to the nearest $1 million and thus, a precision of ±$0.5 million.

Separate Reporting of Transfers

You should report transfers separately and avoid the misclassification of transfer payments as costs or benefits. Transfers occur when wealth or income is redistributed without any direct change in aggregate social welfare. To the extent that regulatory outputs reflects transfers rather than welfare gains to society, you should identify them as transfers rather than costs or benefits. You should also distinguish transfers caused by Federal budget actions—such as those stemming from a rule affecting Social Security payments—from those that involve transfers between non-governmental parties—such as monopoly rents a rule may confer on a private party. You should use as many categories as necessary to describe the major redistributive effects of a regulatory action. If transfers have significant effects in addition to distributional effects, you should evaluate them also.

Effects on State, Local, and Tribal Governments, Small Business, Wages and Economic Growth

You need to identity the portions of benefits, cost, and transfers received by State, local, and tribal governments. To the extent feasible, you also should identify the effects of the rule or program on small businesses, wages, and economic growth. Note that rules with annual costs that are less than one

billion dollars are likely to have minimal effect on economic growth.

BILLING CODE 3110–01–P

Economic and Industry Impacts	**Priority**
	1=top
Q. What might be the range of global responses (e.g., containment strategies), and what would be the resulting economic and supply chain impacts to the U.S.?	1
Q. What are the direct and indirect economic impacts of a disruption (to infrastructure) for a specified region for a given duration and intensity, by state, county, and sector of industry.	2
Q.What level of absenteeism among critical workers (such as dock workers and air traffic controller) would lead to serious economic disruptions? What is the likelihood of that level of absenteeism being reached, and how can it be prevented?	2
Q. What would be the economic effect in the U.S. if imports of live birds were prevented? How important are imports of live birds to industry output or to final consumption in the poultry sector?	3
Q. What would be the likely impact on the domestic poultry industry from bird flu? What would be the likely impact on consumers and on exports?	3
Q. Do the macroeconomic consequences differ depending on whether the human to human transmission originates in the U.S. or abroad?	3
Q. What is the likely impact of a pandemic influenza outbreak, in the absence of interventions, on the baseline levels of:	
•GDP, employment and household income (including distributional information for the latter two)	1
•Labor supply (due to illness, care giving, fear of the disease), including distributional impacts (age, region, sector, etc.) and the sensitivity of those impacts to assumed disease characteristics (e.g., age distribution of morbidity).	1
•Health care demand	1
•Health insurer outlays	2
•Health care provider finances	2
•Health care expenditures of the uninsured	2
•Financial flows to/from the U.S.	1
•Interest and exchange rates	1
•Financial instability in foreign countries	1
•Demand in various economic sectors (face-to-face services, transportation ....)	1
•Travel to and from the U.S.	1
•Travel within the U.S.	1
•Trade generally and in particular trade in 'critical' goods and services and key production inputs (we recognize all of these terms need to be defined—that's the first step)	1
•Output in 'critical' sectors such as food, healthcare, utilities, energy, banking and finance, and telecommunications, considering disruptions to labor supply and supply chains. Identifying the 'breaking point' for each critical sector would be helpful--that is, what level of disruption to a critical sector causes it to cease functioning at a minimum required level. (Analysis should include feedback effects of economic and infrastrucure disruptions on ability to contain disease spread and recover from outbreak.)	1

•Output in non-critical economic sectors.	2	
Q. What are the economic costs and health benefits of:		
•Mandatory passenger health screening at international points of entry (land, sea and air facilities separately)	1	
•Mandatory health screening at foreign ports of departure for passengers traveling to the U.S.	1	
•Restrictions on travel at international ports of entry (full ban or U.S. citizens and residents only; separately by land, sea, air)	1	
•Screening of cargo (all or targeted)	1	
•Quarantine of cargo	1	
•Screening of international cargo transportation crews (truck drivers, ship crews)	1	
•Domestic travel restrictions (in line with PCC options)	1	
•Reducing the number of international entry/exit airports (in line with PCC recommendations)	1	
•School closures (at various breadths of closure relative to outbreak area (i.e., in affected communities only? Within radius of x miles relative to identified cases? State/region-wide?)	1	
•Workplace closures (by type of workplace and breadth of closure relative to outbreak)	1	
•Maritime entry/exit procedures recommended to PCC (applying Notice of Arrival rules to all ships, health screening for all passengers and crew, restricting port access, reducing number of seaports accepting ships).	1	
•Various levels of compliance with voluntary protective measures (generic social distancing, reduction of non-essential travel...)	2	
•Changes to the priority given to (and definitions of) 'critical' sectors and occupations in vaccine distribution plans, considering different assumptions about the number of available vaccine doses?	1	Added this
•Combinations of the interventions above		
Q. How sensitive are these impacts (on baselines and due to interventions) to the key modeling assumptions (including timing of interventions)?	1	

Suggested for deletion (repeated or otherwise covered above, or not econ modeling question)

Q. What are the near-term effects on Gross Domestic Product (GDP), output and employment? What are the long-run effects?		Covered ab
Q. What percent of the workforce will have prolonged absenteeism and for what duration would that be? Can we determine the impact of paid versus unpaid absences?		Covered ab
Q. To what extent would large-scale, extended absences of air traffic controllers and dock workers disrupt supply chains and impact the U.S. economy in general?		Rephrased
Q. Which industries are the most severely affected? How does the impact on industries affect supply chain and ultimately, how does the effect on supply chain impact final demand to consumers?		Covered ab
Q. Do we expect any changes in foreign exchange rates? Will international capital fly to safe havens?		Covered ab

Q. What is the infection and morbidity distribution among the population so that we can determine civilian labor force impacts?		Covered ab
Q. How would the unemployment rate vary with the age distribution of morbidity? What are the short-term and long-term economic impacts if morbidity is concentrated among young adults, versus among the very young and very old?		Covered ab
Q. What is the impact on the travel and tourism industry?		Included in
Q. What is the impact on global and U.S. financial stability?		Covered ab
Q. Are all parts of the world affected by bird flu at the same time, or is there some understanding of how the geographical pattern may unfold?		As stated th
Q. What would be the effects on U.S. international trade and on world trade?		Covered ab
Q. What are the potential global and regional differences in response and susceptibility to disease, and 1) how may these impact the spread of disease to the U.S. population, 2) how does this affect impact to the U.S. supply chains, 3) what types of firms in what industries are impacted the most, due to absenteeism, freight disruptions, and government response strategies.		First questi
Q. Depending on the duration of the spread and severity of infection, how long can we expect an economic recovery to take?		Contained i
Q. Can we expect that the likely spread of the disease will lead to disparate regional economic impacts? Can we get a likely geographic spread of the disease in the U.S. so that we can consider regional impacts?		Covered ab
First Scenario: This would be an unconstrained scenario with people continuing to carry on their daily lives as they would without bird flu. This is, of course, an unrealistic scenario, but comparison with the second scenario, it would serve to highlight the importance of actions that families can take to lessen the severity of the disease.		This is a m
Second Scenario: This would include some of the basic social distancing measures that would be expected to be taken by households, but would <u>not</u> include the closing of schools. I think this should be categorized as the primary baseline scenario from which to estimate the impacts of policy choices.		This is a m
Third Scenario: This would include specifically the closing of schools to limit the spread of the disease. How effective would be this action?		This is a m
Fourth Scenario: This would include the government et. al. policy responses such as quarantines, anti-viral, and vaccination programs to slow the spread of the disease. How effective would this be?		This is a m
Q. How do we know the effects of social distancing? If an infected person is 3 feet away from you or 6 feet away, how does the probability of becoming infected change? How much does it change? And, how do we know that?		Epi (as in e
Q. What do the models tell would be the most effective means by which to eliminate or slow the propagation of the virus?		This is the
Q. What are impacts of uncertainties associated with differential response timing and mitigation actions?		Covered ab
Q. What is the likely impact of a pandemic influenza outbreak, in the absence of interventions, on the baseline levels of:		

•Urban transits		??
Q. How quickly will demand for health services surpass the health care infrastructures capacity?		Contained i
Q. How long would that last and would it be repeated?		
Q. How will U.S. infrastructures be impacted by a potential influenza pandemic? (Infrastructures include agriculture, food, healthcare, water and wastewater, oil and gas, electric power, banking and finance, defense industrial base, telecommunications, chemical supply chains, transportation of people and commodities.) How will these impacts affect delivery of basic services (e.g., electrical power, water, food, transportation) and affect disease spread and recovery?		Covered ab
•How much vaccine would be required to maintain a functioning infrastructure?		Contained i
•What lead times would be required to ensure that sufficient vaccines or antivirals were available		Modeling q
Q. What are the numbers, types, and locations of firms most impacted by pandemic influenza? Characterize loss of output/sales, employment, and income, by firm. What are the expected changes in regional activity and infrastructure usage due to short-run structural changes in the economy (regional infrastructure loss, regional absenteeism).		Covered ab
Potential Government Policies		
Q. What are USDA's policies to deal with Avian Flu in poultry flocks? Can the disease be contained? What are the costs and benefits associated with these policies?		Not a huma
Q. What would be the effect on transmission of restricting travel (and exit and entry screening) between affected and unaffected countries, and how effective would such measures need to be to delay spread significantly?		Covered ab
Q. If Mexico and/or Canada impose travel restrictions to and from their countries to the U.S., what would be the impact to the U.S. economy and industries and what USG policies should be activated to avoid serious disruptions?		Covered ab
Q. What are the costs and benefits associated with USG imposed social distancing measures?		Covered ab
Q. What is the best overall strategy for minimizing the impacts to human health and national economic security? A composite analysis must pull together the previous analyses' results to identify and evaluate alternative mitigation strategies that minimize human health and economic impacts in the U.S. in the event global strategies fail to contain the disease. This includes identification of regional characteristics that may influence costs and effectiveness [population density, income levels, health care system differences, transportation network characteristics] of response strategies. This also requires the assessment of a range of multiple, condition-based intervention strategies (a combination of the most effective delay and "herd immunity" tactics identified in previous questions). 		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Pre-Pandemic								
Intense Bird-Bird Transmission								
Intense Bird-Human Transmission								
Intense Human-Human Transmission (Pandemic)								
General Characteristics of the Disease								
Q. How long will the first wave of the pandemic last? How long before the second wave, and subsequent waves, if any?		Required	Needed Immediately			Epi	MIDAS initiative is testing a suite of interventions which will reduce morbidity and mortality by reducing disease transmission and dramatically change the shape of the epi curve, probably eliminating "wave effect". Assumption is that continual seeding of communities will occur until vaccine is developed.	

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. How long will it take for a pandemic to run through an urban community? How long for a rural community? Is the likely path of the disease transmission more between urban areas or between urban and rural?		Required	Needed Immediately		Hundreds of Millions $		MIDAS initiative will offer some insights, especially in "unmitigated scenario" (as worst case). Recent work in Science by Viboud et al. addresses thrid question and she can weigh in on this question if necessary.	
Q. Are there parts of the country in which it is more likely to contract the disease from poultry than from human to human transmission?								
Q. Once human-to-human pandemic influenza is established in the U.S., at what point (if any) do measures to screen travelers and cargo to prevent the introduction of the virus into the United States become counterproductive?								If strategy proves to be efficacious at significantly reducing community transmission, screening should probably continue, since issue then becomes preventing introductions to unaffected communities as long as possible. It becomes "counterproductive" if all attempts at domestic containment prove futile and an uncontrolled domestic pandemic occurs.

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. Given current preparedness/response plans, how long will it take for the pandemic to spread from the East Coast to the West Coast? Or West Coast to East? North to South? South to North? If there are differences in time, what causes the differences?								MIDAS initiative will offer insights although not with precise directionality suggested by question.
Managing the Illness								
Q. What chance is there that intensive use of antivirals combined with measures to increase social distance might contain a pandemic in its earliest stages before widespread geographic spread beyond the source area (say in SE Asia) has occurred?		Required	Needed Immediately		Billions $			Papers already published on this topic. Hatchett will suggest to MIDAS that it consider rerunning Thai model using parameters being explored in current runs.
Q. Could antivirals be used in the early stages of a national epidemic to prevent or significantly slow spread, and how might antivirals be optimally targeted to achieve this?		Required	Needed Immediately		Billions $		MIDAS effort will definitely offer insight on this question. Likely best approach is treatment/prophylaxis in affected communities with strict community containment measures.	
Q. Are measures to increase social distance likely to significantly slow the spread of pandemic influenza nationally, e.g. through quarantines, closure of schools/workplaces, cessation of mass public gatherings, restricting travel?		Required	Needed Immediately		Tens of Billions $		MIDAS effort will definitely address this question, for both voluntary and coercive restrictions.	

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. Given a limited antiviral stockpile, what is the optimal strategy for using antivirals to limit mortality, morbidity and/or hospitalizations in (a) the general population, and (b) essential workers (e.g. healthcare, emergency services)?		Required	Needed Immediately		Tens of Billions $		MIDAS effort can address a) only.	
Q. Given the delays in production, what impact is vaccine likely to have on the first or second waves of a pandemic, and how best might limited early vaccine stocks be used to minimize morbidity/mortality or limit transmission?		Required	Needed Immediately		Tens of Billions $		MIDAS is looking at second part of question. If community strategy works vaccine will be the thing that allows communities confidently to lift restrictions, so it would have a very significant impact.	
Q. Assuming vaccines and antivirals are largely ineffective, what mitigation strategies can be proposed? Which of these are most effective and what are their cascading impacts? Which would be implemented at the national, regional, or local levels?		Required	Needed Immediately		Billions $			First, even partially efficacious measures can make significant contributions. Strategy makes us rethink our understanding of value of vaccines/antivirals. If they fail completely, we are left with the social distancing strategies that are being modeled.
Q. If supplies of vaccines and antivirals are limited, how would these limited resources be used most effectively?		Required	Needed Immediately		Billions $		MIDAS can address this for varying Ro's and rates of public compliance with strategy.	
Q. What strategies and resources would be available for implementing quarantines?		Required	Needed Immediately		Tens of Billions $			

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. With the data which is likely to be available, will it be possible in real time to assess the effectiveness of interventions during a pandemic and identify threshold points at which intervention priorities would need to change (e.g. from early containment to later protection of essential services)?		Required	Needed Immediately		Tens of Billions $		MIDAS may offer insights.	Interestingly it is low virulence scenarios where the judgment calls will be hardest.
Q. Given the uncertainty in the likely (age-specific) virulence of the next pandemic virus, how do the optimal policies of antiviral use and social distance measures change as a function of virulence?		Required	Needed Immediately		Billions $			
Q. How quickly and with what geographic pattern would an uncontrolled pandemic be expected to spread globally?								
Q. Once a pandemic virus is introduced to a country, what will be the likely speed and pattern of spread to all major conurbations/population centers?								See work by Viboud et al. in recent Science.
Q. How does the total effectiveness (in terms of reductions in transmission, morbidity or mortality) of a policy of antiviral use scale with the size of the stockpile available (e.g. equivalent of treatment courses for 1, 5, 10, 25% of the population), and does the >optimal= policy change as a function of the number of doses stockpiled?							Current MIDAS modeling suggests that current stockpiles might be adequate if Ro<3.0 and strategy applied consistently with decent (60%) compliance. Cost of adding workplace prophylaxis appears to be prohibitive in all scenarios.	

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. How can the following preparedness measures at 50% and 70% efficacy minimize the number of influenza cases and ergo deaths in the event of an H5N1 pandemic from SE Asia on American soil via airports (also consider morbidity, rate of spread, rate of workforce debilitation):							MIDAS is looking at 30-60-90% compliance for isolation, quarantine, and keeping kids home. MIDAS is exploring "enhanced social distancing" which would encompass masks but not at 50%-70% parameters. Can explain at length if necessary.	
▪H5N1 vaccine (20 M doses for 10 M persons in the critical workforce) Tamiflu (20 M treatment courses) for hospitalized persons (est. 8.5 M in U.S.)							MIDAS exploring various approaches to using prepandemic vaccine at anticipated stockpile levels.	
▪N95 masks (30 M)							MIDAS exploring various approaches to using prepandemic vaccine at anticipated stockpile levels.	
▪Quarantine of confirmed cases for respiratory disease							MIDAS capable	
▪6 M treatment courses of antiviral drugs at the onset of a pandemic in the U.S. for prophylactic usage in household contacts of confirmed cases as early containment measures							MIDAS capable	
▪RØ = 2							MIDAS capable	

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. During human-to-human stage, for unvaccinated CBP Officers and TSA screeners who interact with 300-400 travelers daily, the employees have no PPE, and encounter a passenger(s) with pandemic influenza, what is the probability they will become infected and ill? (Social distancing is not an option in the work place)								
Q.What is the probability that an infected but asymptomatic CBP/TSA person will infect subsequent travelers? (Premise being they will virus shed before they know they are ill).								
Q. Same scenario as above, adding N-95 PPE for employees?								
Q. Once human-to-human pandemic influenza is established in the U.S., at what point (if any) do measures to screen travelers and cargo to prevent the introduction of the virus into the United States become counterproductive?								If strategy proves to be efficacious at significantly reducing community transmission, screening should probably continue, since issue then becomes preventing introductions to unaffected communities as long as possible. It becomes "counterproductive" if all attempts at domestic containment prove futile and an uncontrolled domestic pandemic occurs.

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. Given current preparedness/response plans, how long will it take for the pandemic to spread from the East Coast to the West Coast? Or West Coast to East? North to South? South to North? If there are differences in time, what causes the differences?								If strategy proves to be efficacious at significantly reducing community transmission, screening should probably continue, since issue then becomes preventing introductions to unaffected communities as long as possible. It becomes "counterproductive" if all attempts at domestic containment prove futile and an uncontrolled domestic pandemic occurs.
Q. What level of production and distribution of protective equipment is needed to protect health care workers? The general population?		Required	Needed Immediately		Hundreds of Millions $			
Q. Is the current capacity for the production and distribution of infection-control devices (protective equipment such as surgical masks, N95 respirators, and other protective equipment) sufficient to protect workers with high risks of exposure, such as health care workers? How about teachers, retail workers, and others in direct contact with the public while at work?		Required	Needed pre-H to H and within 6 months		Hundreds of Millions $		MIDAS effort may offer insights in this regard, if we know current production capacity.	

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. What level of supply is needed and where should the supplies be stockpiled for most effective deployment? How should we prioritize what populations receive such supplies upon deployment?		Required	Needed Immediately		Billions $			
Q. What actions (closing ports, closing schools, etc.) best slow the spread of the disease or reduce morbidity?		Required	Needed Immediately		Tens of Billions $		MIDAS initiative will provide insight.	
Q. Would closing major portions of the transportation infrastructure reduce the severity of the pandemic in terms of morbidity, mortality, and the macroeconomic impact? What are the specific impacts from disruptions to public transportation, the rail network, trucking, air transportation, and the ports?		Required	Needed Immediately		Tens of Billions $		MIDAS effort should provide insight. Likely won't affect morbidity/mortality but macroeconomic tradeoffs need to be explored, since preventing spread of disease could spare communities the imposed cost of targeted, layered containment.	
Baselines to Measure Impacts and Effectiveness								
First Scenario: This would be an unconstrained scenario with people continuing to carry on their daily lives as they would without bird flu. This is, of course, an unrealistic scenario, but comparison with the second scenario, it would serve to highlight the importance of actions that families can take to lessen the severity of the disease.							MIDAS capable.	

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Second Scenario: This would include some of the basic social distancing measures that would be expected to be taken by households, but would not include the closing of schools. I think this should be categorized as the primary baseline scenario from which to estimate the impacts of policy choices.							MIDAS capable.	
Third Scenario: This would include specifically the closing of schools to limit the spread of the disease. How effective would be this action?							Not in absence of other interventions. MIDAS has already explored closing schools as an isolated option.	
Fourth Scenario: This would include the government et. al. policy responses such as quarantines, anti-viral, and vaccination programs to slow the spread of the disease. How effective would this be?								
Q. How do we know the effects of social distancing? If an infected person is 3 feet away from you or 6 feet away, how does the probability of becoming infected change? How much does it change? And, how do we know that?								Not in absence of other interventions.
Q. What do the models tell would be the most effective means by which to eliminate or slow the propagation of the virus?		Required	Needed Immediately		Tens of Billions $		MIDAS will offer insights.	
Q. What are impacts of uncertainties associated with differential response timing and mitigation actions?		Required	Needed Immediately		Tens of Billions $		MIDAS will offer insights.	
Q. What is the likely impact of a pandemic influenza outbreak, in the absence of interventions, on the baseline levels of:		Required	Needed Immediately					

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
•GDP, employment and household income (distributional information for the last two would be very helpful)		Required	Needed Immediately				MIDAS will offer insights on possible absenteeism rates.	
•Labor supply (due to illness, care giving, fear of the disease)		Required	Needed Immediately				MIDAS will offer insights.	
•Health care demand		Required	Needed Immediately				MIDAS will offer insights on possible absenteeism rates.	
•Health insurer outlays		Required	Needed Immediately					
•Health care provider finances		Required	Needed Immediately					
•Health care expenditures of the uninsured		Required	Needed Immediately					
•Financial flows to/from the U.S.		Required	Needed Immediately					
•Financial instability in foreign countries		Required	Needed Immediately					
•Demand in various economic sectors (face-to-face services, transportation ....)		Required	Needed Immediately					
•Travel to and from the U.S.		Required	Needed Immediately					
•Travel within the U.S.		Required	Needed Immediately					
•Trade in 'critical' goods and services and key production inputs (we recognize all of these terms need to be defined—that's the first step)		Required	Needed Immediately					
Q. What are the economic costs and health benefits of (some of these overlap with the MIDAS runs and others are points being discussed in various HSC PCCs):		Required	Needed Immediately				MIDAS effort may provide input into our thinking about relative value of health screening (may increase the value)	
•Mandatory passenger health screening at international points of entry (land, sea and air facilities separately)		Required	Needed Immediately				MIDAS effort may provide input into our thinking about relative value of health screening (may increase the value)	
•Mandatory health screening at foreign ports of departure for passengers traveling to the U.S.		Required	Needed Immediately					

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
•Restrictions on travel at international ports of entry (full ban or U.S. citizens and residents only; separately by land, sea, air)		Required	Needed Immediately					
•Screening of cargo (all or targeted)		Required	Needed Immediately					
•Quarantine of cargo		Required	Needed Immediately					
•Screening of international cargo transportation crews (truck drivers, ship crews)		Required	Needed Immediately					
•Domestic travel restrictions (in line with PCC options)		Required	Needed Immediately				MIDAS effort looking at voluntary (50%) and coercive (90%) reductions in travel when performed in conjunction with targeted, layered containment.	
•Reducing the number of international entry/exit airports (in line with PCC recommendations)		Required	Needed Immediately					
•School closures (at various breadths of closure relative to outbreak area (i.e., in affected communities only? Within radius of x miles relative to identified cases? State/region-wide?)		Required	Needed Immediately				MIDAS will offer insights on area closure (when virus arrives in a community) v. reactive closure (when virus documented in each school).	
•Workplace closures (by type of workplace and breadth of closure relative to outbreak)		Required	Needed Immediately				MIDAS effort designed to explore keeping workplaces open.	
•Maritime entry/exit procedures recommended to PCC (applying Notice of Arrival rules to all ships, health screening for all passengers and crew, restricting port access, reducing number of seaports accepting ships).		Required	Needed Immediately					

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
•Various levels of compliance with voluntary protective measures (generic social distancing, reduction of non-essential travel...)		Required	Needed Immediately				MIDAS capable.	
•Urban transits		Required	Needed Immediately					
•Combinations of the interventions above		Required	Needed Immediately				MIDAS capable.	
Q. How sensitive are these impacts to the key modeling assumptions?		Required	Needed Immediately					MIDAS modelers may be able to perform sensitivity analyses to the extent possible. It's a combinatorial problem coupled with fact that interventions have interdependencies.
Economic and Industry Impacts								
Q. What would be the economic effect in the U.S. if imports of live birds were prevented? How important are imports of live birds to industry output or to final consumption in the poultry sector?	Ag	Useful, not required	Needed Immediately					
Q. What would be the likely impact on the domestic poultry industry from bird flu? What would be the likely impact on consumers and on exports?	Ag	In between	Needed Immediately

Q. What is the infection and morbidity distribution among the population so that we can determine civilian labor force impacts?	Epi/ Econ	Required	Needed Immediately					

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. How would the unemployment rate vary with the age distribution of morbidity? What are the short-term and long-term economic impacts if morbidity is concentrated among young adults, versus among the very young and very old?	Epi/ Econ	In between	Needed Immediately		Billions $			
Q. What is the impact on the travel and tourism industry?	Infra	Required	Needed pre-H to H and within 6 months		Billions $			
Q. What is the impact on global and U.S. financial stability?	Econ	Required	Needed Immediately		Tens of Billions $			
Q. Are all parts of the world affected by bird flu at the same time, or is there some understanding of how the geographical pattern may unfold?	Ag	Required	Needed Immediately		Tens of Billions $			
Q. What would be the effects on U.S. international trade and on world trade?	Econ	Required	Needed Immediately		Tens of Billions $			
Q. What might be the range of global responses (e.g., containment strategies), and what would be the resulting economic and supply chain impacts to the U.S.? What are the short-term versus long-term, permanent changes to the U.S. economy?	Econ/ Infra	Required	Needed Immediately		Billions $			
Q. What are the potential global and regional differences in response and susceptibility to disease, and 1) how may these impact the spread of disease to the U.S. population, 2) how does this affect impact to the U.S. supply chains, 3) what types of firms in what industries are impacted the most, due to absenteeism, freight disruptions, and government response strategies.	Epi/ Econ/ Infra	Required	Needed Immediately		Billions $			

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. Depending on the duration of the spread and severity of infection, how long can we expect an economic recovery to take?	Epi/ Econ	Required	Needed Immediately		Tens of Billions $			
Q. Can we expect that the likely spread of the disease will lead to disparate regional economic impacts? Can we get a likely geographic spread of the disease in the U.S. so that we can consider regional impacts?	Econ	In between	Needed pre-H to H and within 6 months					
Stability of the Critical Infrastructure								
Q. How quickly will demand for health services surpass the health care infrastructures capacity?	Epi/ Infra	Required	Needed Immediately					
Q. How long would that last and would it be repeated?	Epi/ Infra	Required	Needed Immediately					
Q. How will U.S. infrastructures be impacted by a potential influenza pandemic? (Infrastructures include agriculture, food, healthcare, water and wastewater, oil and gas, electric power, banking and finance, defense industrial base, telecommunications, chemical supply chains, transportation of people and commodities.) How will these impacts affect delivery of basic services (e.g., electrical power, water, food, transportation) and affect disease spread and recovery?	Epi/ Infra	Required	Needed Immediately		Tens of Billions $			
•How much vaccine would be required to maintain a functioning infrastructure?	Epi/ Infra	Required	Needed Immediately		Billions $			
•What lead times would be required to ensure that sufficient vaccines or antivirals were available	Epi/ Infra	Required	Needed Immediately		Billions $			

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. What are the numbers, types, and locations of firms most impacted by pandemic influenza? Characterize loss of output/sales, employment, and income, by firm. What are the expected changes in regional activity and infrastructure usage due to short-run structural changes in the economy (regional infrastructure loss, regional absenteeism).	Epi/ Econ/ Infra	In between	Needed pre-H to H and within 6 months		Billions $			
Medical								
Q. Will there be enough vaccine to keep this sector operational?	Epi/ Infra	Required	Needed Immediately		Billions $			
Q. How quickly will demand for health services surpass the health care infrastructures capacity?	Epi/ Infra	Required	Needed Immediately		Billions $			
Q. How long would that last and would it be repeated?	Epi/ Infra	Required	Needed Immediately		Billions $			
Q. What is the anticipated demand for anti-viral drugs and vaccine? Is there sufficient supply available?	Epi/ Infra	Required	Needed Immediately		Billions $			
Q. What are the effects of uncertainties in disease characteristics on response effectiveness and on economic impacts? Very high levels of uncertainty exist, particularly for disease characteristics that cannot be resolved before the virus attains human to human transmission capability.	Epi/ Infra	In between	Needed pre-H to H and within 6 months		Billions $			
Q. What is the variability in global social and medical systems, and how would this impact the spread and consequences of pandemic influenza?	Epi/ Econ	Required	Needed Immediately		Billions $			

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Food Manufacturing and Agriculture								
Q. Will there be enough vaccine to keep this sector operational?	Epi/ Infra	Required	Needed Immediately		Billions $			
Q. Does there come a point when the virus causes this sector to function at a less than required rate to provide for essential needs?	Epi/ Infra	Required	Needed Immediately		Billions $			
Q. What are the impacts on the food distribution system of a pandemic (scenario 3)?	Epi/ Infra	Required	Needed Immediately		Billions $			
Q. What are the economic impacts on the poultry industry associated with a limited HPAI outbreak (a single state outbreak that is eradicated fairly quickly), a more extensive HPAI outbreak (a multiple state outbreak that is eventually eradicated), and a human-to-human outbreak. This includes the impacts from shocks to domestic supply and export and domestic demand for poultry? We differentiate between export and domestic demand shocks because trade restrictions will affect export markets even though domestic markets may be unchanged.	Ag	In between	Needed Immediately					
Q. What are upstream and downstream economic impacts associated with each of the scenarios? This includes impacts on feed and other livestock markets?	Ag	In between	Needed Immediately					
Q. What are the government costs associated with indemnity payments for the eradication of domestic poultry? What are the government costs associated with disposal of the carcasses?	Ag	Required	Needed Immediately					

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. What are the domestic impacts of HPAI outbreaks in other countries? This includes impacts on the domestic poultry, other livestock, and feed. We have seen a recent decline in the growth of poultry exports. How much this due to HPAI is unclear.	Ag	Useful, not required	Needed Immediately					
Transportation								
Q. Will there be enough vaccine to keep this sector operational?	Epi/ Infra	Required	Needed Immediately		Billions $			
Q. Once pandemic influenza is established in the U.S., what effects will it have on the supply and demand for transportation services, and what effects will restrictions in transportation supply have on the U.S. economy?	Epi/ Infra	Required	Needed pre-H to H and within 6 months		Billions $			
Q. What critical supplies will become unavailable in certain locations because of a shortage of transportation capacity, and what can be done to mitigate those shortages?	Epi/ Infra	Required	Needed pre-H to H and within 6 months		Billions $			
Q. What effects will domestic restrictions on passenger travel and freight transportation have on the U.S. economy, or on particular regional economies?	Epi/ Econ/ Infra	Required	Needed Immediately		Billions $			
Q. At what point could the decrease in passengers cause the air carriers to cease operations? *NOTE: These include a "fear" factor that may be estimated or may require a sensitivity analysis.*	Epi/ Infra	Required	Needed pre-H to H	Operational	Billions $			These include a "fear" factor that may be estimated or may require a sensitivity analysis.
Q. What will be the economic and operational impact of travel restrictions?	Epi/ Econ/ Infra	Required	Needed pre-H to H	Strategic	Tens of Billions $			

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. How will the funneling of international flights to airports with designated CDC quarantine stations affect the aviation industry including the airports losing passengers?	Epi/ Infra	Required	Needed pre-H to H and within 6 months	Operational	Hundreds of Millions $			
Q. How will a pandemic flu affect passenger enplanements?	Epi/ Infra	Required	Needed pre-H to H and within 6 months	Strategic	Tens of Billions $			
Q. Will a decrease of passengers be relatively localized or equally distributed across the nation?	Epi/ Infra	Useful, not required	Needed after first H-H	Strategic	Billions $			
Q. How will passenger fear of contracting disease affect enplanements (i.e. severe drop-off as in SARS?)	Epi/ Infra	Required	Needed pre-H to H and within 6 months	Strategic	Tens of Billions $			
Q. What effects will restrictions on international passenger and freight transportation (adopted in response to an outbreak of pandemic influenza abroad) have on the U.S. economy?	Epi/ Infra/ Econ	In between	Needed within 6-9 months					
Q. How many hours worth of PPE will be required per FTE?	Epi/ Infra	Required	Needed pre-H to H and within 6 months	Operational	Tens of Millions $			This may be more of an operational research type of issue rather than a system modeling question
Q. What is the impact of a 48-hour isolation period for air cargo arriving from economic impacted areas?	Epi/ Econ/ Infra	Required	Needed Immediately	Operational	Hundreds of Millions $			
Q. To what degree would the population shift from common carrier (aviation, rail) to individual modes of transportation (POV)?	Epi/ Infra	Required	Needed pre-H to H and within 6 months	Strategic	Billions $			
Q. What will the duration of the pandemic be?	Epi	Required	Needed Immediately	Strategic	Tens of Billions $			

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. What effects will a pandemic influenza have on the U.S. transportation industry that endure beyond the time period of the pandemic itself, and what can be done to help the U.S. transportation system recover from these enduring effects?	Epi/ Econ/ Infra	In between	Needed pre-H to H and within 6 months		Billions $			
Energy								
Q. Is the current capacity for the production and distribution of infection-control devices (protective equipment such as surgical masks, N95 respirators, and other protective equipment)? How might such devises be deployed by government or industry to protect workers with high risks of exposure or workers to the maintenance of key infrastructures?	Epi/ Infra	Required	Needed Immediately		Tens of Billions $			
Q. Should caches of infection-control/protective equipment and supplies be stockpiled throughout the U.S. to be available for distribution in the event of a pandemic? What level of supply is needed and where should the supplies be stockpiled for most effective deployment? What role would FEMA, DOD play in such efforts? What role might the private sector play?	Epi/ Infra	Required	Needed Immediately		Billions $			

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. What are the specific impacts to the energy system from disruptions to public transportation, the rail network, trucking, air transportation, and the ports? What effects will restrictions on international freight and commodity transportation (adopted in response to an outbreak of pandemic influenza abroad) have on U.S. energy supplies.	Epi/ Infra	Required	Needed Immediately		Billions $			
Q. If pandemic influenza is established in the U.S., what effects will it have on the supply and demand for fuels including transportation fuels, home heating and cooling, industry and commercial energy demand?	Epi/ Econ/ Infra	Required	Needed Immediately					
Q. To what extent would large-scale, extended absences of dock workers from ports disrupt critical petroleum and natural energy supply chains and impact the U.S. economy in general?	Epi/ Econ/ Infra	In between	Needed pre-H to H and within 6 months		Billions $			
Q. What critical supplies will become unavailable in certain locations because of energy shortages and what can be done to mitigate those shortages? What role will FEMA and DOD play in a flu pandemic?	Epi/ Infra	In between	Needed pre-H to H and within 6 months		Billions $			
Q. With the data which is likely to be available, will it be possible to assess the capacity of the energy infrastructure to maintain needed supplies and services?	Epi/ Infra	In between	Needed pre-H to H and within 6 months		Billions $			
Q. What increased vulnerabilities to other energy related types of events (e.g. terrorist or weather-related) may be caused by pandemic flu preparation or response?	Epi/ Infra	In between	Needed pre-H to H and within 6 months		Hundreds of Millions $			

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Water, Communications, Financial								
Potential Government Policies								
Q. What are USDA's policies to deal with Avian Flu in poultry flocks? Can the disease be contained? What are the costs and benefits associated with these policies?	Ag	Required	Needed Immediately					
Q. What would be the effect on transmission of restricting travel (and exit and entry screening) between affected and unaffected countries, and how effective would such measures need to be to delay spread significantly?	Epi/ Econ/ Infra	Required	Needed Immediately					
Q. After a pandemic is declared in a foreign country, we may have 2 months to prepare. If H5N1 flu were transmitted to the U.S., what impact would deployment and distribution of new H5N1 vaccine have, assuming 70% or 90% efficacy for ablation of disease and a production and distribution rate of 4, 10, and 20 M doses per week?	Epi/ Econ/ Infra	Required	Needed Immediately					
Q. If Mexico and/or Canada impose travel restrictions to and from their countries to the U.S., what would be the impact to the U.S. economy and industries and what USG policies should be activated to avoid serious disruptions?	Epi/ Econ/ Infra	Required	Needed Immediately					
Q. What are the costs and benefits associated with USG imposed social distancing measures?	Epi/ Econ	Required	Needed Immediately					

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Model(s) Needed	Models Capable Information	Additional Comments
Q. What is the best overall strategy for minimizing the impacts to human health and national economic security? A composite analysis must pull together the previous analyses' results to identify and evaluate alternative mitigation strategies that minimize human health and economic impacts in the U.S. in the event global strategies fail to contain the disease. This includes identification of regional characteristics that may influence costs and effectiveness [population density, income levels, health care system differences, transportation network characteristics] of response strategies. This also requires the assessment of a range of multiple, condition-based intervention strategies (a combination of the most effective delay and "herd immunity" tactics identified in previous questions).	Epi/ Econ/ Infra	Required	Needed Immediately		Tens of Billions $

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Can Be Answered By: 'BOE', data, experts	Foundation For Further Analysis
Pre-Pandemic							
Q. When can we expect infected birds to appear in the U.S.?	check with DOI						
Q. If the virus is carried by migratory birds and imports of live birds, is it possible to keep these infected birds out of the country?	check with DOI						
Q. What measures should we be taking to keep infected birds from being imported?	check with DOI						
Q. What are the normal flight patterns of migratory birds? Where would they likely first appear in the U.S.? Where do they go next? Are all areas of the country likely to get inflows of migratory birds at some point, or will some areas be much less likely to get infected birds?	check with DOI					Data	Yes
Q. Is it helpful to know whether the country where the birds came from has had any cases of infection? Or do we need to trace the entire migratory path?	check with DOI						
Q. What are the types of birds that carry the virus?		Required	Needed Immediately	Strategic		Expert Judgement	Yes
Q. What is the likely proportion of birds in any given flock that might be infected?		Required	Needed Immediately	Strategic		Expert Judgement	Yes
Q. How could a person on the street tell if a bird was infected with the virus? Are there any outward symptoms?	X	Person on the street will never be able to tell.					

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Can Be Answered By: 'BOE', data, experts	Foundation For Further Analysis
Intense Bird-Bird Transmission							
Q. Do we keep track of individual groups of migratory birds?	check with DOI						
Q. Is there any way to determine whether a given flock of migratory birds has been infected?	X						
Q. Is there any way to eliminate a group of infected migratory birds before they get to the U.S. or in another country en route to the U.S.?	check with DOI/DHS						
Q. How can we target infected migratory birds after they land in the U.S.? Is this a viable strategy to slow the spread of the virus?	check with DOI						
Q. After the initial infection from migratory birds, how does the rest of the domestic poultry population become infected? Must other poultry stocks become infected from migratory birds or do the stocks inter mingle and might this be a source of the spread of the virus?	X						
Q. What are the strategies that the Department of Agriculture and the poultry industry must follow to eliminate or to slow the spread of the virus?	X						
Q. What are the costs of those strategies on the industry?		Required	Needed Immediately	Strategic	Tens of Millions $	Expert Judgement	Yes
Intense Bird-Human Transmission							
Q. Is it most likely for humans to become infected from poultry exposure? How likely is it for humans to become infected directly from migratory birds?		Useful, not required	Needed Immediately	Tactical		Expert Judgement	No
Q. What protective clothing, etc. should poultry farmers/workers have to guard against becoming infected?		Required	Needed Immediately	Operational			
Q. Are there particular states where poultry farming is concentrated, or is it more a local industry?		Required	Needed Immediately	Operational		Data	No

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Can Be Answered By: 'BOE', data, experts	Foundation For Further Analysis
Intense Human-Human Transmission (Pandemic)							
General Characteristics of the Disease							
Q. Does it matter whether the mutated virus was created in the U.S. or whether it was imported from a human host who came from abroad? Can we factor in the global variability of social and medical systems into the likely spread and consequences of a pandemic outbreak?							
Q. Is the human to human virus unique or, because it was created in different places, could there be different versions of the virus that would require different approaches/vaccines, etc.?							
Q. Can we categorize, a priori, the new virus in terms of its ease of spread, its lethality, etc. based on the biology, or must we wait for human data?							
Q. Can we determine whether the likely path of the disease will be a minimal, moderate, or worst case scenario as a function of the biology?							
Q. When would we know these things?							
Q. What information needs to get to employers and workers to help reduce the spread of the disease in the workplace?							
Q. Is there sufficient time to produce stockpiles of protective equipment and supplies to be used by the general population to reduce the spread of the disease?							
Managing the Illness							
Q. How quickly and with what geographic pattern would an uncontrolled pandemic be expected to spread globally?							
Q. Once a pandemic virus is introduced to a country, what will be the likely speed and pattern of spread to all major conurbations/population centers?							

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Can Be Answered By: 'BOE', data, experts	Foundation For Further Analysis
Q. With the data which is likely to be available, will it be possible in real time to assess the effectiveness of interventions during a pandemic and identify threshold points at which intervention priorities would need to change (e.g. from early containment to later protection of essential services)?		Required	Needed Immediately		Tens of Billions $		
Q. Given the uncertainty in the likely (age-specific) virulence of the next pandemic virus, how do the optimal policies of antiviral use and social distance measures change as a function of virulence?		Required	Needed Immediately		Billions $		
Q. What type of general guidance, technical assistance, outreach and information should be provided to employers and workers to prevent, manage, or reduce the transmission of the virus in the workplace, including for health-care workers?							
Q. Is the current capacity for the production and distribution of infection-control devices (protective equipment such as surgical masks, N95 respirators, and other protective equipment) sufficient to protect workers with high risks of exposure, such as health care workers? How about teachers, retail workers, and others in direct contact with the public while at work?							
Q. How should caches of infection-control/protective equipment and supplies be stockpiled throughout the U.S. to be available for distribution in the event of a pandemic?							
Q. Are there sufficient numbers of surgical masks available to be worn by all individuals affected by the virus in an effort to help curb its spread?							
Q. If vaccines and antivirals are largely ineffective, what mitigation strategies can be proposed?							
Baselines to Measure Impacts and Effectiveness							
Q. What are the critical elements in each of the models that will determine the basic outlines of the solution?							
Q. How should we pick a rate of infection (R0)? I ride on the bus and the subway, not to mention meetings during the day,							

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Can Be Answered By: 'BOE', data, experts	Foundation For Further Analysis
Q. How should we pick a rate of compliance for suggested social distancing? Is there any evidence on this or are we							
Q. How do we know the effects of social distancing? If an infected person is 3 feet away from you or 6 feet away, how							
Economic and Industry Impacts							
Q. Do the macroeconomic consequences differ depending on whether the human to human transmission originates in the U.S. or abroad?		Required	Needed Immediately		Billions $		
Q. Which industries are the most severely affected? How does the impact on industries affect supply chain and ultimately, how does the effect on supply chain impact final demand to consumers?		Required	Needed Immediately	Strategic		Unknown	Yes
Q. Depending on the spread of the disease in the U.S., what are the regional differences in potential impacts to industries, the supply chain, and to final demand?							
Q. Are we prepared to estimate economic impacts below the regional level, i.e., states, counties, metropolitan statistical areas, cities?							
Q. Are we prepared to estimate economic impacts below the industry level, i.e., firms and/or establishments by location?							
Q. Do we expect any changes in foreign exchange rates? Will international capital fly to safe havens?							
Q. How much different are the economic scenarios? How dependent are they on the medical scenarios?							
Q. Can we expect that the likely spread of the disease will lead to disparate regional economic impacts? Can we get a likely geographic spread of the disease in the U.S. so that we can consider regional impacts?							
Q. What is current capacity for the production and distribution of infection-control devices to protect people with high risk of exposure?							
Stability of the Critical Infrastructure							

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Can Be Answered By: 'BOE', data, experts	Foundation For Further Analysis
Q. How should we determine which sectors are critical? Essentials of life??							
Q. Can we agree that the critical sectors are 1) medical, 2) food and agriculture, 3) transportation, 4) water and waste treatment, 5) energy, 6) communications, and 7) financial?							
Medical							
Q. What are the measures of capacity in the industry? What are the number of beds, number of hospitals, etc. by state?							
Q. What is current capacity for the production and distribution of infection-control devices to protect people with high risk of exposure?							
Q. Should we be stockpiling these devices throughout the U.S. to be ready for distribution?							
Q. Is there a role for mobile health facilities?							
Food Manufacturing and Agriculture							
Q. What must be done to ensure that this does not happen?		Required	Needed Immediately	Strategic		Unknown	Yes
Q. What proportion of food supplies comes from local distributors as opposed to national distributors?		Useful, not required		Tactical		Unknown	No
Q. If consumer confidence falls, how long will it take to rebound? What alternatives are available to consumers? Historically, domestic demand for poultry has not been affected by HPAI.		Required	Needed pre-H to H and within 6 months	Strategic		Expert Judgement	Yes
Q. What is the most efficient response (e.g., culling vs. inoculation) in different disease outbreak circumstances? This includes advancing our knowledge base on disease spread and the ability to simulate the extent of outbreaks in a population of animal herds or flocks.		In between	Needed Immediately	Strategic		Data	Yes

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Can Be Answered By: 'BOE', data, experts	Foundation For Further Analysis
Q. What are the domestic impacts of HPAI outbreaks in other countries? This includes impacts on the domestic poultry, other livestock, and feed. We have seen a recent decline in the growth of poultry exports. How much this due to HPAI is unclear.		Useful, not required	Needed Immediately	Strategic		Back of the Envelope (BOE)	Yes
Transportation							
Q. What is the size of this sector in terms of employment, number of trucks (short and long haul), number of rail cars, number of planes, etc. and importance to the economy?.							
Q. What portion of each of these modes of transport carries essential food and agriculture, or medical supplies?							
Q. Will there be enough to ensure delivery of food and medical supplies?							
Q. Does there come a point when the virus causes this sector to function at a less than required rate to provide for essential needs?							
Q. What must be done to ensure that this does not happen?							
Q. Are there critical occupations such as air traffic controllers and dock workers that should be protected to ensure minimal economic impacts?							
Q. Would there be an advantage to closing major portions of the mass transportation system as one way to force social distancing?							
Q. At what point could the decrease in passengers cause the air carriers to cease operations? *Note: These include a "fear" factor that may be estimated or may require a sensitivity analysis*.		Required	Needed pre-H to H and within 6 months	Operational	Tens of Billions $		
Q. What will be the economic and operational impact of travel restrictions?		Required	Needed pre-H to H and within 6 months	Strategic	Billions $		
Q. How will the funneling of international flights to airports with designated CDC quarantine stations affect the aviation industry including the airports losing passengers?		Required	Needed pre-H to H and within 6 months	Operational	Hundreds of Millions $		

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Can Be Answered By: 'BOE', data, experts	Foundation For Further Analysis
Q. How will a pandemic flu affect passenger enplanements?		Required	Needed pre-H to H and within 6 months	Strategic	Billions $		
Q. Will a decrease of passengers be relatively localized or equally distributed across the nation?		In between	Needed pre-H to H and within 6 months	Strategic	Billions $		
Q. How will passenger fear of contracting disease affect enplanements (i.e. severe drop-off as in SARS?)		In between	Needed pre-H to H and within 6 months	Strategic	Tens of Billions $		
Q. What economic and behavioral impact will active and/or passive surveillance have on travel?		In between	Needed pre-H to H and within 6 months	Operational	Tens of Millions $		
Q. To what degree would the population shift from mass transit (aviation, rail) to individual modes of transportation (POV)?		Useful, not required	Needed pre-H to H and within 6 months	Operational	Hundreds of Millions $		
Energy							
Q. How can the USG maintain stability in the energy sector?							
Q. What would be the crisis points in energy supply disruption, e.g., breakdown of import flow of energy products into and from the Gulf Coast?							
Q. Can we identify the key Energy firms and establishments that we need to make certain have adequate inputs to production, essential workers, and means of energy delivery?							
Q. How many people are needed? How many personnel are required to perform 'essential' functions to maintain energy supplies, particularly electricity.							
Q. By energy supply source what are the key issues: coal, nuclear, electricity, natural gas, petroleum and petroleum products.							
Q. What type of general guidance, technical assistance, outreach and information should be provided to energy sector employers and workers to prevent, manage, or reduce the transmission of the virus in the workplace?							
Q. For energy sector workers what percentage of workforce can be assumed to have prolonged absenteeism, and for what average duration?							

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Can Be Answered By: 'BOE', data, experts	Foundation For Further Analysis
Q. What steps might the U.S. government take to mitigate energy supply, and delivery constraints during a pandemic flu emergency? What can be done to help the U.S. energy system recover from any potentially enduring effects?							
Q. What might the U.S. do to ensure continuing energy supplies from other countries which may be more vulnerable to a pandemic?							
Q. What are the implications of various governmental and other recommendations to the public on the U.S. economy in the near and mid-term? What can or should the government do to mitigate possible panic buying by the public in response to increasing media attention as the bird-to-bird and bird to human flu approaches the U.S.?							
Water, Communications, Financial							
Q. Will there be enough vaccine to keep these sectors operational?							
Q. What should we be concerned about for each of these sectors?							
Potential Government Policies							
Q. What types of economic preparedness plans are most effective (e.g., changes in internal and inter-firm operations), as measured by numbers of firms that survive (now and in the future) a pandemic?		In between	Needed pre-H to H and within 6 months		Billions $		
Q. What are USDA's policies to deal with Avian Flu in poultry flocks? Can the disease be contained? What are the costs and benefits associated with these policies?							

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Can Be Answered By: 'BOE', data, experts	Foundation For Further Analysis
Q. What would be the effect on transmission of restricting travel (and exit and entry screening) between affected and unaffected countries, and how effective would such measures need to be to delay spread significantly?							
Q. After a pandemic is declared in a foreign country, we may have 2 months to prepare. If H5N1 flu were transmitted to the U.S., what impact would deployment and distribution of new H5N1 vaccine have, assuming 70% or 90% efficacy for ablation of disease and a production and distribution rate of 4, 10, and 20 M doses per week?							
Q. What monetary and fiscal policies can the USG impose to help in the economic recovery?							
Q. What policies can the IMF undertake to contribute to global economic stability?							
Q. What will restrictions on domestic and international travel (passenger and freight) have on the U.S. economy and industries? What can we consider as critical supplies and what can policymakers do to ensure their delivery?							
Q. Should the USG be concerned about the possibility of a terrorist attack during this time of a weakened U.S. economy and population and what should the USG do about it?							
Q. What types of economic preparedness plans are most effective (e.g., changes in internal and inter-firm operations), as measured by numbers of firms that survive (now and in the future) a pandemic?							

		Required to Make Actionable Decisions/Policies	How Soon the Answer Will Be Needed	Strategic, Ops, or Tactical	Economic Implications	Can Be Answered By: 'BOE', data, experts	Foundation For Further Analysis
Q. What is the best overall strategy for minimizing the impacts to human health and national economic security? A composite analysis must pull together the previous analyses' results to identify and evaluate alternative mitigation strategies that minimize human health and economic impacts in the U.S. in the event global strategies fail to contain the disease. This includes identification of regional characteristics that may influence costs and effectiveness [population density, income levels, health care system differences, transportation network characteristics] of response strategies. This also requires the assessment of a range of multiple, condition-based intervention strategies (a combination of the most effective delay and "herd immunity" tactics identified in previous questions).		Required	Needed Immediately		Tens of Billions $		

Additional Comments
120 USFWS Wildlife Inspectors at 35 ports-of-entry, trained and experienced in wildlife law enforcement, smuggling techniques, and smuggling routes, to detect illegal wild bird trade.
I believe we already know much of this information. Due to antigenic drift it may not be possible to identify most likely birds.
Even experts cannot tell. That's why we ship to labs.

Additional Comments
Experts cannot tell for sure if a dead bird has AI.
Spread is usually through inter-mingling
See USDA Playbook
Odds of a human (US) of becoming infected are very small
Data is already available

All-
Today is expected to be our last meeting of the working group. The modeling questions have been prioritized and categorized. There is a planned telecon between the epi modelers to go over technical issues about the epi models. At that point, we will present a prioritized list of modeling questions to Dr. Runge for review and approval regarding the consequence of pandemic influenza based on the input of this group.

Please note the attached documents.

- The compiled Modeling Questions matrix dated today contains additions for the epidemiological modeling efforts and as such I have added a new column called "Models Capable Information". For those who submitted the epi information, please review to ensure I captured your input as I changed the verbiage slightly. If there are questions/comments, please let me know.
- The Non-Modeling Questions reflects additions by USDA including recommendations for referral to DOI for answers.
- Treasury and Commerce prioritized the economic impact questions and they are in the third matrix.
- My thanks to Jonathan Wolfson for finding information regarding OMB's regard for the valuation of life. This is the pdf file and the OMB discussion can be found on page 31.

Thanks again to our friends in Commerce for hosting most of our meetings.

Thanks much!!!
-Jenny

Rec. #	Pertinent Text	Update (February 15, 2017)
49	**DHS should, *in coordination with DOJ*, revise the National Response Plan to provide more effective coordination of the law enforcement response to a disaster by clarifying and expanding the role and mission of the Public Safety and Security support function and the Senior Federal Law Enforcement Officer.**	**ATF will *coordinate the drafting of an implementation plan for recommendations 49 through 49c*. FBI will *coordinate the drafting of an implementation plan for recommendation 49e*.** **Supporting components:** **FBI, USMS, DEA, EOUSA, CRM, BOP, OIPL, and OLC (as required)** **Update**: ATF hosted a meeting on Thursday, April 13, to discuss recommendations 49 and 49(a)-(c), concerning ESF-13 and the designation of the Senior Federal Law Enforcement Official. Attendees included representatives from FBI, USMS, DEA, OJP/BJA, BOP, and OIPL. OLC and OAG remain in the loop but were unable to attend Thursday's meeting. Working group members: • Ed Smith—USMS • Donald Augustine—DEA • Mike Metzger—DEA • Luke Ormandy—BOP • Jim Burch—OJP/BJA • Omar Vargas—OIPL • Kim Tilton—FBI • Craig Olson—FBI • Mike Bukovac—ATF • Dave Wulf--ATF • Jeff Taylor—OAG • Rosemary Hart—OLC There was general agreement with the notion that ESF-13 should serve as an umbrella organization for essentially all non-investigative law-enforcement response activities during an Incident of National Significance. Additionally, there was agreement that the

		implementation plan should ensure a strong link between ESF-13 and the SFLEO. Based upon the input received at Thursday's meeting, ATF is currently drafting Implementation plans.
49a	**Designate DOJ as the primary agency responsible for the ESF-13 Public Safety and Security function.**	
49b	**Finalize the drafting of Public Safety and Security policies and procedures.**	
49c	**Specify that the Attorney General will, in consultation with the Secretary of Homeland Security, designate the SFLEO.**	
49d	**Include a new position designated as the "Senior Civilian Representative of the Attorney General" (SCRAG).**	**Assigned to ODAG. The SCRAG position is one that was created for the purpose of coordinating law enforcement activities during a "Garden Plot" incident during which DoD personnel are called into service in support of law enforcement pursuant to the Insurrection Statutes. Implementation plan should examine whether all incidents will require a SCRAG in addition to the SFLEO.**
49e	**Require the establishment of a law enforcement coordination center within the Joint Field Office (JFO) to coordinate the Federal, State, and local law enforcement response during all types of emergencies.**	**Assigned to FBI.** **Update: Awaiting update.**
50	**DOJ should lead the development of the capability to surge Federal law enforcement resources in the immediate aftermath of a disaster. As outlined by the NRP, *law enforcement personnel should be drawn from the following sources, in this order:* 1) Civilian law enforcement and National Guard from affected State; 2) Civilian law enforcement and National Guard from other States; and 3) Civilian law enforcement from Federal agencies. To maximize the availability of law enforcement assets from each of these categories,**	**Except for 50b, FBI will *coordinate drafting of implementation plan for recommendations 50 – 50d*. 50b will be led by ODAG with (1) OLC input and (2) USMS as lead for long-term implementation efforts.** **Supporting components:** **ATF, DEA, USMS, EOUSA, CRM, BOP, OLC, JMD, OJP and OIPL** **Update: Awaiting update from FBI its tasks.**

	the following should be done: **a. DOJ should establish a program to review State and local plans for continuity of operations for law enforcement and the criminal justice system during a crisis.** **b. DOJ should develop a program to increase States' awareness of the procedures for requesting Federal law enforcement assistance under the Emergency Federal Law Enforcement Assistance Act.** **c. DOJ should lead an interagency effort to catalogue the Federal law enforcement assets within the Executive Branch.** This effort will serve as the basis for developing a database of assets available for use during an INS, in order to ensure appropriate use of all available Federal law enforcement assets. **d. DOJ and DHS should each develop, in coordination with the other, the capability to rapidly deploy a contingent of Federal law enforcement officers to prevent and respond to civil disorder.** Consistent with the principle that law enforcement is the responsibility of local and State governments, this force should deploy only in the event that State authorities request Federal assistance pursuant to the Emergency Federal Law Enforcement Assistance Act, or as otherwise directed by the President. However, the NRP should make clear that where, as in this case, the need for additional law enforcement resources is manifest and obvious, it should be the Attorney General's responsibility, after notifying the Secretary of Homeland Security, to make an offer of Federal law enforcement support to the affected Governor.	Recommendation 50b: Working group members: • Scott A. Sanders, USMS, Lead long term plan • Rosemary Hart, OLC, Lead short term plan • Fran Schmitz, ODAG, assisting both • Unknown, OJP (working with Hart on short term plan) Assignments: Sanders working on final long-term implementation plan for 50 b Hart finalizing short-term plan, drafting letter to Governors from AG detailing process for requesting assistance. Schmitz assisting as necessary. Status: Sanders has responsibility for combining both short-term and long-term plans in written form for submission. The final draft has been sent to the working group and still waiting for one of the members to reply. Hart awaiting response from OJP for final information to be included in AG letter.
51	**DOJ should develop procedures for streamlined deputization of qualified Federal law enforcement**	**Lead to USMS who will consult with OIPL, FBI, DEA, OLC, and ATF. Work should include deputization of state and local law**

	officers.	**enforcement employed by communities outside jurisdiction(s) impacted by the incident.** **Update**: Working Group members: • DEA: David Augustine 202 307-4211 • DEA: Michael Metzger 202 307-4226 • OIPL: Omar Vargas 202 514-3465 • OLC Rosemary Hart 202 514-2027 • ATF: David Wulf 202 927-7772 • ATF: Michael Bouchard 202 927-7970 • USMS: Steve Roque 202 307-9046 • USMS: Luis Caballero 202 307-9337 • USMS: Eva Gilbert 202 307-9146 • FBI: Kim Tilton The USMS has submitted its recommendation to the working group, which will meet on Tuesday, April 18, 2006 at 10:00 AM to discuss any additional recommendations and any associated pros and cons. Also discussed will be a proposed letter from the AG to the Governors that will facilitate the deputation of federal LE to enforce state laws.
52	**DOJ should, in coordination with DHS, further incorporate force protection into Federal response planning, to prevent disruption of Federal agencies' operations and to protect Federal personnel and property.**	**USMS will *coordinate the drafting of an implementation plan for recommendation 52*.** **Supporting components:** **ATF, DEA, FBI, BOP** **Update**: Working Group members: • USMS- Senior Inspector Edward Smith (856) 207-5022

		• ATF- SAC Luke Franey CIMB (202) 927 8020 • BOP- Chief Joseph Moorhead (202) 610 0596 • DEA- Deputy Chief Mike Metzger (CCCPS) (202) 307-4226 • FBI- A/ Chief Kim Tilton (CMU) (703) 632-4211 Tasks: USMS- Draft overall proposal for DOJ ATF, FBI, DEA, BOP- review, consult, collaborate regarding DOJ recommendations Current Status: Achieved general agreement on proposal outline. Agree this proposal should fall under ESF-13. Meeting held at ATF HQ on 4-13 to discuss ESF-13 integration. Final draft will be complete by 4-14 for sister agency review.
53	**DOJ should, in coordination with the Administrative Office of the U.S. Courts, develop a program to ensure the continuity of the Federal criminal justice system and to provide assistance to States in developing complementary plans.**	**EOUSA will *coordinate effort to develop plan with OIPL, OJP and CRM.***
54	**DOJ should develop plans to improve the accountability for persons under supervision by the Federal criminal justice system, and to provide assistance to States in developing complementary plans.**	**USMS lead, *in coordination with AOUSC, BOP, CRM, OIPL, and USPC*** **Update**: USMS has received input from USMS and AOUSC; is awaiting additional coordination with BOP, USPS, and OIPL.
55	**DOJ, in coordination with DHS, should establish a program to provide oversight and technical assistance for States' emergency plans for evacuating prisoners in the event of a disaster.**	**BOP lead, *in coordination with USMS and OIPL.*** **Update**: **Awaiting update.**
56	**DHS and DOJ should coordinate their respective grant**	**OJP in consultation with OIPL and ODAG.**

	and assistance funding programs to States and local governments to establish uniform standards and conditions of awards in furtherance of the above recommendations. If both departments should determine a need for legislation to remedy the disparate standards or criteria for different grant sources, OMB should consult with the departments to draft proposed legislation.	**Update: Awaiting update.**

Mike - Mark Epley and I will deal with this, but I just wanted to register my concern at the tone and level of micromanagement and attepted oversight expressed in the e-mail at the bottom of this chain.

If [redacted] shop is worried that OJP is up to no good, they should really bring that to me, and otherwise should worlk through DAAG David Hagy, the faith based POC.

This level of mistrust in the ranks can't be helping the initiative.

Thanks,

Gordon

I can't say I have a lot of faith in the Faith-based Taskforce but keep trying to be nice. My staff bears the brunt of the dealings with them but I am really tapped out by the ungratitude and the overbearing attitude. We would love to have a cordial relationship with them but I am really sick and tired of working with them and 1) not getting any credit for projects that are costing money, 2) [redacted] acting as if we work for them, and 3) always the threat of a red on the PMA agenda.

And you won't see very many emails for me like this, I prefer phone calls but we need some help. This is just one example of many we've had with the Taskforce. Be glad to have a longer conversation but would sincerely like some guidance and clarity on dealing with them.

Subject: New Orleans Conference

Michael,

I spoke with [redacted] a few days ago when [redacted] forwarded to me an invitation for [redacted] to speak at the ARC conference in New Orleans in three weeks. [redacted] was quite enthusiastic, and was able to give me some, but not all of the background of the event. I have some remaining questions about the conference, especially on funding and coordination:

1. When I came aboard a year ago, I was informed that JJ wouldn't be doing any more ARC conferences, but that there was a small budget for the Task Force (in cooperation with JJ and JJ's contractor) to put together two or perhaps three ARC conferences, so I was very surprised when I found out that JJ was in the process of putting on a conference, especially an all-expenses-paid conference. How is the New Orleans conference being funded? Is this the funding that I understand was pooled together by JJ, OJP and OVW and designated for the Task Force to do ARC training, or is it a new separate pool?

2. I'm not sure I understood her correctly, but [redacted] informed me that JJ had put together its invitee list (with input from [redacted]), and that this list includes successful grantees and earmark recipients. I had understood the purpose of the ARC conference to be to advance the Faith-Based and Community Initiative by assisting those who are unfamiliar with the grants process. Perhaps I'm misinformed, but if not, what is JJ's purpose in inviting successful and/or earmark (politically connected) grantees? Perhaps this content IS different from the other ARC conferences?

3. The Task Force, along with the New Jersey Office on Faith-Based and Community Initiatives, is jointly hosting an ARC conference later this week in Trenton. Registration for this conference has been quite popular, as are the monthly White House Faith-Based and Community Initiative grants tutorials (registrations in the hundreds). In both cases attendees pay for their own transportation and hotels, which substantially reduces the overall cost of the conferences, and yet the conferences are standing room only. According to my conversation with [redacted], less than 100 invitees are coming to the New Orleans ARC (she indicated to me that they had not been able to reach capacity and asked our office and Omar in Intergorvernmental Affairs to supply additional invitees), and all of their flight and hotel expenses are being paid for by the Department. It seems a bit incongruous for the Department to be putting on two ARC conferences in the space of a month, one with hundreds of registrants put on for a minimum of expense, the other with just a handful of hand-picked, out of town invitees, at a much greater expense, and in the middle of what is probably the most distressed area of the country (which is also probably full of new or small non-profits that could really benefit from this training and would not need to fly in).

4. Has the curriculum been updated? [redacted] mentioned that the New Orleans conference was a carbon copy of the one held last year and that the same materials were being used. In preparation for the ARC conference in Trenton later this week, Jana has worked with the contractor to update the curriculum, as several items (including a list of the federal Offices for Faith-Based and Community Initiatives and their current directors) were out of date. We want to be sure that the materials have been updated, as appropriate, and are not simply copies of the curriculum from last year.

I understand you're travelling a lot this month, but because the conference is almost upon us, would you find someone to answer these questions by the end of this week? We need to discuss these concerns as soon as possible. All options need to be on the table, including postponement of the New Orleans conference.

Thanks very much,
[redacted]

Subject: New Orleans Conference

Michael,

I spoke with [redacted] a few days ago when [redacted] forwarded to me an invitation for [redacted] to speak at the ARC conference in New Orleans in three weeks. [redacted] was quite enthusiastic, and was able to give me some, but not all of the background of the event. I have some remaining questions about the conference, especially on funding and coordination:

1. When I came aboard a year ago, I was informed that JJ wouldn't be doing any more ARC conferences, but that there was a small budget for the Task Force (in cooperation with JJ and JJ's contractor) to put together two or perhaps three ARC conferences, so I was very surprised when I found out that JJ was in the process of putting on a conference, especially an all-expenses-paid conference. How is the New Orleans conference being funded? Is this the funding that I understand was pooled together by JJ, OJP and OVW and designated for the Task Force to do ARC training, or is it a new separate pool?

2. I'm not sure I understood [redacted] correctly, but [redacted] informed me that JJ had put together its invitee list (with input from [redacted]), and that this list includes successful grantees and earmark recipients. I had understood the purpose of the ARC conference to be to advance the Faith-Based and Community Initiative by assisting those who are unfamiliar with the grants process. Perhaps I'm misinformed, but if not, what is JJ's purpose in inviting successful and/or earmark (politically connected) grantees? Perhaps this content IS different from the other ARC conferences?

3. The Task Force, along with the New Jersey Office on Faith-Based and Community Initiatives, is jointly hosting an ARC conference later this week in Trenton. Registration for this conference has been quite popular, as are the monthly White House Faith-Based and Community Initiative grants tutorials (registrations in the hundreds). In both cases attendees pay for their own transportation and hotels, which substantially reduces the overall cost of the conferences, and yet the conferences are standing room only. According to my conversation with [redacted] less than 100 invitees are coming to the New Orleans ARC ([redacted] indicated to me that they had not been able to reach capacity and asked our office and Omar in Intergorvernmental Affairs to supply additional invitees), and all of their flight and hotel expenses are being paid for by the Department. It seems a bit incongruous for the Department to be putting on two ARC conferences in the space of a month, one with hundreds of registrants put on for a minimum of expense, the other with just a handful of hand-picked, out of town invitees, at a much greater expense, and in the middle of what is probably the most distressed area of the country (which is also probably full of new or small non-profits that could really benefit from this training and would not need to fly in).

4. Has the curriculum been updated? [redacted] mentioned that the New Orleans conference was a carbon copy of the one held last year and that the same materials were being used. In preparation for the ARC conference in Trenton later this week, [redacted] has worked with the contractor to update the curriculum, as several items (including a list of the federal Offices for Faith-Based and Community Initiatives and

as several items (including a list of the federal Offices for Faith-based and Community Initiatives and their current directors) were out of date. We want to be sure that the materials have been updated, as appropriate, and are not simply copies of the curriculum from last year.

I understand you're travelling a lot this month, but because the conference is almost upon us, would you find someone to answer these questions by the end of this week? We need to discuss these concerns as soon as possible. All options need to be on the table, including postponement of the New Orleans conference.

Thanks very much,

[redacted]

Washington's Schedule:

Today's Events In Washington 44

DOJ_NMG_0026144

TERRORISM NEWS:

9/11 Victims' Family Members Testify For Defense At Moussaoui Trial. The Washington Post (4/20, A10, Markon, Dwyer, 744K) reports that family members of 9/11 victims yesterday testified on behalf of the defense at the Zacarias Moussaoui sentencing trial. "There was no talk of punishment from the witness stand, no hint of whether family members think Moussaoui should be executed for his role in the terror attacks. … But the defense is hoping that jurors got an implicit message from yesterday's testimony: that some victims think Moussaoui's life should be spared." The Post adds, "There was limited emotion, as well as a few tears, as the family members took the stand and told of their suffering but also spoke of their hope, describing how they have tried to move beyond grief and rage and get on with their lives."

The New York Times (4/20, Lewis, 1.19M) notes witness Marilynn M. Rosenthal "testified that she and her family were determined not to be 'caught up in a whirlpool of sadness and frustration and anger' over the loss of her son, Josh, who was killed at the World Trade Center." Outside the courthouse, "she criticized the Bush administration for refusing to bring to trial several people who were indisputably planners of the Sept. 11 attacks, referring to a handful of senior members of Al Qaeda who are imprisoned overseas in the secret detention system run by the Central Intelligence Agency. Mr. Moussaoui, she said, 'was a marginal figure.'"

The AP (4/20, Sniffen) also reports on the family members' testimony and adds that earlier in the day, psychiatrist Michael First testified "Moussaoui's flight instructors said that even after 57 hours of training they would not let him fly solo 'because he couldn't focus on two things at once,'" which Frist sees as a symptom of schizophrenia. "On cross-examination, prosecutor David Novak asked how Moussaoui was able to drive a car if schizophrenics cannot do two mental tasks at once. First responded that an ex-FBI agent and pilot told him that flying a plane is 'a completely different level of magnitude.'" AFP (4/20) also reports on yesterday's testimony.

Hayat Jurors Seek Material About FBI Interviews. The Los Angeles Times (4/20, Tempest, 958K) reports that the juries in the trial of Umer and Hamid Hayat "asked for supplemental material from the court Wednesday as they continued deliberations. In a possible signal that a videotaped confession by the son, Hamid Hayat, might not be considered enough evidence for a guilty verdict, jurors in that case asked if they could also consider secretly taped conversations between an FBI informant and Hayat about sending money to Pakistan." Umer Hayat's jury asked "if it could review the testimony of three FBI agents." US District Judge Garland Burrell "said he would respond to the requests this morning, but indicated that transcripts in the Umer Hayat case would not be available until Friday." The Stockton Record (4/20, Hood) adds that the Hamid Hayat jurors sent Burrell a note "late Wednesday asking whether material support includes sending money to Hamid Hayat's uncle in Pakistan, where it potentially could be transferred to an Islamic extremist group. … He initially seemed to agree with defense attorney Wazhma Mojaddidi, who said jurors should be given instructions that mirror the indictment: The charge doesn't allege the younger Hayat supported terrorism financially."

The Lodi News-Sentinel (4/20, Bohm) also reports on the jurors' requests and notes prosecutors filed a motion yesterday asking Burrell "to seal the verdicts if one jury reaches a decision while the other is still deliberating, an issue Burrell will take up Thursday. … Citing extensive media coverage, the government said…that the jurors still deliberating could overhear news of the first verdict."

US Releases List Of 558 Enemy Combatants Held In Guantanamo Bay. The AP (4/20, Fox) reports the US government "released the first list of detainees held at the Guantanamo Bay prison on Wednesday — the most extensive accounting yet of the hundreds of people held there, nearly all of them labeled enemy combatants." The Pentagon's list names 558 people and was released "in response to a Freedom of Information lawsuit by The Associated Press." Some names "are familiar, such as David Hicks, a Muslim from Australia charged with fighting U.S. and coalition forces in Afghanistan. Lesser-known detainees on the list include Muhammed al-Qahtani, a Saudi who reportedly was supposed to be the 20th hijacker in the Sept. 11, 2001, attacks. Although his presence at Guantanamo had been reported, the military had previously declined to

DOJ_NMG_0026145

confirm it." Others, "such as an Afghan identified only as 'Commander Chaman,' remain mysterious." The detainees "on the list came from 41 countries. The largest number -- 132 -- came from Saudi Arabia. Afghanistan followed with 125, then Yemen with 107."

Trial Begins In 9/11-Related Perjury Case. The AP (4/20, Neumeister) reports that in the first day of San Diego State University student Osama Awadallah's perjury trial yesterday, Assistant US Attorney Brendan McGuire said in his opening statement that Awadallah "hampered the investigation into the Sept. 11 terrorist attacks by lying about his associations with one of two hijackers." Awadallah lawyer Jesse Berman "conceded his client denied…that he had written the name of a hijacker in a school exam book," but Berman said Awadallah "realized his mistake and fixed it five days later." The AP notes that the case "was tossed out in 2002 by Judge Shira Scheindlin, who said Awadallah's consent to FBI interviews and a lie detector test…resulted from 'duress or coercion.' Two perjury charges were reinstated by an appeals court." Testifying yesterday, FBI Special Agent Jacqueline Maguire "said investigators were anxious to learn as much as they could about the hijackers as quickly as possible to see if there were new threats. As she spoke, photographs of several hijackers in Western-style clothing and then clothing from their Middle Eastern homelands was displayed on a large screen for the jury."

The New York Times (4/20, Preston, 1.19M) adds, "The trial tests the government's practice of long detention of witnesses in terror cases. … After an interview with F.B.I. agents, Mr. Awadallah was detained as a material witness on Sept. 21. Barred from communicating with his family, he was held in solitary confinement and denied his Muslim diet, Mr. Berman said. Over the next three weeks, he was taken from San Diego through a county jail in San Bernardino, to Oklahoma City and then to the federal detention center in Manhattan. … 'This is the type of torture, for lack of a better word, that he had to endure for 20 days,' Mr. Berman said.

Rep Andrews Says US Is In Constitutional Crisis. The Philadelphia Inquirer (4/20, Ott) reports, "The nation is in the midst of its worst constitutional crisis in the last 30 years, Democratic U.S. Rep. Rob Andrews of Camden County told a group of Rutgers University-Camden law students yesterday." The Inquirer continues, "During the two-hour forum, Andrews called for congressional review of President Bush's approval of warrantless eavesdropping on Americans. … The Senate Judiciary Committee held a hearing this month on a motion to censure Bush for the eavesdropping. The resolution has a slim chance of passing the Senate. … Andrews said the hearing wasn't enough. He said the Republican-led Congress should thoroughly review the President's eavesdropping authorization. … 'The real scandal is not the executive branch intercepting private conversations,' Andrews said, 'but the criminal negligence of the Congress in not having hearings.'" The Inquirer adds, "His comments were part of a panel discussion on government wiretapping at the Rutgers Law School. Also featured were civil liberties lawyer Grayson Barber and national Federalist Society leader Falk Engel. … Engel, a Republican, commented: 'It's repugnant what's coming out of this Justice Department.' … He said the failure of Congress to act may be interpreted constitutionally as tacit approval of the expansion of presidential powers."

Al Arian Case Seen As Example Of "Less-Than-Stellar" Terror Prosecutions. Time (4/19, Malloy) reports in a Web exclusive, "When federal prosecutors earlier this week announced a plea deal that will ultimately deport…Sami Al-Arian, they hailed it as a major achievement in the war on terror. … But given all the buildup, the resolution of the Al-Arian case seems far from a clear-cut victory, and the government's triumphant tone speaks volumes about its less-than-stellar record in federal anti-terror cases." Time adds, "It's not really, however, a victory for Al-Arian either. For decades, he'd insisted that he rejected the PIJ. But both his plea and wiretap evidence brought out in his indictment and trial severely undercut his image as nothing more than an outspoken advocate for Palestinian rights."

FBI Holding Georgia Tech Student On Terror Allegations. The Atlanta Journal-Constitution (4/20, Torpy, Morris, 430K) reports, "A Georgia Tech student born in Pakistan has been in federal custody for nearly a month, apparently because authorities suspect a videotape he made of a building may have been related to terrorism, his family said." Syed Haris Ahmed, "who had become increasingly religious in his Islamic faith, was arrested by the FBI March 23 and has been held since, his family said." The AJC adds that Ahmed's sister, Samia Ahmed, "said her brother told her that authorities found a video on the Internet and apparently

DOJ_NMG_0026146

traced it to him. … Agents confiscated computer hard drives and data CDs from the family home, the family said."

California Man Pleads Guilty To Shoulder-Launched Missile Plot. The AP (4/20) reports Californian Chao Tung Wu "has admitted his role in a plot to smuggle Chinese missiles into the US, surface-to-air missiles designed to shoot down aircraft. … A second defendant goes on trial in June. According to a statement read in court, Wu and the other man told an undercover FBI agent they'd arrange the importation of hundreds of missiles from China." The AP adds, "Wu also pleaded guilty to conspiring to smuggle counterfeit hundred-dollar bills he said were made in North Korea, along with ecstacy, methamphetamines and cigarettes."

Herbert Calls Rendition "Crime Against Humanity." In his New York Times column (4/20), Bob Herbert says, "In past years, stories about torture and 'the disappeared' have been associated with sinister regimes in South and Central America. The attitude in the United States was that we were above such dirty business, that it was immoral and uncivilized, and we were better than that." But "now people are disappearing at the hands of the U.S. government." Amnesty International released a report titled, "Below the Radar: Secret Flights to Torture and 'Disappearance,'" on the "reprehensible practice of extraordinary rendition, a highly classified American program in which individuals are seized — abducted — without any semblance of due process and sent off to be interrogated by regimes that are known to engage in torture. Some of the individuals swept up by rendition simply vanish." Herbert adds, "Congress needs to step in and thoroughly investigate this program, which is nothing less than a crime against humanity. Congress needs to investigate it, document it and shut it down."

HOMELAND RESPONSE:

Army Lab Had Several Incidences Of Anthrax Contamination. The Washington Times/AP (4/20) reports the Army's "biological weapons defense laboratory at Fort Detrick probably had multiple episodes of anthrax contamination as workers strove to process a flood of samples sent there for testing in 2001 and 2002, an internal report says." The report "obtained by the Frederick News-Post contains previously undisclosed details about the sometimes sloppy practices that allowed anthrax spores to escape from biosafety containment labs at the U.S. Army Medical Research Institute of Infectious Diseases (USAMRIID). No one was infected by the released spores."

Pennsylvania Police Confiscate $500,000 Cash From Men Near Nuclear Plant. The Houston Chronicle (4/20, Kilday, 581K) reports, "Pennsylvania authorities have confiscated a half million dollars they found in the cab of a truck driven by two Houston men who tried to enter a nuclear power plant. The men have not been charged with any crime. Pennsylvania State Police seized the money because the men denied ownership and because there was an indication by a police dog that drug residue was possibly on the cash." The Chronicle adds that "members of a joint terrorism task force composed of Pennsylvania State Police and the FBI also were notified and went to where the truck was stopped," but Pittsburgh FBI Special Agent William Crowley said Wednesday, "We have no indication that there was ever any terrorism or threat to the plant." WTOV-TV Steubenville, OH (4/18) notes, "Now the FBI and Homeland Security are involved. The worry is that the money may be connected to terrorist activity." But Pennsylvania State Police Sgt. Douglas Humble said, "At this time we do not believe it was associated with the power plant." The Pittsburgh Post-Gazette (4/20, Lash, 261K) and Pittsburgh Tribune-Review (4/20) also report on the incident.

Negroponte Under Fire From Key Lawmakers Of Both Parties. The New York Times (4/20, Shane, 1.19M) reports House Intelligence Committee Chairman Peter Hoekstra and ranking Democrat Jane Harman "have disagreed publicly about many things, but on one issue they have recently come together. Both are disquieted by the first-year performance of John D. Negroponte, the director of national intelligence." They have "expressed…fear" that Negroponte "is creating just another blanket of bureaucracy, muffling rather than clarifying the dangers lurking in the world." In an April 6 report, "the Intelligence Committee warned that Mr. Negroponte's office could end up not as a streamlined coordinator but as 'another layer of large, unintended and unnecessary bureaucracy.' The committee went so far as to withhold part of Mr. Negroponte's budget request until he convinced members he had a workable plan." The Times adds intelligence officials

DOJ_NMG_0026147

"say there has been progress in information-sharing, particularly at the National Counterterrorism Center, the new hub for reports on terrorist threats. Aides to Mr. Negroponte insist that analysts are encouraged to offer divergent views to avoid the 'groupthink' blamed for past failures." Negroponte also "strongly defended his record," saying, "If there's one watchword for what we've been about, it's integration."

NBC Nightly News (4/19, story 5, 2:20, Mitchell, 9.87M) spoke with DNI Negroponte in his first TV interview. Mitchell: "It's been a year since the 16 intelligence agencies were merged into one, a response to the failures that led to 9/11 and got Iraq's weapons of mass destruction all wrong. Critics say nothing has changed. Osama bin Laden and his top deputy, Ayman al-Zawahri, are still at large. Abu Musab al-Zarqawi is still the leader of al Qaeda in Iraq, and there could be another 9/11." Negroponte: "I don't think you can ever rule out the possibility of a serious terrorist incident, because in intelligence work you have to be right almost all of the time." Mitchell: "And what keeps you up at night? What do you worry about most?" Negroponte: "It's the international terrorists. It's al Qaeda. What is it that we don't know?"

Negroponte's Office Budget Is Nearly $1 Billion. The Washington Post (4/20, A11, Pincus, 744K) reports the budget next year for Negroponte's office "and the several agencies attached to it may be near $1 billion or more, according to language buried in the report of the House intelligence committee on the fiscal 2007 intelligence authorization bill." The "exact budget total for the Office of the Director of National Intelligence (ODNI) is classified, but the report by the House Permanent Select Committee on Intelligence contains a figure by the Congressional Budget Office of $990 million for the intelligence community management account that provides the principal funding for the ODNI." The "proposed budget, which is about one-third the size of all CIA funding in years before the Sept. 11, 2001, terrorist attacks, is far larger than expected."

Critics See Privacy Officers As Half-Measure. The Wall Street Journal (4/20, Squeo, 2.11M) reports that as the "son of a U.S. aid worker stationed in Guatemala during the 1970s civil war, Alex Joel recalls being unable to tell the good guys from the bad as both armed soldiers and civilians alike would order his family out of their car to search it." Joel says those "first-hand brushes with totalitarianism" have "led him to take the rights of individuals very seriously. Given that he was recently named as the first civil-liberties protection officer for the U.S. Office of the Director of National Intelligence, such talk is reassuring to privacy advocates." In February, the Justice Department "named Jane Horvath its first chief privacy and civil-liberties officer, making her responsible for developing and ensuring compliance with privacy and civil-liberties policies, specifically as they relate to counterterrorism and law-enforcement efforts." While "even critics of the administration applaud the effort, they question what authority these officials have. Unlike inspectors general at federal agencies, these privacy officers lack the subpoena power necessary to conduct investigations and don't report to Congress."

Army Lab Had Several Incidences Of Anthrax Contamination. The Washington Times/AP (4/20) reports the Army's "biological weapons defense laboratory at Fort Detrick probably had multiple episodes of anthrax contamination as workers strove to process a flood of samples sent there for testing in 2001 and 2002, an internal report says." The report "obtained by the Frederick News-Post contains previously undisclosed details about the sometimes sloppy practices that allowed anthrax spores to escape from biosafety containment labs at the U.S. Army Medical Research Institute of Infectious Diseases (USAMRIID). No one was infected by the released spores."

Advocates Hopeful Airlines Will Participate In Registered Traveler Program. USA Today (4/20, Frank, 2.31M) reports, "Proponents of an idea to speed trusted travelers through security are pushing to sign up airports and overcome skepticism of some airport officials who fear the program won't shorten lines." Companies "looking to sell Registered Traveler programs to airports say they're hopeful that interest in the idea will pick up after the federal Transportation Security Administration (TSA) announces specifics on how it will work." Larry Zmuda, "head of Registered Traveler for Pennsylvania-based Unisys, said his company has signed letters of intent with four airports to start the program. 'This appeals to a lot of smaller (airports) that are trying to get into the big game,' Zmuda said. But, he added, 'a lot are going to wait and see.'"

Allen Believes Coast Guard Has Lessons To Share With Other Parts Of Government. The Washington Post (4/20, D4, Barr, 744K) reports in its "Federal Diary" column that Vice Adm. Thad W. Allen, has been

DOJ_NMG_0026148

confirmed by the Senate become the Coast Guard's next commandant. Since Hurricane Katrina, "members of Congress and key administration officials have been eager to see if the Coast Guard can be used as a model for other parts of the Department of Homeland Security and elsewhere in government. Allen, chief of staff for the Coast Guard, thinks there are lessons to be shared."

WSJournal Denounces $27 Million Award In Alleged Airline Profiling Case. In an editorial, the Wall Street Journal (4/20, 2.11M) denounces a Texas court's decision last week to award "$27.5 million in damages for a woman of Iranian descent who claimed she was racially profiled during an altercation with Southwest Airlines flight attendants." Samantha Carrington "alleges that a Southwest Airlines employee said Ms. Carrington reminded her of a 'terrorist' during the 2003 incident," but Southwest "accuses Ms. Carrington of assaulting a flight attendant and interfering with the crew. We can't know for sure who's telling the truth here," but "even if Ms. Carrington was ill-treated, the most she deserved was some free tickets. Only in America could she hit the tort jackpot."

Texas Seeks Federal Help To Cope With Hurricane Evacuees. The New York Times (4/20, Steinhauer, 1.19M) reports, "Seven months after two powerful hurricanes blew through the Gulf Coast, elected officials, law enforcement agencies and many residents say Texas is nearing the end of its ability to play good neighbor without compensation. Houston is straining along its municipal seams from the 150,000 new residents from New Orleans, officials say." Texas "has thrown its hat in the great Congressional money game, arguing vociferously for federal money to help pay for new police officers in Houston, where the force has dwindled in recent years, and to repair homes in East Texas, where many poor residents lack the means and the insurance to do it on their own. Though the state has requested $2 billion in federal aid to pay for law enforcement, education and housing, state officials say they have received only $22 million so far."

WAR NEWS:

Bush Says Failure In Iraq "Not An Option." The AP (4/20, Hunt) reports, "President Bush said Wednesday he didn't expect to get unanimous support at home for the decision to invade Iraq and said failure there 'is not an option.'" Talking to reporters "on the White House South Lawn after a meeting with a group of governors who have returned from a visit to Iraq and Afghanistan," Bush "said he thanked the state chief executives for 'sending a message from home that we care. ... We appreciate the fact that people are willing to make sacrifices.'" Bush also said "success" in Iraq will "begin to lay the foundation of peace for generations to come."

Rice Says No Sudden Peace Will Come For Iraq. The AP (4/20, Burghart) reports that Secretary of State Condoleezza Rice said at the Chicago Council on Foreign Relations that "Even assuming Iraq forms a national government, there will be no immediate end to the violence, nothing like V-E Day marking World War II's end in Europe." Instead, she contended that "peace will come gradually to Iraq."

Rumsfeld Storm Seen As Upsetting Tenuous Bond Between Uniformed, Civilian Leaders. The Christian Science Monitor (4/20, Sappenfield, 61K) reports, "In their denouncements of Defense Secretary Donald Rumsfeld, seven retired generals have directed their criticism mostly toward his handling of the Iraq war. In some respects, however, the issue goes much deeper." It is "a matter of the military's distrust of its civilian decisionmakers, which emerged in Vietnam and has never fully dissipated." It is "concern over an administration that has sought not only to ramrod major changes through the military, but also -- some say -- to micromanage battlefield tactics." Iraq "has lit the fuse, as those who dislike the style and substance of Mr. Rumsfeld's tenure point to the war as a failure of his policy." But "a deeper concern is that Iraq is worsening the delicate relationship between the military and its civilian leaders."

US Troops In Iraq Become Aware Of Generals' Criticism. Under the headline "Generals' Criticism of Rumsfeld Gets Mixed Reaction Among Troops," the Los Angeles Times (4/20, Moore, 958K) reports, "News that six retired generals recently called for…Rumsfeld to resign has been slow to reach many of the Marines stationed in Iraq's restive and isolated Al Anbar province. … Some of those who had heard about the debate said they were unimpressed with generals who waited until retirement to speak out against their former boss." But one "high-ranking officer said he sympathized with dissenting generals who faced difficulties while in uniform. He cited Army Gen. Eric K. Shinseki, who

DOJ_NMG_0026149

resigned from the military in 2003 after clashing with Rumsfeld over troop strength in Iraq. 'You saw what happened to Shinseki,' said the officer, who requested anonymity."

Media Said To Be Missing Context Of Generals' Criticism. Stephen E. Herbits, who "has served five presidents as a military affairs adviser since 1967, including the Defense Department transition in 2001 and post-September 11 reforms," writes in today's Washington Times (4/20, 90K), "Where is the rest of the story on the recent attacks on Defense Secretary Donald Rumsfeld by a few in the retired military? The news media will better meet its obligations to the public when it seeks more depth of experience and information about these generals-turned-Rumsfeld critics. … My experience points to several relevant issues -- some of which I personally know apply to some of those making the attacks." Herbits says that "while Mr. Rumsfeld has worked within the long tradition of civilian control of the military to modernize and strengthen the promotion and assignment system for senior uniformed officers, there are some who have actively tried to obstruct his efforts and could be acting as an extension of that opposition."

USA Today Says Generals' Criticism Should Not Lead To Rumsfeld's Dismissal. USA Today (4/20, 2.31M) editorializes, "Rumsfeld's tenure as Defense secretary in many ways tracks public attitudes about the Iraq war. … Today, polls find the public weary of the Iraq war and wary of those who initiated it. Rumsfeld is seen more as a latter day Robert McNamara -- the similarly talented Vietnam-era Defense secretary who blinded himself to the realities of the war and guided the nation ever deeper into that misbegotten adventure. The parallel grew stronger in recent days as six retired generals accused Rumsfeld of mishandling the Iraq war, ignoring advice and intimidating subordinates." USA Today adds, "As culpable as Rumsfeld might be, however, criticism from former generals is the worst possible reason to dump him, potentially undermining the nation's long tradition of civilian control of the military. … Further, for all the symbolism and all the bad decisions, Rumsfeld is not the person most accountable. The president is."

After Supplemental Spending Bill, Iraq War's Cost Will Have Doubled Since Invasion. The Washington Post (4/20, A1, Weisman, 744K) reports, "With the expected passage this spring of the largest emergency spending bill in history, annual war expenditures in Iraq will have nearly doubled since the US invasion, as the military confronts the rapidly escalating cost of repairing, rebuilding and replacing equipment chewed up by three years of combat." The cost of the war "in US fatalities has declined this year, but the cost in treasure continues to rise, from $48 billion in 2003 to $59 billion in 2004 to $81 billion in 2005 to an anticipated $94 billion in 2006, according to the Center for Strategic and Budgetary Assessments." The US government "is now spending nearly $10 billion a month in Iraq and Afghanistan, up from $8.2 billion a year ago, a new Congressional Research Service report found."

Funds To Rebuild Iraqi Healthcare System Exhausted, Projects Incomplete. ABC World News Tonight (4/19, story 5, 2:25, Vargas, 8.78M) reported the money to rebuild Iraq's healthcare system is "nearly gone" and "there's not much to show for it." ABC (Karl) added $190 million "in taxpayer money has paid for empty, unfinished buildings like this one in Baghdad without windows, without doors. In March 2004, the Pentagon awarded a California-based company named Parsons Global a contract to build 150 health care centers throughout Iraq." According to "a government audit obtained by ABC, only 6 of the 150 promised health care centers have been completed. Even after spending the $190 million, the company says it couldn't complete the health centers 'due to lack of funding.' Now, the Pentagon terminated the contract, citing 'lack of sufficient progress by the contractor, due to increased security costs and other factors.'"

Al-Jafari Refuses To Step Aside. The Washington Post (4/20, A18, Hernandez, Ibrahim, 744K) reports that Iraq's Prime Minister Ibrahim al-Jafari "denied rumors Wednesday that he would give up his nomination to another term to solve a political impasse, throwing the process of forming the country's new government into new confusion on the eve of a long-delayed meeting of parliament," despite "mounting pressure on Iraqi politicians to resolve their differences, from the public, U.S. officials and the Shiite religious leadership, which issued a statement Tuesday night urging the Shiite parties to make a deal, even if concessions were necessary."

The Washington Times/AP says that "under U.S. pressure, Iraqi leaders decided Wednesday to convene parliament in a bid to jump-start formation of a new unity government," but "Shiite officials raised doubts whether the

DOJ_NMG_0026150

session — already postponed once this week — would take place Thursday as planned."

Meanwhile, the New York Times (4/20, O'Neil, Hauser, 1.19M) reports, "The pressure on Iraq's leaders increased today as President Bush called for an end to the political 'vacuum,' saying that the lack of progress in completing the Iraqi government left the field open for 'malfeasance and harm.'" Bush "pinned the success of the American mission in Iraq on political developments there." The Los Angeles Times (4/20, Wallace, 958K) and Knight Ridder (4/20, Youssef, Strobel), among other sources, run similar stories this morning.

Iraqi Government Says 65,000 Homeless Because Of Sectarian Threats. NBC Nightly News (4/19, story 7, 2:15, Engel, 9.87M) reported on the displacement of Sunni and Shiite Arabs in Iraq that is approaching ethnic cleansing in some areas. Migration officials said "at least 65,000 Iraqis made homeless by escalating sectarian violence." Dana Graber, International Organization for Migration: "They are being threatened. Their family members are being assassinated or kidnapped, and they are leaving out of fear." Engel: "The Iraqi government says 80% are Shiites forced out of Sunni villages around Baghdad." Suheilah Abed Jaffer Al-Kinani, Displacement and Migration Minister (voice of translator): "This is a national crisis that could lead to a full-blown war." Engel: "But why now? The tent cities started to crop up after the destruction in February of a Shiite shrine in Samarra. According to the US military, four times as many Iraqis were killed in March in sectarian attacks than in car bombings."

Neighborhood Militias Shooting At Iraqi Police. The Christian Science Monitor (4/20, Enders, 61K) reports, "Some call them neighborhood watches. Others call them militias." But "as sectarian violence has grown over the past two months in Iraq's capital, men in Sunni neighborhoods have begun to band together." They "have armed themselves with Kalashnikovs, heavy machine guns, and grenades, and have blocked streets with unused cars, furniture, or palm trunks, forcing would-be intruders to take a single route in and out of a neighborhood. … For weeks, residents say, members of the local militia have been shooting at Iraqi police."

Saudis Consider Electric Fence Along Iraqi Border. The Christian Science Monitor (4/20, Abou-Alsamh, 61K) reports, "Apparently concerned that fighting in Iraq could spill over into this oil-rich kingdom, Saudi Arabia is considering a major fortification of its 500-mile border with Iraq. 'The government is thinking of building an electrified fence along the whole border with Iraq in case things go really badly in Iraq, and it starts falling apart,' says a security adviser to the Saudi government, who spoke on condition of anonymity." The border with Iraq "lies mostly in barren desert. A 20-foot-tall sand berm that runs its entire length provides the first line of defense."

Experts Link Saddam To Killings In Shiite Village. USA Today (4/20, Johnson, 2.31M) reports, "Handwriting experts confirmed Saddam Hussein's signature on documents linking him to a bloody government reprisal on a Shiite village where Saddam's motorcade was attacked in 1982." Saddam and seven co-defendants "are charged with the deaths of 148 people, including women and children, from the village of Dujail. Hundreds of others were imprisoned, and the village's orchards and farmland were destroyed." The Los Angeles Times (4/20, Roug, 958K) also reports the story.

British Envoy To US Warned Blair To Prepare For War Two Months Before Invasion. The AFP (4/20) reports, "Britain's ambassador to Washington warned Prime Minister Tony Blair to prepare for war in Iraq almost two months before the US-led invasion began, the now former diplomat said." Christopher Meyer "told a committee of lawmakers that 'the die was cast for war' before Blair met US President George W. Bush on January 31, 2003."

Rocket Blast Misses US Embassy In Kabul. ABC World News Tonight (4/19, story 6, :20, Vargas, 8.78M) reported, "A massive explosion shook the US Embassy compound in the capital of Afghanistan, Kabul. It was apparently caused by a rocket that landed nearby." No Americans "were hurt, but an Afghan security contractor was wounded." The CBS Evening News (4/19, story 10, 0:20, Mitchell, 7.66M) also reported the rocket "hit just outside the embassy in Kabul on the grounds of the Afghan state television station." The AP (4/19, Garwood) reported an Embassy spokesperson "said the blast did not occur on embassy property, and no Americans were injured."

DOJ_NMG_0026151

Increased Fighting Seen As Sign Taliban, Al Qaeda Regrouping. USA Today (4/20, Boork, 2.31M) reports, "Fighting between allied forces and Afghan insurgents has spiked in 2006 as the Afghan government tries to widen its control over the country 4½ years after U.S. forces ousted the Taliban regime. … The increased fighting is a sign 'the Taliban and al-Qaeda have regrouped to a troubling extent,' said Ted Galen Carpenter, a military expert at the Cato Institute, a think tank in Washington."

Afghan Parliament To Vote On Karzai's Proposed Cabinet. The New York Times (4/20, Gall, 1.19M) reports, "Afghanistan's newly established Parliament is to vote Thursday on a 25-member cabinet proposed by President Hamid Karzai, but two weeks of confirmation hearings ended Tuesday with much uncertainty about whether many of his choices would be approved." Karzai, "who has governed for more than four years as the leader of interim and transitional governments, reshuffled his cabinet on March 22 in anticipation of harsh scrutiny by Parliament, which must for the first time vote on his choices."

CORPORATE SCANDALS:

Skilling Defends Statements On Enron's Financial Condition. The Wall Street Journal (4/20, McWilliams, Emshwiller) reports, "Jeffrey Skilling, the former president of Enron Corp., stridently defended the public statements he made about the energy giant's financial health before its 2001 collapse into bankruptcy, even as government prosecutors insisted again that he hid Enron's problems from investors." The Journal continues, "Mr. Skilling, on trial here for conspiracy and fraud along with Kenneth Lay, Enron's former chairman, argued that he adequately described to the public how much of Enron's profits came from speculative, and risky, energy trading while continuing to insist that most of the profits came from the more stable business of distributing energy and providing services. The government contends that Mr. Skilling illegally underplayed Enron's dependence on speculative trading profits, particularly during the California energy crisis in 2000 and 2001." The Journal adds, "Prosecutor Sean Berkowitz ended his questioning of the 52-year-old Mr. Skilling in midafternoon, suggesting the defendant met with a recruiter about an executive position at Lucent Technologies Inc. shortly after his Aug. 14, 2001, resignation for what he said were family reasons. Mr. Berkowitz suggested that Mr. Lay, Mr. Skilling's co-defendant in the current criminal case, was upset when he learned about his former protégé's possible interest in the Lucent job. Mr. Skilling insisted he wasn't interested in the job."

The Los Angeles Times (4/20, Mulligan) reports, "Berkowitz confronted Skilling with the previous testimony of former Enron Energy Trader Tim Belden that the company's Western Power Desk had reaped profits of $104 million in the fourth quarter of 2000, $445 million in the first quarter of 2001 and $333.5 million in the second quarter of 2001 — the lion's share of it from speculative bets on electricity prices. … Skilling insisted those large bets were offset by different positions in other parts of the country so that, on balance, Enron's stance was neutral."

Prosecutor Challenges Skilling On Reasons For Leaving Enron. The New York Times (4/20, Barrionuevo, Bajaj) reports that Berkowitz "wrapped up his cross-examination …by suggesting that Mr. Skilling had lied about the reason he resigned as Enron's chief executive." Berkowitz "asked Mr. Skilling if he had been considering taking a job as chief executive of Lucent Technologies shortly after he resigned from Enron, despite having asserted that he left primarily to spend more time with his family. … Berkowitz showed jurors a list of 11 varying reasons Mr. Skilling has given in trial and elsewhere for his departure in August 2001, after six months as chief executive. … They included his claims that he was weary from work and wanted to spend more time with his family." The Times adds, "Prosecutors have suggested that Mr. Skilling left because he knew that Enron had serious undisclosed accounting problems and losses. … Mr. Berkowitz asked Mr. Skilling on Wednesday whether he had told a friend, Dick Foster, that he was considering a chief executive opening at Lucent. … Mr. Skilling said he had been asked about the position at Lucent by an executive recruiter but did not express an interest in pursuing it."

USA Today (4/20, Farrell) reports, "According to Berkowitz, Foster chastised Skilling for even thinking about taking another CEO position, saying, 'Jeff, I thought this was all about your family.' … Berkowitz said Foster shared his concern with Lay, who had assumed the CEO title from Skilling, and another board member. … 'If Mr. Foster did that, that was a misrepresentation,' Skilling said. … 'Another person you disagree with?' Berkowitz asked, referring to the government witnesses Skilling had contradicted during his four days of direct testimony last week."

DOJ_NMG_0026152

Skilling Defiant To The End. The Washington Post (4/20, D1, Johnson) reports, "Skilling displayed contempt for the prosecutors Wednesday in the third and final day of cross-examination in his fraud trial, completing for jurors the portrait of a complex man who refused to back down from his argument that Enron was felled by a market panic -- despite testimony from a parade of corporate insiders who pleaded guilty and offered evidence against him." The Post continues, "In seven days on the witness stand during which he was alternately proud, furious, depressed and sheepish, Skilling offered the jury his own view of his role, which he hopes will supplant years of vilification following Enron's December 2001 collapse into bankruptcy protection. … The self-assertive witness refused to concede ground and challenged the government at every opportunity Wednesday, creating tension in the packed courtroom. He disagreed with…Berkowitz about nearly everything, such as the reasons Skilling left the company, the risks Enron took and the basis of stock sales he made."

Pennsylvania Tax Accountant Charged With Embezzling Millions. The AP (4/20, Dale) reports, "A tax accountant embezzled $10 million from a client, then used it to fund a lavish lifestyle - from his daughter's $74,000 bat mitzvah to a $20,000, four-day trip to London - that he largely wrote off on taxes, prosecutors alleged." The AP continues, "Prosecutors said Tuesday Denis I. Shusterman blew through the $10 million from about 1996 to 2004, spending half of it on three B-grade horror flicks he produced. As Shusterman's embezzlement and fraud trial opened in federal court, prosecutors said he gave $495,000 to one of three mistresses and $725,000 to a hospital shipping clerk who soon lost it all at the craps table. … 'He was totally enamored with the moviemaking business,' testified lead witness Leslie Edelman, who owned Kimber Mfg., a New York firearms company that lost the $10 million. 'He wanted to be part of it. He wanted the lifestyle.'" The AP adds, "Defense lawyer Elliot Cohen countered that Shusterman legitimately earned the money from Kimber and was entitled to the tax write-offs. … 'The tax laws are designed to benefit many wealthy people. We all know that,' Cohen told jurors. Prosecutors 'are trying to create the image that these deductions are fishy. They're not. They're in the tax code.' … Federal authorities started investigating Shusterman after his mother was convicted in 2002 of helping to embezzle $1.3 million from the suburban Philadelphia synagogue where she worked as a bookkeeper. Betty Shusterman, now 74, is serving a four-year federal prison term. Witnesses told federal agents that Denis Shusterman seemed to be enjoying some newfound wealth, authorities said."

Sentencing Commission Drops Privilege Waiver Policy. The ABA Journal (4/14, Carter) reports, "The U.S. Sentencing Commission's decision to abandon a policy that encourages prosecutors to seek waivers of attorney-client privilege from corporations wanting credit for their cooperation gives heart to champions of the privilege and gets a shrug from the government." The Journal continues, "When the commission adopted the policy in 2004, it noted waivers should not be sought 'unless such waiver is necessary in order to provide timely and thorough disclosure of all pertinent information known to the organization.' … But on the heels of recent surveys indicating that in-house counsel and their outside lawyers believe the U.S. Department of Justice and other federal agencies now routinely ask for the waiver, the commission revisited the issue." The Journal adds, "Opponents of the policy argued the policy itself became a tool for prosecutors to bolster their requests for waivers." The Journal notes, "At its April 5 meeting, the commission agreed and amended its guidelines, deleting commentary suggesting that waiver is in some instances a prerequisite for credit at sentencing. … The change will go into effect on Nov. 1 unless Congress votes its disapproval. … The long-simmering credit-for-waiver issue began coming to a head with the so-called Holder Memo of 1999. Then-Deputy Attorney General Eric H. Holder suggested federal prosecutors could consider waiver of attorney-client privilege in determining whether a corporate defendant cooperated. In 2001, the SEC issued the 'Seaboard Report,' in which the agency said it would not take action against a particular company because of cooperation, listing the waiver as one factor. And in 2003, then-Deputy Attorney General Larry D. Thompson issued what is now referred to as the Thompson Memo, which amplified the Holder Memo."

CRIMINAL LAW:

Second Dismissal Hearing Set For Former AIPC Lobbyists. An unusual second oral argument has been set for tomorrow on the motion by two former pro-Israel lobbyists to dismiss the spying charges against them. The

DOJ_NMG_0026153

Washington Post (4/20, A11, Pincus, 744K) reports that the two, who are accused of receiving and transmitting national defense information, "contend that the espionage statute is unconstitutionally vague and overbroad and may violate the First Amendment." In January, U.S. District Judge T.S. Ellis III "raised the possibility that the law may not be sensibly written when he sentenced a third person in the case, former Defense Department employee Lawrence A. Franklin, to 12 years in prison for giving classified information to Rosen and Weissman, former lobbyists for the American Israel Public Affairs Committee (AIPAC). Last month, after hearing oral arguments on dismissing the case against Rosen and Weissman, Ellis took the unusual step of ordering the Justice Department to respond to defense claims of unconstitutionality. Yesterday, after receiving the government's filing and the defendants' response, Ellis ordered another oral argument on the motion to dismiss."

FBI Agent Believed Ryan Was Lying From First Interview. WBBM-TV Chicago (4/19, Tucker) interviews veteran FBI Special Agent Ray Ruebenson, who interviewed former Gov. George Ryan in January 2000. Ruebenson asked Ryan about his "many trips to Jamaica and whether they were gifts to his family in exchange for political favors to his friends." He "says Ryan told investigators he paid for all the trips and showed the first signs of man who was lying." WBBM adds that "Ruebenson felt so passionate about this case that he postponed his retirement in 1999 to stay on the job. A driving force was the allegations that the License for Bribes scandal was connected to the fiery crash that killed six children in 1994. 'Dan Webb's closing arguments bothered me quite a bit, continually said, "Who cares? It's not a big deal,"' Ruebenson said. 'I took affront to that. The Willises were in the room. Why don't you tell them that it's not a big deal?'"

Four Ryan Jurors Did Not Reveal Past Court Cases. The AP (4/20) reports, "Four of the jurors who convicted former Gov. George Ryan on corruption charges failed to mention their past involvement in court cases, documents unsealed Wednesday show. Three of the jurors had arrest records and the forewoman had filed for divorce," and "the defense is all but guaranteed to bring up the issue when it asks for a new trial or appeal." The AP notes, "U.S. Attorney Patrick J. Fitzgerald issued a statement following the release of the documents saying the 'jury provided a fair and just trial to all the parties in this case.'"

Former Nevada Commissioner Denies Taking Bribes. The AP (4/20, Ritter) reports former Clark County Commissioner Dario Herrera "took the witness stand Wednesday and admitted 'recklessness' and sexual indiscretions while he was in office, but denied taking bribes from former striptease club owner Michael Galardi" through lobbyist Vince Malone. "Herrera's account of a meeting with Malone that the FBI videotaped in the parking lot of a Las Vegas restaurant in September 2001 differed from Galardi's testimony that he had Malone give Herrera $30,000 in cash. Herrera described Malone as a friend who he turned to for help in buying bedroom furniture so his young son could spend a weekend with him in his new apartment after he split from his wife." KLAS-TV Las Vegas (4/19) adds Herrera "says Mike Galardi was correct when he testified Herrera received lap dances and sexual favors from two former employees at Galardi's Cheetahs strip club, but Herrera says he did not know Galardi paid for them." He also "admitted attended dinners and golf outings where Galardi paid the bill, but said, 'There's no way a golf outing or a dinner was going to impact my judgment.'"

Street Aides Blame Each Other For Hiring Indicted Consultant. The Philadelphia Inquirer (4/20, Gelbart, 423K) reports, "Two top Street aides, one former and one current, are battling over whose decision it was to hire a $1 million consultant who oversaw a costly, failed computer project for the city -- and who was indicted in Connecticut on April 7 on charges of making payoffs to a state official there in efforts to win contracts. … In an interview Monday, Dianah Neff, the city's chief information officer, said she was not responsible for hiring Jeanette Foxworth," saying that "former city Finance Director Janice Davis brought her here." But "in an e-mail this week to The Inquirer, Davis said: 'I did NOT bring Jeanette Foxworth on. Dianah Neff hired Jeanette Foxworth through the staffing firm that brought Dianah to the City of Philadelphia.'"

Blunt Says He Has Not Been Contacted In Federal Probe. The Columbia (MO) Daily Tribune (4/20, Flory) reports, "Gov. Matt Blunt said Wednesday that neither his office nor the Department of Revenue has been contacted in connection with any federal investigation into the handling of revenue fee offices. Last week, the Kansas City Star reported that a U.S. Attorney in Arkansas is handling an investigation into how the license fee offices were awarded to

DOJ_NMG_0026154

political supporters of the Blunt administration." The Tribune notes, "The Star also reported that FBI agents have begun interviews in connection with a second investigation into lobbying practices at the Capitol. Asked whether he or anyone in his administration has ever encouraged someone to hire a particular lobbyist, Blunt said, 'I don't believe I have.'"

FBI Documents Detail Pellicano Attempt To Extort Supermarket Mogul. The New York Times (4/20, Halbfinger, Weiner, 1.19M) reports, "When the supermarket billionaire Ronald W. Burkle accused a New York Post gossip columnist of demanding hundreds of thousands of dollars for protection from nasty items in Page Six, it was not the first time that he had told authorities he was the victim of a shakedown. In 2002, Mr. Burkle has told federal investigators, the Hollywood private detective Anthony Pellicano demanded that Mr. Burkle pay him $100,000 to $250,000 in exchange for Mr. Pellicano's agreeing not to investigate him. … Mr. Burkle's account of that meeting to the Federal Bureau of Investigation, related in a summary that was reviewed by The New York Times and corroborated by Mr. Burkle in an interview this week, provides a new glimpse into Mr. Pellicano's methods of drumming up new business and holding himself out as a broker between rich and powerful adversaries — thereby drawing them into his realm at Hollywood's underbelly."

Colorado Woman Indicted On Katrina Relief Fraud Charges. The AP (4/20) reports, "A Denver woman who claimed she was a Hurricane Katrina evacuee from New Orleans to receive thousands of dollars in housing, clothing, and food assistance was indicted on 13 counts of fraud Wednesday. Chandra Donley used false pretenses to receive relief assistance from the Federal Emergency Management Agency, Colorado's Department of Local Affairs, the American Red Cross and Catholic Charities, according to the indictment.

Defense Lawyer Says Reputed Gambino Capo Too Ill For May Trial. The New York Daily News (4/20, Zambito, 729K) reports reputed Gambino family capo Greg DePalma "has been felled by a series of illnesses that have left him near death and too sick to defend himself against federal racketeering charges at his trial in May. Lawyer John Meringolo is asking Judge Alvin Hellerstein to postpone DePalma's May 8 trial, but prosecutors are expected to oppose the request at a hearing scheduled for Monday." The Daily News notes, "FBI agents have collected more than 5,000 hours of audio and video surveillance tapes of DePalma and other mobsters accused in a vast conspiracy that includes gambling and extortion charges."

New York MS-13 Member Convicted Of Racketeering Charges. Newsday (4/20, Armario) reports, "Deliberating for just a few hours yesterday in U.S. District Court in Central Islip," a federal jury found MS-13 member Leonel Mejida of Uniondale "guilty of conspiracy and murder in aid of racketeering, and two weapons charges. Prosecutors said Mejida committed the crimes to meet his 'quota' for the gang." Newsday notes that Mejida's case is "the second prosecution nationwide of an MS-13 member under the federal racketeering statute."

Actress Pleads Guilty To DHS Television Series Scam. The Los Angeles Times (4/20, Krikorian, Hanley, 958K) reports, "The purported star of a bogus television series based on the U.S. Department of Homeland Security pleaded guilty Wednesday to lying to federal agents when she said she did not know the show was part of an elaborate investment scam. In her guilty plea, Alison Ann Heruth…acknowledged making false statements to FBI and IRS agents to conceal the scheme, which authorities allege defrauded dozens of investors of more than $5.5 million over a two-year period. The alleged fraud, whose victims included many local churchgoers, surfaced last fall when federal agents arrested Joseph Medawar," who "is charged with numerous counts of wire fraud, money laundering and other crimes." KCAL-TV Los Angeles (4/19) notes Heruth "admitted that when she met with FBI and Internal Revenue Service investigators in April 2005, she lied to cover up her knowledge of Medawar's alleged investment con." She acknowledged knowing "investors' money was being used to pay the rent on a Beverly Hills mansion she lived in, and to pay for leased cars, jewelry, child care, food and entertainment, the plea agreement states."

Former Corning Employee Sentenced To Four Years For Corporate Espionage. The Elmira Star-Gazette (4/19, Wilson) reported, "Jonathan C. Sanders, who pleaded guilty in January to stealing Corning Inc. trade secrets, was sentenced Tuesday to 48 months in federal prison and ordered to pay a $20,000 fine. … Sanders

DOJ_NMG_0026155

admitted in January that he stole proprietary information from Corning Inc.'s Harrodsburg, Ky., plant on the process the company uses to manufacture liquid crystal display glass. … He sold the information to another defendant who provided it to a Taiwan company, Picvue Electronics, which was interested in competing with Corning Inc. in the liquid crystal display glass business." The Star-Gazette notes, "The arrests followed an investigation by the Federal Bureau of Investigation office in Buffalo under the direction of Special Agent in Charge Peter Ahearn." The Lexington (KY) Herald-Leader (4/19, Kocher) also reported on Sanders' sentencing.

Supreme Court Considers Insanity Defense In Arizona Case. USA Today (4/20, Biskupic, 2.31M) reports, "The Supreme Court struggled Wednesday with an appeal from an Arizona teen who killed a police officer but might have believed he was shooting a space alien. The case could affect insanity-defense laws nationwide." USA Today adds "the case tests constitutional standards for a state's consideration of a defendant's mental illness and how states may be bound to a traditional rule from 19th-century England that allows a defendant to demonstrate insanity if he did not know 'the nature and quality' of the act and that it was wrong." The Supreme Court "has never ruled that defendants have a constitutional right to make an insanity defense, but most states allow it and use the traditional two-prong test."

The New York Times (4/20, Greenhouse, 1.19M) says "much of the debate during the argument centered on whether Arizona's narrowed definition of insanity made a practical difference." The state's lawyer, Randall M. Howe, chief counsel in the Arizona attorney general's office, "asserted that nearly all those defendants who could have claimed that they did not understand the nature of their actions, the part of the definition that Arizona has eliminated, could also demonstrate that they did not know their acts were wrong." The Times adds "several justices appeared troubled" by Howe's arguments. The Washington Post (4/20, A6, Lane, 744K) and Los Angeles Times (4/20, Savage, 958K), among other sources, run similar stories this morning.

The Legal Times (4/20, Mauro) reports, "The much-maligned insanity defense was the focus of debate before the Supreme Court on Wednesday in a case that could further limit its use. … Justices seemed troubled by the case Clark v. Arizona, in which Eric Clark's plea of insanity was rejected, resulting in Clark being convicted of first-degree murder for killing a Flagstaff, Ariz., police officer, even though, his lawyer said, Clark thought he was shooting at an alien being. … But several justices seemed to accept the argument by Arizona and the Bush administration that states have broad discretion in limiting the insanity defense -- even to the point of eliminating it altogether, as several states have done."

The AP (4/20, Holland) reports, "Eric Clark thought he was being pursued by aliens before he shot and killed an Arizona police officer nearly five years ago. … Clark, a 17-year-old schizophrenic, was found guilty of first-degree murder and sentenced to life in prison. His lawyer argued that he was 'guilty except insane' and should instead be sent to a psychiatric facility." The AP adds, "The Supreme Court was reviewing Clark's appeal on Wednesday, in what may become a significant test of state insanity laws. … All but four states - Idaho, Kansas, Montana and Utah - allow insanity defenses, but the ruling in Clark's case could force legislatures to change their laws."

CNN.com (4/20, Mears) reports, "The justices appeared to have a hard time Wednesday determining whether Clark and others like him have a constitutional right to an insanity defense. … 'Eric was delusional,' Clark's appellate attorney, David Goldberg, told the justices. 'He believed he was killing an alien that occupied the officer's body, that aliens had invaded his town.' … 'What if he knew right from wrong, and knew it was wrong to kill aliens?' asked Justice David Souter, 'Would he still have (an insanity) defense?' … Justice John Paul Stevens followed up, 'Does it make a difference whether he knew it's wrong to kill aliens? Does he have to think it's wrong to kill aliens' for reasonable doubt to be raised about his culpability? … Several justices worried whether a victory for Clark would mean a wave of insanity claims by criminal defendants, where 'everybody is going to have an excuse,' as Souter put it."

Former Hockey Player Seeks Transfer To Canadian Prison. The St. Louis Post-Dispatch (4/20, Shaw) reports, "Writing out of frustration, according to his lawyer, imprisoned former Blues player Mike Danton issued a two-page, handwritten letter to the news media questioning Justice Department officials' decision to keep him in the U.S." the Post-Dispatch continues, "Last month, Danton was denied transfer to the Canadian prison system, which was a possibility –- but never a promise –- under his plea agreement with prosecutors in his murder-for-hire case. Authorities concluded that transferring Danton would "not serve the ends of justice" and that his crime was too severe to warrant a

DOJ_NMG_0026156

transfer." The Post-Dispatch adds, "The Justice Department unit that evaluates such transfers said Danton has to wait two years to reapply, and can improve his chance by being a model prisoner."

FCC Launches Payola Probes Of Four Radio Companies. The Los Angeles Times (4/20, Duhigg) reports, "The Federal Communications Commission on Wednesday launched formal investigations into pay-for-play practices at four of the nation's largest radio corporations, the biggest federal inquiry into radio bribery since the congressional payola hearings of 1960." The Times continues, "Two FCC officials with direct knowledge of the matter confirmed that the agency had requested documents from Clear Channel Communications Inc., CBS Radio Inc., Entercom Communications Corp. and Citadel Broadcasting Corp. over allegations that radio programmers had received cash, checks, clothing and other gifts in exchange for playing certain songs without revealing the deals to listeners, a violation of federal rules. … The FCC requests, known formally as 'letters of inquiry,' are the first step in investigations that could result in sanctions ranging from financial penalties to the revocation of stations' licenses." The Times adds, "In the past, radio executives at firms including Clear Channel, the nation's largest station owner, have said that company policies prohibit accepting gifts for airplay and that internal probes have not revealed widespread wrongdoing. … The four broadcasters have been negotiating with the FCC for weeks to forestall a federal inquiry by offering to discontinue certain practices and pay limited fines. But those talks stalled last month over the issue of how much the broadcasters should pay."

Report Says McKinney Struck Capitol Police Officer With Closed Fist. CNN's The Situation Room (4/19, Blitzer) reported, "There are new details emerging right now about the confrontation between Congresswoman Cynthia McKinney and a Capitol Hill police officer." CNN (Todd) added that the police report on the incident "does not list Congresswoman Cynthia McKinney by name, only as S-1, for suspect. But the document, obtained by CNN, does name the officer she allegedly hit last month. He's listed by Paul McKenna, also as C-1, or complainant. The report says officer McKenna -- quote -- 'stated that he was physically assaulted by S-1. S-1 struck C-1 in his chest with a closed fist.'" CNN added, "Capitol Hill Police would not discuss McKenna's record. Contacted by CNN, McKinney's attorneys would not comment on the police report, but stressed, she has not been charged with a crime. McKinney's aides would not comment. Earlier, McKinney accused an officer of inappropriately touching her, and the Capitol Hill Police of racial profiling -- this after McKinney went around a metal detector. Capitol Hill Police deny both accusations. And even McKinney has toned down her rhetoric."

Police Make 2nd Arrest After Carjacking Spree. The Washington Post (4/20, Wilber) reports, "Police charged a 32-year-old man [named John West] with receiving stolen property and unauthorized use of one of the vehicles taken in the carjackings. Police said they also are reviving their focus on a 16-year-old who was arrested after a car chase early Tuesday that ended near the National Zoo. Neither has been charged directly in the carjackings or robberies." The police are reinvestigating the juvenile after realizing that "a key seized from the youth belonged to another carjacked vehicle."

Court Upholds Dismissal Of DeLay Charges. An appeals court has upheld a judges ruling throwing out a felony conspiracy charge against former House Majority Leader Tom DeLay. The AP (4/20, Vertuno) reports, "A lower court judge dismissed a conspiracy charge against DeLay in December, agreeing with defense arguments that the conspiracy law did not cover election code violations in 2002; the Legislature amended the law in 2003."

Ruling Seen As Victory For DeLay. CQ (4/19, McDonald) reported that while "two more serious charges of campaign money laundering and conspiracy to launder campaign funds" stand against DeLay, the ruling "does represent a victory for DeLay, whose attorneys had argued that the conspiracy charge against him for violating the election code did not apply to state campaign law in 2002 when the crime was alleged to have taken place."

Police Arrest Illinois Rape Suspect. The Chicago Tribune (4/19, Bowean) reports, "A 21-year-old resident has been charged in two of four reported assaults" in a Riverdale community. Wesley Toney "was arrested at home Tuesday after DNA evidence linked him to the two cases, Police Chief Pete Satriano said." A judge "ordered [Toney] held in lieu of $1.5 million bail."

DOJ_NMG_0026157

Online Offender Registries Could Invite Vigilantism. The Washington Post (4/20, Fahrenthold) reports that the murders of two registered Maine sex offenders "have alarmed some defense attorneys and advocates for sexual offenders, who say this crime is among the darkest examples of the harassment and threats that have followed the rapid rise in registries that publicly identify offenders." Advocates of the registries said "they were saddened by the Maine case, but noted that many states -- including Maine -- place warnings on registry sites that harassment or intimidation of offenders is illegal. They said that removing offenders' home addresses, as some critics of the registries suggest, would leave them less useful to parents."

Boston Archdiocese Reveals Financial Books. The New York Times (4/20, Bellock) reports that the Boston Catholic archdiocese on Wednesday gave the "most detailed financial accounting any diocese has made available," which revealed a $46 million deficit. Experts called the deficit "the largest any diocese has ever had." The cardinal and lay experts attributed the deficit to "declining donations as a result of the abuse crisis, pension funds hurt by declining stock prices, skyrocketing health care costs for priests and the expensive maintenance for old parish buildings." In addition, "the archdiocese has paid out more than $150 million in legal settlements related to accusations of sexual abuse by priests."

CIVIL RIGHTS:

Florida Law Blocking Child Abuse Agency Probe Of Juvenile Camp Death. The Miami Herald (4/20, Miller, 323K) reports, "Though a surveillance video played around the country shows guards punching, kneeing and choking Martin Lee Anderson before he stopped breathing at a Panama City boot camp, Florida child abuse investigators are not looking into whether the boy died from abuse or neglect. That's because both child welfare and juvenile justice administrators are interpreting one sentence in state law as granting Florida's five juvenile boot camps an exemption to requirements that all suspected or alleged child abuse be reported to the Department of Children & Families' abuse hotline." The Herald notes, "Martin's death is being investigated by a special prosecutor appointed by Gov. Jeb Bush," and "the FBI and U.S. Attorney's Office…also are investigating whether boot camp guards violated the youth's civil rights."

Boot Camp Death Spurs Student Demonstration. The AP (4/20, Fanta) reports, "About 30 college students protested peacefully Wednesday in the foyer of Gov. Jeb Bush's office, calling for the arrest of guards who struck and kicked a teenage boy at a juvenile boot camp in Panama City. The 14-year-old boy died the next day." The AP continues, "Bush said he planned to meet with the students about the Jan. 6 death of Martin Lee Anderson but cautioned that it was premature to take action until an investigation was done. The students also want Bush to apologize to the boy's family for how the investigation has been handled. They say there is a coverup." The AP adds, 'Medical examiner Charles Siebert said in the first autopsy that the boy died of complications from sickle cell trait, a usually benign blood disorder. The boy's family said the altercation with guards killed him. Bush has appointed Hillsborough County State Attorney Mark Ober as special prosecutor to investigate. … Ober witnessed a second autopsy in Tampa in February, and his office said the boy didn't die of the blood disorder. That autopsy's findings aren't complete. Ober also removed the Florida Department of Law Enforcement from the investigation because of private e-mails the FDLE's chief sent to Bay County's sheriff, whose office ran the boot camp. … The U.S. Justice Department is investigating possible civil rights violations in the Anderson case. Bay County has closed its boot camp, and the House Judiciary Committee wants to replace camps statewide with residential programs."

Tennessee White Supremacist Candidate Questions Ballot Disqualification. The Memphis Commercial Appeal (4/20, Sullivan) reports, "James L. Hart, the racist eugenicist running for the congressional seat that includes Millington, could contest the state's decision to disqualify him by pointing out that the state law the Division of Elections relies on was not 'pre-qualified' by the Justice Department under the Voting Rights Act, his lawyer says. … But Richard Barrett, Hart's lawyer and a founder of the white supremacist Nationalist Movement, said his client is 'too principled' to make the point, in part because he doesn't support 'the so-called Voting Rights Act' or its provisions protecting minority voters from state voting laws that might dilute their strength at the polls." The Appeal continues, "State Elections Coordinator Brook K. Thompson said Barrett, who

DOJ_NMG_0026158

lives in Mississippi, where voting laws must be pre-qualified, is mistaken about Tennessee voting laws, which do not. … 'We have a statute that is presumably valid and, until somebody challenges it and has it struck down, it's valid,' Thompson said Wednesday. 'I can't just determine that that statute is unconstitutional, or even assume it is... A federal judge can.'" The Appeal adds, "The Tennessee law allows political parties to petition the state to remove candidates from primary ballots that aren't 'bona fide' party members, and the state Republican Executive Committee passed a resolution to that effect last month. Barrett points out that, as the party's unwelcome standard bearer in 2004, Hart won nearly 60,000 votes. … Barrett also suggests that the state provisions, passed in 1972, permit such an arbitrary decision to be made in a way that could, in another context, dilute the minority vote."

3rd Circuit Allows Age Bias Suit To Proceed. The Legal Intelligencer (4/20, Duffy) reports, "An employer hit with an age discrimination lawsuit in the wake of a companywide layoff is not entitled to summary judgment -- even if it offers several 'age neutral' reasons for the decision -- if the plaintiff is able to point to 'implausibilities and inconsistencies' among those reasons, the 3rd U.S. Circuit Court of Appeals has ruled." The Intelligencer continues, "The 2-1 ruling in Tomasso v. The Boeing Co. is an important victory for plaintiffs because it charts a course for surviving summary judgment in a traditionally difficult sector of employment discrimination claims stemming from a 'reduction in force,' or RIF." The Intelligencer adds, "Writing for the court, Senior 3rd Circuit Judge Edward R. Becker said he recognized that 'a decision to lay off an employee in an RIF differs from a decision to fire an employee during ordinary circumstances.' … In an RIF, Becker said, 'even qualified employees are laid off in order to reduce personnel,' while in ordinary circumstances, employees are fired for poor performance. … But in both situations, Becker said, the courts apply the McDonnell Douglas burden-shifting test."

Judge Allows Ten Commandments Monument To Remain At Ohio Courthouse. The AP (4/20) reports, "A Ten Commandments monument that has stood on the courthouse lawn (in Toledo, OH) for almost 50 years does not promote religion and can remain in place,a federal judge ruled." The AP continues, "U.S. District Judge James Carr said Tuesday that the monument can stay because the motives for placing it outside the Lucas County courthouse were secular and not an endorsement of a specific belief." The AP adds, "The American Civil Liberties Union of Ohio sued Lucas County, Ohio, in 2002 to have the display removed, saying it was unconstitutional and promoted religion. … Carr's decision followed a ruling last year by the U.S. Supreme Court that addressed displays of the Ten Commandments."

Maryland Woman Sentenced To Seven Years In Domestic Slavery Case. The AP (4/20) reports, "A woman convicted of holding a Nigerian girl in the U.S. and forcing her to work as an unpaid servant has been sentenced to seven years in federal prison and will be deported after that time." The AP continues, "U.S. District Judge Peter J. Messitte listened to a statement from the now 23-year-old victim before sentencing Adaobi Stella Udeozor on Tuesday. The victim had been taken from her family in Nigeria when she was 14 under the false belief that she was being adopted to attend school in the United States, according to evidence presented in federal court. … She was subsequently raped by the man who took her from her family and abused by his wife, according to prosecutors. … 'I want to make Stella pay the price for what she did to me,' the young woman told the judge." The AP notes, "Udeozor, a physician who lives in Darnestown, Maryland, was convicted of conspiracy and harboring an alien for financial gain in 2004. A jury acquitted her of forcing the girl to work as a domestic slave but made a special finding that the girl had been held in involuntary servitude for more than a year. … In the past six years, federal prosecutors in U.S. District Court in Greenbelt have won at least six convictions in forced labor cases. Such mistreatment is common, according to law enforcement officials and advocacy groups."

ANTITRUST:

Knight Ridder Head Expects McClatchy Sale To Go Through. The Fort Worth Star-Telegram (4/20, Fuquay) reports, "Knight Ridder Chairman Tony Ridder said Tuesday that he expects the company's pending sale to McClatchy Co. to go through, despite a steady decline in the value of the buyout and a requirement that at least 80 percent of Knight Ridder shareholders approve the deal." The Star-Telegram continues, "Sacramento, Calif.-based McClatchy, the nation's 10th-largest newspaper publisher, announced

DOJ_NMG_0026159

March 13 that it had agreed to pay $6.5 billion in cash, stock and debt for Knight Ridder, which has owned the Star-Telegram since 1997. … McClatchy has said it hopes to close the deal by July 1." The Star-Telegram adds, "During a visit to Fort Worth, Ridder told newspaper employees, 'I think it's very unlikely' that the falling value of newspaper companies' stocks would scuttle the buyout. As McClatchy's shares have slipped, the value of the buyout, which is for $40 in cash and a little more than half a share of McClatchy stock, has fallen to about $6.2 billion." The Star-Telegram notes, "Ridder also said that although the U.S. Justice Department is examining antitrust issues raised by the sale, he expects those to be resolved in the next five or six weeks. McClatchy and Knight Ridder own newspapers with overlapping distribution in three markets."

Judge Denies Class Action Status to IPO-Commission Plaintiffs. The Wall Street Journal (4/20, Smith) reports, "Judge Lawrence M. McKenna denied class-action status to one class of plaintiffs in a case first filed in 1998 alleging that companies that issued stock in the IPOs were harmed by the alleged price-fixing." The judge "said the plaintiffs named in the case couldn't represent the group of issuers of IPOs valued at $20 million to $80 million because they had acquired the rights to sue."

Dow Jones (4/20) reports, "The lawsuit was one of two brought against the major underwriters over alleged collusion since 1994 to fix underwriting fees charged to issuers of IPOs valued between $20 million and $80 million at 7% of the proceeds of those offerings. … At the same, the judge is still considering whether to grant class status to a related lawsuit brought in 1998 on behalf of purchasers of IPOs."

DOJ, FTC Grant Early End To Waiting Period For Armor Holdings' Purchase. Dow Jones (4/20) reports, "Armor Holdings Inc. said the Department of Justice and the Federal Trade Commission granted early termination of the waiting period under the Hart-Scott- Rodino Antitrust Improvements Act in connection with Armor's purchase of Stewart & Stevenson Services Inc. … The Jacksonville, Fla., vehicle armor and body armor company said Stewart & Stevenson scheduled a May 9 meeting for shareholders of record April 5 to vote on the deal."

The AP (4/20) reports, "Under the terms of the deal, Armor Holdings is acquiring Stewart & Stevenson's outstanding stock for $35 per share in cash."

German Moving Firms Fined For Antitrust Violations. The AP (4/20) reports, "Germany's antitrust regulator said Wednesday it has fined six moving companies a total of euro2.4 million (US$2.9 million) for illegally fixing the price of work for the U.S. military." The AP continues, "The Federal Cartel Office said the companies agreed among themselves a minimum price for work in 2001 and 2002 packing and helping move the personal possessions of U.S. soldiers stationed in Germany." The AP adds, "The fined companies were assigned work by a main contractor to the U.S. military which U.S. authorities have already fined more than US$10 million because of the price-fixing, it said. … It didn't identify any of the companies fined or the U.S. military bases in Germany that were involved and an agency spokesman was not immediately available for comment." The AP adds, "Cartel Office President Ulf Boege said it was the first time that his officials and their U.S. counterparts had carried out such parallel investigations."

Jury Awards $133 Million To Victim Of Microsoft, Autodesk Patent Infringement. The Wall Street Journal (4/20, Fleetwood) reports, "A Texas jury awarded a total of $133 million to a Michigan man in a patent dispute with Microsoft Corp. and Autodesk Inc. David Colvin, the founder of closely held z4 Technologies Inc., sued [them] in federal court, claiming Microsoft and Autodesk appropriated two of his antipiracy-software patents with Microsoft's Office and Windows XP and Autodesk's AutoCAD programs. Microsoft was ordered to pay $115 million, and Autodesk was required to pay $18 million." The Journal reports, "Microsoft …. said it would await resolution of all issues before it makes any decisions. Autodesk spokeswoman Caroline Kawashima said the company was disappointed with the verdict and intended to pursue its options."

Pinnacle Raises Bid For Aztar. The Wall St. Journal (4/20, Sanders) reports, "Pinnacle Entertainment Inc. raised its offer for Aztar Corp. to about $1.65 billion, or $43 a share, five weeks after its original bid of $38 set off a bidding frenzy for the casino operator." The Journal writes, "The amended bid, however, is still $4 a share lower than the April 13 offer made by the casino affiliate of closely held Columbia Sussex Corp." Observers speculate that Columbia might be "stymied in its attempts to secure casino licenses in states

DOJ_NMG_0026160

including New Jersey and Missouri where Columbia doesn't currently operate casinos but Aztar does."

Mittal Activates Clock On Bid For Arcelor. The Financial Times (4/19, Laitner) reports, "Lakshmi Mittal on Wednesday set the clock ticking for the formal unveiling of his hostile €20.2bn ($25bn) bid for for Arcelor, as the likelihood increased of a shareholder revolt against Arcelor's defence plans at its annual meeting next week." Mittal "said he planned to send detailed bid documents to Arcelor shareholders in two weeks, after which they would have seven weeks to decide whether to accept the offer." The Wall Street Journal (4/20, Fleming and Teitelbaum) reports that "two corporate-governance groups said they will recommend at next week's annual meeting that some Arcelor directors shouldn't be re-elected," because Arcelor "hurt its own shareholders" in trying to stave off Mittal.

ENVIRONMENT:

Suit Alleges Contamination Of New Jersey Drinking Water By DuPont. The AP (4/20, Chase) reports, "Drinking water supplies near a DuPont facility in New Jersey have been contaminated with chemicals, including a suspected carcinogen used in the production of Teflon, according to a federal lawsuit." The AP continues, "The lawsuit, filed Tuesday, alleges that the contamination is linked to the manufacturing, use and disposal of perfluorinated chemicals, including PFOA, at DuPont's Chambers Works plant in Salem County, New Jersey." The AP adds, "PFOA, or perfluorooctanoic acid, is a processing aid used in the manufacturing of fluoropolymers, which have a wide variety of product applications, including nonstick cookware. The chemical also can be a byproduct in the manufacturing of fluorotelomers used in surface protection products for applications such as stain-resistant textiles and grease-resistant food wrappers. … The plaintiffs are seeking class-action status and compensatory and punitive damages for what they describe as the 'intentional, knowing, reckless and negligent acts and omissions of DuPont in connection with the contamination of human drinking water supplies.' … In a statement, DuPont said the lawsuit, filed in U.S. District Court in New Jersey, is without merit."

Shenandoah Is One Of Nation's 10 Most Endangered Rivers. The Washington Post (4/20, McCrummen) reports that the Shenandoah "made its grim debut yesterday on an annual list of the nation's 10 most-endangered rivers." The group American Rivers says the river "has reached a tipping point." While American Rivers blames the Army Corps of Engineers for many other rivers' deficiencies, it attributes the Shenandoah's growing problems to "national builders and the seemingly unquenchable demands of thousands for new houses in pretty spots."

American Mercury Recycling Rules May Worsen Global Pollution. The Wall Street Journal (4/20, Fialka) reports, "Instead of being permanently removed from the environment, recycled American mercury frequently travels through a secretive and unregulated chain of processors and brokers that can often end with primitive African, Asian and Latin American gold mines." It notes, "The process [of gold extraction] sends the metal into the atmosphere where it can orbit the world as many as four times before settling in distant places, such as Maine's seemingly protected lakes."

If Bird Flu Reaches US, Focus To Be On Quick Detection. If the bird flu virus shows up in US poultry, the Wall Street Journal/AP (4/20, D6) reports, "the government will kill flocks suspected of having the virus before tests are completed," officials said. If bird flu arrives, "quick detection will be key to quickly containing it and eradicating it," said Ron DeHaven, head of the USDA's Animal and Plant Health Inspection Service. Officials also "encourage those producers to bring flocks inside and watch for signs of flu…and report them immediately to state or federal authorities." USA Today (4/20, D8, 2.31M) also reports briefly on DeHaven's comments.

Study Predicts Climate Change Will Not Be Extreme. Newly published research says that while Earth will experience a significant climate shift in the next century as a result of greenhouse gas build up, the more extreme estimates of global warming predicted by some are unlikely to occur. The Washington Post (4/20, A8, Weiss, 744K) reports, "The new work extends a difficult line of research that uses historical climate data and computer models to predict the impact of atmospheric carbon dioxide levels, which are increasing as a result of human activity, such as burning fossil fuels." The new work, described in today's issue of the

DOJ_NMG_0026161

journal Nature, "recalculates the relationship between atmospheric composition and climate, taking into account the climate-affecting impacts of sun-blocking volcanic eruptions; carbon dioxide levels derived from air bubbles trapped in Antarctic ice; and temperature data derived from tree rings. The result: Climate sensitivity almost certainly falls within the more conventional range of current predictions, with only a 5 percent chance that it will exceed 11 degrees Fahrenheit."

Case Made For Protecting Sustainable Forests. Don Melnick, a professor of conservation biology at Columbia University, and Mary Pearl, president of Wildlife Trust, write in the New York Times (4/20, 1.19M) that since the first Earth Day on April 22, 1970, "we have lost more than one billion acres of forest, with no end in sight. … Everywhere, forests prevent erosion, filter and regulate the flow of fresh water, protect coral reefs and fisheries and harbor animals that pollinate, control pests and buffer disease. That is why the single most important action we can take to protect lives and livelihoods worldwide is to protect forests. And one of the best ways to do that is to change how we think about their economics." Sustainable forests "can form the basis for the health and economic well-being of the poorest among us, while benefiting everyone else as well. What could be a more satisfying vision for Earth Day 2006?"

FBI/DEA/ATF/USMS:

Anderson Family Fighting FBI Attempt To Search Papers. The CBS Evening News (4/19, story 6, 2:15, Mitchell, 7.66M) reported, "The family of the late investigative reporter Jack Anderson is squaring off against the FBI, trying to stop the bureau from seizing his files. The issue here is secrecy." CBS (Orr) added that "the FBI believes these nearly 200 boxes holding Anderson's notes and papers may contain leaked, classified documents." George Washington University archivist Mark Feldstein "says government agents are on a fishing expedition." The FBI "insists it's a matter of national security, and wants to confiscate any secret documents among Anderson's papers before they're put on public display." CBS News "has learned even some Justice officials privately say the effort is too heavy-handed."

USA Today Says Request Reminiscent "Of The FBI's Bad Old Days." In an editorial, USA Today (4/20, 2.31M) criticizes the FBI attempt to search journalist Jack Anderson's papers, writing, "Based on what's known so far, the episode smacks of yet another excessive effort to protect supposed secrets that, in fact, the public is helped by knowing. Curiously, FBI officials say they know classified documents are in the files but won't say how they know, triggering memories of the FBI's bad old days of questionable tactics in pursuit of its own paranoid agendas." USA adds, "If the FBI has real evidence of classified government property in the Anderson files, it should be able to persuade a judge to allow a narrowly focused search. Until then, a family upholding the principles of its lost patriarch has every right and duty to resist."

WPost Says Administration Trying To "Diminish" Openness, "Criminalize" Debate. The Washington Post (4/20, 744K) editorializes that "the Bush administration is promoting a reading of an old and largely moribund law that could radically diminish the openness of U.S. government while criminalizing huge swaths of academic debate and journalism." The Post cites the AIPAC classified documents case and "the FBI's attempt to seize control of the papers of the late columnist Jack Anderson" as examples of the administration move to expand the "World War I-era statute that prohibits people who receive secret information from disclosing it further." The Anderson "case makes clear that this problem is not merely theoretical but real and immediate. … It's the same legal theory at work, as the bureau's spokesman, Bill Carter, explained: 'Under the law, no private person may possess classified documents that were illegally provided to them.'"

"Operation Wasteland" Nets At Least 30 Arrests. The Long Beach (CA) Press-Telegram (4/19) reports, "Carlos Cabrera is arrested and taken into custody by law enforcement in Norwalk during 'Operation Snow Globe,' a multiple law enforcement operation targeting gangs that finances their activities by dug trafficking. Thirty individuals were arrested and cocaine and methamphetamine was seized. … 'In October of 2003, we made a promise to the gang members who terrorize our community that we were coming for them,' said Long Beach Police Chief Anthony Batts, who spoke at a joint press conference with representatives from the Drug Enforcement Agency, the U.S. Attorney's Office and the California Department of Justice, among others." The Press-Telegram says the chief made his comments in Los Angeles Wednesday, when authorities

DOJ_NMG_0026162

detailed a two-year investigation called Operation Wasteland. The Press-Telegram says that operation included two linked investigations: Operation Daddy Day Care, targeting the Highland Park Gang and Operation Snow Globe, which focused on the East Side Wilmas.

The San Gabriel Valley Tribune (4/20) reports the alleged leader of one of two street gangs "suspected of selling 500 to 800 pounds of methamphetamine per month was arrested Wednesday in a quiet Covina neighborhood. The Drug Enforcement Administration sweep covered 12 cities and involved 22 police agencies said. Authorities say Robert Gastelum, 29, was the leader of the Highland Park Gang and quietly coordinated a drug-dealing operation from his home."

The Whittier (CA) Daily News (4/20) reports, "The investigation, spanning two years and dubbed 'Operation Wasteland,' netted 30 arrests of suspected members of the drug ring, including brothers Fernando and Carlos Cabrera, identified by officials as the drug ring's top leaders."

KCAL-TV, Los Angeles (4/19) reports on its Web site that federal agents "arrested 31 people and seized drugs, cash and firearms in a crackdown on drug-dealing gangs in the Southland. In an operation dubbed 'Operation Wasteland,' agents seized eight pounds of methamphetamine, about a pound of cocaine, 23 vehicles, 14 firearms, and approximately $90,000 cash, DEA Agent Sarah Fenno said."

Cable TV Coverage. FOX Report with Shepard Smith (4/19, 7:00 p.m.) reported, "The crackdown begins before dawn, with agents suited up in armor and armed to the teeth. The target -- two Hispanic gangs spread across southern California that are charged with trafficking cocaine and methamphetamine through the Mexican drug cartels. Then the feds say they distribute the narcotics to points throughout the United States. … Called Operation Wasteland, the gangs are said to be involved in murder, robbery, grand theft, and illegal drugs and weapons. … The numbers from this raid are still coming in, but the feds are saying that a 17-month investigation and the subsequent crackdown have broken the backs of two major gangs based here in Los Angeles that have been in operation for more than three decades." In an interview with agent Jose Martinez, Martinez said, "Our focus at the DEA was obviously the distribution of drugs. And at their level, they were mid-level wholesalers distributing to, you know, every other part of the country."

Local TV Coverage. KCBS-TV, Los Angeles (4/19, 5:00 p.m.) reported, "Dozens of gang members are out of business tonight, arrested in a huge roundup involving all kinds of law enforcement agencies. Calling it Operation Wasteland, agents seized firearms, meth, cocaine, almost two dozen vehicles and $90,000 in cash. They targeted two specific gangs with about 650 members in the LA area. Thirty-one of them have been arrested."

WITI-TV, FOX Milwaukee (4/19, 9:00 p.m.) reported, "The gangs are said to be involved in murder, robbery, grand theft and illegal drugs and weapons. And in the driveway of this modest home sits a $100,000 BMW, a 2005 AMG Mercedes, a new Lincoln Navigator, a Hummer with Gucci interior, and a Lexus."

Convicted Spokane Drug Dealer Rejects Plea Bargain, Gets Life Sentence. The Spokesman Review (4/19) reports, "A Spokane drug dealer who rejected a plea bargain for only a few years in prison was sent away Tuesday to spend the rest of his life in a federal penitentiary, without the possibility of parole. Raul S. Zavala got the harsh sentence because under federal drug laws he was deemed a 'career offender' whose two previous drug-dealing convictions were factors in his mandatory sentence. … Zavala was arrested in Spokane on April 29, 2005, by Drug Enforcement Administration task force agents who found two pounds of methamphetamine – worth an estimated $16,000 – in his car."

California City Council Extends Moratorium On Marijuana Dispensaries. The Whittier (CA) Daily News (4/20) reports the Pico Rivera City Council unanimously "agreed Tuesday to extend its temporary ban on medical marijuana dispensaries by 10 months and 15 days. Officials made the decision to extend an interim ordinance, which prohibits issuing any permits to medical marijuana dispensaries in the city, because they need more time to study the subject."

Texas Drugs Task Force Commander Accused Of Extorting Money From Traffickers. According to the Houston Chronicle (4/20), the deputy commander of a counter-narcotics task force in Laredo and a suspected accomplice allegedly "extorted tens of thousands of dollars from drug traffickers, shielded them from other agents and gave them a place to store cocaine,

DOJ_NMG_0026163

according to a federal indictment unsealed on Wednesday. … FBI agents arrested Julio Alfonso Lopez on Tuesday. His alleged accomplice, Meliton Valadez...was arrested Wednesday. Lopez is accused of accepting four bribes totaling $44,500 from Veladez."

Texas Grand Jury Indicts Man On Murder Charge Linked To Drug Deal. The Brownsville (TX) Herald (4/20) reports a Cameron County grand jury on Wednesday "indicted a suspected Mexican hitman in the slaying of San Benito resident. Benito Barrera Martinez, 42, was indicted on a murder charge in the June 1997 death of Martin Villarreal. Cameron County Sheriff's Department deputies believe that Barrera and another suspect, Juan 'El Flaco' Cardenas Castañeda, killed Villarreal because of a botched $1.5 million marijuana deal with a Mexican drug lord."

Six Branch Davidians Soon To Be Released From Prison. The AP (4/19, Brown) reports, "Thirteen years after the Branch Davidians' armed standoff with federal agents ended in an inferno that killed nearly 80 people, six sect members who were sent to prison are about to be released from custody." The AP continues, "Most of those who will be freed over the next two months escaped from the compound near Waco as it burned to the ground on April 19, 1993 — 51 days after a shootout that erupted when federal Bureau of Alcohol, Tobacco and Firearms agents tried to arrest religious leader David Koresh for stockpiling guns and explosives. … The six men went to federal prison for manslaughter, weapons offenses or both in connection with the shootout, which left four federal agents and six Davidians dead." The AP adds, "Once the men are out, they will be on supervised release for three to five years. Among other things, they will be barred from associating with one another. … A seventh Davidian is also still behind bars but is not scheduled for release until next year."

Union Wants ATF To Allow More Telework. Government Executive (4/20, Pulliam) reports, "The Justice Department's Bureau of Alcohol, Tobacco, Firearms and Explosives and a federal employee union are embroiled in a dispute over a new work-away-from-the-office policy, with the union pushing for a much more expansive program than the agency allegedly is willing to offer." GE continues, "The bureau and the National Treasury Employees Union have been negotiating for more than a year over a telework program to replace a still-existing pilot agreed to five years ago. The dispute is now before the Federal Service Impasses Panel, and NTEU claims that the bureau has forced the cancellation of at least one scheduled meeting with the panel. … An ATF spokeswoman said she cannot discuss the matter because of the ongoing litigation." GE adds, "According to NTEU, the bureau's final proposal for a new policy designates only the position of management and program analyst, held by nine people, as eligible for telework on a part-time basis. There are more than 800 employees represented in the negotiations. … The union's proposal designates that position, as well as 14 others, as eligible. Investigators and auditors, who spend a large percentage of their time in the field, would be designated as eligible for full-time telework under the union plan, and could work from home at their own discretion."

IMMIGRATION:

Federal Officials Arrest Hundreds In Immigration Raids. CNN.com (4/20, Frieden, Ahlers) reports, "Federal immigration authorities rounded up more than 1,000 illegal immigrants at dozens of sites and charged nine individuals of the firm that employed them, federal law enforcement officials announced Wednesday." CNN continues, "Seven current and former managers of IFCO Systems, which has offices in several states, were arrested and charged in connection with the employment of illegal immigrants, said U.S. Attorney Glenn Suddaby in Albany, New York. … Suddaby said two lower level employees were also charged in the case." CNN adds, "The action against IFCO Systems -- an industry leader in the manufacture of wooden pallets, crates and containers -- came as Homeland Security and Justice Department officials prepared to announce steps to toughen internal enforcement of the nation's immigration laws. … Immigration and Customs Enforcement officials said Homeland Security Secretary Michael Chertoff and other Bush administration officials and a federal prosecutor will appear at the agency's Washington headquarters Thursday. They will announce the new strategy aimed at employers and disclose the results of the enforcement actions targeting IFCO Systems."

New Jersey Woman Sentenced To Prison For Illegal Immigrant License Plot. The Knoxville News Sentinel (4/20, Satterfield) reports US District Court

DOJ_NMG_0026164

Judge Thomas Phillips yesterday sentenced Zeneida Concepcion Rivera of Lakewood, N.J., to the maximum "46 months in prison for a plot to secure Tennessee driver's licenses for illegal immigrants. … Rivera admitted at an October court hearing that she and her boyfriend ferried illegal immigrants to Knoxville bimonthly over a nine-month period." The News Sentinel notes, "The FBI's Joint Terrorism Task Force nabbed Rivera and six immigrants in July at the EconoLodge on Merchants Center Boulevard after months of investigation and surveillance. … It's not clear why Rivera's boyfriend has not been charged. … It's also not clear if the FBI is pursuing a probe of Knoxville residents who aided Rivera." The AP (4/20, Mansfield) notes Rivera "insisted she was providing a service to hardworking undocumented workers who needed one of Tennessee's unique driver's certificates so they could legally drive to their construction jobs and support their families. … But Assistant U.S. Attorney Jeffrey Theodore said the certificates turned Tennessee into a 'magnet' for undocumented immigrants seeking legitimacy.

Immigrant Advocates Divided On May 1 Boycott. The New York Times (4/20, Swarns, 1.19M) reports leaders "of the demonstrations that drew hundreds of thousands of immigrants into the streets last week announced Wednesday that they were planning voter registration and citizenship drives across the country in an effort to transform the immigrant community into a powerful, organized political force." But the immigrant advocacy group leaders "remain sharply divided over whether immigrants should demonstrate their economic strength by staying away from their jobs, schools and local shops on May 1 in what organizers are calling the Great American Boycott of 2006." In Washington, "the leaders of the National Capital Immigration Coalition, an alliance of immigrant, labor and business groups, is urging immigrants to ignore the boycott and to participate in voter registration drives and other activities after attending school or going to work."

The Washington Post (4/20, A13, Fears, 744K) reports a panel "of immigration activists said yesterday that it will not encourage workers and families to walk off the job and keep their children from school as part of a May 1 boycott, but will hold voter-recruitment and petition drives instead." The announcement "by activists from the District, Chicago and Los Angeles at a news conference in Washington underlined the split among the mostly Latino activist groups that led huge demonstrations in more than 140 cities in recent weeks, and shows that the grass-roots movement is operating at cross purposes toward the same end -- immigration reform and legal status for illegal immigrants." Their "plan for civil action is a far cry from the boycotts planned by groups in Los Angeles, Dallas and Chicago, where the largest demonstrations have occurred and where Spanish-speaking disc jockeys were instrumental in turning out crowds."

The Washington Times (4/20, Summers, 90K) reports, "D.C.-area leaders are discouraging participation in 'The Great American Boycott,' in which immigrants and illegal aliens plan to shun shops, work and public transportation to demonstrate their contribution to the U.S. economy. The boycott is being organized by Latino Movement USA and the Act Now to Stop War and End Racism (ANSWER) Coalition." DC-area leaders "said they fear a boycott may kindle resentment among lawmakers and sympathizers and create consequences for protesters who would miss yet another day of school or work."

The AP (4/20, Prengaman) reports backers "of the protest want to dramatize the importance of immigrants to the US economy by leaving construction sites and restaurants undermanned, crops untended and hotel rooms uncleaned," but "others fear such protests will make immigrants look anti-American, annoy the public and alienate lawmakers who are still wavering over how to reshape U.S. immigration policy. They worry, too, that thousands will get fired from their jobs."

Organizers Predict Chicago May 1 Rally To Top 100,000. The Chicago Tribune (4/20, 643K) reports organizers "of a May 1 march to legalize illegal immigrants predicted Wednesday that the turnout would top the March 10 event that drew at least 100,000 participants to the Loop." Jose Artemio Arreola, "a member of the organizing committee, said the number of participating organizations has doubled since the first event."

About 1,000 High School Students Protest At Colorado Capitol. The AP (4/20, Trujillo) reports, "Waving U.S. and Mexican flags, hundreds of high school students descended on the Colorado Capitol Wednesday for a rally in support of illegal immigrants." About "1,000 marchers jammed Denver's Speer Boulevard on Wednesday morning and temporarily blocked other intersections as they headed toward the Capitol, but no major problems were reported, police spokeswoman Virginia Quinones said."

ICE Agents Raid IFCO Systems Plants For Immigration Violations. NBC Nightly News (4/19, story 4, 1:55, P. Williams, 9.87M) reported, "Police and Federal

DOJ_NMG_0026165

agents moved in this morning at dozens of plants nationwide owned by a global company called IFCO Systems that supplies shipping containers and pallets to some of the nation's biggest retailers. Immigration & Customs Enforcement agents arrested suspected illegal immigrants at this facility in Houston, a scene repeated today at 40 other IFCO locations. But tonight, Federal officials say the main targets of the operation are seven current and former IFCO executives, not just workers." Julie Myers, Assistant Secretary, US Immigration & Customs Enforcement: "We're alleging for the individuals that have been charged that they knowingly assisted in the employment of illegal aliens and in some cases harboring the illegal aliens." Williams: "Homeland Security says it's using laws traditionally directed against drug smugglers and organized crime."

The CBS Evening News (4/19, story 5, 0:25, Mitchell, 7.66M) reported, "Along with the workers, Immigration & Customs agents arrested seven current and former IFCO managers for conspiracy to transport and harbor illegal immigrants."

Dean Says Border Security Is A Top Democratic Priority. The Washington Times (4/20, Hallow, 90K) reports Democratic National Committee Chairman Howard Dean "called border security his party's top immigration priority for November." Dean said, "The first thing we want is tough border control. We have to do a much better job on our borders than George Bush has done. And then we can go to the policy disagreements about how to get it done." The Times adds Republicans "reacted with surprise to Mr. Dean's announcement, which puts the DNC chief's views at odds with those of many Democrats in Congress." Dean "said his party will make immigration an issue as part of its strategy to 'nationalize' the fall elections and is opening a television advertising campaign -- beginning with Spanish-language pitches on radio stations in three Southwestern states -- that puts tougher border enforcement first."

Colorado Columnist Says Washington Shirking Responsibility On Immigration. In a Wall Street Journal op-ed (4/20), Denver Post columnist Fred Brown says the "explosion of controversy, anger and even fear about illegal immigrants flooding into the U.S. from the south has revealed a less-accepting side of the Colorado state of mind. There is a gathering concern about the tide of unassimilated newcomers, and little consensus about solutions." These "inchoate feelings are stoked by Tom Tancredo, the Republican congressman from Denver's southern suburbs and fierce anti-immigration activist." At the state legislature, both Republicans and Democrats "exploit the issue in the interest of politics, but Colorado's best interests seem to be secondary." The "one thing on which all sides agree" is that "the major responsibility is Washington's -- the problem is far larger than the states can confront one by one. Yet Capitol Hill, where reform is now suspended in the limbo between abstraction and political calculation, seems to have no understanding of the urgency of the problem."

Mexico Provides Few Protections For Latin American Migrants. The Washington Times/AP (4/20, Stevenson) reports migrants "from elsewhere in Latin America, considered felons by" the Mexican government, "fear robbery and rape at the hands of corrupt police. While immigrants in the United States have held huge demonstrations in recent weeks, the hundreds of thousands of undocumented Central Americans in Mexico suffer mostly in silence." Although Mexico "demands humane treatment for its citizens who migrate to the United States, regardless of their legal status, Mexico provides few protections for migrants on its own soil." Undocumented Central Americans "complain much more about how they are treated by Mexican officials than about authorities on the U.S. side of the border, where aliens may resent being caught but often praise the professionalism of the agents scouring the desert for their trail."

Celebrities Largely Sidestepping Immigration Debate. The Washington Post (4/20, C1, Johnson, 744K) reports, "Now the immigration debate is hot. But the celebrity squawk is, well, not." Last week, Salma Hayek "became the first Big Name to Speak Out. She told the New York Daily News: 'As a human being, I find this situation intolerable. As an immigrant, I find it offensive. And as an American citizen, I find it disheartening. The work that these immigrants do directly affects the health of the U.S. economy." Eva Longoria "has been speaking -- carefully -- about the debate," but "many famous lips have remained zipped."

Beckel, Thomas Debate Immigration Reform. USA Today (4/20, 2.31M) runs a "Common Ground" debate between liberal Bob Beckel and conservative Cal Thomas on immigration reform. Beckel said, "The thrust of the bill in the House of Representatives, though, is to make the mere presence of illegals a felony. Then we're to find the 12 million and send them home. That is not only ridiculous, it is undoable." Thomas added, "True, but at least there's a law-and-order concern in that proposal. Senate Democratic

DOJ_NMG_0026166

Minority Leader Harry Reid, on the other hand, today suggests that illegal aliens don't pose much of a criminal threat at all and should be simply ushered in. This is the same man who in 1993 introduced a bill to drastically scale down the number of immigrants allowed. … Reid takes a more liberal stance today because he thinks it will pay off politically for Democrats."

Samuelson Says Immigration Proposals Run Counter To Goal Of Assimilation. In his Washington Post (4/20, A25, 744K), Robert Samuelson says, "One of America's glories is that it has assimilated many waves of immigrants. Outsiders have become insiders" even though it "hasn't been easy." If today's "wave of immigration does not end in assimilation, it will be a failure. By this standard, I think the major contending sides in the present bitter debate are leading us astray. Their proposals, if adopted, would frustrate assimilation." The "'cop' school…adamantly opposes amnesty and would make being here illegally a felony, as opposed to a lesser crime." But the "mere threat of a crackdown stigmatizes much of the Hispanic population -- whether they're legal or illegal immigrants, or whether they've been here for generations." The "'guest worker' advocates" want "400,000 or more new foreign workers annually." But advocates "of guest workers don't acknowledge that poor, unskilled immigrants -- whether legal or illegal -- create huge social costs."

San Diego ICE Agent Profiled. The Washington Post (4/20, A23, Pomfret, 744K) profiles Miguel "Mike" Unzueta, "special agent in charge of the federal Immigration and Customs Enforcement bureau" in San Diego, whose team was responsible for finding the drug smuggler's tunnel from Tijuana known as "El Grande." The Sept. 11 terrorist attacks "were followed by an enormous bureaucratic shakeup, the creation of the Department of Homeland Security and the merger of the investigative wings of the Immigration and Naturalization Service and of Customs into ICE." For Unzueta "and many other senior Customs agents, the transition was rocky. For one, they were used to dealing with things -- drugs, money, controlled technology, child pornography -- while Immigration handled people." Unzueta "left Washington in 2002 and returned to San Diego. He was made the special agent in charge, or SAC, in 2005. Since then, the illegal-immigration issue has loomed large on his beat and around the nation."

SCOTUS To Consider Use Of RICO In Illegal Worker Disputes. The National Law Journal (4/20, Coyle) reports, "As Congress wages a battle over illegal immigration and its impact on this nation, the Supreme Court is about to enter the fray in a context involving one of the law's most powerful weapons -- RICO." The Journal continues, "In 1996, Congress expanded the reach of RICO -- the Racketeer Influenced and Corrupt Organizations Act -- to include violations of federal immigration law. A decade later, the justices this month will consider whether a corporation and its outside recruiters, alleged to have engaged in the systematic recruiting and hiring of illegal workers, can constitute an 'enterprise' under RICO. Mohawk Industries v. Williams, No. 05-465." The Journal adds, "The high court case stems from a class action against carpet giant Mohawk Industries Inc., most of whose more than 30,000 employees work in northwest Georgia. The suit was brought by Howard Foster of Chicago's Johnson & Bell, who has pioneered the use of RICO on behalf of workers who lost jobs or had wages artificially depressed because of their employers' alleged hiring and concealment of illegal immigrants. … Mohawk, which is appealing its defeat of a motion to dismiss in the 11th U.S. Circuit Court of Appeals, is urging the justices to reject that circuit's view of "enterprise," a view that will transform the powerful RICO law into a 'general civil liability statute for virtually all alleged corporate conspiracies and business disputes,' contends its high court counsel, Carter G. Phillips of Sidley Austin's Washington office. … The company has drawn support from the U.S. Chamber of Commerce, the National Association of Manufacturers and other business groups who believe that the case against Mohawk is another example of RICO run amok."

TAX:

DOJ Bars Illinois Group From Making Misleading Down-Payment Statements. Inman News (4/19) reports, "An Illinois down-payment-assistance organization and its president have been permanently barred from making false and misleading statements in promoting their program to house sellers, officials said today." Inman continues, "West Dundee, Ill.-based Partners in Charity Inc. (PIC) and its president, Charles M. Konkus of Barrington, Ill., have been permanently barred from making false and misleading statements in promoting the down-payment-

DOJ_NMG_0026167

assistance program, the Justice Department said. … According to the government's amended complaint, PIC enters into 'down-payment-assistance' contracts with house sellers. Under these contracts, PIC agrees to provide the down payment to people who buy the sellers' houses, and the sellers agree to reimburse PIC for the down payment and to pay PIC an administrative fee, the complaint says. … The suit alleges that in marketing and operating this scheme, PIC and Konkus falsely advised house sellers and others that the sellers may claim charitable deductions on their federal income tax returns for the amounts they pay PIC under these contracts." Inman adds, "Sellers' payments are not deductible charitable contributions, the Department of Justice said. The injunction requires the defendants to refrain from falsely claiming that these contributions are deductible. … 'The Tax Division of the Department of Justice has made it a high priority to put an end to the business of providing false tax advice,' said Eileen J. O'Connor, assistant attorney general for the Tax Division, in a statement. … 'Anyone receiving tax advice should verify the motives and qualifications of those giving it, even those claiming to be charitable organizations,' O'Connor said."

US Challenges E-Commerce Firm Over Tax Liabilities. The Duluth News Tribune (4/20, Brissett) reports, "E-commerce firm 50 Below Sales & Marketing Inc. of Duluth tried to keep current with its taxes last year, but was thwarted by Internal Revenue Service actions, the company president said in court filings." The Tribune continues, "Company President Mike Rollo also said in court documents that his company paid its tax liability and penalties of $308,000 for the first quarter of this year." The Tribune adds, "The U.S. Justice Department, representing the IRS, has alleged in a separate case that the company owes as much as $3.7 million in unpaid employment taxes, including money withheld from employee paychecks. … On Tuesday, Judge Ann D. Montgomery heard arguments in U.S. District Court in Minneapolis on a Department of Justice motion for a temporary restraining order prohibiting the company from failing to pay employment taxes and failing to file tax returns on time. She did not rule on the matter." The Tribune notes, "50 Below and the Justice Department are involved in two suits. In one, the Duluth company has asked the court to order the IRS to enter into an installment agreement with the company to allow it to pay back taxes. The IRS previously denied that request. … In the second case, the Justice Department asked the court to permanently enjoin Fifty Below from failing to pay taxes withheld from employee paychecks to the IRS, to pay its own employment and unemployment taxes, and to file tax returns -- all in a timely manner."

CONGRESS-ADMINISTRATION:

McClellan Resigns, Rove Drops Policy Role To Focus On Politics. In the latest White House personnel shifts, press secretary Scott McClellan announced his resignation. He also said Deputy Chief of Staff Karl Rove has relinquished role as policy coordinator. Fox News' Special Report (4/19, Cameron) reported "overall policy development and related duties including working with cabinet agencies have now been handed over to Joel Kaplan, who has been promoted to be an additional deputy chief of staff." Kaplan "served as a top deputy at White House Office of Management and Budget under Josh Bolten and expected to emerge as a top Bolten player at the White House." Media reports are describing the moves, particularly Rove's, as Josh Bolten asserting his power as the new White House Chief of Staff. On ABC World News Tonight (4/19, story 2, 1:15, Vargas, 8.78M), Washington correspondent George Stephanopoulos said Rove's new role is "a slap on the wrist. He goes back to the position he had before 2004. He was promoted after the 2004 elections. What this says is that Josh Bolten wanted to send a signal that he was in charge." Similarly, on the CBS Evening News (4/19, story 2, 1:20, Mitchell, 7.66M), national political correspondent Gloria Borger said, "I think what we see happening today is a White House that's in a much more traditional mold with a chief of staff who actually says, 'I'm going to be running things.'" CNN's The Situation Room (4/19, Quijano) calls Rove's move "another indication of the wide latitude Josh Bolten has in making changes in the West Wing."

In a front-page story titled "White House Shifts Into Survival Mode," the Washington Post (4/20, A1, Balz, 744K) says "yesterday's senior staff changes represent a frank acknowledgment of the trouble in which…Bush now finds himself. They are also a signal of how starkly Bush's second-term ambitions have shifted after a year of persistent problems at home and abroad." Rove's "shift in responsibilities" also suggests that new White House Chief of Staff Joshua B. Bolten intends to operate a different White House than his predecessor, Andrew H. Card Jr., who resigned after more than five years at the helm." Bolten "is

DOJ_NMG_0026168

likely to have clearer lines of authority and less free-lancing by powerful officials. They also expect Bolten to play a more active and influential role in shaping domestic policy" than did Andy Card. Meanwhile, the Washington Times (4/20, Curl, 90K) says Bolten "has wielded an iron fist as he overhauls the West Wing -- stripping power" from Rove. The Times quotes a "White House insider" saying, "That move shows just how savvy Bolten is, as well as his leadership ability. And there'll be more moves like this -- guaranteed."

The Los Angeles Times (4/20, Hamburger, Simon, Brownstein, 958K) reports, "A former White House official who had talked recently with Bolten said Wednesday's moves resulted from Bolten's view that he needed to address three serious problems facing Bush: deteriorating press coverage, souring relations with Congress, and increasing tensions between the White House and GOP candidates." The former official "asked not to be identified because of concern the White House might not appreciate his comments during a difficult time."

The story was the lead on each of the networks, which also ran follow-up reports on the changes for a cumulative total of about thirteen minutes. ABC World News Tonight (4/19, lead story, 2:50, Raddatz, 8.78M) reported McClellan "has been the public face for the Administration, but the more substantive change today may be Karl Rove, the architect of the President's election and reelection." Rove's decision to drop his policy role frees "him up to concentrate on the midterm elections." Norman Ornstein, American Enterprise Institute: "This is an understanding and admission in the White House, that Karl Rove needs to be there doing politics. And you can't have him doing good politics if he's also running policy."

The CBS Evening News (4/19, lead story, 3:00, Axelrod, 7.66M) said "there should be no question about the power of that new White House Chief of Staff, Josh Bolten. Anyone who has the authority to narrow the responsibilities of Karl Rove clearly has the green light to make changes around here. The architect of George Bush's political success had his job downsized today. Rove will no longer oversee policy for the White House, focusing now on big picture politics."

NBC Nightly News (4/19, lead story, 3:05, Gregory, 9.87M) reported, "Top advisors say it reflects a pretty grim mood around here, a sense that this team has got to become more assertive and, frankly, more effective if it's going to salvage this second term. The biggest change today was the one that may be harder to notice" as Rove "lost some of his duties as deputy chief of staff." The President is "close now to choosing a successor for McClellan."

The AP (4/20, Hunt) reports that "in recent months, McClellan had told people he enjoyed his job and wanted to stay for the long term. He said Wednesday he started to think about leaving in the past few weeks and concluded, with a new chief of staff, that it was a good time to go. He and Bush came to a decision in a meeting Monday in the Oval Office. 'I have given it my all, sir, and I have given you my all, sir, and I will continue to do so as we transition to a new press secretary,' McClellan said." Bush "patted McClellan on the back and they walked together across the South Lawn to the president's helicopter to begin a trip to Alabama." Another AP story (4/20, Raum) said "McClellan, "through his daily on-camera briefings, has become the face of the Bush White House. Increasingly, as Bush's poll ratings plummet and the war in Iraq drags on, that face has become more opaque and troubled, the briefings more contentious."

In its style section, the Washington Post (4/20, C1, Kurtz, 744K) says McClellan "was painful to watch at times, gamely repeating the same stock phrases under a barrage of hostile media fire, grasping for new ways to deliver the same non-answers." But "former colleagues of McClellan, an affable Texan who has worked for Bush since he was governor, say he acquitted himself well in what has become an increasingly difficult and contentious job." Ari Fleischer, "who was McClellan's boss when Fleischer held the spokesman's job, said his successor enjoyed 'the trust and confidence of the president' and 'was flawless in his performance, especially when you read the transcripts.'" But "asked about McClellan's apparent discomfort at the podium, Fleischer said: 'Whether or not a press secretary thrives in the back-and-forth, pugilistic environment of the television age is always going to be an issue.'"

The Wall Street Journal (4/20, McKinnon, 2.11M) reports, "Some Republicans have said that the affable Mr. McClellan wasn't a forceful-enough advocate of White House positions, contending that he relied too much on stock phrases and occasional stonewalling." His departure "gives the White House a chance to find a more effective voice, addressing complaints that the administration's real problem is more style than substance. … Conservative bloggers, many of whom had complained about his job performance, cheered his resignation, hoping that the White House will put a more forceful advocate at the podium for the daily televised briefing." USA Today (4/20, Jackson, Benedetto, 2.31M)

DOJ_NMG_0026169

quotes Bush media adviser Mark McKinnon saying "the new spokesman must have 'the full trust of the president,' as well as credibility with the press." McKinnon "called it 'the hardest job' imaginable: 'You need a lot of patience, a good smile, a sharp wit and iron underwear.'"

Knight Ridder (4/20, Hutcheson, Douglas) says that "like the previous personnel shifts, the latest moves are largely cosmetic and aren't likely to result in any dramatic policy changes." Bush "has resisted calls for the ouster of Defense Secretary Donald H. Rumsfeld or other dramatic shifts that could signal a new course at the White House. … Even if he wanted to make big changes, Bush faces a shrinking pool of applicants."

The Christian Science Monitor (4/20, Feldmann, 61K) reports on "the latest shake-up for a troubled presidency." Yesterday's announcements "throw more fodder into the discussion mill for the politically oriented, and give this White House another day of 'change' headlines. 'In the short run, it gives them a breather,' says Stephen Wayne, a political scientist at Georgetown University in Washington." The Financial Times (4/20, Alden, Daniel, Yeager) quotes Frank Luntz, a Republican political consultant, saying, "Finally, the White House has recognised what everyone else knew for months now – things needed to change."

Rove Says His Role In Bush Team Not Diminished As Washington Debates The Point. The New York Times (4/20, Bumiller, 1.19M) reports, "Rove has been at Mr. Bush's side since Mr. Bush entered politics, and for years his influence has been unquestioned. The decision to take away his daily control over the White House's policy-making apparatus is the first time his role has shrunk," and it is "a stark reversal from the heady aftermath of Mr. Bush's 2004 re-election victory, when Mr. Rove's portfolio was expanded to give him formal control over policy." The Times adds, "In a telephone interview Wednesday night, Mr. Rove brushed aside suggestions that the change was a diminishment of his role. 'It is something different,' he said. 'I've got a new boss,' he continued, a boss 'who says I want you to do more of this and less of that.'" Rove "will retain his title as a deputy chief of staff, as well as his catch-all designation as Mr. Bush's senior adviser."

The Washington Post (4/20, A1, Baker, VandeHei, 744K) reports, "Among people close to the White House and in Republican circles around Washington, there remained debate whether the move should be regarded as a demotion or reassignment. The answer will remain unknown until Bolten's operation has more time to prove itself. But there was agreement that the move was a negative verdict on the status quo." A "senior administration official glad to see Rove return to his strong suit" said, "He's the best thinker in our party, and in the last year he's been doing all the staffing memos and making sure the paperwork is done on time and all that."

The AP (4/20, Fournier) says that in 2005, Rove "took a promotion and added policymaking to his already jam-packed portfolio. It was a mistake -- one that may have contributed to the president's slump -- and so he's been told to focus on his old job: politics." The AP adds, "Technically, it is a demotion. But in terms of real power and influence, Rove remains virtually unmatched at the White House."

The Baltimore Sun (4/20, Davis, 296K) says Rove "remains at the forefront of Bush's team, and officials played down the notion that he had been demoted. 'Karl's voice will continue to be a crucial one in the policy process, as it has been all along,' McClellan said."

In its "Washington Wire" column on its web site, the Wall Street Journal's web site (4/19) reports that the expected shift in duties for Rove "is meant to address another problem -- the perception that too many of the administration's policy decisions are made primarily with partisan political considerations in mind." The Journal adds, "Rove allies suggest that he took the deputy chief of staff title at the beginning of the second term only to prevent Card from filling the job with one of his own loyalists, after Card nixed giving the job to Rove's choice, Jay Lefkowitz. … Rove's real function -- Bush's major political adviser and, now, burnisher of his legacy -- is not likely to change very much even if his title does."

Insiders Say Bush Had Role In Redirecting Rove's Emphasis. A separate item in the "Washington Wire" column on the Wall Street Journal (4/19, 2.11M) reports that Bush "played a role in redirecting Karl Rove's emphasis away from policy administration toward the fall election and toward strategy for the remainder of Bush's term, insiders say. At the same time Josh Bolten wanted Joel Kaplan, his budget office deputy, in new White House structure. Bolten and Rove agreed on the shift on Sunday, the day before Bolten officially started new job as chief of staff."

Snow, Nichols, Clarke, Senor Mentioned As Possible McClellan Replacements. CNN's The Situation Room (4/19, Quijano) reported, "After nearly three years on the job as the president's chief spokesman, an emotional Scott McClellan announced his resignation. … McClellan's

DOJ_NMG_0026170

announcement of his departure was not unexpected. As CNN first reported two weeks ago, Republican sources say the new White House chief of staff, Josh Bolten, is focusing on reshaping White House communications and legislative affairs. Possible names being mentioned to succeed McClellan, Fox News anchor Tony Snow, former Treasury spokesman Rob Nichols, and former Pentagon spokeswoman and CNN contributor Torie Clarke." The CBS Evening News (4/19, lead story, 3:00, Axelrod, 7.66M) called Snow the "leading candidate," and mentioned "former coalition spokesman in Iraq, Dan Senor" as a candidate. The Washington Times (4/20, Dinan, Curl, 90K) says Snow is "a longtime friend of Mr. Bolten and a White House speechwriter under the first President Bush."

Torie Clarke was asked on CNN's The Situation Room (4/19) if she would accept the job of White House Press Secretary of asked. Clarke said, "Not happening. It's not under consideration. They're not going to ask. And I'm not going to do it."

Bartlett Says McClellan's Removal Is Not An Indication Of Poor Job Performance. White House Communications Director Dan Bartlett said on MSNBC's Hardball (4/19) that McClellan "served this country and this White House very well during very difficult times. This is not an indication that he did a poor job. This is just an indication that it's time for a new team to come in and help the president sprint to the finish."

Hill Republicans Pleased With Change In Rove's Job Description. CNN's The Situation Room (4/19, Bash) reported that congressional Republicans "are very happy" Rove is going back to "putting much of his focus on politics and strategically looking at the universe this election year specifically. It goes without saying that most Republicans, especially in the leadership on Capitol Hill, are frankly scared to death about what this climate that they're in means for their prospects this November. So they say if Karl Rove is, in fact, going to spend more of his time doing that, that's great with them."

Dean Celebrates Rove's "Demotion." USA Today (4/20, Jackson, Benedetto, 2.31M) reports Democratic National Committee Chairman Howard Dean "celebrated what he called Rove's 'demotion' but added that 'the Bush White House is merely engaging in window dressing.'"

Three Top Business Leaders Reportedly Turned Down Treasury Post. The CBS Evening News (4/19, lead story, 3:00, Axelrod, 7.66M) reported Treasury Secretary John Snow "has signaled he wants to leave. The Administration reached out to at least three high-profile business leaders recently: Time Warner's Dick Parsons, Morgan Stanley's John Mack, and Henry Paulson of Goldman Sachs. None were interested."

NYTimes Says Those "Who Messed Everything Up" Remain In Office. The New York Times (4/20, 1.19M) editorializes, "Bush wants to show the nation he's shaking things up in his administration, but it is clear that the people who messed everything up will remain in place. The press secretary goes; the political-and-domestic-policy adviser is losing half his portfolio. There's a new White House chief of staff. But the folks at the Defense Department are still on the job, doing...what they've been doing." The Times also says, "The sudden exit of Scott McClellan, the press secretary, would be meaningless under normal circumstances. But in the current context, it really does send an important message." Bush "is like one of those people who pretend to apologize by saying they're sorry if they were misunderstood. He doesn't believe he's done anything wrong. It's our fault for not appreciating him. Blame the victim."

Bush Legacy Seen As Dependent On War On Terrorism, Iraq. On NBC Nightly News (4/19, story 2, 1:30 Williams, 9.87M) presidential historian said, "If we could come back in 30 years and I had one question to ask that would tell me how future Americans will think of George Bush, it would be how did the war on terrorism turn out, how did the war in Iraq turn out? If those things led to a more safe world, George Bush will be well thought of."

Bush Promotes Competitiveness Initiative.

The Los Angeles Times (4/20, Gerstenzang, 958K) reports from Tuskegee, AL, "With gas prices topping $3 a gallon and jobs continuing to move overseas, President Bush is presenting anew his long-term solution to the nation's economic anxieties: a program to boost the study of math and science and the renewal of a tax credit to encourage industrial research and development." The Times adds, "Eleven weeks after unveiling his American Competitiveness Initiative in the State of the Union address, Bush is devoting much of his public time this week to speeches -- in Maryland on Tuesday, in Alabama on Wednesday and in San Jose on Friday -- on the role that math, science and technology education and leading-edge research can play to protect the nation's economic standing." Speaking at Tuskegee University, "one of the most prominent of the nation's

DOJ_NMG_0026171

historically black colleges, he said: 'If we lose our nerve and retreat, it will make it hard for us to provide those jobs people want.'"

The AP (4/20, Pickler) reports that Bush said yesterday the US "needs to keep on the cutting edge in research in the face of growing competition over jobs and natural resources from India and China. … 'These countries are emerging nations,' Bush said in a speech at Tuskegee University. 'They are growing rapidly and they provide competition for jobs and natural resources. As these new jobs of the 21st century come into being, people are going to hire people with the skills set. … And if our folks don't have the skill set, those jobs are going to go somewhere else.'"

WSFA-TV Montgomery, Alabama (4/19) reported Bush "spoke to a packed house at Tuskegee University on Wednesday pressing his plan for bolstering U.S. technology." The President also "talked about what he termed progress under 'No Child Left Behind' and called for more than 70,000 teachers to be trained in teaching advanced placement courses." He also spoke about Academic Competitiveness Grants and Smart Grants.

NYTimes Says There Is Shortage Of Math, Science Teachers. An editorial in the New York Times (4/20, 1.19M) praises New York City's offer to pay housing subsidies of nearly $15,000 to "experienced math, science and special education teachers who agree to work in some of the city's toughest middle and high schools." The Times says the subsidy "sends the important signal that the city is dedicated to attracting the best teachers and improving its schools. But neither this program nor others like it around the country address the bedrock issue: public universities are turning out too few math and science teachers. … Elected officials must then do whatever it takes -- including raising salaries -- to make sure that more of the most talented math and science students end up in classrooms and spend their careers there."

Rolling Stone Essay Says Historians May Rate Bush As Worst President. Rolling Stone runs as its cover story (4/21) an essay by Princeton historian Sean Wilentz under the headline "The Worst President in History?" Wilentz says, "George W. Bush's presidency appears headed for colossal historical disgrace. Barring a cataclysmic event on the order of the terrorist attacks of September 11th, after which the public might rally around the White House once again, there seems to be little the administration can do to avoid being ranked on the lowest tier of U.S. presidents. And that may be the best-case scenario. Many historians are now wondering whether Bush, in fact, will be remembered as the very worst president in all of American history."

Kennedy Book Criticizes Bush, GOP. Knight Ridder (4/20, Kuhnhenn) reports that on Thursday, Sen. Edward Kennedy "launches a national publicity tour to promote a new book he's authored -- a blistering critique of President Bush and the Republican congressional leadership that makes a case for an activist government to help solve national problems." Kennedy is "trying to put a bit of a roar in his voiceless party. Yet by continuing to work with Republicans on issues that include immigration and health care, Kennedy is also openly rejecting the view held by many Democrats that they shouldn't help their opponents win legislative victories, especially now that they're stumbling. Kennedy prefers achievement."

Bush Reappoints Social Security Public Trustees. In defiance of Senate leaders from both parties, President Bush yesterday reappointed the two public representatives on the board of trustees for Social Security and Medicare. The New York Times (4/20, Pear, 1.19M) reports, "The White House announced that Mr. Bush had granted 'recess appointments' to the public trustees, John L. Palmer, former dean of the Maxwell School at Syracuse University, and Thomas R. Saving, an economist at Texas A&M. … The chairman of the Senate Finance Committee, Charles E. Grassley, Republican of Iowa, and its senior Democrat, Max Baucus of Montana, had urged Mr. Bush to find other candidates. They did not criticize Mr. Palmer or Mr. Saving, but said they wanted fresh perspectives on Social Security and Medicare."

Democrats Push For Extension Of Medicare Drug Plan Deadline. Democratic lawmakers are continuing their calls for an extension of the May 15 deadline for seniors to enroll in a Medicare prescription drug plan. CQ (4/19, Schuler) reported, "Sen. Debbie Stabenow, D-Mich., said 47 senators joined her in signing a letter…to Majority Leader Bill Frist, R-Tenn., asking him to bring up legislation to extend the deadline immediately when the Senate returns next week."

Letters Tell Thousands Drug Benefit Premiums Are Unpaid. USA Today (4/20, Appleby, 2.31M) reports,

DOJ_NMG_0026172

"Insurers have notified tens of thousands of people in Medicare's new drug benefit plan that they might be kicked out because their premiums have not been paid. But many who received the letters in the past few days insist they have already paid, have signed up for automatic Social Security deductions or qualify for free coverage, according to insurance counseling programs in California, New York, Pennsylvania and Arkansas. … The letters come as the government and insurers are encouraging people to sign up for the program before the May 15 deadline. The letters say insurers' records show no payment and warn that if payment isn't received by May 31, 'we will have to disenroll you.'"

Doctor's Study Says NIH Budget Will Fall 3.8% Next Year. The budget for NIH is expected to fall 3.8% next year, according to Dr. Joseph Loscalzo, a top US biomedical researcher. The Washington Times (4/20, Price, 90K) reports, "The Bush administration has proposed a $28.6 billion budget for NIH in fiscal 2007, a 0.1 percent reduction from last year. … An NIH spokesman said yesterday he was unable to obtain a copy of Dr. Loscalzo's essay and therefore could not comment."

Novak Says GOP's Efforts At Budget Reform To Face Test. In his syndicated column, Robert Novak (4/20) discusses the House's failure to pass a budget bill before the Easter break. Novak says that though "a budget containing spending reforms was agreed to by the new majority leader, John Boehner, and Rep. Mike Pence, head of the conservative Republican Study Committee," the bill was torpedoed by Appropriations Committee Chairman Jerry Lewis (R), who "blocked support for the rule needed to debate the budget because the bill's effort to control the earmarking epidemic would have undercut influence of the appropriators." Novak notes that next week, "a new effort will be made to pass the budget…and that means either getting the Appropriations chairman back in line or overriding him. Control of the budget is necessary for Republicans to restore credibility, as signaled by the appointment of the highly regarded Rob Portman as budget director." Novak adds that traditionally, "the leadership's next step would be to seek compromises with Lewis that dilute the reforms. But maybe not this time." Pence and Boehner's efforts "to rid Congress of its earmark addiction" will "be supported in the administration by Portman. The test comes next week."

Emerson Apologizes For Profanity In Letter To Constituent. A letter from Rep. Jo Ann Emerson to a constituent, ends with a profane insult. According to the AP (4/20, Hananel) the letter concludes with a seven latter profanity starting with a: "I think you're an a-------." Emerson "says she can't explain how the offensive language made it into the letter, which otherwise reads like a typical response to a citizen's question about last year's testimony of oil executives before the Senate Commerce Committee. 'There is no excuse for this inappropriate letter having been sent, and every apology has been made to the individual who received it,' Emerson said in a statement to The Associated Press."

Marine One Grounded By Technical Problems. NBC Nightly News (4/19, story 3, 0:40, Williams, 9.87M) reported on the "eventful morning at the Bush White House." After "Scott McClellan's resignation scene there on the lawn, the President headed for his helicopter, Marine One. He boarded, as usual, they cranked up the rotors and then it all came to a grinding halt. The President then bounded off the very familiar white top Sikorsky aircraft, which was apparently in no condition to fly today. The problem, it turned out – air-to-ground communications; the radio. And so the Secret Service threw together a motorcade and minutes later the boss was off, by land, to Andrews Air Force Base."

OTHER NEWS:

Oil Prices Reach New Record As US Gasoline Prices Continue To Climb. The price of oil reached a new record of $72.17 this afternoon, up 82 cents, as Iranian President Mahmoud Ahmadinejad said he believed the oil was undervalued. ABC World News Tonight (4/19, story 3, 2:40, Stark, 8.78M) reported geopolitics "once again dominated the oil market today. This time, it was the president of Iran, declaring oil prices were undervalued at over $70 a barrel. Americans don't get oil from Iran; Iranian oil has been embargoed for more than a decade. But it proves just how vulnerable the US is to suppliers all over the globe. The United States consumes almost 21 million barrels a day, and produces only 8 million. Foreign producers provide 60% of its needs, a dicey proposition in a fractious world." Michelle Billig, PIRA Energy Group: "And

DOJ_NMG_0026173

then you look at the top five countries that we get oil from. Four of them are particularly risky places." NBC Nightly News (4/19, story 6, 0:30, Williams, 9.87M) also reported, "It was another wild day on the oil markets today with prices surging to yet another record-high close."

The CBS Evening News (4/19, story 3, 0:30, Mitchell, 7.66M) reported, "The price of gasoline is rising about a penny a day of late, and the pennies are adding up. Two months ago, you could fill a 15-gallon tank for less then $34. Today, it's going to cost you $42. Fill up once a week and that's an increase of nearly $437 a year. In some places like this station in New York City, regular is already well over three bucks a gallon."

USA Today (4/20, Healey, 2.31M) reports on the gas prices under the headline "Drivers Curb Use As Gas Goes Up," and says "gas use last month was 0.6% less than a year ago, the American Petroleum Institute reported, because 'high fuel prices have led to decreased demand for gasoline and other refined oil products.'" The US Energy Information Administration (EIA) "said gasoline use the past four weeks was up a slight 0.6% vs. a year ago. Typical is an increase of 1.5%, and that's the growth rate assumed in many industry, analyst and government forecasts." The Wall Street Journal (4/20, 2.11M) also reports on the rising fuel prices.

Bartlett Says Administration Never Said Iraq War Would Result In Cheaper Gasoline Prices. White House Communications Director Dan Bartlett was asked on MSNBC's Hardball (4/19) about pre-war claims that the Iraq war "would help us get cheaper gas." Bartlett said, "That's not correct. The president or no one else never said that the war was going to result in cheaper gas prices." Asked again if anyone in the Administration "ever said that we would have cheaper gas because of the war in Iraq," Bartlett said, "I don't recall anybody ever saying that. What we have said is that the resources for Iraq, the oil resources there, that was not the motivation of going into Iraq. The motivation was to rid that country of a brutal dictator that was a threat to the American people and we have done that."

US Automakers Seek To Get Ahead Of Flex Fuel Vehicle Market. The CBS Evening News (4/19, story 4, 2:35, Mason, 7.66M) reported, "When GM unveiled its new Chevy Avalanche this year, they drove it through a giant box of popcorn, because like many new flexfuel GM vehicles, the Avalanche can run on either gas or E85 ethanol, a corn-based fuel. GM's even putting its money behind a national ad campaign urging Americans to live green by going yellow." GM Vice Chairman Bob Lutz: "No, we're very serious about this, and we've made the investment for the vehicles. We are prepared to convert more and more of our fleet." Mason: "Together, GM and Ford plan to make nearly 700,000 flexfuel vehicles this year. Add that to at least five million already on the road. The problem isn't production, it's where do you fill them up?" E85 "can be more expensive than gas, and less fuel efficient." Of the "165,000 gas stations in the country, only 650, mostly in the Midwest, now sell E85. That's expected to grow to 2,000 by the end of the year, but Lutz says they need more."

Fueled By Gas Prices, Inflation Gauge Higher In March. The Washington Post (4/20, D1, Henderson, 744K) reports, "Climbing gasoline prices helped push inflation higher last month, the government reported yesterday, heightening concerns that businesses may be passing more of their energy costs to consumers." The Labor Department's consumer price index, "a widely followed inflation gauge, rose 0.4 percent in March after edging up a mild 0.1 percent the month before." The report "caused analysts to reconsider predictions that the Federal Reserve will soon stop raising interest rates to keep inflation under control." The Post adds, "Much of the March increase in the CPI reflected a 3.6 percent jump in gasoline prices." USA Today (4/20, Kirchhoff, 2.31M) titles its story "March Consumer Prices Jump More Than Expected," and says the numbers could "possibly" complicate "the Federal Reserve's job as it tries to decide when to wind up its nearly two-year campaign of interest rate increases."

The Wall Street Journal (4/20, Conkey, Phillips, 2.11M) also says the Federal Reserve "may have more work to do in its effort to contain inflation." Edward McKelvey, senior economist with Goldman Sachs, "said yesterday's inflation data 'creates a perceptual issue' for the Fed. 'Markets have just sort of digested this idea that maybe they're close to done,' Mr. McKelvey said. 'This appears to send a different message.'"

Poll Finds Consumers Expect Housing Bubble to Burst. The Wall Street Journal (4/20, Morrisey, 2.11M) reports, "More than 70% of US consumers believe a national housing bubble will burst and home prices will collapse within the next year, although 56% believe it's unlikely to happen in the area where they live, according a new survey." The Experian-Gallup Personal Credit Index study, released yesterday, "found that 71% of the 1,004 adults surveyed believe a bubble exists and could burst within the next 12

DOJ_NMG_0026174

months. Only 24% believe it's unlikely to happen and 5% said they didn't know." However, "most consumers don't think it will happen where they live -- at least not in the next three years."

Stock Markets Continue Rally. NBC Nightly News (4/19, story 6, 0:30, Williams, 9.87M) reported that despite the new record oil price, "stocks managed to hang on to yesterday's big gains and add a bit. The Dow was up 10 points on the day [to close at 11,278.77]. NASDAQ gained almost 15 points [to close at 2,370.88]." USA Today (4/20, Shell, 2.31M) reports the Standard & Poor's 500 index "edged up 2.28 points, or 0.2%, to 1309.93." The Wall Street Journal (4/20, Patterson, 2.11M), among other newspapers, also reports the stock numbers.

IMF Forecast Criticizes US Budget, Trade Deficits. The Los Angeles Times (4/20, Havemann, 958K) reports, "Clearly irritating U.S. economic officials, the International Monetary Fund faulted the United States on Wednesday for its budget and trade deficits and its failure to provide universal health insurance, predicting that the dollar would inevitably decline in value against the world's other currencies." In its "semiannual report on the world economic outlook, the IMF painted a generally rosy picture, with the global economy growing by 4.9% in 2006." But the IMF "said 'global imbalances' loomed as risks to that scenario. Among the imbalances, it singled out U.S. budget and trade deficits."

Plame To Attend White House Correspondents Dinner. Editor and Publisher (4/19, Strupp) reports, "E&P has confirmed" that Valerie Plame is "slated to attend this year's" White House correspondents dinner, "along with her husband Joseph Wilson and several other notable non-journalist guests, such as Alex Trebek and Ben Rothlisberger, according to organizers." It is "unlikely she will be seated next to" columnist Robert Novak, "but perhaps Bush may have a good view of her from the dais. She and Wilson will be guests of ABC News."

Abramoff Ties Said To Be Hurting Reed's Candidacy. Georgia lieutenant governor candidate Ralph Reed's work is becoming a drag on his candidacy, according to the Wall Street Journal (4/20, 2.11M). Several surveys "show Mr. Reed still holding a narrow lead, but with high unfavorable ratings and many voters undecided. While the Abramoff scandal has affected other campaigns, such as the re-election bid of Montana Republican Sen. Conrad Burns, the Georgia race appears the most competitive. So Mr. Reed's dilemma raises the question: Will Mr. Reed, a star of the national Republican Party, become the first campaign casualty of the Abramoff scandal when he squares off with state Sen. Casey Cagle in the July 18 primary?"

Giuliani To Speak At Reed Fundraiser Next Month. CNN's The Situation Room (4/19 Snow) reported, "Just two days after Rudy Giuliani was publicly snubbed by Christian conservative leader the Reverend Jerry Falwell, Ralph Reed, former leader of the Christian Coalition, is aligning himself with the former New York City mayor. Reed is running for Georgia's lieutenant governor. And Giuliani will speak at a fund- raiser for him next month."

Nagin Seen As Frontrunner In New Orleans Mayoral Race. The Washington Post (4/20, A9, Whoriskey, 744K) reports that "to the astonishment of some who had assumed that his missteps and post-Katrina despair would doom his reelection bid," New Orleans Mayor Ray Nagin "is also counted as a front-runner as voters head to the polls on Saturday" in the New Orleans mayoral race. Nagin and others credit his post-storm performance for his standing, and many still fondly recall him telling federal authorities to 'get off their asses' as the city slipped into chaos. But one of the reasons for his recent appeal, and by some estimates the most powerful force in this historic election, is race. … Even as his white support drifts to his challengers, some of those black voters who spurned Nagin four years ago are embracing him, political analysts said."

The Washington Times (4/20, Debose, 90K) reports, "The 20 other candidates are taking shots mostly at the mayor, but many New Orleanians think he will prevail, perhaps in a squeaker."

"Delayed Recovery" Designation For Some New Orleans Neighborhoods Opposed. Susan E. Howell, a political science professor at the University of New Orleans, and John B. Vinturella, a business consultant, write in the New York Times (4/20, 1.19M) that the Bring New Orleans Back Commission "has designated parts of New Orleans East 'delayed recovery,' meaning that residents can rebuild only at their own risk, without any guarantee that there will be basic services, like working sewers or police protection, in the near future. … These are people who overcame the odds, played by the rules, broke out of the infamous 'cycle of poverty,' bought homes, built families and enjoyed a taste of

DOJ_NMG_0026175

what Americans define as success. And they are being told that their community is not on the immediate recovery list. It should come as no surprise that these residents are fighting the commission and the planners to save their neighborhood."

DNC Meeting To Begin In New Orleans Today. The Democratic National Committee will begin a three day meeting is set to begin in New Orleans today. The AP (4/20, Sidoti) reports that the choice of New Orleans for the meeting "was part of a political calculation, as is a three-day agenda for the 400 delegates that combines party business with community service." Democrats "plan to clean out hurricane-ravaged homes in this slowly recovering city, a project designed to highlight the party's criticism of the Bush administration." Democrats "hope their reconstruction work leaves an image with voters that lasts through the congressional midterm elections." The AP adds, "Republicans chalked up the Democrats' New Orleans meeting to grandstanding."

Dean Proposes Six-Point Agenda For Democrats. CQ (4/19, Giroux) reports Dean has "proposed that Democratic candidates across the country emphasize six major points: honesty and openness in government operations; a strong national defense; promoting American jobs through energy independence; building a health care system that 'works for everybody;' strengthening public education; and promoting retirement security." Dean also "said that this national agenda will include a 'values piece' that probably will be unveiled in September."

Dean Says Character Is Key Campaign Issue In 2006. The Christian Science Monitor (4/20, Cook, 61K) reports on a recent "Monitor Breakfast" with DNC Chairman Howard Dean. Dean said the biggest issues in the 2006 election "are character issues. ... They are going to go to the President's and the Republicans' trustworthiness and honesty and their competence. And they are going to lose big on both those issues. After that we get to Iraq, we get to the economy, we get to healthcare."

Attempts To Override Kaine Vetoes Fail. Attempts to override seven vetoes by Virginia Gov. Tim Kaine failed in the Virginia legislature Wednesday. The Washington Post (4/20, A1, Shear, 744K) reports, "Republicans in the House of Delegates and Senate had attempted to strip Kaine and all future governors of the power to pick members of two tobacco policy panels and the board that directs the state's transportation program. Kaine vetoed the bills, calling them an unwise shift in power to the legislative branch. Lawmakers also failed to override Kaine's veto of a gun rights measure that would have allowed Virginians to store guns unseen in their cars without a concealed weapons permit. Kaine had called the bill a danger to police. Shortly after concluding a seven-hour debate over the governor's vetoes and his amendments to other bills, both chambers gaveled right back into the special session that is now in its fourth week."

WPost Blasts Virginia GOP Lawmakers' Objection To Transportation Taxes. An editorial in the Washington Post (4/20, A24, 744K) says, "L. Scott Lingamfelter, a Republican from Prince William County in Virginia's House of Delegates, would prefer to sacrifice a possible $1.5 billion in federal matching funds for Metro rather than compromise what he ringingly calls 'our principles.' By that, he and other Republicans in the legislature mean that they will oppose any new taxation, even to improve the state's jampacked roads or expand its mass transit system, because Virginians are already overtaxed. It's a fine argument. If only it were true. … It is galling coming from Mr. Lingamfelter, whose own constituents would be among the main beneficiaries of a revenue shot in the arm for the region's roads and rails."

Bush, Hu To Discuss Trade Issues During DC Visit. The CBS Evening News (4/19, story 11, 3:00, Mitchell, 7.66M) reported, "President Bush is getting ready to welcome China's president to the White House. President Hu Jintao was in the Seattle area today before flying to Washington, DC. His talks with Mr. Bush will focus largely on trade. China enjoyed a more than $200 billion advantage over the US last year."

ABC World News Tonight (4/19, story 4, :30, Vargas, 8.78M) reported, "One more reason for the higher oil prices is the soaring demand for oil in China. China uses 6.5 million barrels of oil a day, second to only the US. This is one of the topics that President Bush and China's President, Hu Jintao will discuss tomorrow. Today, Mr. Hu toured the Boeing plant outside Seattle. He indicated China is eager to buy more jets from Boeing. It was an attempt to ease trade tensions with the US, ahead of meeting Mr. Bush."

The AP (4/20, Klug) reports, "For Bush, the success of Hu's visit will be judged largely by whatever concessions Washington wins on a long list of complaints. Those include allegations that China mistreats its citizens, that an

DOJ_NMG_0026176

undervalued currency hampers U.S. competition, that China's growing military strength could lead to conflict in the Taiwan Strait, and that Beijing has pursued energy deals with countries the United States considers tyrannical. For Hu, the visit provides a chance to burnish China's image at a time when Americans are wrestling with what China's new economic and political clout means here."

The Washington Post (4/20, A20, Kessler, 744K) reports that when Bush and Hu meet today, some of the biggest foreign policy challenges facing the United States will be on the table, including the nuclear ambitions of Iran and North Korea. Increasingly, administration officials believe, the key to these issues and other overseas problems may lie in Beijing, a reflection of the pivotal position China has come to play on the international stage."

The Financial Times (4/20, Dinmore) reports, "China's close relationship with Iran's defence industry" will be under the spotlight. Visitors "include representatives from China North Industries Corporation – Norinco – a company singled out in 2003 for the most punitive US sanctions against a Chinese entity for its alleged aid to Iran's ballistic missile programme. … Pressure from China and lobbying by big US customers for a range of Norinco products – from optical fibre to hunting rifles – led to a removal of the import ban last year."

Bush Expected To "Talk Tough" With Hu. The Washington Times (4/20, Curl, 90K) reports that President Bush "is prepared to talk tough with the communist leader, who is making his first state visit to the U.S. since taking power. Mr. Bush will urge Mr. Hu to do more to cut his country's swelling trade surplus with the United States and join efforts to isolate Iran because of its nuclear program. The talks between the leaders will be frank, one U.S. official said this week."

Pelosi Says Administration Should Stand Up To Beijing. House Minority Leader Nancy Pelosi writes in the Los Angeles Times (4/20, 958K), "Hu will receive the best welcome U. taxpayer money can buy, including full military honors and a 21-gun salute. … While open dialogue is essential, many of us on both sides of the aisle in Congress oppose the celebratory nature of this official visit." Pelosi adds, "We must have engagement with China, but it should be sustainable engagement that enables us to maintain our values, continue our economic growth and uphold our national security. … The American people want the administration to show resolve in standing up to Beijing, to demonstrate that we believe that the Chinese people deserve freedom.

Hu Tours Boeing Plant In Seattle. Hu spent the second day of his four-day visiting a Boeing plant outside Seattle. The Wall Street Journal (4/20, 2.11M) reports that in address to Boeing employees, Hu "touted China's purchase of billions of dollars of Boeing airplanes in an address to the aerospace company's employees. In a luncheon speech later to some 600 dignitaries and business leaders, Mr. Hu recited statistics highlighting the benefits of U.S. trade and investment relations with China."

The Washington Post (4/20, A20, Harden, 744K) reports that Hu "was effusive and optimistic about the importance of trade to the future of both countries. At the same time, though, he announced no new proposals for cutting his country's huge trade surplus with the United States, revaluing its currency or limiting China's oil purchases from rogue countries such as Iran."

The New York Times (4/20, Kahn, 1.19M) reports that Hu "continued a charm offensive directed mainly at commercial interests and offered an overview of economic relations that broke little new ground but displayed a prodigious memory for statistical data." The Times adds, "Mr. Hu acknowledged that some problems existed in ties between the countries, calling them 'hardly avoidable.' But unlike the Bush administration, which has laid out concerns about China's military spending, currency policy and quest for oil in considerable detail, Mr. Hu offered mostly oratorical platitudes."

A front page story in the Wall Street Journal (4/20, 2.11M) reports that China's economic growth surged ahead by 10.2% in the first quarter of 2006, adding "to US pressure on President Hu Jintao to let the yuan appreciate." Yesterday in Seattle, "Hu reiterated a pledge to gradually liberalize China's currency policy, but reaffirmed his commitment to keep its exchange rate 'basically stable at an adaptive and equilibrium level' -- underlining a reluctance to move too precipitously on currency policy."

The New York Times (4/20, Bradsher, 1.19M) reports that the topic of the yuan "is likely to be near the top of the agenda when President Hu Jintao of China meets President Bush in Washington on Thursday. A currency appreciation would make Chinese exports more expensive in foreign markets and foreign goods more competitive in China." The yuan "has risen against the dollar by 3.3 percent since July, and already there are side effects: businesses across China

DOJ_NMG_0026177

are concluding that their survival may depend on following Japanese and South Korean companies up the economic ladder as quickly as possible, selling more advanced products with fatter profit margins. As a result, China is gradually moving from competing with countries like Thailand and Indonesia to vying with South Korea, southern Europe and eventually, with the likes of Germany, Japan and the United States."

Professor Says Yuan/Dollar Rate Should Be Left Where It Is. Ronald McKinnon, a professor of economics at Stanford, writes in the Wall Street Journal (4/20, 2.11M), "Section 3004 of Public Law 100-418 requires that the secretary of the Treasury assess whether countries such as China that have global current account surpluses or large bilateral trade surpluses with the U.S. are manipulating their exchange rates to prevent effective balance of payments adjustment or to gain an unfair competitive advantage in international trade. The question of whether the beleaguered treasury secretary, John Snow, is willing to classify China as a 'currency manipulator,' with unspecified economic sanctions to follow if he does, is the current serious flashpoint in China-U.S. relations." McKinnon adds that "whether or not such a broad agreement is implemented, Secretary Snow's narrower job of interpreting Section 3004 is straightforward: China is not a currency manipulator and the yuan/dollar rate is best left more or less where it is."

China Is Fastest Growing Market For US Exports. USA Today (4/20, Lynch, 2.31M) reports that the fastest-growing market for American exports is China. Last year's "$41.8 billion in U.S. exports to China represented a 157% increase compared with 2000's $16.3 billion. Over the five-year period, exports to China grew more than five times as fast as exports to the rest of the world, making China the USA's No. 4 export market, behind only Mexico, Canada and Japan. … Companies prospering by exporting to China run the gamut from hardwood lumber suppliers to manufacturers of sophisticated coal-mining equipment."

US Families Seen As Becoming Dependent On Inexpensive Chinese Products. The CBS Evening News (4/19, story 11, 3:00, Peterson, 7.66M) reported on the Bongiorni family's experiment of not buying anything manufactured in China for a year. The goods "the Bongiorni's became so dependent on came from factories just like this one here in China and because of these factories, Americans get a bargain every time they go shopping, and these people get a chance at a better life. China's economy, at one time run by the state, is now all about private enterprise. 15 years ago, private industry contributed $5.3 billion to the economy. Now the number is more like $288 billion -- an increase of more than 5,000% and still climbing because of factories like this one."

China Said To "Trample Shamelessly" On Basic Human Rights. Rebecca MacKinnon, who was CNN's Beijing bureau chief from 1998 to 2001, and is now a research fellow at Harvard's Berkman Center for Internet & Society, writes in the Washington Post (4/20, A25, 744K) about the growing number of "state kidnappings" in China. According to MacKinnon, "Their extralegality and the lack of official records make it impossible to count them. Human rights organizations try to keep count, but the outside world generally hears about only those victims whose friends and family manage to overcome police pressure to stay quiet and who are also well-connected or savvy enough to get the story out somehow." MacKinnon adds, "With Chinese President Hu Jintao in the United States this week, Americans have an opportunity to assess his regime. What is this country to think? On the one hand his government has raised the living standards of millions of its citizens with economic reform and international trade. On the other hand his underlings trample shamelessly on his people's basic human rights."

WSJournal Says Internal Pressures Will Drive Change In China. An editorial in the Wall Street Journal (4/20, 2.11M) says that changes in China "aren't taking place because the U.S. demands it. China's burgeoning middle class, created and buoyed by economic growth, will drive internal change. That's why Congressional threats to impose tariffs or brand China a 'currency manipulator' are so dangerous. They damage American business interests, and they could also endanger the prosperity that will drive China's political change."

WPost Criticizes Lack Of Bush-Hu Press Conference. An editorial in the Washington Post (4/20, A24, 744K) faults the Bush's Administrations "acquiescence to a Chinese demand" that there be no news conference "at which American and Chinese journalists can ask unscripted questions." The Post that the lack of such a news conference means Hu will "not be subjected to possibly embarrassing queries about political prisoners, religious freedom or censorship of the Internet symbolizes a major element of Mr. Bush's policy -- his willingness to relegate China's worsening performance on political freedom and human rights to a back burner."

DOJ_NMG_0026178

NYTimes Says Bush Can't Criticize Hu On China's Oil Consumption. An editorial in the New York Times (4/20, 1.19M) says, "When President Bush welcomes the Chinese president, Hu Jintao, to the White House today, the American complaint will be that China's appetite for oil affects its stance on Iran, Sudan and other trouble spots. In other words, China is acting just like everyone else: subjugating its foreign policy to its energy concerns." The Times adds, "Clearly, Mr. Bush and Mr. Hu must tackle energy in a real and meaningful way. That can be done only if the United States both helps China find alternative energy sources and shows that America is doing the same thing itself. … Asking other countries to lay off the world's oil supply so America can continue to support its gas-guzzling Hummers doesn't really cut it."

Administration Said To Be Preparing For Possible Military Conflict With China. The Wall Street Journal (4/20, King, 2.11M) reports that the Bush Administration views China's claim that it poses no long-term threat to the US "skeptically." The Bush Administration "behind the scenes is busy preparing for a possible military conflict with China. And to better gird itself, the U.S. is reaching out to a willing partner: Japan." The Administration "is pushing what it calls a long-range 'hedging strategy.' The tactic -- essentially a bet on the safe side in case China turns hostile -- has wide support across the administration, originating in the Pentagon but extending into the White House and the State Department. … The strategy also puts a premium on bolstering Washington's decades-long military ties to Japan."

The Washington Times (4/20, Gertz, 90K) reports, "The Pentagon is engaged in an extensive buildup of military forces in Asia as part of a covert strategy to strengthen and position U.S. and allied forces to deter -- or defeat -- China. The buildup includes changes in deployments of aircraft-carrier battle groups, the conversion of nuclear-missile submarines and the regular dispatch of bombers to areas close to targets in China, according to senior Bush administration officials and a three-month investigation by The Washington Times." President Bush "approved elements of the first phase of the strategy within the past several months. The key architect is Defense Secretary Donald H. Rumsfeld. The State Department's point man on the strategy is Deputy Secretary of State Robert B. Zoellick, who has led three rounds of strategic talks with China in the past several months."

Papers Link China To Missile Smuggling Plot. Court papers made public yesterday in the case of Chao Tung Wu, a California man who pleaded guilty to trying to smuggle antiaircraft missiles into the US indicate that a Chinese general and a state-run manufacturer are linked to the crime. The Washington Times (4/20, Gertz, 90K) reports, "Wu and a second defendant who is awaiting trial, Yi Qing Chen, met an undercover FBI agent and sought to sell 200 QW-2s, as well as launcher and operational hardware for the missiles, according to court papers. A statement of facts read in court yesterday revealed that Wu had offered to provide enough missiles 'for a regiment' of soldiers. … Documents provided to the agent included a proposal for the sale from the Xinshidai company, which makes the QW-2 and other missiles."

Taiwan President Says China Errs "On The Side Of Aggression With Taiwan." Chen Shui-Ban, president of Taiwan, writes in the Wall Street Journal (4/20, 2.11M) that China's "approach to Taiwan seems to err on the side of aggression rather than caution. Politically, Beijing has refused to interact with Taiwan's democratically elected government for the past six years. … The Taiwan people can never forget that, despite skepticism and criticism from the international community as well as strong public opposition in Taiwan, the Chinese government deliberately proceeded to unilaterally change the status quo by passing legislation codifying non-peaceful measures against Taiwan." Chen adds, "We believe in democracy and uphold the principle of popular sovereignty, which means that Taiwan's future and our relations with China can only be determined by the will of Taiwan's 23 million people. We oppose the non-democratic approach that Beijing has taken against its own people and against the people of Taiwan."

US Won't Rule Out Military Option On Iran, Considers Turning To IAEA. The AP (4/20, Jahn) reports that Undersecretary of State Nicholas Burns, "echoing a statement Tuesday by President Bush, did not reject the possibility of a military response" to Iran's nuclear aspirations. Also, the United States may turn to the IAEA "to exert more pressure on Iran out of frustration with Russian and Chinese opposition to firm Security Council action." While the anonymous officials "emphasized that no decisions had been made on the idea," just "the fact that Washington was contemplating such action was significant."

DOJ_NMG_0026179

USA Today (4/20, 2.31M) reports Secretary of State Condoleezza Rice "told the Chicago Council on Foreign Relations that the international community agrees Iran should not be permitted to develop nuclear weapons. 'We are prepared to use measures at our disposal -- political, economic, others -- to dissuade Iran,' Rice said. The United States has not ruled out military action." In Moscow, US Undersecretary of State Nicholas Burns "said after meetings with the Group of Eight industrialized nations and permanent members of the United Nations Security Council that most favor sanctions against Iran in the dispute over its nuclear program." Burns "said there are differences over what action to take, but there is "a greater sense of urgency" after Iran said last week that it had enriched uranium."

The Washington Post (4/20, A19, Finn, 744K), under the headline "Envoys Remain Split On Plan Against Iran," says that "for weeks, the United States, Britain and France have been pressing for tough steps against Iran, while Russia and China have argued that a hard line might backfire. All have expressed public concern over Iran's program." Javier Solana, the European Union's foreign policy chief, "said last week that the EU was considering targeted sanctions, but he added that 'any military action is absolutely [off] the table for us.'"

Negroponte Says Iran Still Years Away From Building Nuclear Weapon. NBC Nightly News (4/19, story 5, 2:20, Mitchell, 9.87M) spoke with Director of National Intelligence John Negroponte in his first TV interview. Asked "how quickly" Iran would be capable of building a nuclear weapon, Negroponte said, "Our assessment is that the prospects of an Iranian weapon are still a number of years off and probably into the next decade." Mitchell: "But he doesn't rule out that Iran's radical leaders could be lying about their recent breakthroughs." Negroponte: "Why their leadership makes some of the statements that they make? It's conceivable that they are exaggerating their progress." Mitchell: "Now Iran is priority number one. He has added assets, spies, and analysts, as well as an Iran mission manager and put in failsafe tests to verify intelligence reports."

Iran Seen As Forming Mideast "Axis." Under the headline "Mideast 'Axis' Forms Against West," the Christian Science Monitor (4/20, Blanford, 61K) reports, "Rising tension between the West and Iran is coinciding with the emergence of a loose anti-Western alliance -- Israel now dubs it an 'axis of terror' -- spanning the Middle East, presenting a new challenge to the US's regional ambitions. Centered on Iran, this alignment has hardened in recent months, analysts say." Tehran is "shoring up old alliances and strengthening ties with countries (Syria and Iraq) and with groups (Hizbullah, Hamas, and Islamic Jihad) that share its hostility toward Israel and the US."

Annan Calls For Iranian Cooperation On Lebanon. The AP (4/20, Lederer) reports, "Secretary-General Kofi Annan has urged Iran as well as Syria to cooperate in trying to disarm Lebanese militias that still control parts of the country, the first time the U.N. chief has issued a report linking Tehran to instability in Lebanon." U.S. Ambassador John Bolton "praised Annan's remarks," saying "they showed" the effects of "Iran's financing terrorist groups in Lebanon and Syria." While "the secretary-general did not mention the financing of terrorist groups," he noted "the 'close ties, with frequent contacts and regular communication,'" between Lebanon's Hezbollah guerrillas, Syria and Iran. The Washington Post (4/20, A26, Lynch, 744K) runs a similar report under the headline "Annan Presses Syria And Iran Over Hezbollah."

Iran Urges Gulf Nations To Remain Neutral. The AP (4/20, Elias) reports that Former Iranian President Hashemi Rafsanjani "seemed to be signaling Gulf nations that they should not take sides in the U.S.-Iran standoff." He "said that if the United States ever attacked his country, he was certain that Kuwait…would not take sides," and "on Monday, Rafsanjani was even more pointed, saying Iran was certain the 'Persian Gulf countries will not help the United States to attack Iran.'" He also "called on Iran's neighbors, such as Kuwait, and all Muslims to 'defend Iran and support it.'"

Reid Blasts Bush's Efforts On Iran. The AP (4/20) reports, "The Bush administration is relying too heavily on other countries in the international effort to stop Iran from developing nuclear weapons, according to Sen. Harry Reid." Reid " said the administration should be taking the lead, but instead is relying on Germany, France and Great Britain to convince Iran to end its uranium enrichment program. 'It is hard to comprehend,' Reid said Tuesday in Reno. 'We should be involved at trying to arrive at a diplomatic solution. ... Not just these three countries.'"

UK Believes US Won't Take Military Action. However, the AFP (4/20) reports that UK Foreign Secretary Jack Straw said "he did not believe the United States would take military action against Iran." While "the United States has 'not taken any option off the table, but in practice, as both President George Bush and Secretary of State Condoleezza

DOJ_NMG_0026180

Rice say they are pursuing the diplomatic option as vigorously as the Europeans and Russia and China."

Iranian Official Entered US Using Green Card. The Washington Times (4/20, Kralev, Mcelhatton, 90K) reports, "An Iranian government official who recently entered the United States used a green card issued 13 years ago, and U.S. officials said yesterday that they were investigating whether he broke the law by accepting a position with a state sponsor of terrorism." Mohammad Nahavandian, "an economics and technology aide to Iran's top nuclear negotiator, Ali Larijani, raised questions about his immigration status when he arrived in the United States two weeks ago, apparently to attend a conference." Iranian officials "are banned from traveling to the United States, unless they are granted a special visa."

Bush Urged To Reinstitute Selective Service To Prepare US For Possible War. Paul Kane, "a Marine who served in Iraq and a fellow at the Kennedy School of Government," writes in the New York Times (4/20, 1.19M), "The American public needs to be prepared for what is shaping up to be a clash of colossal proportions between the West and Iran. President Franklin D. Roosevelt masterfully prepared Americans before the United States entered World War II by initiating a peacetime draft under the Selective Training and Service Act of 1940. Now, President Bush and Congress should reinstitute selective service under a lottery without any deferments." He adds, "This single action will send a strong message to three constituencies in the crisis over Iran's nuclear intentions -- Iran, outside powers like China and Russia and Americans at home -- and perhaps lead to a peaceful resolution."

Hamas Denies Hiding Arms In Jordan. The New York Times (4/20, Myre, 1.19M) reports, "Hamas on Wednesday denied accusations by Jordan that it had hidden a cache of weapons inside Jordan's borders." Jordan "said Tuesday that it had uncovered Hamas's weapons, prompting it to postpone a visit by the Palestinian foreign minister, Mahmoud Zahar, who is also a senior Hamas leader." Hamas, "which now controls the Palestinian government, said it regretted the decision to delay talks."

Palestinian Journalists Critical Of Hamas Rulers. The Washington Times/AP (4/20, El Deeb) reports, "The Hamas government's toughest detractors have popped up at home, criticizing the Islamic militant rulers in Palestinian newspaper cartoons, TV commentaries and radio talk shows. Such friction between the government and the press is rare for the Arab world." But "the Hamas government has proven an easy target. It's broke and internationally isolated because of its refusal to moderate its hard-line views, and has been unable to pay the salaries of tens of thousands of government employees." Hamas "remains defiant, claiming it'll be able to govern without Western aid."

Cheney To Visit Lithuania, Kazakhstan, Croatia. The AP (4/20) reports, "Vice President Dick Cheney will visit Lithuania, Kazakhstan and Croatia next month for meetings with European leaders." The Vice President "will address a summit of the leaders of the Baltic and Black Sea regions on May 4 in Vilnius, Lithuania." The White House "said Cheney would emphasize the importance of the region's democratic transformation and President Bush's goal of advancing freedom."

Responsibility For Turkish Bombings Is Unclear. The Washington Post (4/20, A16, Vick, Borg, 744K) reports that Turks are wondering who is behind the wave of recent "small explosions." While "experts do see the involvement of [Kurdish] militants in several of the attacks," the Post writes that "one scenario holds that hardened elements of the Turkish government are promoting a conflict that justifies a stern, militaristic response." The bombings and crackdown "may endanger a crucial shift by Turkey's elected government away from stern measures."

Chavez Pulls Out Of Andean Community Over Members Trade Deals With US. The AP (4/20, Rey) reports Venezuelan President Hugo Chavez "said Wednesday that his country is pulling out of the five-nation Andean Community trade bloc, calling the group 'fatally wounded' after other members Colombia and Peru finalized free-trade deals with the US." The AP calls Chavez "a staunch opponent of US free-trade deals" and says "his government was looking to leave the Andean Community, which also includes Bolivia, Ecuador, Colombia and Peru." Chavez has moved his nation towards membership in the Mercosur bloc, of which Venezuela is currently an associate member and whose members include "left-leaning governments such as Argentina, Brazil and Uruguay, as well as Paraguay."

Old Latin American Parties Lose Ground To New Populist Movements. The New York Times

DOJ_NMG_0026181

(4/20, Forero, 1.19M) reports, "Disillusioned by corruption and a failure to deliver prosperity, [Latin American] voters are increasingly captivated by new, mostly leftist movements promising to redistribute wealth, punishing traditional parties and turning political systems on their heads." The change is most drastic in "the five Andean countries." However, voters in countries like Bolivia and Peru have thus turned away from older parties that "offered stability, a clear ideology and experienced functionaries."

Cuba Will Buy More Food From Nebraska. AP (4/20, Rodriguez) reports, "Cuba agreed Wednesday to buy another $30 million in food from Nebraska, strengthening trade relations with a US farm state already selling corn, wheat, soybeans and other products to the communist island." Nebraska Lt. Gov. Rick "Sheehy said the new deal will include the export of pork, cattle, poultry, wheat, corn, soybeans, dry beans and dairy in the next 18 months." An "exception [to the US embargo] created in 2000 allows food and agricultural products to be sold directly on a cash-only basis" to Cuba.

Canada's Mad Cow Case Puts Pressure On USDA. This week's news about a new case of mad cow disease in Canada, the Christian Science Monitor (4/20, Knickerbocker, 61K) reports, "has led to calls for a ban on imports of Canadian cattle" and "also raises questions about the US Department of Agriculture's testing and tracking procedures, as well as its controversial prohibition on private testing." These disputes, the Monitor says, "point up the potential conflict between the USDA's two basic mandates: Promoting US agricultural products domestically and abroad even as it is ensuring the safety of those products, which could sometimes require revealing bad news to consumers."

Johanns To Meet With Canadian Ag Minister Thursday. The Dow Jones Newswire (4/20, Klassen) reports Agriculture Secretary Mike Johanns will meet Thursday with Canadian Agriculture Minister Chuck Strahl in Washington to "discuss a number of issues affecting the agricultural sectors in Canada and the US, including World Trade Organization agriculture negotiations, bilateral trade issues and avian influenza preparedness," as well as Canada's latest mad cow case.

Wolfowitz Fills Two Key Posts At World Bank. The Washington Post (4/20, D1, Blustein, 744K) reports that World Bank President Paul D. Wolfowitz "has selected a New Zealander and a Salvadoran to be managing directors, the topmost staff rank at the bank, according to a senior bank economist. The two are Juan Jose Daboub, a former minister of finance and head of El Salvador's largest telecommunications company, and Graeme Wheeler, the bank's acting managing director." The Post says the appointments "are by far the most important move to date by Wolfowitz to fill vacancies at senior levels. … The large number of vacancies has aroused intense concern among staffers that Wolfowitz is being too slow in giving them direction; many of them have also chafed about the influence wielded by several Americans with ties to the Bush administration, including two who worked with Wolfowitz during his years as deputy secretary of defense and were given high-ranking staff posts. The selections of Wheeler and Daboub may dampen some of that dissension."

US-Japanese Beef Dispute Could Touch Off Trade War. USA Today (4/20, Wiseman, 2.31M) reports that "a mistake at a Brooklyn meatpacking company and public hysteria in Japan about mad cow disease are raising tensions between the United States and Japan, reviving memories of the bitter trade disputes of the 1980s." Japan has banned all American beef since January 20, when a Brooklyn meatpacker "shipped to Tokyo boxes of veal containing a spinal column, considered a 'specified risk material' for mad cow disease." USA Today writes, "US lawmakers are losing patience, raising the specter of sanctions against Japanese goods and a possible trade war."

Japanese-South Korean Tensions Over Islet Group Rise. The Washington Post (4/20, A16, Faiola, 744K) reports that Japan and South Korea are disputing the ownership of "rocky outcroppings controlled by South Korea," called "Dokdo in Korean and Takeshima in Japanese." South Korea sent a "flotilla of 20 patrol ships" to confront "Japanese coast guard" vessels sent to "conduct an official survey." The Post writes that "Washington's two biggest allies in the region" are feuding evens "when they are struggling to present a united front on China's military rise and North Korea's nuclear belligerence."

Private International Aid Donors Far Surpass US Government. The Washington Times (4/20, Price, 90K) reports that "US foreign aid from private sources totaled $71.2 billion in 2004, a sum more than 3½ times greater than

DOJ_NMG_0026182

the foreign aid the US government provided that year." A Hudson Institute study found "support from foundations, charities, corporations and religious groups accounts for only a third of all the private donations made abroad. The other two-thirds comes from immigrants living in this country, who send money home."

Developing Nations Block UN Reforms. The Washington Times (4/20, Sands, Pisik, 90K) reports, "The president of the UN General Assembly yesterday defended the world body's overhaul of its human rights panel, but warned that in the days ahead, the United Nations faces an even more difficult fight over critical management reforms." Swedish diplomat Jan Eliasson "said in an interview with reporters and editors at The Washington Times. 'We have problems ahead of us. I will not hide the fact that the management issues are very difficult and we face a polarization of the membership.'" That "polarization reared its head late Tuesday, when a bloc of developing nations introduced a resolution that could postpone indefinitely the progress on reforms sought by wealthier states." UN "officials called it a 'classic blocking tactic,' and US Ambassador John R. Bolton told The Washington Times in New York yesterday that the ploy could sabotage reforms sought by the United States."

Court Ratifies Prodi's Win In Italy. The Washington Post (4/20, A22, Delaney, 744K) reports, "Italy's top court confirmed Wednesday that Romano Prodi and his opposition coalition won a majority in the lower house of Parliament in national elections last week. His rival, Prime Minister Silvio Berlusconi, continued to refuse to concede defeat in the bitterly contested balloting." The Court of Cassation "said Prodi's Union coalition had defeated the House of Liberties bloc led by Berlusconi by a mere 24,755 votes, enough to claim victory and receive extra seats that will give it a 55 percent majority in the lower house, the Chamber of Deputies." The Los Angeles Times (4/20, Wilkinson, 958K) also reports the story.

Berlusconi Said To Be Angling For Presidency. Despite the ruling, the New York Times (4/20, Fisher, 1.19M) reports Prime Minister Silvio Berlusconi "still would not concede defeat. Instead, there were strong signs that he was possibly opening a new campaign: to be named the nation's president, or at least have a strong say in the choice."

India Tries To Halt Nepalese Crisis. Under the headline, "Army Fires at Protesters as Nepal's Political Crisis Deepens," the New York Times (4/20, Sengupta, 1.19M) reports, "The Royal Nepalese Army fired at pro-democracy protesters in an eastern town on Wednesday, as the death toll climbed to at least eight in two weeks of defiant demonstrations and the country appeared headed toward a dangerous brink. The brink of what remained unclear." Political parties allied with Maoist rebels plan another set of protests today. The Post continues, "What King Gyanendra is prepared to do to ease the crisis remains a mystery," and "there was little disagreement that the king's own actions had narrowed his options, and that he would ultimately be compelled to concede more than he would have only a few weeks ago."

The Financial Times (4/20, Johnson, Bhattarai) keys on the Indian effort, saying Saran will tell Gyanendra "to restore multi-party democracy with immediate effect or risk seeing his throne swept away by the tide of protests engulfing the Himalayan kingdom."

Gazprom Warns EU Not To Interfere With Its Goals. The Financial Times (4/20, Buckley, Ostrovsky) reports that "Gazprom, Russia's state-controlled gas monopoly, on Wednesday told European Union countries not to block its international ambitions, warning that it could redirect supplies to other markets." Gazprom is bridling at efforts to thwart "its ambitions to move into downstream gas distribution in Europe," such as the British government's desire to "block a potential takeover of [Britain's] biggest gas supplier by Gazprom."

Corporate "Thugs" Intimidate Smaller Russian Businesses. Under the headline "In Russia, Corporate Thugs Use Legal Guise," the Washington Post (4/20, A1, Finn, 744K) reports that a "new breed of Russian financial predator" is targeting "small and medium-size companies. Often the goal is not the company itself, but the real estate it occupies, acquired in the privatizations of the early 1990s." The raiders work with "corrupt lawyers, accountants, judges, bureaucrats and police to exploit weaknesses in Russia's fledgling corporate legal system," causing the government to fear the growing perception "that rule of law remains illusory in the country."

"NATO-Style Oil Alliance" Predicted. Jim Pinkerton argues in the Financial Times (4/20) that "America

DOJ_NMG_0026183

is likely to lead the way" in formalizing "energy policy into national security policy." He contends, "Opec has already cartelised the producing nations; we are now likely to see a counter-cartel of consuming nations."

Hoagland Urges Quick Congressional Action In Favor Of India Nuclear Deal. Jim Hoagland writes in his column in the Washington Post (4/20, A25, 744K) that "India is a strategic maverick" in that it "has chosen this moment to forge a close partnership with Washington and to speak up positively about American power in world affairs." Now, "for me that flaws in the nuclear draft agreement are heavily outweighed by the advantages it brings in cutting global pollution, easing pressure on oil markets and bringing a substantial part of India's nuclear program under international supervision." As "India is moving from a past of shaking an angry finger in the American face to providing a helping hand for U.S. power in the future," Congress "should move expeditiously to set this transformation in motion."

WSJournal Praises Estonian Leader. An editorial in the Wall Street Journal (4/20, 2.11M) praises "former Estonian Prime Minister Mart Laar" for his stewardship of the Estonian economy. Laar has won the "biennial Milton Friedman Prize for Advancing Liberty." The Journal says, "Estonia ranks seventh among the world's freest economies in the annual Heritage Foundation/Wall Street Journal Index of Economic Freedom, the only ex-Soviet bloc country in the top 10. It has a flat-rate income tax, a currency board that pegs its kroon to the euro for stability, and a low external tariff rate."

Washington's Schedule:

Today's Events In Washington ... 38

DOJ_NMG_0026188

TERRORISM NEWS:

9/11 Victims' Family Members Testify For Defense At Moussaoui Trial. The Washington Post (4/20, A10, Markon, Dwyer, 744K) reports that family members of 9/11 victims yesterday testified on behalf of the defense at the Zacarias Moussaoui sentencing trial. "There was no talk of punishment from the witness stand, no hint of whether family members think Moussaoui should be executed for his role in the terror attacks. … But the defense is hoping that jurors got an implicit message from yesterday's testimony: that some victims think Moussaoui's life should be spared." The Post adds, "There was limited emotion, as well as a few tears, as the family members took the stand and told of their suffering but also spoke of their hope, describing how they have tried to move beyond grief and rage and get on with their lives."

The New York Times (4/20, Lewis, 1.19M) notes witness Marilynn M. Rosenthal "testified that she and her family were determined not to be 'caught up in a whirlpool of sadness and frustration and anger' over the loss of her son, Josh, who was killed at the World Trade Center." Outside the courthouse, "she criticized the Bush administration for refusing to bring to trial several people who were indisputably planners of the Sept. 11 attacks, referring to a handful of senior members of Al Qaeda who are imprisoned overseas in the secret detention system run by the Central Intelligence Agency. Mr. Moussaoui, she said, 'was a marginal figure.'"

The AP (4/20, Sniffen) also reports on the family members' testimony and adds that earlier in the day, psychiatrist Michael First testified "Moussaoui's flight instructors said that even after 57 hours of training they would not let him fly solo 'because he couldn't focus on two things at once,'" which Frist sees as a symptom of schizophrenia. "On cross-examination, prosecutor David Novak asked how Moussaoui was able to drive a car if schizophrenics cannot do two mental tasks at once. First responded that an ex-FBI agent and pilot told him that flying a plane is 'a completely different level of magnitude.'" AFP (4/20) also reports on yesterday's testimony.

Hayat Jurors Seek Material About FBI Interviews. The Los Angeles Times (4/20, Tempest, 958K) reports that the juries in the trial of Umer and Hamid Hayat "asked for supplemental material from the court Wednesday as they continued deliberations. In a possible signal that a videotaped confession by the son, Hamid Hayat, might not be considered enough evidence for a guilty verdict, jurors in that case asked if they could also consider secretly taped conversations between an FBI informant and Hayat about sending money to Pakistan." Umer Hayat's jury asked "if it could review the testimony of three FBI agents." US District Judge Garland Burrell "said he would respond to the requests this morning, but indicated that transcripts in the Umer Hayat case would not be available until Friday." The Stockton Record (4/20, Hood) adds that the Hamid Hayat jurors sent Burrell a note "late Wednesday asking whether material support includes sending money to Hamid Hayat's uncle in Pakistan, where it potentially could be transferred to an Islamic extremist group. … He initially seemed to agree with defense attorney Wazhma Mojaddidi, who said jurors should be given instructions that mirror the indictment: The charge doesn't allege the younger Hayat supported terrorism financially."

The Lodi News-Sentinel (4/20, Bohm) also reports on the jurors' requests and notes prosecutors filed a motion yesterday asking Burrell "to seal the verdicts if one jury reaches a decision while the other is still deliberating, an issue Burrell will take up Thursday. … Citing extensive media coverage, the government said…that the jurors still deliberating could overhear news of the first verdict."

US Releases List Of 558 Enemy Combatants Held In Guantanamo Bay. The AP (4/20, Fox) reports the US government "released the first list of detainees held at the Guantanamo Bay prison on Wednesday — the most extensive accounting yet of the hundreds of people held there, nearly all of them labeled enemy combatants." The Pentagon's list names 558 people and was released "in response to a Freedom of Information lawsuit by The Associated Press." Some names "are familiar, such as David Hicks, a Muslim from Australia charged with fighting U.S. and coalition forces in Afghanistan. Lesser-known detainees on the list include Muhammed al-Qahtani, a Saudi who reportedly was supposed to be the 20th hijacker in the Sept. 11, 2001, attacks. Although his presence at Guantanamo had been reported, the military had previously declined to confirm it." Others, "such as an Afghan identified only as 'Commander Chaman,' remain mysterious." The detainees "on the list came from 41 countries. The largest number -- 132 -- came from Saudi Arabia. Afghanistan followed with 125, then Yemen with 107."

Trial Begins In 9/11-Related Perjury Case. The AP (4/20, Neumeister) reports that in the first day of San Diego State University student Osama Awadallah's perjury trial yesterday, Assistant US Attorney Brendan McGuire said in his opening statement that Awadallah "hampered the investigation into the Sept. 11 terrorist attacks by lying about his associations with one of two hijackers." Awadallah lawyer

DOJ_NMG_0026189

Jesse Berman "conceded his client denied…that he had written the name of a hijacker in a school exam book," but Berman said Awadallah "realized his mistake and fixed it five days later." The AP notes that the case "was tossed out in 2002 by Judge Shira Scheindlin, who said Awadallah's consent to FBI interviews and a lie detector test…resulted from 'duress or coercion.' Two perjury charges were reinstated by an appeals court." Testifying yesterday, FBI Special Agent Jacqueline Maguire "said investigators were anxious to learn as much as they could about the hijackers as quickly as possible to see if there were new threats. As she spoke, photographs of several hijackers in Western-style clothing and then clothing from their Middle Eastern homelands was displayed on a large screen for the jury."

The New York Times (4/20, Preston, 1.19M) adds, "The trial tests the government's practice of long detention of witnesses in terror cases. … After an interview with F.B.I. agents, Mr. Awadallah was detained as a material witness on Sept. 21. Barred from communicating with his family, he was held in solitary confinement and denied his Muslim diet, Mr. Berman said. Over the next three weeks, he was taken from San Diego through a county jail in San Bernardino, to Oklahoma City and then to the federal detention center in Manhattan. … 'This is the type of torture, for lack of a better word, that he had to endure for 20 days,' Mr. Berman said.

Rep Andrews Says US Is In Constitutional Crisis. The Philadelphia Inquirer (4/20, Ott) reports, "The nation is in the midst of its worst constitutional crisis in the last 30 years, Democratic U.S. Rep. Rob Andrews of Camden County told a group of Rutgers University-Camden law students yesterday." The Inquirer continues, "During the two-hour forum, Andrews called for congressional review of President Bush's approval of warrantless eavesdropping on Americans. … The Senate Judiciary Committee held a hearing this month on a motion to censure Bush for the eavesdropping. The resolution has a slim chance of passing the Senate. … Andrews said the hearing wasn't enough. He said the Republican-led Congress should thoroughly review the President's eavesdropping authorization. … 'The real scandal is not the executive branch intercepting private conversations,' Andrews said, 'but the criminal negligence of the Congress in not having hearings.'" The Inquirer adds, "His comments were part of a panel discussion on government wiretapping at the Rutgers Law School. Also featured were civil liberties lawyer Grayson Barber and national Federalist Society leader Falk Engel. … Engel, a Republican, commented: 'It's repugnant what's coming out of this Justice Department.' … He said the failure of Congress to act may be interpreted constitutionally as tacit approval of the expansion of presidential powers."

Al Arian Case Seen As Example Of "Less-Than-Stellar" Terror Prosecutions. Time (4/19, Malloy) reports in a Web exclusive, "When federal prosecutors earlier this week announced a plea deal that will ultimately deport…Sami Al-Arian, they hailed it as a major achievement in the war on terror. … But given all the buildup, the resolution of the Al-Arian case seems far from a clear-cut victory, and the government's triumphant tone speaks volumes about its less-than-stellar record in federal anti-terror cases." Time adds, "It's not really, however, a victory for Al-Arian either. For decades, he'd insisted that he rejected the PIJ. But both his plea and wiretap evidence brought out in his indictment and trial severely undercut his image as nothing more than an outspoken advocate for Palestinian rights."

FBI Holding Georgia Tech Student On Terror Allegations. The Atlanta Journal-Constitution (4/20, Torpy, Morris, 430K) reports, "A Georgia Tech student born in Pakistan has been in federal custody for nearly a month, apparently because authorities suspect a videotape he made of a building may have been related to terrorism, his family said." Syed Haris Ahmed, "who had become increasingly religious in his Islamic faith, was arrested by the FBI March 23 and has been held since, his family said." The AJC adds that Ahmed's sister, Samia Ahmed, "said her brother told her that authorities found a video on the Internet and apparently traced it to him. … Agents confiscated computer hard drives and data CDs from the family home, the family said."

California Man Pleads Guilty To Shoulder-Launched Missile Plot. The AP (4/20) reports Californian Chao Tung Wu "has admitted his role in a plot to smuggle Chinese missiles into the US, surface-to-air missiles designed to shoot down aircraft. … A second defendant goes on trial in June. According to a statement read in court, Wu and the other man told an undercover FBI agent they'd arrange the importation of hundreds of missiles from China." The AP adds, "Wu also pleaded guilty to conspiring to smuggle counterfeit hundred-dollar bills he said were made in North Korea, along with ecstacy, methamphetamines and cigarettes."

Herbert Calls Rendition "Crime Against Humanity." In his New York Times column (4/20), Bob Herbert says, "In past years, stories about torture and 'the disappeared' have been associated with sinister regimes in South and Central America. The attitude in the United States was that we were above such dirty business, that it was immoral and uncivilized, and we were better than that." But "now people are disappearing at the hands of the U.S. government." Amnesty International released a report titled,

DOJ_NMG_0026190

"Below the Radar: Secret Flights to Torture and 'Disappearance,'" on the "reprehensible practice of extraordinary rendition, a highly classified American program in which individuals are seized — abducted — without any semblance of due process and sent off to be interrogated by regimes that are known to engage in torture. Some of the individuals swept up by rendition simply vanish." Herbert adds, "Congress needs to step in and thoroughly investigate this program, which is nothing less than a crime against humanity. Congress needs to investigate it, document it and shut it down."

HOMELAND RESPONSE:

Army Lab Had Several Incidences Of Anthrax Contamination. The Washington Times/AP (4/20) reports the Army's "biological weapons defense laboratory at Fort Detrick probably had multiple episodes of anthrax contamination as workers strove to process a flood of samples sent there for testing in 2001 and 2002, an internal report says." The report "obtained by the Frederick News-Post contains previously undisclosed details about the sometimes sloppy practices that allowed anthrax spores to escape from biosafety containment labs at the U.S. Army Medical Research Institute of Infectious Diseases (USAMRIID). No one was infected by the released spores."

Pennsylvania Police Confiscate $500,000 Cash From Men Near Nuclear Plant. The Houston Chronicle (4/20, Kilday, 581K) reports, "Pennsylvania authorities have confiscated a half million dollars they found in the cab of a truck driven by two Houston men who tried to enter a nuclear power plant. The men have not been charged with any crime. Pennsylvania State Police seized the money because the men denied ownership and because there was an indication by a police dog that drug residue was possibly on the cash." The Chronicle adds that "members of a joint terrorism task force composed of Pennsylvania State Police and the FBI also were notified and went to where the truck was stopped," but Pittsburgh FBI Special Agent William Crowley said Wednesday, "We have no indication that there was ever any terrorism or threat to the plant." WTOV-TV Steubenville, OH (4/18) notes, "Now the FBI and Homeland Security are involved. The worry is that the money may be connected to terrorist activity." But Pennsylvania State Police Sgt. Douglas Humble said, "At this time we do not believe it was associated with the power plant." The Pittsburgh Post-Gazette (4/20, Lash, 261K) and Pittsburgh Tribune-Review (4/20) also report on the incident.

Negroponte Under Fire From Key Lawmakers Of Both Parties. The New York Times (4/20, Shane, 1.19M) reports House Intelligence Committee Chairman Peter Hoekstra and ranking Democrat Jane Harman "have disagreed publicly about many things, but on one issue they have recently come together. Both are disquieted by the first-year performance of John D. Negroponte, the director of national intelligence." They have "expressed…fear" that Negroponte "is creating just another blanket of bureaucracy, muffling rather than clarifying the dangers lurking in the world." In an April 6 report, "the Intelligence Committee warned that Mr. Negroponte's office could end up not as a streamlined coordinator but as 'another layer of large, unintended and unnecessary bureaucracy.' The committee went so far as to withhold part of Mr. Negroponte's budget request until he convinced members he had a workable plan." The Times adds intelligence officials "say there has been progress in information-sharing, particularly at the National Counterterrorism Center, the new hub for reports on terrorist threats. Aides to Mr. Negroponte insist that analysts are encouraged to offer divergent views to avoid the 'groupthink' blamed for past failures." Negroponte also "strongly defended his record," saying, "If there's one watchword for what we've been about, it's integration."

NBC Nightly News (4/19, story 5, 2:20, Mitchell, 9.87M) spoke with DNI Negroponte in his first TV interview. Mitchell: "It's been a year since the 16 intelligence agencies were merged into one, a response to the failures that led to 9/11 and got Iraq's weapons of mass destruction all wrong. Critics say nothing has changed. Osama bin Laden and his top deputy, Ayman al-Zawahri, are still at large. Abu Musab al-Zarqawi is still the leader of al Qaeda in Iraq, and there could be another 9/11." Negroponte: "I don't think you can ever rule out the possibility of a serious terrorist incident, because in intelligence work you have to be right almost all of the time." Mitchell: "And what keeps you up at night? What do you worry about most?" Negroponte: "It's the international terrorists. It's al Qaeda. What is it that we don't know?"

Negroponte's Office Budget Is Nearly $1 Billion. The Washington Post (4/20, A11, Pincus, 744K) reports the budget next year for Negroponte's office "and the several agencies attached to it may be near $1 billion or more, according to language buried in the report of the House intelligence committee on the fiscal 2007 intelligence authorization bill." The "exact budget total for the Office of the Director of National Intelligence (ODNI) is classified, but the report by the House Permanent Select Committee on Intelligence contains a figure by the Congressional Budget Office of $990 million for the intelligence community management account that provides the principal funding for the ODNI." The "proposed budget, which is about one-third

DOJ_NMG_0026191

the size of all CIA funding in years before the Sept. 11, 2001, terrorist attacks, is far larger than expected."

Critics See Privacy Officers As Half-Measure. The Wall Street Journal (4/20, Squeo, 2.11M) reports that as the "son of a U.S. aid worker stationed in Guatemala during the 1970s civil war, Alex Joel recalls being unable to tell the good guys from the bad as both armed soldiers and civilians alike would order his family out of their car to search it." Joel says those "first-hand brushes with totalitarianism" have "led him to take the rights of individuals very seriously. Given that he was recently named as the first civil-liberties protection officer for the U.S. Office of the Director of National Intelligence, such talk is reassuring to privacy advocates." In February, the Justice Department "named Jane Horvath its first chief privacy and civil-liberties officer, making her responsible for developing and ensuring compliance with privacy and civil-liberties policies, specifically as they relate to counterterrorism and law-enforcement efforts." While "even critics of the administration applaud the effort, they question what authority these officials have. Unlike inspectors general at federal agencies, these privacy officers lack the subpoena power necessary to conduct investigations and don't report to Congress."

Army Lab Had Several Incidences Of Anthrax Contamination. The Washington Times/AP (4/20) reports the Army's "biological weapons defense laboratory at Fort Detrick probably had multiple episodes of anthrax contamination as workers strove to process a flood of samples sent there for testing in 2001 and 2002, an internal report says." The report "obtained by the Frederick News-Post contains previously undisclosed details about the sometimes sloppy practices that allowed anthrax spores to escape from biosafety containment labs at the U.S. Army Medical Research Institute of Infectious Diseases (USAMRIID). No one was infected by the released spores."

Advocates Hopeful Airlines Will Participate In Registered Traveler Program. USA Today (4/20, Frank, 2.31M) reports, "Proponents of an idea to speed trusted travelers through security are pushing to sign up airports and overcome skepticism of some airport officials who fear the program won't shorten lines." Companies "looking to sell Registered Traveler programs to airports say they're hopeful that interest in the idea will pick up after the federal Transportation Security Administration (TSA) announces specifics on how it will work." Larry Zmuda, "head of Registered Traveler for Pennsylvania-based Unisys, said his company has signed letters of intent with four airports to start the program. 'This appeals to a lot of smaller (airports) that are trying to get into the big game,' Zmuda said. But, he added, 'a lot are going to wait and see.'"

Allen Believes Coast Guard Has Lessons To Share With Other Parts Of Government. The Washington Post (4/20, D4, Barr, 744K) reports in its "Federal Diary" column that Vice Adm. Thad W. Allen, has been confirmed by the Senate become the Coast Guard's next commandant. Since Hurricane Katrina, "members of Congress and key administration officials have been eager to see if the Coast Guard can be used as a model for other parts of the Department of Homeland Security and elsewhere in government. Allen, chief of staff for the Coast Guard, thinks there are lessons to be shared."

WSJournal Denounces $27 Million Award In Alleged Airline Profiling Case. In an editorial, the Wall Street Journal (4/20, 2.11M) denounces a Texas court's decision last week to award "$27.5 million in damages for a woman of Iranian descent who claimed she was racially profiled during an altercation with Southwest Airlines flight attendants." Samantha Carrington "alleges that a Southwest Airlines employee said Ms. Carrington reminded her of a 'terrorist' during the 2003 incident," but Southwest "accuses Ms. Carrington of assaulting a flight attendant and interfering with the crew. We can't know for sure who's telling the truth here," but "even if Ms. Carrington was ill-treated, the most she deserved was some free tickets. Only in America could she hit the tort jackpot."

Texas Seeks Federal Help To Cope With Hurricane Evacuees. The New York Times (4/20, Steinhauer, 1.19M) reports, "Seven months after two powerful hurricanes blew through the Gulf Coast, elected officials, law enforcement agencies and many residents say Texas is nearing the end of its ability to play good neighbor without compensation. Houston is straining along its municipal seams from the 150,000 new residents from New Orleans, officials say." Texas "has thrown its hat in the great Congressional money game, arguing vociferously for federal money to help pay for new police officers in Houston, where the force has dwindled in recent years, and to repair homes in East Texas, where many poor residents lack the means and the insurance to do it on their own. Though the state has requested $2 billion in federal aid to pay for law enforcement, education and housing, state officials say they have received only $22 million so far."

WAR NEWS:

Bush Says Failure In Iraq "Not An Option." The AP (4/20, Hunt) reports, "President Bush said Wednesday he didn't expect to get unanimous support at home for the decision to invade Iraq and said failure there 'is not an

DOJ_NMG_0026192

option.'" Talking to reporters "on the White House South Lawn after a meeting with a group of governors who have returned from a visit to Iraq and Afghanistan," Bush "said he thanked the state chief executives for 'sending a message from home that we care. ... We appreciate the fact that people are willing to make sacrifices.'" Bush also said "success" in Iraq will "begin to lay the foundation of peace for generations to come."

Rice Says No Sudden Peace Will Come For Iraq. The AP (4/20, Burghart) reports that Secretary of State Condoleezza Rice said at the Chicago Council on Foreign Relations that "Even assuming Iraq forms a national government, there will be no immediate end to the violence, nothing like V-E Day marking World War II's end in Europe." Instead, she contended that "peace will come gradually to Iraq."

Rumsfeld Storm Seen As Upsetting Tenuous Bond Between Uniformed, Civilian Leaders. The Christian Science Monitor (4/20, Sappenfield, 61K) reports, "In their denouncements of Defense Secretary Donald Rumsfeld, seven retired generals have directed their criticism mostly toward his handling of the Iraq war. In some respects, however, the issue goes much deeper." It is "a matter of the military's distrust of its civilian decisionmakers, which emerged in Vietnam and has never fully dissipated." It is "concern over an administration that has sought not only to ramrod major changes through the military, but also -- some say -- to micromanage battlefield tactics." Iraq "has lit the fuse, as those who dislike the style and substance of Mr. Rumsfeld's tenure point to the war as a failure of his policy." But "a deeper concern is that Iraq is worsening the delicate relationship between the military and its civilian leaders."

US Troops In Iraq Become Aware Of Generals' Criticism. Under the headline "Generals' Criticism of Rumsfeld Gets Mixed Reaction Among Troops," the Los Angeles Times (4/20, Moore, 958K) reports, "News that six retired generals recently called for…Rumsfeld to resign has been slow to reach many of the Marines stationed in Iraq's restive and isolated Al Anbar province. … Some of those who had heard about the debate said they were unimpressed with generals who waited until retirement to speak out against their former boss." But one "high-ranking officer said he sympathized with dissenting generals who faced difficulties while in uniform. He cited Army Gen. Eric K. Shinseki, who resigned from the military in 2003 after clashing with Rumsfeld over troop strength in Iraq. 'You saw what happened to Shinseki,' said the officer, who requested anonymity."

Media Said To Be Missing Context Of Generals' Criticism. Stephen E. Herbits, who "has served five presidents as a military affairs adviser since 1967, including the Defense Department transition in 2001 and post-September 11 reforms," writes in today's Washington Times (4/20, 90K), "Where is the rest of the story on the recent attacks on Defense Secretary Donald Rumsfeld by a few in the retired military? The news media will better meet its obligations to the public when it seeks more depth of experience and information about these generals-turned-Rumsfeld critics. … My experience points to several relevant issues -- some of which I personally know apply to some of those making the attacks." Herbits says that "while Mr. Rumsfeld has worked within the long tradition of civilian control of the military to modernize and strengthen the promotion and assignment system for senior uniformed officers, there are some who have actively tried to obstruct his efforts and could be acting as an extension of that opposition."

USA Today Says Generals' Criticism Should Not Lead To Rumsfeld's Dismissal. USA Today (4/20, 2.31M) editorializes, "Rumsfeld's tenure as Defense secretary in many ways tracks public attitudes about the Iraq war. … Today, polls find the public weary of the Iraq war and wary of those who initiated it. Rumsfeld is seen more as a latter day Robert McNamara -- the similarly talented Vietnam-era Defense secretary who blinded himself to the realities of the war and guided the nation ever deeper into that misbegotten adventure. The parallel grew stronger in recent days as six retired generals accused Rumsfeld of mishandling the Iraq war, ignoring advice and intimidating subordinates." USA Today adds, "As culpable as Rumsfeld might be, however, criticism from former generals is the worst possible reason to dump him, potentially undermining the nation's long tradition of civilian control of the military. … Further, for all the symbolism and all the bad decisions, Rumsfeld is not the person most accountable. The president is."

After Supplemental Spending Bill, Iraq War's Cost Will Have Doubled Since Invasion. The Washington Post (4/20, A1, Weisman, 744K) reports, "With the expected passage this spring of the largest emergency spending bill in history, annual war expenditures in Iraq will have nearly doubled since the US invasion, as the military confronts the rapidly escalating cost of repairing, rebuilding and replacing equipment chewed up by three years of combat." The cost of the war "in US fatalities has declined this year, but the cost in treasure continues to rise, from $48 billion in 2003 to $59 billion in 2004 to $81 billion in 2005 to an anticipated $94 billion in 2006, according to the Center for Strategic and Budgetary Assessments." The US government "is now spending nearly $10 billion a month in Iraq and Afghanistan, up from $8.2 billion a year ago, a new Congressional Research Service report found."

Funds To Rebuild Iraqi Healthcare System Exhausted, Projects Incomplete. ABC World News Tonight (4/19, story 5, 2:25, Vargas, 8.78M) reported the money to

DOJ_NMG_0026193

rebuild Iraq's healthcare system is "nearly gone" and "there's not much to show for it." ABC (Karl) added $190 million "in taxpayer money has paid for empty, unfinished buildings like this one in Baghdad without windows, without doors. In March 2004, the Pentagon awarded a California-based company named Parsons Global a contract to build 150 health care centers throughout Iraq." According to "a government audit obtained by ABC, only 6 of the 150 promised health care centers have been completed. Even after spending the $190 million, the company says it couldn't complete the health centers 'due to lack of funding.' Now, the Pentagon terminated the contract, citing 'lack of sufficient progress by the contractor, due to increased security costs and other factors.'"

Al-Jafari Refuses To Step Aside. The Washington Post (4/20, A18, Hernandez, Ibrahim, 744K) reports that Iraq's Prime Minister Ibrahim al-Jafari "denied rumors Wednesday that he would give up his nomination to another term to solve a political impasse, throwing the process of forming the country's new government into new confusion on the eve of a long-delayed meeting of parliament," despite "mounting pressure on Iraqi politicians to resolve their differences, from the public, U.S. officials and the Shiite religious leadership, which issued a statement Tuesday night urging the Shiite parties to make a deal, even if concessions were necessary."

The Washington Times/AP says that "under U.S. pressure, Iraqi leaders decided Wednesday to convene parliament in a bid to jump-start formation of a new unity government," but "Shiite officials raised doubts whether the session — already postponed once this week — would take place Thursday as planned."

Meanwhile, the New York Times (4/20, O'Neil, Hauser, 1.19M) reports, "The pressure on Iraq's leaders increased today as President Bush called for an end to the political 'vacuum,' saying that the lack of progress in completing the Iraqi government left the field open for 'malfeasance and harm.'" Bush "pinned the success of the American mission in Iraq on political developments there." The Los Angeles Times (4/20, Wallace, 958K) and Knight Ridder (4/20, Youssef, Strobel), among other sources, run similar stories this morning.

Iraqi Government Says 65,000 Homeless Because Of Sectarian Threats. NBC Nightly News (4/19, story 7, 2:15, Engel, 9.87M) reported on the displacement of Sunni and Shiite Arabs in Iraq that is approaching ethnic cleansing in some areas. Migration officials said "at least 65,000 Iraqis made homeless by escalating sectarian violence." Dana Graber, International Organization for Migration: "They are being threatened. Their family members are being assassinated or kidnapped, and they are leaving out of fear." Engel: "The Iraqi government says 80% are Shiites forced out of Sunni villages around Baghdad." Suheilah Abed Jaffer Al-Kinani, Displacement and Migration Minister (voice of translator): "This is a national crisis that could lead to a full-blown war." Engel: "But why now? The tent cities started to crop up after the destruction in February of a Shiite shrine in Samarra. According to the US military, four times as many Iraqis were killed in March in sectarian attacks than in car bombings."

Neighborhood Militias Shooting At Iraqi Police. The Christian Science Monitor (4/20, Enders, 61K) reports, "Some call them neighborhood watches. Others call them militias." But "as sectarian violence has grown over the past two months in Iraq's capital, men in Sunni neighborhoods have begun to band together." They "have armed themselves with Kalashnikovs, heavy machine guns, and grenades, and have blocked streets with unused cars, furniture, or palm trunks, forcing would-be intruders to take a single route in and out of a neighborhood. … For weeks, residents say, members of the local militia have been shooting at Iraqi police."

Saudis Consider Electric Fence Along Iraqi Border. The Christian Science Monitor (4/20, Abou-Alsamh, 61K) reports, "Apparently concerned that fighting in Iraq could spill over into this oil-rich kingdom, Saudi Arabia is considering a major fortification of its 500-mile border with Iraq. 'The government is thinking of building an electrified fence along the whole border with Iraq in case things go really badly in Iraq, and it starts falling apart,' says a security adviser to the Saudi government, who spoke on condition of anonymity." The border with Iraq "lies mostly in barren desert. A 20-foot-tall sand berm that runs its entire length provides the first line of defense."

Experts Link Saddam To Killings In Shiite Village. USA Today (4/20, Johnson, 2.31M) reports, "Handwriting experts confirmed Saddam Hussein's signature on documents linking him to a bloody government reprisal on a Shiite village where Saddam's motorcade was attacked in 1982." Saddam and seven co-defendants "are charged with the deaths of 148 people, including women and children, from the village of Dujail. Hundreds of others were imprisoned, and the village's orchards and farmland were destroyed." The Los Angeles Times (4/20, Roug, 958K) also reports the story.

British Envoy To US Warned Blair To Prepare For War Two Months Before Invasion. The AFP (4/20) reports, "Britain's ambassador to Washington warned Prime Minister Tony Blair to prepare for war in Iraq almost two months before the US-led invasion began, the now former diplomat said." Christopher Meyer "told a committee

DOJ_NMG_0026194

of lawmakers that 'the die was cast for war' before Blair met US President George W. Bush on January 31, 2003."

Rocket Blast Misses US Embassy In Kabul. ABC World News Tonight (4/19, story 6, :20, Vargas, 8.78M) reported, "A massive explosion shook the US Embassy compound in the capital of Afghanistan, Kabul. It was apparently caused by a rocket that landed nearby." No Americans "were hurt, but an Afghan security contractor was wounded." The CBS Evening News (4/19, story 10, 0:20, Mitchell, 7.66M) also reported the rocket "hit just outside the embassy in Kabul on the grounds of the Afghan state television station." The AP (4/19, Garwood) reported an Embassy spokesperson "said the blast did not occur on embassy property, and no Americans were injured."

Increased Fighting Seen As Sign Taliban, Al Qaeda Regrouping. USA Today (4/20, Boork, 2.31M) reports, "Fighting between allied forces and Afghan insurgents has spiked in 2006 as the Afghan government tries to widen its control over the country 4½ years after U.S. forces ousted the Taliban regime. … The increased fighting is a sign 'the Taliban and al-Qaeda have regrouped to a troubling extent,' said Ted Galen Carpenter, a military expert at the Cato Institute, a think tank in Washington."

Afghan Parliament To Vote On Karzai's Proposed Cabinet. The New York Times (4/20, Gall, 1.19M) reports, "Afghanistan's newly established Parliament is to vote Thursday on a 25-member cabinet proposed by President Hamid Karzai, but two weeks of confirmation hearings ended Tuesday with much uncertainty about whether many of his choices would be approved." Karzai, "who has governed for more than four years as the leader of interim and transitional governments, reshuffled his cabinet on March 22 in anticipation of harsh scrutiny by Parliament, which must for the first time vote on his choices."

CORPORATE SCANDALS:

Skilling Defends Statements On Enron's Financial Condition. The Wall Street Journal (4/20, McWilliams, Emshwiller) reports, "Jeffrey Skilling, the former president of Enron Corp., stridently defended the public statements he made about the energy giant's financial health before its 2001 collapse into bankruptcy, even as government prosecutors insisted again that he hid Enron's problems from investors." The Journal continues, "Mr. Skilling, on trial here for conspiracy and fraud along with Kenneth Lay, Enron's former chairman, argued that he adequately described to the public how much of Enron's profits came from speculative, and risky, energy trading while continuing to insist that most of the profits came from the more stable business of distributing energy and providing services. The government contends that Mr. Skilling illegally underplayed Enron's dependence on speculative trading profits, particularly during the California energy crisis in 2000 and 2001." The Journal adds, "Prosecutor Sean Berkowitz ended his questioning of the 52-year-old Mr. Skilling in midafternoon, suggesting the defendant met with a recruiter about an executive position at Lucent Technologies Inc. shortly after his Aug. 14, 2001, resignation for what he said were family reasons. Mr. Berkowitz suggested that Mr. Lay, Mr. Skilling's co-defendant in the current criminal case, was upset when he learned about his former protégé's possible interest in the Lucent job. Mr. Skilling insisted he wasn't interested in the job."

The Los Angeles Times (4/20, Mulligan) reports, "Berkowitz confronted Skilling with the previous testimony of former Enron Energy Trader Tim Belden that the company's Western Power Desk had reaped profits of $104 million in the fourth quarter of 2000, $445 million in the first quarter of 2001 and $333.5 million in the second quarter of 2001 — the lion's share of it from speculative bets on electricity prices. … Skilling insisted those large bets were offset by different positions in other parts of the country so that, on balance, Enron's stance was neutral."

Prosecutor Challenges Skilling On Reasons For Leaving Enron. The New York Times (4/20, Barrionuevo, Bajaj) reports that Berkowitz "wrapped up his cross-examination …by suggesting that Mr. Skilling had lied about the reason he resigned as Enron's chief executive." Berkowitz "asked Mr. Skilling if he had been considering taking a job as chief executive of Lucent Technologies shortly after he resigned from Enron, despite having asserted that he left primarily to spend more time with his family. … Berkowitz showed jurors a list of 11 varying reasons Mr. Skilling has given in trial and elsewhere for his departure in August 2001, after six months as chief executive. … They included his claims that he was weary from work and wanted to spend more time with his family." The Times adds, "Prosecutors have suggested that Mr. Skilling left because he knew that Enron had serious undisclosed accounting problems and losses. … Mr. Berkowitz asked Mr. Skilling on Wednesday whether he had told a friend, Dick Foster, that he was considering a chief executive opening at Lucent. … Mr. Skilling said he had been asked about the position at Lucent by an executive recruiter but did not express an interest in pursuing it."

USA Today (4/20, Farrell) reports, "According to Berkowitz, Foster chastised Skilling for even thinking about taking another CEO position, saying, 'Jeff, I thought this was all about your family.' … Berkowitz said Foster shared his concern with Lay, who had assumed the CEO title from Skilling, and another board member. … 'If Mr. Foster did that, that was a misrepresentation,' Skilling said. … 'Another person you disagree with?' Berkowitz asked, referring to the

DOJ_NMG_0026195

government witnesses Skilling had contradicted during his four days of direct testimony last week."

Skilling Defiant To The End. The Washington Post (4/20, D1, Johnson) reports, "Skilling displayed contempt for the prosecutors Wednesday in the third and final day of cross-examination in his fraud trial, completing for jurors the portrait of a complex man who refused to back down from his argument that Enron was felled by a market panic -- despite testimony from a parade of corporate insiders who pleaded guilty and offered evidence against him." The Post continues, "In seven days on the witness stand during which he was alternately proud, furious, depressed and sheepish, Skilling offered the jury his own view of his role, which he hopes will supplant years of vilification following Enron's December 2001 collapse into bankruptcy protection. … The self-assertive witness refused to concede ground and challenged the government at every opportunity Wednesday, creating tension in the packed courtroom. He disagreed with…Berkowitz about nearly everything, such as the reasons Skilling left the company, the risks Enron took and the basis of stock sales he made."

Pennsylvania Tax Accountant Charged With Embezzling Millions. The AP (4/20, Dale) reports, "A tax accountant embezzled $10 million from a client, then used it to fund a lavish lifestyle - from his daughter's $74,000 bat mitzvah to a $20,000, four-day trip to London - that he largely wrote off on taxes, prosecutors alleged." The AP continues, "Prosecutors said Tuesday Denis I. Shusterman blew through the $10 million from about 1996 to 2004, spending half of it on three B-grade horror flicks he produced. As Shusterman's embezzlement and fraud trial opened in federal court, prosecutors said he gave $495,000 to one of three mistresses and $725,000 to a hospital shipping clerk who soon lost it all at the craps table. … 'He was totally enamored with the moviemaking business,' testified lead witness Leslie Edelman, who owned Kimber Mfg., a New York firearms company that lost the $10 million. 'He wanted to be part of it. He wanted the lifestyle.'" The AP adds, "Defense lawyer Elliot Cohen countered that Shusterman legitimately earned the money from Kimber and was entitled to the tax write-offs. … 'The tax laws are designed to benefit many wealthy people. We all know that,' Cohen told jurors. Prosecutors 'are trying to create the image that these deductions are fishy. They're not. They're in the tax code.' … Federal authorities started investigating Shusterman after his mother was convicted in 2002 of helping to embezzle $1.3 million from the suburban Philadelphia synagogue where she worked as a bookkeeper. Betty Shusterman, now 74, is serving a four-year federal prison term. Witnesses told federal agents that Denis Shusterman seemed to be enjoying some newfound wealth, authorities said."

Sentencing Commission Drops Privilege Waiver Policy. The ABA Journal (4/14, Carter) reports, "The U.S. Sentencing Commission's decision to abandon a policy that encourages prosecutors to seek waivers of attorney-client privilege from corporations wanting credit for their cooperation gives heart to champions of the privilege and gets a shrug from the government." The Journal continues, "When the commission adopted the policy in 2004, it noted waivers should not be sought 'unless such waiver is necessary in order to provide timely and thorough disclosure of all pertinent information known to the organization.' … But on the heels of recent surveys indicating that in-house counsel and their outside lawyers believe the U.S. Department of Justice and other federal agencies now routinely ask for the waiver, the commission revisited the issue." The Journal adds, "Opponents of the policy argued the policy itself became a tool for prosecutors to bolster their requests for waivers." The Journal notes, "At its April 5 meeting, the commission agreed and amended its guidelines, deleting commentary suggesting that waiver is in some instances a prerequisite for credit at sentencing. … The change will go into effect on Nov. 1 unless Congress votes its disapproval. … The long-simmering credit-for-waiver issue began coming to a head with the so-called Holder Memo of 1999. Then-Deputy Attorney General Eric H. Holder suggested federal prosecutors could consider waiver of attorney-client privilege in determining whether a corporate defendant cooperated. In 2001, the SEC issued the 'Seaboard Report,' in which the agency said it would not take action against a particular company because of cooperation, listing the waiver as one factor. And in 2003, then-Deputy Attorney General Larry D. Thompson issued what is now referred to as the Thompson Memo, which amplified the Holder Memo."

CRIMINAL LAW:

Second Dismissal Hearing Set For Former AIPC Lobbyists. An unusual second oral argument has been set for tomorrow on the motion by two former pro-Israel lobbyists to dismiss the spying charges against them. The Washington Post (4/20, A11, Pincus, 744K) reports that the two, who are accused of receiving and transmitting national defense information, "contend that the espionage statute is unconstitutionally vague and overbroad and may violate the First Amendment." In January, U.S. District Judge T.S. Ellis III "raised the possibility that the law may not be sensibly written when he sentenced a third person in the case, former Defense Department employee Lawrence A. Franklin, to 12 years in prison for giving classified information to Rosen and Weissman, former lobbyists for the American Israel Public

DOJ_NMG_0026196

Affairs Committee (AIPAC). Last month, after hearing oral arguments on dismissing the case against Rosen and Weissman, Ellis took the unusual step of ordering the Justice Department to respond to defense claims of unconstitutionality. Yesterday, after receiving the government's filing and the defendants' response, Ellis ordered another oral argument on the motion to dismiss."

FBI Agent Believed Ryan Was Lying From First Interview. WBBM-TV Chicago (4/19, Tucker) interviews veteran FBI Special Agent Ray Ruebenson, who interviewed former Gov. George Ryan in January 2000. Ruebenson asked Ryan about his "many trips to Jamaica and whether they were gifts to his family in exchange for political favors to his friends." He "says Ryan told investigators he paid for all the trips and showed the first signs of man who was lying." WBBM adds that "Ruebenson felt so passionate about this case that he postponed his retirement in 1999 to stay on the job. A driving force was the allegations that the License for Bribes scandal was connected to the fiery crash that killed six children in 1994. 'Dan Webb's closing arguments bothered me quite a bit, continually said, "Who cares? It's not a big deal,"' Ruebenson said. 'I took affront to that. The Willises were in the room. Why don't you tell them that it's not a big deal?'"

Four Ryan Jurors Did Not Reveal Past Court Cases. The AP (4/20) reports, "Four of the jurors who convicted former Gov. George Ryan on corruption charges failed to mention their past involvement in court cases, documents unsealed Wednesday show. Three of the jurors had arrest records and the forewoman had filed for divorce," and "the defense is all but guaranteed to bring up the issue when it asks for a new trial or appeal." The AP notes, "U.S. Attorney Patrick J. Fitzgerald issued a statement following the release of the documents saying the 'jury provided a fair and just trial to all the parties in this case.'"

Former Nevada Commissioner Denies Taking Bribes. The AP (4/20, Ritter) reports former Clark County Commissioner Dario Herrera "took the witness stand Wednesday and admitted 'recklessness' and sexual indiscretions while he was in office, but denied taking bribes from former striptease club owner Michael Galardi" through lobbyist Vince Malone. "Herrera's account of a meeting with Malone that the FBI videotaped in the parking lot of a Las Vegas restaurant in September 2001 differed from Galardi's testimony that he had Malone give Herrera $30,000 in cash. Herrera described Malone as a friend who he turned to for help in buying bedroom furniture so his young son could spend a weekend with him in his new apartment after he split from his wife." KLAS-TV Las Vegas (4/19) adds Herrera "says Mike Galardi was correct when he testified Herrera received lap dances and sexual favors from two former employees at Galardi's Cheetahs strip club, but Herrera says he did not know Galardi paid for them." He also "admitted attended dinners and golf outings where Galardi paid the bill, but said, 'There's no way a golf outing or a dinner was going to impact my judgment.'"

Street Aides Blame Each Other For Hiring Indicted Consultant. The Philadelphia Inquirer (4/20, Gelbart, 423K) reports, "Two top Street aides, one former and one current, are battling over whose decision it was to hire a $1 million consultant who oversaw a costly, failed computer project for the city -- and who was indicted in Connecticut on April 7 on charges of making payoffs to a state official there in efforts to win contracts. … In an interview Monday, Dianah Neff, the city's chief information officer, said she was not responsible for hiring Jeanette Foxworth," saying that "former city Finance Director Janice Davis brought her here." But "in an e-mail this week to The Inquirer, Davis said: 'I did NOT bring Jeanette Foxworth on. Dianah Neff hired Jeanette Foxworth through the staffing firm that brought Dianah to the City of Philadelphia.'"

Blunt Says He Has Not Been Contacted In Federal Probe. The Columbia (MO) Daily Tribune (4/20, Flory) reports, "Gov. Matt Blunt said Wednesday that neither his office nor the Department of Revenue has been contacted in connection with any federal investigation into the handling of revenue fee offices. Last week, the Kansas City Star reported that a U.S. Attorney in Arkansas is handling an investigation into how the license fee offices were awarded to political supporters of the Blunt administration." The Tribune notes, "The Star also reported that FBI agents have begun interviews in connection with a second investigation into lobbying practices at the Capitol. Asked whether he or anyone in his administration has ever encouraged someone to hire a particular lobbyist, Blunt said, 'I don't believe I have.'"

FBI Documents Detail Pellicano Attempt To Extort Supermarket Mogul. The New York Times (4/20, Halbfinger, Weiner, 1.19M) reports, "When the supermarket billionaire Ronald W. Burkle accused a New York Post gossip columnist of demanding hundreds of thousands of dollars for protection from nasty items in Page Six, it was not the first time that he had told authorities he was the victim of a shakedown. In 2002, Mr. Burkle has told federal investigators, the Hollywood private detective Anthony Pellicano demanded that Mr. Burkle pay him $100,000 to $250,000 in exchange for Mr. Pellicano's agreeing not to investigate him. … Mr. Burkle's account of that meeting to the Federal Bureau of Investigation, related in a summary that was reviewed by The New York Times and corroborated

DOJ_NMG_0026197

by Mr. Burkle in an interview this week, provides a new glimpse into Mr. Pellicano's methods of drumming up new business and holding himself out as a broker between rich and powerful adversaries — thereby drawing them into his realm at Hollywood's underbelly."

Colorado Woman Indicted On Katrina Relief Fraud Charges. The AP (4/20) reports, "A Denver woman who claimed she was a Hurricane Katrina evacuee from New Orleans to receive thousands of dollars in housing, clothing, and food assistance was indicted on 13 counts of fraud Wednesday. Chandra Donley used false pretenses to receive relief assistance from the Federal Emergency Management Agency, Colorado's Department of Local Affairs, the American Red Cross and Catholic Charities, according to the indictment.

Defense Lawyer Says Reputed Gambino Capo Too Ill For May Trial. The New York Daily News (4/20, Zambito, 729K) reports reputed Gambino family capo Greg DePalma "has been felled by a series of illnesses that have left him near death and too sick to defend himself against federal racketeering charges at his trial in May. Lawyer John Meringolo is asking Judge Alvin Hellerstein to postpone DePalma's May 8 trial, but prosecutors are expected to oppose the request at a hearing scheduled for Monday." The Daily News notes, "FBI agents have collected more than 5,000 hours of audio and video surveillance tapes of DePalma and other mobsters accused in a vast conspiracy that includes gambling and extortion charges."

New York MS-13 Member Convicted Of Racketeering Charges. Newsday (4/20, Armario) reports, "Deliberating for just a few hours yesterday in U.S. District Court in Central Islip," a federal jury found MS-13 member Leonel Mejida of Uniondale "guilty of conspiracy and murder in aid of racketeering, and two weapons charges. Prosecutors said Mejida committed the crimes to meet his 'quota' for the gang." Newsday notes that Mejida's case is "the second prosecution nationwide of an MS-13 member under the federal racketeering statute."

Actress Pleads Guilty To DHS Television Series Scam. The Los Angeles Times (4/20, Krikorian, Hanley, 958K) reports, "The purported star of a bogus television series based on the U.S. Department of Homeland Security pleaded guilty Wednesday to lying to federal agents when she said she did not know the show was part of an elaborate investment scam. In her guilty plea, Alison Ann Heruth…acknowledged making false statements to FBI and IRS agents to conceal the scheme, which authorities allege defrauded dozens of investors of more than $5.5 million over a two-year period. The alleged fraud, whose victims included many local churchgoers, surfaced last fall when federal agents arrested Joseph Medawar," who "is charged with numerous counts of wire fraud, money laundering and other crimes." KCAL-TV Los Angeles (4/19) notes Heruth "admitted that when she met with FBI and Internal Revenue Service investigators in April 2005, she lied to cover up her knowledge of Medawar's alleged investment con." She acknowledged knowing "investors' money was being used to pay the rent on a Beverly Hills mansion she lived in, and to pay for leased cars, jewelry, child care, food and entertainment, the plea agreement states."

Former Corning Employee Sentenced To Four Years For Corporate Espionage. The Elmira Star-Gazette (4/19, Wilson) reported, "Jonathan C. Sanders, who pleaded guilty in January to stealing Corning Inc. trade secrets, was sentenced Tuesday to 48 months in federal prison and ordered to pay a $20,000 fine. … Sanders admitted in January that he stole proprietary information from Corning Inc.'s Harrodsburg, Ky., plant on the process the company uses to manufacture liquid crystal display glass. … He sold the information to another defendant who provided it to a Taiwan company, Picvue Electronics, which was interested in competing with Corning Inc. in the liquid crystal display glass business." The Star-Gazette notes, "The arrests followed an investigation by the Federal Bureau of Investigation office in Buffalo under the direction of Special Agent in Charge Peter Ahearn." The Lexington (KY) Herald-Leader (4/19, Kocher) also reported on Sanders' sentencing.

Supreme Court Considers Insanity Defense In Arizona Case. USA Today (4/20, Biskupic, 2.31M) reports, "The Supreme Court struggled Wednesday with an appeal from an Arizona teen who killed a police officer but might have believed he was shooting a space alien. The case could affect insanity-defense laws nationwide." USA Today adds "the case tests constitutional standards for a state's consideration of a defendant's mental illness and how states may be bound to a traditional rule from 19th-century England that allows a defendant to demonstrate insanity if he did not know 'the nature and quality' of the act and that it was wrong." The Supreme Court "has never ruled that defendants have a constitutional right to make an insanity defense, but most states allow it and use the traditional two-prong test."

The New York Times (4/20, Greenhouse, 1.19M) says "much of the debate during the argument centered on whether Arizona's narrowed definition of insanity made a practical difference." The state's lawyer, Randall M. Howe, chief counsel in the Arizona attorney general's office, "asserted that nearly all those defendants who could have

DOJ_NMG_0026198

claimed that they did not understand the nature of their actions, the part of the definition that Arizona has eliminated, could also demonstrate that they did not know their acts were wrong." The Times adds "several justices appeared troubled" by Howe's arguments. The Washington Post (4/20, A6, Lane, 744K) and Los Angeles Times (4/20, Savage, 958K), among other sources, run similar stories this morning.

The Legal Times (4/20, Mauro) reports, "The much-maligned insanity defense was the focus of debate before the Supreme Court on Wednesday in a case that could further limit its use. … Justices seemed troubled by the case Clark v. Arizona, in which Eric Clark's plea of insanity was rejected, resulting in Clark being convicted of first-degree murder for killing a Flagstaff, Ariz., police officer, even though, his lawyer said, Clark thought he was shooting at an alien being. … But several justices seemed to accept the argument by Arizona and the Bush administration that states have broad discretion in limiting the insanity defense -- even to the point of eliminating it altogether, as several states have done."

The AP (4/20, Holland) reports, "Eric Clark thought he was being pursued by aliens before he shot and killed an Arizona police officer nearly five years ago. … Clark, a 17-year-old schizophrenic, was found guilty of first-degree murder and sentenced to life in prison. His lawyer argued that he was 'guilty except insane' and should instead be sent to a psychiatric facility." The AP adds, "The Supreme Court was reviewing Clark's appeal on Wednesday, in what may become a significant test of state insanity laws. … All but four states - Idaho, Kansas, Montana and Utah - allow insanity defenses, but the ruling in Clark's case could force legislatures to change their laws."

CNN.com (4/20, Mears) reports, "The justices appeared to have a hard time Wednesday determining whether Clark and others like him have a constitutional right to an insanity defense. … 'Eric was delusional,' Clark's appellate attorney, David Goldberg, told the justices. 'He believed he was killing an alien that occupied the officer's body, that aliens had invaded his town.' … 'What if he knew right from wrong, and knew it was wrong to kill aliens?' asked Justice David Souter, 'Would he still have (an insanity) defense?' … Justice John Paul Stevens followed up, 'Does it make a difference whether he knew it's wrong to kill aliens? Does he have to think it's wrong to kill aliens' for reasonable doubt to be raised about his culpability? … Several justices worried whether a victory for Clark would mean a wave of insanity claims by criminal defendants, where 'everybody is going to have an excuse,' as Souter put it."

Former Hockey Player Seeks Transfer To Canadian Prison. The St. Louis Post-Dispatch (4/20, Shaw) reports, "Writing out of frustration, according to his lawyer, imprisoned former Blues player Mike Danton issued a two-page, handwritten letter to the news media questioning Justice Department officials' decision to keep him in the U.S." the Post-Dispatch continues, "Last month, Danton was denied transfer to the Canadian prison system, which was a possibility — but never a promise — under his plea agreement with prosecutors in his murder-for-hire case. Authorities concluded that transferring Danton would "not serve the ends of justice" and that his crime was too severe to warrant a transfer." The Post-Dispatch adds, "The Justice Department unit that evaluates such transfers said Danton has to wait two years to reapply, and can improve his chance by being a model prisoner."

FCC Launches Payola Probes Of Four Radio Companies. The Los Angeles Times (4/20, Duhigg) reports, "The Federal Communications Commission on Wednesday launched formal investigations into pay-for-play practices at four of the nation's largest radio corporations, the biggest federal inquiry into radio bribery since the congressional payola hearings of 1960." The Times continues, "Two FCC officials with direct knowledge of the matter confirmed that the agency had requested documents from Clear Channel Communications Inc., CBS Radio Inc., Entercom Communications Corp. and Citadel Broadcasting Corp. over allegations that radio programmers had received cash, checks, clothing and other gifts in exchange for playing certain songs without revealing the deals to listeners, a violation of federal rules. … The FCC requests, known formally as 'letters of inquiry,' are the first step in investigations that could result in sanctions ranging from financial penalties to the revocation of stations' licenses." The Times adds, "In the past, radio executives at firms including Clear Channel, the nation's largest station owner, have said that company policies prohibit accepting gifts for airplay and that internal probes have not revealed widespread wrongdoing. … The four broadcasters have been negotiating with the FCC for weeks to forestall a federal inquiry by offering to discontinue certain practices and pay limited fines. But those talks stalled last month over the issue of how much the broadcasters should pay."

Report Says McKinney Struck Capitol Police Officer With Closed Fist. CNN's The Situation Room (4/19, Blitzer) reported, "There are new details emerging right now about the confrontation between Congresswoman Cynthia McKinney and a Capitol Hill police officer." CNN (Todd) added that the police report on the incident "does not list Congresswoman Cynthia McKinney by name, only as S-1, for suspect. But the document, obtained by CNN, does name the officer she allegedly hit last month. He's listed by Paul McKenna, also as C-1, or complainant. The report says officer McKenna -- quote -- 'stated that he was physically

DOJ_NMG_0026199

assaulted by S-1. S-1 struck C-1 in his chest with a closed fist.'" CNN added, "Capitol Hill Police would not discuss McKenna's record. Contacted by CNN, McKinney's attorneys would not comment on the police report, but stressed, she has not been charged with a crime. McKinney's aides would not comment. Earlier, McKinney accused an officer of inappropriately touching her, and the Capitol Hill Police of racial profiling -- this after McKinney went around a metal detector. Capitol Hill Police deny both accusations. And even McKinney has toned down her rhetoric."

Police Make 2nd Arrest After Carjacking Spree. The Washington Post (4/20, Wilber) reports, "Police charged a 32-year-old man [named John West] with receiving stolen property and unauthorized use of one of the vehicles taken in the carjackings. Police said they also are reviving their focus on a 16-year-old who was arrested after a car chase early Tuesday that ended near the National Zoo. Neither has been charged directly in the carjackings or robberies." The police are reinvestigating the juvenile after realizing that "a key seized from the youth belonged to another carjacked vehicle."

Court Upholds Dismissal Of DeLay Charges. An appeals court has upheld a judges ruling throwing out a felony conspiracy charge against former House Majority Leader Tom DeLay. The AP (4/20, Vertuno) reports, "A lower court judge dismissed a conspiracy charge against DeLay in December, agreeing with defense arguments that the conspiracy law did not cover election code violations in 2002; the Legislature amended the law in 2003."

Ruling Seen As Victory For DeLay. CQ (4/19, McDonald) reported that while "two more serious charges of campaign money laundering and conspiracy to launder campaign funds" stand against DeLay, the ruling "does represent a victory for DeLay, whose attorneys had argued that the conspiracy charge against him for violating the election code did not apply to state campaign law in 2002 when the crime was alleged to have taken place."

Police Arrest Illinois Rape Suspect. The Chicago Tribune (4/19, Bowean) reports, "A 21-year-old resident has been charged in two of four reported assaults" in a Riverdale community. Wesley Toney "was arrested at home Tuesday after DNA evidence linked him to the two cases, Police Chief Pete Satriano said." A judge "ordered [Toney] held in lieu of $1.5 million bail."

Online Offender Registries Could Invite Vigilantism. The Washington Post (4/20, Fahrenthold) reports that the murders of two registered Maine sex offenders "have alarmed some defense attorneys and advocates for sexual offenders, who say this crime is among the darkest examples of the harassment and threats that have followed the rapid rise in registries that publicly identify offenders." Advocates of the registries said "they were saddened by the Maine case, but noted that many states -- including Maine -- place warnings on registry sites that harassment or intimidation of offenders is illegal. They said that removing offenders' home addresses, as some critics of the registries suggest, would leave them less useful to parents."

Boston Archdiocese Reveals Financial Books. The New York Times (4/20, Bellock) reports that the Boston Catholic archdiocese on Wednesday gave the "most detailed financial accounting any diocese has made available," which revealed a $46 million deficit. Experts called the deficit "the largest any diocese has ever had." The cardinal and lay experts attributed the deficit to "declining donations as a result of the abuse crisis, pension funds hurt by declining stock prices, skyrocketing health care costs for priests and the expensive maintenance for old parish buildings." In addition, "the archdiocese has paid out more than $150 million in legal settlements related to accusations of sexual abuse by priests."

CIVIL RIGHTS:

Florida Law Blocking Child Abuse Agency Probe Of Juvenile Camp Death. The Miami Herald (4/20, Miller, 323K) reports, "Though a surveillance video played around the country shows guards punching, kneeing and choking Martin Lee Anderson before he stopped breathing at a Panama City boot camp, Florida child abuse investigators are not looking into whether the boy died from abuse or neglect. That's because both child welfare and juvenile justice administrators are interpreting one sentence in state law as granting Florida's five juvenile boot camps an exemption to requirements that all suspected or alleged child abuse be reported to the Department of Children & Families' abuse hotline." The Herald notes, "Martin's death is being investigated by a special prosecutor appointed by Gov. Jeb Bush," and "the FBI and U.S. Attorney's Office…also are investigating whether boot camp guards violated the youth's civil rights."

Boot Camp Death Spurs Student Demonstration. The AP (4/20, Fanta) reports, "About 30 college students protested peacefully Wednesday in the foyer of Gov. Jeb Bush's office, calling for the arrest of guards who struck and kicked a teenage boy at a juvenile boot camp in Panama City. The 14-year-old boy died the next day." The AP continues, "Bush said he planned to meet with the students about the Jan. 6 death of Martin Lee Anderson but cautioned that it was premature to take action until an investigation was done. The students also want Bush to apologize to the boy's

DOJ_NMG_0026200

family for how the investigation has been handled. They say there is a coverup." The AP adds, 'Medical examiner Charles Siebert said in the first autopsy that the boy died of complications from sickle cell trait, a usually benign blood disorder. The boy's family said the altercation with guards killed him. Bush has appointed Hillsborough County State Attorney Mark Ober as special prosecutor to investigate. … Ober witnessed a second autopsy in Tampa in February, and his office said the boy didn't die of the blood disorder. That autopsy's findings aren't complete. Ober also removed the Florida Department of Law Enforcement from the investigation because of private e-mails the FDLE's chief sent to Bay County's sheriff, whose office ran the boot camp. … The U.S. Justice Department is investigating possible civil rights violations in the Anderson case. Bay County has closed its boot camp, and the House Judiciary Committee wants to replace camps statewide with residential programs."

Tennessee White Supremacist Candidate Questions Ballot Disqualification. The Memphis Commercial Appeal (4/20, Sullivan) reports, "James L. Hart, the racist eugenicist running for the congressional seat that includes Millington, could contest the state's decision to disqualify him by pointing out that the state law the Division of Elections relies on was not 'pre-qualified' by the Justice Department under the Voting Rights Act, his lawyer says. … But Richard Barrett, Hart's lawyer and a founder of the white supremacist Nationalist Movement, said his client is 'too principled' to make the point, in part because he doesn't support 'the so-called Voting Rights Act' or its provisions protecting minority voters from state voting laws that might dilute their strength at the polls." The Appeal continues, "State Elections Coordinator Brook K. Thompson said Barrett, who lives in Mississippi, where voting laws must be pre-qualified, is mistaken about Tennessee voting laws, which do not. … 'We have a statute that is presumably valid and, until somebody challenges it and has it struck down, it's valid,' Thompson said Wednesday. 'I can't just determine that that statute is unconstitutional, or even assume it is... A federal judge can.'" The Appeal adds, "The Tennessee law allows political parties to petition the state to remove candidates from primary ballots that aren't 'bona fide' party members, and the state Republican Executive Committee passed a resolution to that effect last month. Barrett points out that, as the party's unwelcome standard bearer in 2004, Hart won nearly 60,000 votes. … Barrett also suggests that the state provisions, passed in 1972, permit such an arbitrary decision to be made in a way that could, in another context, dilute the minority vote."

3rd Circuit Allows Age Bias Suit To Proceed. The Legal Intelligencer (4/20, Duffy) reports, "An employer hit with an age discrimination lawsuit in the wake of a companywide layoff is not entitled to summary judgment -- even if it offers several 'age neutral' reasons for the decision -- if the plaintiff is able to point to 'implausibilities and inconsistencies' among those reasons, the 3rd U.S. Circuit Court of Appeals has ruled." The Intelligencer continues, "The 2-1 ruling in Tomasso v. The Boeing Co. is an important victory for plaintiffs because it charts a course for surviving summary judgment in a traditionally difficult sector of employment discrimination claims stemming from a 'reduction in force,' or RIF." The Intelligencer adds, "Writing for the court, Senior 3rd Circuit Judge Edward R. Becker said he recognized that 'a decision to lay off an employee in an RIF differs from a decision to fire an employee during ordinary circumstances.' … In an RIF, Becker said, 'even qualified employees are laid off in order to reduce personnel,' while in ordinary circumstances, employees are fired for poor performance. … But in both situations, Becker said, the courts apply the McDonnell Douglas burden-shifting test."

Judge Allows Ten Commandments Monument To Remain At Ohio Courthouse. The AP (4/20) reports, "A Ten Commandments monument that has stood on the courthouse lawn (in Toledo, OH) for almost 50 years does not promote religion and can remain in place,a federal judge ruled." The AP continues, "U.S. District Judge James Carr said Tuesday that the monument can stay because the motives for placing it outside the Lucas County courthouse were secular and not an endorsement of a specific belief." The AP adds, "The American Civil Liberties Union of Ohio sued Lucas County, Ohio, in 2002 to have the display removed, saying it was unconstitutional and promoted religion. … Carr's decision followed a ruling last year by the U.S. Supreme Court that addressed displays of the Ten Commandments."

Maryland Woman Sentenced To Seven Years In Domestic Slavery Case. The AP (4/20) reports, "A woman convicted of holding a Nigerian girl in the U.S. and forcing her to work as an unpaid servant has been sentenced to seven years in federal prison and will be deported after that time." The AP continues, "U.S. District Judge Peter J. Messitte listened to a statement from the now 23-year-old victim before sentencing Adaobi Stella Udeozor on Tuesday. The victim had been taken from her family in Nigeria when she was 14 under the false belief that she was being adopted to attend school in the United States, according to evidence presented in federal court. … She was subsequently raped by the man who took her from her family and abused by his wife, according to prosecutors. … 'I want to make Stella pay the price for what she did to me,' the young woman told the judge." The AP notes, "Udeozor, a physician who lives in Darnestown, Maryland, was convicted of conspiracy and

DOJ_NMG_0026201

harboring an alien for financial gain in 2004. A jury acquitted her of forcing the girl to work as a domestic slave but made a special finding that the girl had been held in involuntary servitude for more than a year. … In the past six years, federal prosecutors in U.S. District Court in Greenbelt have won at least six convictions in forced labor cases. Such mistreatment is common, according to law enforcement officials and advocacy groups."

ANTITRUST:

Knight Ridder Head Expects McClatchy Sale To Go Through. The Fort Worth Star-Telegram (4/20, Fuquay) reports, "Knight Ridder Chairman Tony Ridder said Tuesday that he expects the company's pending sale to McClatchy Co. to go through, despite a steady decline in the value of the buyout and a requirement that at least 80 percent of Knight Ridder shareholders approve the deal." The Star-Telegram continues, "Sacramento, Calif.-based McClatchy, the nation's 10th-largest newspaper publisher, announced March 13 that it had agreed to pay $6.5 billion in cash, stock and debt for Knight Ridder, which has owned the Star-Telegram since 1997. … McClatchy has said it hopes to close the deal by July 1." The Star-Telegram adds, "During a visit to Fort Worth, Ridder told newspaper employees, 'I think it's very unlikely' that the falling value of newspaper companies' stocks would scuttle the buyout. As McClatchy's shares have slipped, the value of the buyout, which is for $40 in cash and a little more than half a share of McClatchy stock, has fallen to about $6.2 billion." The Star-Telegram notes, "Ridder also said that although the U.S. Justice Department is examining antitrust issues raised by the sale, he expects those to be resolved in the next five or six weeks. McClatchy and Knight Ridder own newspapers with overlapping distribution in three markets."

Judge Denies Class Action Status to IPO-Commission Plaintiffs. The Wall Street Journal (4/20, Smith) reports, "Judge Lawrence M. McKenna denied class-action status to one class of plaintiffs in a case first filed in 1998 alleging that companies that issued stock in the IPOs were harmed by the alleged price-fixing." The judge "said the plaintiffs named in the case couldn't represent the group of issuers of IPOs valued at $20 million to $80 million because they had acquired the rights to sue."

Dow Jones (4/20) reports, "The lawsuit was one of two brought against the major underwriters over alleged collusion since 1994 to fix underwriting fees charged to issuers of IPOs valued between $20 million and $80 million at 7% of the proceeds of those offerings. … At the same, the judge is still considering whether to grant class status to a related lawsuit brought in 1998 on behalf of purchasers of IPOs."

DOJ, FTC Grant Early End To Waiting Period For Armor Holdings' Purchase. Dow Jones (4/20) reports, "Armor Holdings Inc. said the Department of Justice and the Federal Trade Commission granted early termination of the waiting period under the Hart-Scott- Rodino Antitrust Improvements Act in connection with Armor's purchase of Stewart & Stevenson Services Inc. … The Jacksonville, Fla., vehicle armor and body armor company said Stewart & Stevenson scheduled a May 9 meeting for shareholders of record April 5 to vote on the deal."

The AP (4/20) reports, "Under the terms of the deal, Armor Holdings is acquiring Stewart & Stevenson's outstanding stock for $35 per share in cash."

German Moving Firms Fined For Antitrust Violations. The AP (4/20) reports, "Germany's antitrust regulator said Wednesday it has fined six moving companies a total of euro2.4 million (US$2.9 million) for illegally fixing the price of work for the U.S. military." The AP continues, "The Federal Cartel Office said the companies agreed among themselves a minimum price for work in 2001 and 2002 packing and helping move the personal possessions of U.S. soldiers stationed in Germany." The AP adds, "The fined companies were assigned work by a main contractor to the U.S. military which U.S. authorities have already fined more than US$10 million because of the price-fixing, it said. … It didn't identify any of the companies fined or the U.S. military bases in Germany that were involved and an agency spokesman was not immediately available for comment." The AP adds, "Cartel Office President Ulf Boege said it was the first time that his officials and their U.S. counterparts had carried out such parallel investigations."

Jury Awards $133 Million To Victim Of Microsoft, Autodesk Patent Infringement. The Wall Street Journal (4/20, Fleetwood) reports, "A Texas jury awarded a total of $133 million to a Michigan man in a patent dispute with Microsoft Corp. and Autodesk Inc. David Colvin, the founder of closely held z4 Technologies Inc., sued [them] in federal court, claiming Microsoft and Autodesk appropriated two of his antipiracy-software patents with Microsoft's Office and Windows XP and Autodesk's AutoCAD programs. Microsoft was ordered to pay $115 million, and Autodesk was required to pay $18 million." The Journal reports, "Microsoft …. said it would await resolution of all issues before it makes any decisions. Autodesk spokeswoman Caroline Kawashima said the company was disappointed with the verdict and intended to pursue its options."

Pinnacle Raises Bid For Aztar. The Wall St. Journal (4/20, Sanders) reports, "Pinnacle Entertainment Inc. raised

DOJ_NMG_0026202

its offer for Aztar Corp. to about $1.65 billion, or $43 a share, five weeks after its original bid of $38 set off a bidding frenzy for the casino operator." The Journal writes, "The amended bid, however, is still $4 a share lower than the April 13 offer made by the casino affiliate of closely held Columbia Sussex Corp." Observers speculate that Columbia might be "stymied in its attempts to secure casino licenses in states including New Jersey and Missouri where Columbia doesn't currently operate casinos but Aztar does."

Mittal Activates Clock On Bid For Arcelor. The Financial Times (4/19, Laitner) reports, "Lakshmi Mittal on Wednesday set the clock ticking for the formal unveiling of his hostile €20.2bn ($25bn) bid for for Arcelor, as the likelihood increased of a shareholder revolt against Arcelor's defence plans at its annual meeting next week." Mittal "said he planned to send detailed bid documents to Arcelor shareholders in two weeks, after which they would have seven weeks to decide whether to accept the offer." The Wall Street Journal (4/20, Fleming and Teitelbaum) reports that "two corporate-governance groups said they will recommend at next week's annual meeting that some Arcelor directors shouldn't be re-elected," because Arcelor "hurt its own shareholders" in trying to stave off Mittal.

ENVIRONMENT:

Suit Alleges Contamination Of New Jersey Drinking Water By DuPont. The AP (4/20, Chase) reports, "Drinking water supplies near a DuPont facility in New Jersey have been contaminated with chemicals, including a suspected carcinogen used in the production of Teflon, according to a federal lawsuit." The AP continues, "The lawsuit, filed Tuesday, alleges that the contamination is linked to the manufacturing, use and disposal of perfluorinated chemicals, including PFOA, at DuPont's Chambers Works plant in Salem County, New Jersey." The AP adds, "PFOA, or perfluorooctanoic acid, is a processing aid used in the manufacturing of fluoropolymers, which have a wide variety of product applications, including nonstick cookware. The chemical also can be a byproduct in the manufacturing of fluorotelomers used in surface protection products for applications such as stain-resistant textiles and grease-resistant food wrappers. … The plaintiffs are seeking class-action status and compensatory and punitive damages for what they describe as the 'intentional, knowing, reckless and negligent acts and omissions of DuPont in connection with the contamination of human drinking water supplies.' … In a statement, DuPont said the lawsuit, filed in U.S. District Court in New Jersey, is without merit."

Shenandoah Is One Of Nation's 10 Most Endangered Rivers. The Washington Post (4/20, McCrummen) reports that the Shenandoah "made its grim debut yesterday on an annual list of the nation's 10 most-endangered rivers." The group American Rivers says the river "has reached a tipping point." While American Rivers blames the Army Corps of Engineers for many other rivers' deficiencies, it attributes the Shenandoah's growing problems to "national builders and the seemingly unquenchable demands of thousands for new houses in pretty spots."

American Mercury Recycling Rules May Worsen Global Pollution. The Wall Street Journal (4/20, Fialka) reports, "Instead of being permanently removed from the environment, recycled American mercury frequently travels through a secretive and unregulated chain of processors and brokers that can often end with primitive African, Asian and Latin American gold mines." It notes, "The process [of gold extraction] sends the metal into the atmosphere where it can orbit the world as many as four times before settling in distant places, such as Maine's seemingly protected lakes."

If Bird Flu Reaches US, Focus To Be On Quick Detection. If the bird flu virus shows up in US poultry, the Wall Street Journal/AP (4/20, D6) reports, "the government will kill flocks suspected of having the virus before tests are completed," officials said. If bird flu arrives, "quick detection will be key to quickly containing it and eradicating it," said Ron DeHaven, head of the USDA's Animal and Plant Health Inspection Service. Officials also "encourage those producers to bring flocks inside and watch for signs of flu…and report them immediately to state or federal authorities." USA Today (4/20, D8, 2.31M) also reports briefly on DeHaven's comments.

Study Predicts Climate Change Will Not Be Extreme. Newly published research says that while Earth will experience a significant climate shift in the next century as a result of greenhouse gas build up, the more extreme estimates of global warming predicted by some are unlikely to occur. The Washington Post (4/20, A8, Weiss, 744K) reports, "The new work extends a difficult line of research that uses historical climate data and computer models to predict the impact of atmospheric carbon dioxide levels, which are increasing as a result of human activity, such as burning fossil fuels." The new work, described in today's issue of the journal Nature, "recalculates the relationship between atmospheric composition and climate, taking into account the climate-affecting impacts of sun-blocking volcanic eruptions; carbon dioxide levels derived from air bubbles trapped in Antarctic ice; and temperature data derived from tree rings.

DOJ_NMG_0026203

The result: Climate sensitivity almost certainly falls within the more conventional range of current predictions, with only a 5 percent chance that it will exceed 11 degrees Fahrenheit."

Case Made For Protecting Sustainable Forests. Don Melnick, a professor of conservation biology at Columbia University, and Mary Pearl, president of Wildlife Trust, write in the New York Times (4/20, 1.19M) that since the first Earth Day on April 22, 1970, "we have lost more than one billion acres of forest, with no end in sight. … Everywhere, forests prevent erosion, filter and regulate the flow of fresh water, protect coral reefs and fisheries and harbor animals that pollinate, control pests and buffer disease. That is why the single most important action we can take to protect lives and livelihoods worldwide is to protect forests. And one of the best ways to do that is to change how we think about their economics." Sustainable forests "can form the basis for the health and economic well-being of the poorest among us, while benefiting everyone else as well. What could be a more satisfying vision for Earth Day 2006?"

FBI/DEA/ATF/USMS:

Anderson Family Fighting FBI Attempt To Search Papers. The CBS Evening News (4/19, story 6, 2:15, Mitchell, 7.66M) reported, "The family of the late investigative reporter Jack Anderson is squaring off against the FBI, trying to stop the bureau from seizing his files. The issue here is secrecy." CBS (Orr) added that "the FBI believes these nearly 200 boxes holding Anderson's notes and papers may contain leaked, classified documents." George Washington University archivist Mark Feldstein "says government agents are on a fishing expedition." The FBI "insists it's a matter of national security, and wants to confiscate any secret documents among Anderson's papers before they're put on public display." CBS News "has learned even some Justice officials privately say the effort is too heavy-handed."

USA Today Says Request Reminiscent "Of The FBI's Bad Old Days." In an editorial, USA Today (4/20, 2.31M) criticizes the FBI attempt to search journalist Jack Anderson's papers, writing, "Based on what's known so far, the episode smacks of yet another excessive effort to protect supposed secrets that, in fact, the public is helped by knowing. Curiously, FBI officials say they know classified documents are in the files but won't say how they know, triggering memories of the FBI's bad old days of questionable tactics in pursuit of its own paranoid agendas." USA adds, "If the FBI has real evidence of classified government property in the Anderson files, it should be able to persuade a judge to allow a narrowly focused search. Until then, a family upholding the principles of its lost patriarch has every right and duty to resist."

WPost Says Administration Trying To "Diminish" Openness, "Criminalize" Debate. The Washington Post (4/20, 744K) editorializes that "the Bush administration is promoting a reading of an old and largely moribund law that could radically diminish the openness of U.S. government while criminalizing huge swaths of academic debate and journalism." The Post cites the AIPAC classified documents case and "the FBI's attempt to seize control of the papers of the late columnist Jack Anderson" as examples of the administration move to expand the "World War I-era statute that prohibits people who receive secret information from disclosing it further." The Anderson "case makes clear that this problem is not merely theoretical but real and immediate. … It's the same legal theory at work, as the bureau's spokesman, Bill Carter, explained: 'Under the law, no private person may possess classified documents that were illegally provided to them.'"

"Operation Wasteland" Nets At Least 30 Arrests. The Long Beach (CA) Press-Telegram (4/19) reports, "Carlos Cabrera is arrested and taken into custody by law enforcement in Norwalk during 'Operation Snow Globe,' a multiple law enforcement operation targeting gangs that finances their activities by dug trafficking. Thirty individuals were arrested and cocaine and methamphetamine was seized. … 'In October of 2003, we made a promise to the gang members who terrorize our community that we were coming for them,' said Long Beach Police Chief Anthony Batts, who spoke at a joint press conference with representatives from the Drug Enforcement Agency, the U.S. Attorney's Office and the California Department of Justice, among others." The Press-Telegram says the chief made his comments in Los Angeles Wednesday, when authorities detailed a two-year investigation called Operation Wasteland. The Press-Telegram says that operation included two linked investigations: Operation Daddy Day Care, targeting the Highland Park Gang and Operation Snow Globe, which focused on the East Side Wilmas.

The San Gabriel Valley Tribune (4/20) reports the alleged leader of one of two street gangs "suspected of selling 500 to 800 pounds of methamphetamine per month was arrested Wednesday in a quiet Covina neighborhood. The Drug Enforcement Administration sweep covered 12 cities and involved 22 police agencies said. Authorities say Robert Gastelum, 29, was the leader of the Highland Park Gang and quietly coordinated a drug-dealing operation from his home."

The Whittier (CA) Daily News (4/20) reports, "The investigation, spanning two years and dubbed 'Operation Wasteland,' netted 30 arrests of suspected members of the

DOJ_NMG_0026204

drug ring, including brothers Fernando and Carlos Cabrera, identified by officials as the drug ring's top leaders."

KCAL-TV, Los Angeles (4/19) reports on its Web site that federal agents "arrested 31 people and seized drugs, cash and firearms in a crackdown on drug-dealing gangs in the Southland. In an operation dubbed 'Operation Wasteland,' agents seized eight pounds of methamphetamine, about a pound of cocaine, 23 vehicles, 14 firearms, and approximately $90,000 cash, DEA Agent Sarah Fenno said."

Cable TV Coverage. FOX Report with Shepard Smith (4/19, 7:00 p.m.) reported, "The crackdown begins before dawn, with agents suited up in armor and armed to the teeth. The target -- two Hispanic gangs spread across southern California that are charged with trafficking cocaine and methamphetamine through the Mexican drug cartels. Then the feds say they distribute the narcotics to points throughout the United States. … Called Operation Wasteland, the gangs are said to be involved in murder, robbery, grand theft, and illegal drugs and weapons. … The numbers from this raid are still coming in, but the feds are saying that a 17-month investigation and the subsequent crackdown have broken the backs of two major gangs based here in Los Angeles that have been in operation for more than three decades." In an interview with agent Jose Martinez, Martinez said, "Our focus at the DEA was obviously the distribution of drugs. And at their level, they were mid-level wholesalers distributing to, you know, every other part of the country."

Local TV Coverage. KCBS-TV, Los Angeles (4/19, 5:00 p.m.) reported, "Dozens of gang members are out of business tonight, arrested in a huge roundup involving all kinds of law enforcement agencies. Calling it Operation Wasteland, agents seized firearms, meth, cocaine, almost two dozen vehicles and $90,000 in cash. They targeted two specific gangs with about 650 members in the LA area. Thirty-one of them have been arrested."

WITI-TV, FOX Milwaukee (4/19, 9:00 p.m.) reported, "The gangs are said to be involved in murder, robbery, grand theft and illegal drugs and weapons. And in the driveway of this modest home sits a $100,000 BMW, a 2005 AMG Mercedes, a new Lincoln Navigator, a Hummer with Gucci interior, and a Lexus."

Convicted Spokane Drug Dealer Rejects Plea Bargain, Gets Life Sentence. The Spokesman Review (4/19) reports, "A Spokane drug dealer who rejected a plea bargain for only a few years in prison was sent away Tuesday to spend the rest of his life in a federal penitentiary, without the possibility of parole. Raul S. Zavala got the harsh sentence because under federal drug laws he was deemed a 'career offender' whose two previous drug-dealing convictions were factors in his mandatory sentence. … Zavala was arrested in Spokane on April 29, 2005, by Drug Enforcement Administration task force agents who found two pounds of methamphetamine – worth an estimated $16,000 – in his car."

California City Council Extends Moratorium On Marijuana Dispensaries. The Whittier (CA) Daily News (4/20) reports the Pico Rivera City Council unanimously "agreed Tuesday to extend its temporary ban on medical marijuana dispensaries by 10 months and 15 days. Officials made the decision to extend an interim ordinance, which prohibits issuing any permits to medical marijuana dispensaries in the city, because they need more time to study the subject."

Texas Drugs Task Force Commander Accused Of Extorting Money From Traffickers. According to the Houston Chronicle (4/20), the deputy commander of a counter-narcotics task force in Laredo and a suspected accomplice allegedly "extorted tens of thousands of dollars from drug traffickers, shielded them from other agents and gave them a place to store cocaine, according to a federal indictment unsealed on Wednesday. … FBI agents arrested Julio Alfonso Lopez on Tuesday. His alleged accomplice, Meliton Valadez...was arrested Wednesday. Lopez is accused of accepting four bribes totaling $44,500 from Veladez."

Texas Grand Jury Indicts Man On Murder Charge Linked To Drug Deal. The Brownsville (TX) Herald (4/20) reports a Cameron County grand jury on Wednesday "indicted a suspected Mexican hitman in the slaying of San Benito resident. Benito Barrera Martinez, 42, was indicted on a murder charge in the June 1997 death of Martin Villarreal. Cameron County Sheriff's Department deputies believe that Barrera and another suspect, Juan 'El Flaco' Cardenas Castañeda, killed Villarreal because of a botched $1.5 million marijuana deal with a Mexican drug lord."

Six Branch Davidians Soon To Be Released From Prison. The AP (4/19, Brown) reports, "Thirteen years after the Branch Davidians' armed standoff with federal agents ended in an inferno that killed nearly 80 people, six sect members who were sent to prison are about to be released from custody." The AP continues, "Most of those who will be freed over the next two months escaped from the compound near Waco as it burned to the ground on April 19, 1993 — 51 days after a shootout that erupted when federal Bureau of Alcohol, Tobacco and Firearms agents tried to arrest religious leader David Koresh for stockpiling guns and explosives. … The six men went to federal prison for manslaughter, weapons offenses or both in connection with

DOJ_NMG_0026205

the shootout, which left four federal agents and six Davidians dead." The AP adds, "Once the men are out, they will be on supervised release for three to five years. Among other things, they will be barred from associating with one another. … A seventh Davidian is also still behind bars but is not scheduled for release until next year."

Union Wants ATF To Allow More Telework. Government Executive (4/20, Pulliam) reports, "The Justice Department's Bureau of Alcohol, Tobacco, Firearms and Explosives and a federal employee union are embroiled in a dispute over a new work-away-from-the-office policy, with the union pushing for a much more expansive program than the agency allegedly is willing to offer." GE continues, "The bureau and the National Treasury Employees Union have been negotiating for more than a year over a telework program to replace a still-existing pilot agreed to five years ago. The dispute is now before the Federal Service Impasses Panel, and NTEU claims that the bureau has forced the cancellation of at least one scheduled meeting with the panel. … An ATF spokeswoman said she cannot discuss the matter because of the ongoing litigation." GE adds, "According to NTEU, the bureau's final proposal for a new policy designates only the position of management and program analyst, held by nine people, as eligible for telework on a part-time basis. There are more than 800 employees represented in the negotiations. … The union's proposal designates that position, as well as 14 others, as eligible. Investigators and auditors, who spend a large percentage of their time in the field, would be designated as eligible for full-time telework under the union plan, and could work from home at their own discretion."

IMMIGRATION:

Federal Officials Arrest Hundreds In Immigration Raids. CNN.com (4/20, Frieden, Ahlers) reports, "Federal immigration authorities rounded up more than 1,000 illegal immigrants at dozens of sites and charged nine individuals of the firm that employed them, federal law enforcement officials announced Wednesday." CNN continues, "Seven current and former managers of IFCO Systems, which has offices in several states, were arrested and charged in connection with the employment of illegal immigrants, said U.S. Attorney Glenn Suddaby in Albany, New York. … Suddaby said two lower level employees were also charged in the case." CNN adds, "The action against IFCO Systems -- an industry leader in the manufacture of wooden pallets, crates and containers -- came as Homeland Security and Justice Department officials prepared to announce steps to toughen internal enforcement of the nation's immigration laws. … Immigration and Customs Enforcement officials said Homeland Security Secretary Michael Chertoff and other Bush administration officials and a federal prosecutor will appear at the agency's Washington headquarters Thursday. They will announce the new strategy aimed at employers and disclose the results of the enforcement actions targeting IFCO Systems."

New Jersey Woman Sentenced To Prison For Illegal Immigrant License Plot. The Knoxville News Sentinel (4/20, Satterfield) reports US District Court Judge Thomas Phillips yesterday sentenced Zeneida Concepcion Rivera of Lakewood, N.J., to the maximum "46 months in prison for a plot to secure Tennessee driver's licenses for illegal immigrants. … Rivera admitted at an October court hearing that she and her boyfriend ferried illegal immigrants to Knoxville bimonthly over a nine-month period." The News Sentinel notes, "The FBI's Joint Terrorism Task Force nabbed Rivera and six immigrants in July at the EconoLodge on Merchants Center Boulevard after months of investigation and surveillance. … It's not clear why Rivera's boyfriend has not been charged. … It's also not clear if the FBI is pursuing a probe of Knoxville residents who aided Rivera." The AP (4/20, Mansfield) notes Rivera "insisted she was providing a service to hardworking undocumented workers who needed one of Tennessee's unique driver's certificates so they could legally drive to their construction jobs and support their families. … But Assistant U.S. Attorney Jeffrey Theodore said the certificates turned Tennessee into a 'magnet' for undocumented immigrants seeking legitimacy.

Immigrant Advocates Divided On May 1 Boycott. The New York Times (4/20, Swarns, 1.19M) reports leaders "of the demonstrations that drew hundreds of thousands of immigrants into the streets last week announced Wednesday that they were planning voter registration and citizenship drives across the country in an effort to transform the immigrant community into a powerful, organized political force." But the immigrant advocacy group leaders "remain sharply divided over whether immigrants should demonstrate their economic strength by staying away from their jobs, schools and local shops on May 1 in what organizers are calling the Great American Boycott of 2006." In Washington, "the leaders of the National Capital Immigration Coalition, an alliance of immigrant, labor and business groups, is urging immigrants to ignore the boycott and to participate in voter registration drives and other activities after attending school or going to work."

The Washington Post (4/20, A13, Fears, 744K) reports a panel "of immigration activists said yesterday that it will not encourage workers and families to walk off the job and keep their children from school as part of a May 1 boycott, but will hold voter-recruitment and petition drives instead." The

DOJ_NMG_0026206

announcement "by activists from the District, Chicago and Los Angeles at a news conference in Washington underlined the split among the mostly Latino activist groups that led huge demonstrations in more than 140 cities in recent weeks, and shows that the grass-roots movement is operating at cross purposes toward the same end -- immigration reform and legal status for illegal immigrants." Their "plan for civil action is a far cry from the boycotts planned by groups in Los Angeles, Dallas and Chicago, where the largest demonstrations have occurred and where Spanish-speaking disc jockeys were instrumental in turning out crowds."

The Washington Times (4/20, Summers, 90K) reports, "D.C.-area leaders are discouraging participation in 'The Great American Boycott,' in which immigrants and illegal aliens plan to shun shops, work and public transportation to demonstrate their contribution to the U.S. economy. The boycott is being organized by Latino Movement USA and the Act Now to Stop War and End Racism (ANSWER) Coalition." DC-area leaders "said they fear a boycott may kindle resentment among lawmakers and sympathizers and create consequences for protesters who would miss yet another day of school or work."

The AP (4/20, Prengaman) reports backers "of the protest want to dramatize the importance of immigrants to the US economy by leaving construction sites and restaurants undermanned, crops untended and hotel rooms uncleaned," but "others fear such protests will make immigrants look anti-American, annoy the public and alienate lawmakers who are still wavering over how to reshape U.S. immigration policy. They worry, too, that thousands will get fired from their jobs."

Organizers Predict Chicago May 1 Rally To Top 100,000. The Chicago Tribune (4/20, 643K) reports organizers "of a May 1 march to legalize illegal immigrants predicted Wednesday that the turnout would top the March 10 event that drew at least 100,000 participants to the Loop." Jose Artemio Arreola, "a member of the organizing committee, said the number of participating organizations has doubled since the first event."

About 1,000 High School Students Protest At Colorado Capitol. The AP (4/20, Trujillo) reports, "Waving U.S. and Mexican flags, hundreds of high school students descended on the Colorado Capitol Wednesday for a rally in support of illegal immigrants." About "1,000 marchers jammed Denver's Speer Boulevard on Wednesday morning and temporarily blocked other intersections as they headed toward the Capitol, but no major problems were reported, police spokeswoman Virginia Quinones said."

ICE Agents Raid IFCO Systems Plants For Immigration Violations. NBC Nightly News (4/19, story 4, 1:55, P. Williams, 9.87M) reported, "Police and Federal agents moved in this morning at dozens of plants nationwide owned by a global company called IFCO Systems that supplies shipping containers and pallets to some of the nation's biggest retailers. Immigration & Customs Enforcement agents arrested suspected illegal immigrants at this facility in Houston, a scene repeated today at 40 other IFCO locations. But tonight, Federal officials say the main targets of the operation are seven current and former IFCO executives, not just workers." Julie Myers, Assistant Secretary, US Immigration & Customs Enforcement: "We're alleging for the individuals that have been charged that they knowingly assisted in the employment of illegal aliens and in some cases harboring the illegal aliens." Williams: "Homeland Security says it's using laws traditionally directed against drug smugglers and organized crime."

The CBS Evening News (4/19, story 5, 0:25, Mitchell, 7.66M) reported, "Along with the workers, Immigration & Customs agents arrested seven current and former IFCO managers for conspiracy to transport and harbor illegal immigrants."

Dean Says Border Security Is A Top Democratic Priority. The Washington Times (4/20, Hallow, 90K) reports Democratic National Committee Chairman Howard Dean "called border security his party's top immigration priority for November." Dean said, "The first thing we want is tough border control. We have to do a much better job on our borders than George Bush has done. And then we can go to the policy disagreements about how to get it done." The Times adds Republicans "reacted with surprise to Mr. Dean's announcement, which puts the DNC chief's views at odds with those of many Democrats in Congress." Dean "said his party will make immigration an issue as part of its strategy to 'nationalize' the fall elections and is opening a television advertising campaign -- beginning with Spanish-language pitches on radio stations in three Southwestern states -- that puts tougher border enforcement first."

Colorado Columnist Says Washington Shirking Responsibility On Immigration. In a Wall Street Journal op-ed (4/20), Denver Post columnist Fred Brown says the "explosion of controversy, anger and even fear about illegal immigrants flooding into the U.S. from the south has revealed a less-accepting side of the Colorado state of mind. There is a gathering concern about the tide of unassimilated newcomers, and little consensus about solutions." These "inchoate feelings are stoked by Tom Tancredo, the Republican congressman from Denver's southern suburbs and fierce anti-immigration activist." At the state legislature, both Republicans and Democrats "exploit the issue in the interest of politics, but Colorado's best interests seem to be secondary." The "one thing on which all sides agree" is that "the major responsibility is Washington's -- the problem is far larger than the states can confront one by one. Yet Capitol Hill, where reform is now suspended in the limbo between abstraction and political calculation, seems to have no understanding of the urgency of the problem."

DOJ_NMG_0026207

Mexico Provides Few Protections For Latin American Migrants. The Washington Times/AP (4/20, Stevenson) reports migrants "from elsewhere in Latin America, considered felons by" the Mexican government, "fear robbery and rape at the hands of corrupt police. While immigrants in the United States have held huge demonstrations in recent weeks, the hundreds of thousands of undocumented Central Americans in Mexico suffer mostly in silence." Although Mexico "demands humane treatment for its citizens who migrate to the United States, regardless of their legal status, Mexico provides few protections for migrants on its own soil." Undocumented Central Americans "complain much more about how they are treated by Mexican officials than about authorities on the U.S. side of the border, where aliens may resent being caught but often praise the professionalism of the agents scouring the desert for their trail."

Celebrities Largely Sidestepping Immigration Debate. The Washington Post (4/20, C1, Johnson, 744K) reports, "Now the immigration debate is hot. But the celebrity squawk is, well, not." Last week, Salma Hayek "became the first Big Name to Speak Out. She told the New York Daily News: 'As a human being, I find this situation intolerable. As an immigrant, I find it offensive. And as an American citizen, I find it disheartening. The work that these immigrants do directly affects the health of the U.S. economy." Eva Longoria "has been speaking -- carefully -- about the debate," but "many famous lips have remained zipped."

Beckel, Thomas Debate Immigration Reform. USA Today (4/20, 2.31M) runs a "Common Ground" debate between liberal Bob Beckel and conservative Cal Thomas on immigration reform. Beckel said, "The thrust of the bill in the House of Representatives, though, is to make the mere presence of illegals a felony. Then we're to find the 12 million and send them home. That is not only ridiculous, it is undoable." Thomas added, "True, but at least there's a law-and-order concern in that proposal. Senate Democratic Minority Leader Harry Reid, on the other hand, today suggests that illegal aliens don't pose much of a criminal threat at all and should be simply ushered in. This is the same man who in 1993 introduced a bill to drastically scale down the number of immigrants allowed. … Reid takes a more liberal stance today because he thinks it will pay off politically for Democrats."

Samuelson Says Immigration Proposals Run Counter To Goal Of Assimilation. In his Washington Post (4/20, A25, 744K), Robert Samuelson says, "One of America's glories is that it has assimilated many waves of immigrants. Outsiders have become insiders" even though it "hasn't been easy." If today's "wave of immigration does not end in assimilation, it will be a failure. By this standard, I think the major contending sides in the present bitter debate are leading us astray. Their proposals, if adopted, would frustrate assimilation." The "'cop' school…adamantly opposes amnesty and would make being here illegally a felony, as opposed to a lesser crime." But the "mere threat of a crackdown stigmatizes much of the Hispanic population -- whether they're legal or illegal immigrants, or whether they've been here for generations." The "'guest worker' advocates" want "400,000 or more new foreign workers annually." But advocates "of guest workers don't acknowledge that poor, unskilled immigrants -- whether legal or illegal -- create huge social costs."

San Diego ICE Agent Profiled. The Washington Post (4/20, A23, Pomfret, 744K) profiles Miguel "Mike" Unzueta, "special agent in charge of the federal Immigration and Customs Enforcement bureau" in San Diego, whose team was responsible for finding the drug smuggler's tunnel from Tijuana known as "El Grande." The Sept. 11 terrorist attacks "were followed by an enormous bureaucratic shakeup, the creation of the Department of Homeland Security and the merger of the investigative wings of the Immigration and Naturalization Service and of Customs into ICE." For Unzueta "and many other senior Customs agents, the transition was rocky. For one, they were used to dealing with things -- drugs, money, controlled technology, child pornography -- while Immigration handled people." Unzueta "left Washington in 2002 and returned to San Diego. He was made the special agent in charge, or SAC, in 2005. Since then, the illegal-immigration issue has loomed large on his beat and around the nation."

SCOTUS To Consider Use Of RICO In Illegal Worker Disputes. The National Law Journal (4/20, Coyle) reports, "As Congress wages a battle over illegal immigration and its impact on this nation, the Supreme Court is about to enter the fray in a context involving one of the law's most powerful weapons -- RICO." The Journal continues, "In 1996, Congress expanded the reach of RICO -- the Racketeer Influenced and Corrupt Organizations Act -- to include violations of federal immigration law. A decade later, the justices this month will consider whether a corporation and its outside recruiters, alleged to have engaged in the systematic recruiting and hiring of illegal workers, can constitute an 'enterprise' under RICO. Mohawk Industries v. Williams, No. 05-465." The Journal adds, "The high court case stems from a class action against carpet giant Mohawk Industries Inc., most of whose more than 30,000 employees work in northwest Georgia. The suit was brought by Howard Foster of Chicago's Johnson & Bell, who has pioneered the use of RICO on behalf of workers who lost jobs or had wages artificially depressed because of their employers' alleged hiring and concealment of illegal immigrants. … Mohawk, which is appealing its defeat of a motion to dismiss in the 11th U.S. Circuit Court of Appeals, is urging the justices to

DOJ_NMG_0026208

reject that circuit's view of "enterprise," a view that will transform the powerful RICO law into a 'general civil liability statute for virtually all alleged corporate conspiracies and business disputes,' contends its high court counsel, Carter G. Phillips of Sidley Austin's Washington office. … The company has drawn support from the U.S. Chamber of Commerce, the National Association of Manufacturers and other business groups who believe that the case against Mohawk is another example of RICO run amok."

TAX:

DOJ Bars Illinois Group From Making Misleading Down-Payment Statements. Inman News (4/19) reports, "An Illinois down-payment-assistance organization and its president have been permanently barred from making false and misleading statements in promoting their program to house sellers, officials said today." Inman continues, "West Dundee, Ill.-based Partners in Charity Inc. (PIC) and its president, Charles M. Konkus of Barrington, Ill., have been permanently barred from making false and misleading statements in promoting the down-payment-assistance program, the Justice Department said. … According to the government's amended complaint, PIC enters into 'down-payment-assistance' contracts with house sellers. Under these contracts, PIC agrees to provide the down payment to people who buy the sellers' houses, and the sellers agree to reimburse PIC for the down payment and to pay PIC an administrative fee, the complaint says. … The suit alleges that in marketing and operating this scheme, PIC and Konkus falsely advised house sellers and others that the sellers may claim charitable deductions on their federal income tax returns for the amounts they pay PIC under these contracts." Inman adds, "Sellers' payments are not deductible charitable contributions, the Department of Justice said. The injunction requires the defendants to refrain from falsely claiming that these contributions are deductible. … 'The Tax Division of the Department of Justice has made it a high priority to put an end to the business of providing false tax advice,' said Eileen J. O'Connor, assistant attorney general for the Tax Division, in a statement. … 'Anyone receiving tax advice should verify the motives and qualifications of those giving it, even those claiming to be charitable organizations,' O'Connor said."

US Challenges E-Commerce Firm Over Tax Liabilities. The Duluth News Tribune (4/20, Brissett) reports, "E-commerce firm 50 Below Sales & Marketing Inc. of Duluth tried to keep current with its taxes last year, but was thwarted by Internal Revenue Service actions, the company president said in court filings." The Tribune continues, "Company President Mike Rollo also said in court documents that his company paid its tax liability and penalties of $308,000 for the first quarter of this year." The Tribune adds, "The U.S. Justice Department, representing the IRS, has alleged in a separate case that the company owes as much as $3.7 million in unpaid employment taxes, including money withheld from employee paychecks. … On Tuesday, Judge Ann D. Montgomery heard arguments in U.S. District Court in Minneapolis on a Department of Justice motion for a temporary restraining order prohibiting the company from failing to pay employment taxes and failing to file tax returns on time. She did not rule on the matter." The Tribune notes, "50 Below and the Justice Department are involved in two suits. In one, the Duluth company has asked the court to order the IRS to enter into an installment agreement with the company to allow it to pay back taxes. The IRS previously denied that request. … In the second case, the Justice Department asked the court to permanently enjoin Fifty Below from failing to pay taxes withheld from employee paychecks to the IRS, to pay its own employment and unemployment taxes, and to file tax returns -- all in a timely manner."

CONGRESS-ADMINISTRATION:

McClellan Resigns, Rove Drops Policy Role To Focus On Politics. In the latest White House personnel shifts, press secretary Scott McClellan announced his resignation. He also said Deputy Chief of Staff Karl Rove has relinquished role as policy coordinator. Fox News' Special Report (4/19, Cameron) reported "overall policy development and related duties including working with cabinet agencies have now been handed over to Joel Kaplan, who has been promoted to be an additional deputy chief of staff." Kaplan "served as a top deputy at White House Office of Management and Budget under Josh Bolten and expected to emerge as a top Bolten player at the White House." Media reports are describing the moves, particularly Rove's, as Josh Bolten asserting his power as the new White House Chief of Staff. On ABC World News Tonight (4/19, story 2, 1:15, Vargas, 8.78M), Washington correspondent George Stephanopoulos said Rove's new role is "a slap on the wrist. He goes back to the position he had before 2004. He was promoted after the 2004 elections. What this says is that Josh Bolten wanted to send a signal that he was in charge." Similarly, on the CBS Evening News (4/19, story 2, 1:20, Mitchell, 7.66M), national political correspondent Gloria Borger said, "I think what we see happening today is a White House that's in a much more traditional mold with a chief of staff who actually says, 'I'm going to be running things.'" CNN's The Situation Room (4/19, Quijano) calls Rove's move "another indication of the wide latitude Josh Bolten has in making changes in the West Wing."

DOJ_NMG_0026209

In a front-page story titled "White House Shifts Into Survival Mode," the Washington Post (4/20, A1, Balz, 744K) says "yesterday's senior staff changes represent a frank acknowledgment of the trouble in which…Bush now finds himself. They are also a signal of how starkly Bush's second-term ambitions have shifted after a year of persistent problems at home and abroad." Rove's "shift in responsibilities" also suggests that new White House Chief of Staff Joshua B. Bolten intends to operate a different White House than his predecessor, Andrew H. Card Jr., who resigned after more than five years at the helm." Bolten "is likely to have clearer lines of authority and less free-lancing by powerful officials. They also expect Bolten to play a more active and influential role in shaping domestic policy" than did Andy Card. Meanwhile, the Washington Times (4/20, Curl, 90K) says Bolten "has wielded an iron fist as he overhauls the West Wing -- stripping power" from Rove. The Times quotes a "White House insider" saying, "That move shows just how savvy Bolten is, as well as his leadership ability. And there'll be more moves like this -- guaranteed."

The Los Angeles Times (4/20, Hamburger, Simon, Brownstein, 958K) reports, "A former White House official who had talked recently with Bolten said Wednesday's moves resulted from Bolten's view that he needed to address three serious problems facing Bush: deteriorating press coverage, souring relations with Congress, and increasing tensions between the White House and GOP candidates." The former official "asked not to be identified because of concern the White House might not appreciate his comments during a difficult time."

The story was the lead on each of the networks, which also ran follow-up reports on the changes for a cumulative total of about thirteen minutes. ABC World News Tonight (4/19, lead story, 2:50, Raddatz, 8.78M) reported McClellan "has been the public face for the Administration, but the more substantive change today may be Karl Rove, the architect of the President's election and reelection." Rove's decision to drop his policy role frees "him up to concentrate on the midterm elections." Norman Ornstein, American Enterprise Institute: "This is an understanding and admission in the White House, that Karl Rove needs to be there doing politics. And you can't have him doing good politics if he's also running policy."

The CBS Evening News (4/19, lead story, 3:00, Axelrod, 7.66M) said "there should be no question about the power of that new White House Chief of Staff, Josh Bolten. Anyone who has the authority to narrow the responsibilities of Karl Rove clearly has the green light to make changes around here. The architect of George Bush's political success had his job downsized today. Rove will no longer oversee policy for the White House, focusing now on big picture politics."

NBC Nightly News (4/19, lead story, 3:05, Gregory, 9.87M) reported, "Top advisors say it reflects a pretty grim mood around here, a sense that this team has got to become more assertive and, frankly, more effective if it's going to salvage this second term. The biggest change today was the one that may be harder to notice" as Rove "lost some of his duties as deputy chief of staff." The President is "close now to choosing a successor for McClellan."

The AP (4/20, Hunt) reports that "in recent months, McClellan had told people he enjoyed his job and wanted to stay for the long term. He said Wednesday he started to think about leaving in the past few weeks and concluded, with a new chief of staff, that it was a good time to go. He and Bush came to a decision in a meeting Monday in the Oval Office. 'I have given it my all, sir, and I have given you my all, sir, and I will continue to do so as we transition to a new press secretary,' McClellan said." Bush "patted McClellan on the back and they walked together across the South Lawn to the president's helicopter to begin a trip to Alabama." Another AP story (4/20, Raum) said "McClellan, "through his daily on-camera briefings, has become the face of the Bush White House. Increasingly, as Bush's poll ratings plummet and the war in Iraq drags on, that face has become more opaque and troubled, the briefings more contentious."

In its style section, the Washington Post (4/20, C1, Kurtz, 744K) says McClellan "was painful to watch at times, gamely repeating the same stock phrases under a barrage of hostile media fire, grasping for new ways to deliver the same non-answers." But "former colleagues of McClellan, an affable Texan who has worked for Bush since he was governor, say he acquitted himself well in what has become an increasingly difficult and contentious job." Ari Fleischer, "who was McClellan's boss when Fleischer held the spokesman's job, said his successor enjoyed 'the trust and confidence of the president' and 'was flawless in his performance, especially when you read the transcripts.'" But "asked about McClellan's apparent discomfort at the podium, Fleischer said: 'Whether or not a press secretary thrives in the back-and-forth, pugilistic environment of the television age is always going to be an issue.'"

The Wall Street Journal (4/20, McKinnon, 2.11M) reports, "Some Republicans have said that the affable Mr. McClellan wasn't a forceful-enough advocate of White House positions, contending that he relied too much on stock phrases and occasional stonewalling." His departure "gives the White House a chance to find a more effective voice, addressing complaints that the administration's real problem is more style than substance. … Conservative bloggers, many of whom had complained about his job performance, cheered his resignation, hoping that the White House will put a more forceful advocate at the podium for the daily televised briefing." USA Today (4/20, Jackson, Benedetto, 2.31M) quotes Bush media adviser Mark McKinnon saying "the new

DOJ_NMG_0026210

spokesman must have 'the full trust of the president,' as well as credibility with the press." McKinnon "called it 'the hardest job' imaginable: 'You need a lot of patience, a good smile, a sharp wit and iron underwear.'"

Knight Ridder (4/20, Hutcheson, Douglas) says that "like the previous personnel shifts, the latest moves are largely cosmetic and aren't likely to result in any dramatic policy changes." Bush "has resisted calls for the ouster of Defense Secretary Donald H. Rumsfeld or other dramatic shifts that could signal a new course at the White House. … Even if he wanted to make big changes, Bush faces a shrinking pool of applicants."

The Christian Science Monitor (4/20, Feldmann, 61K) reports on "the latest shake-up for a troubled presidency." Yesterday's announcements "throw more fodder into the discussion mill for the politically oriented, and give this White House another day of 'change' headlines. 'In the short run, it gives them a breather,' says Stephen Wayne, a political scientist at Georgetown University in Washington." The Financial Times (4/20, Alden, Daniel, Yeager) quotes Frank Luntz, a Republican political consultant, saying, "Finally, the White House has recognised what everyone else knew for months now – things needed to change."

Rove Says His Role In Bush Team Not Diminished As Washington Debates The Point. The New York Times (4/20, Bumiller, 1.19M) reports, "Rove has been at Mr. Bush's side since Mr. Bush entered politics, and for years his influence has been unquestioned. The decision to take away his daily control over the White House's policy-making apparatus is the first time his role has shrunk," and it is "a stark reversal from the heady aftermath of Mr. Bush's 2004 re-election victory, when Mr. Rove's portfolio was expanded to give him formal control over policy." The Times adds, "In a telephone interview Wednesday night, Mr. Rove brushed aside suggestions that the change was a diminishment of his role. 'It is something different,' he said. 'I've got a new boss,' he continued, a boss 'who says I want you to do more of this and less of that.'" Rove "will retain his title as a deputy chief of staff, as well as his catch-all designation as Mr. Bush's senior adviser."

The Washington Post (4/20, A1, Baker, VandeHei, 744K) reports, "Among people close to the White House and in Republican circles around Washington, there remained debate whether the move should be regarded as a demotion or reassignment. The answer will remain unknown until Bolten's operation has more time to prove itself. But there was agreement that the move was a negative verdict on the status quo." A "senior administration official glad to see Rove return to his strong suit" said, "He's the best thinker in our party, and in the last year he's been doing all the staffing memos and making sure the paperwork is done on time and all that."

The AP (4/20, Fournier) says that in 2005, Rove "took a promotion and added policymaking to his already jam-packed portfolio. It was a mistake -- one that may have contributed to the president's slump -- and so he's been told to focus on his old job: politics." The AP adds, "Technically, it is a demotion. But in terms of real power and influence, Rove remains virtually unmatched at the White House."

The Baltimore Sun (4/20, Davis, 296K) says Rove "remains at the forefront of Bush's team, and officials played down the notion that he had been demoted. 'Karl's voice will continue to be a crucial one in the policy process, as it has been all along,' McClellan said."

In its "Washington Wire" column on its web site, the Wall Street Journal's web site (4/19) reports that the expected shift in duties for Rove "is meant to address another problem -- the perception that too many of the administration's policy decisions are made primarily with partisan political considerations in mind." The Journal adds, "Rove allies suggest that he took the deputy chief of staff title at the beginning of the second term only to prevent Card from filling the job with one of his own loyalists, after Card nixed giving the job to Rove's choice, Jay Lefkowitz. … Rove's real function -- Bush's major political adviser and, now, burnisher of his legacy -- is not likely to change very much even if his title does."

Insiders Say Bush Had Role In Redirecting Rove's Emphasis. A separate item in the "Washington Wire" column on the Wall Street Journal (4/19, 2.11M) reports that Bush "played a role in redirecting Karl Rove's emphasis away from policy administration toward the fall election and toward strategy for the remainder of Bush's term, insiders say. At the same time Josh Bolten wanted Joel Kaplan, his budget office deputy, in new White House structure. Bolten and Rove agreed on the shift on Sunday, the day before Bolten officially started new job as chief of staff."

Snow, Nichols, Clarke, Senor Mentioned As Possible McClellan Replacements. CNN's The Situation Room (4/19, Quijano) reported, "After nearly three years on the job as the president's chief spokesman, an emotional Scott McClellan announced his resignation. … McClellan's announcement of his departure was not unexpected. As CNN first reported two weeks ago, Republican sources say the new White House chief of staff, Josh Bolten, is focusing on reshaping White House communications and legislative affairs. Possible names being mentioned to succeed McClellan, Fox News anchor Tony Snow, former Treasury spokesman Rob Nichols, and former Pentagon spokeswoman and CNN contributor Torie Clarke." The CBS Evening News (4/19, lead story, 3:00, Axelrod, 7.66M) called Snow the "leading candidate," and mentioned "former coalition spokesman in Iraq, Dan Senor" as a candidate. The Washington Times (4/20, Dinan, Curl, 90K) says Snow is "a

DOJ_NMG_0026211

longtime friend of Mr. Bolten and a White House speechwriter under the first President Bush."

Torie Clarke was asked on CNN's The Situation Room (4/19) if she would accept the job of White House Press Secretary of asked. Clarke said, "Not happening. It's not under consideration. They're not going to ask. And I'm not going to do it."

Bartlett Says McClellan's Removal Is Not An Indication Of Poor Job Performance. White House Communications Director Dan Bartlett said on MSNBC's Hardball (4/19) that McClellan "served this country and this White House very well during very difficult times. This is not an indication that he did a poor job. This is just an indication that it's time for a new team to come in and help the president sprint to the finish."

Hill Republicans Pleased With Change In Rove's Job Description. CNN's The Situation Room (4/19, Bash) reported that congressional Republicans "are very happy" Rove is going back to "putting much of his focus on politics and strategically looking at the universe this election year specifically. It goes without saying that most Republicans, especially in the leadership on Capitol Hill, are frankly scared to death about what this climate that they're in means for their prospects this November. So they say if Karl Rove is, in fact, going to spend more of his time doing that, that's great with them."

Dean Celebrates Rove's "Demotion." USA Today (4/20, Jackson, Benedetto, 2.31M) reports Democratic National Committee Chairman Howard Dean "celebrated what he called Rove's 'demotion' but added that 'the Bush White House is merely engaging in window dressing.'"

Three Top Business Leaders Reportedly Turned Down Treasury Post. The CBS Evening News (4/19, lead story, 3:00, Axelrod, 7.66M) reported Treasury Secretary John Snow "has signaled he wants to leave. The Administration reached out to at least three high-profile business leaders recently: Time Warner's Dick Parsons, Morgan Stanley's John Mack, and Henry Paulson of Goldman Sachs. None were interested."

NYTimes Says Those "Who Messed Everything Up" Remain In Office. The New York Times (4/20, 1.19M) editorializes, "Bush wants to show the nation he's shaking things up in his administration, but it is clear that the people who messed everything up will remain in place. The press secretary goes; the political-and-domestic-policy adviser is losing half his portfolio. There's a new White House chief of staff. But the folks at the Defense Department are still on the job, doing...what they've been doing." The Times also says, "The sudden exit of Scott McClellan, the press secretary, would be meaningless under normal circumstances. But in the current context, it really does send an important message." Bush "is like one of those people who pretend to apologize by saying they're sorry if they were misunderstood. He doesn't believe he's done anything wrong. It's our fault for not appreciating him. Blame the victim."

Bush Legacy Seen As Dependent On War On Terrorism, Iraq. On NBC Nightly News (4/19, story 2, 1:30 Williams, 9.87M) presidential historian said, "If we could come back in 30 years and I had one question to ask that would tell me how future Americans will think of George Bush, it would be how did the war on terrorism turn out, how did the war in Iraq turn out? If those things led to a more safe world, George Bush will be well thought of."

Bush Promotes Competitiveness Initiative. The Los Angeles Times (4/20, Gerstenzang, 958K) reports from Tuskegee, AL, "With gas prices topping $3 a gallon and jobs continuing to move overseas, President Bush is presenting anew his long-term solution to the nation's economic anxieties: a program to boost the study of math and science and the renewal of a tax credit to encourage industrial research and development." The Times adds, "Eleven weeks after unveiling his American Competitiveness Initiative in the State of the Union address, Bush is devoting much of his public time this week to speeches -- in Maryland on Tuesday, in Alabama on Wednesday and in San Jose on Friday -- on the role that math, science and technology education and leading-edge research can play to protect the nation's economic standing." Speaking at Tuskegee University, "one of the most prominent of the nation's historically black colleges, he said: 'If we lose our nerve and retreat, it will make it hard for us to provide those jobs people want.'"

The AP (4/20, Pickler) reports that Bush said yesterday the US "needs to keep on the cutting edge in research in the face of growing competition over jobs and natural resources from India and China. … 'These countries are emerging nations,' Bush said in a speech at Tuskegee University. 'They are growing rapidly and they provide competition for jobs and natural resources. As these new jobs of the 21st century come into being, people are going to hire people with the skills set. … And if our folks don't have the skill set, those jobs are going to go somewhere else.'"

WSFA-TV Montgomery, Alabama (4/19) reported Bush "spoke to a packed house at Tuskegee University on Wednesday pressing his plan for bolstering U.S. technology." The President also "talked about what he termed progress under 'No Child Left Behind' and called for more than 70,000 teachers to be trained in teaching advanced placement courses." He also spoke about Academic Competitiveness Grants and Smart Grants.

NYTimes Says There Is Shortage Of Math, Science Teachers. An editorial in the New York Times (4/20, 1.19M) praises New York City's offer to pay housing subsidies of nearly $15,000 to "experienced math, science and special education teachers who agree to work in some of the city's toughest middle and high schools." The Times says the

DOJ_NMG_0026212

subsidy "sends the important signal that the city is dedicated to attracting the best teachers and improving its schools. But neither this program nor others like it around the country address the bedrock issue: public universities are turning out too few math and science teachers. … Elected officials must then do whatever it takes -- including raising salaries -- to make sure that more of the most talented math and science students end up in classrooms and spend their careers there."

Rolling Stone Essay Says Historians May Rate Bush As Worst President. Rolling Stone runs as its cover story (4/21) an essay by Princeton historian Sean Wilentz under the headline "The Worst President in History?" Wilentz says, "George W. Bush's presidency appears headed for colossal historical disgrace. Barring a cataclysmic event on the order of the terrorist attacks of September 11th, after which the public might rally around the White House once again, there seems to be little the administration can do to avoid being ranked on the lowest tier of U.S. presidents. And that may be the best-case scenario. Many historians are now wondering whether Bush, in fact, will be remembered as the very worst president in all of American history."

Kennedy Book Criticizes Bush, GOP. Knight Ridder (4/20, Kuhnhenn) reports that on Thursday, Sen. Edward Kennedy "launches a national publicity tour to promote a new book he's authored -- a blistering critique of President Bush and the Republican congressional leadership that makes a case for an activist government to help solve national problems." Kennedy is "trying to put a bit of a roar in his voiceless party. Yet by continuing to work with Republicans on issues that include immigration and health care, Kennedy is also openly rejecting the view held by many Democrats that they shouldn't help their opponents win legislative victories, especially now that they're stumbling. Kennedy prefers achievement."

Bush Reappoints Social Security Public Trustees. In defiance of Senate leaders from both parties, President Bush yesterday reappointed the two public representatives on the board of trustees for Social Security and Medicare. The New York Times (4/20, Pear, 1.19M) reports, "The White House announced that Mr. Bush had granted 'recess appointments' to the public trustees, John L. Palmer, former dean of the Maxwell School at Syracuse University, and Thomas R. Saving, an economist at Texas A&M. … The chairman of the Senate Finance Committee, Charles E. Grassley, Republican of Iowa, and its senior Democrat, Max Baucus of Montana, had urged Mr. Bush to find other candidates. They did not criticize Mr. Palmer or Mr. Saving, but said they wanted fresh perspectives on Social Security and Medicare."

Democrats Push For Extension Of Medicare Drug Plan Deadline. Democratic lawmakers are continuing their calls for an extension of the May 15 deadline for seniors to enroll in a Medicare prescription drug plan. CQ (4/19, Schuler) reported, "Sen. Debbie Stabenow, D-Mich., said 47 senators joined her in signing a letter…to Majority Leader Bill Frist, R-Tenn., asking him to bring up legislation to extend the deadline immediately when the Senate returns next week."

Letters Tell Thousands Drug Benefit Premiums Are Unpaid. USA Today (4/20, Appleby, 2.31M) reports, "Insurers have notified tens of thousands of people in Medicare's new drug benefit plan that they might be kicked out because their premiums have not been paid. But many who received the letters in the past few days insist they have already paid, have signed up for automatic Social Security deductions or qualify for free coverage, according to insurance counseling programs in California, New York, Pennsylvania and Arkansas. … The letters come as the government and insurers are encouraging people to sign up for the program before the May 15 deadline. The letters say insurers' records show no payment and warn that if payment isn't received by May 31, 'we will have to disenroll you.'"

Doctor's Study Says NIH Budget Will Fall 3.8% Next Year. The budget for NIH is expected to fall 3.8% next year, according to Dr. Joseph Loscalzo, a top US biomedical researcher. The Washington Times (4/20, Price, 90K) reports, "The Bush administration has proposed a $28.6 billion budget for NIH in fiscal 2007, a 0.1 percent reduction from last year. … An NIH spokesman said yesterday he was unable to obtain a copy of Dr. Loscalzo's essay and therefore could not comment."

Novak Says GOP's Efforts At Budget Reform To Face Test. In his syndicated column, Robert Novak (4/20) discusses the House's failure to pass a budget bill before the Easter break. Novak says that though "a budget containing spending reforms was agreed to by the new majority leader, John Boehner, and Rep. Mike Pence, head of the conservative Republican Study Committee," the bill was torpedoed by Appropriations Committee Chairman Jerry Lewis (R), who "blocked support for the rule needed to debate the budget because the bill's effort to control the earmarking epidemic would have undercut influence of the appropriators." Novak notes that next week, "a new effort will be made to pass the budget…and that means either getting the Appropriations chairman back in line or overriding him. Control of the budget is necessary for Republicans to restore credibility, as signaled by the appointment of the highly regarded Rob Portman as budget director." Novak adds that traditionally, "the leadership's next step would be to seek

DOJ_NMG_0026213

compromises with Lewis that dilute the reforms. But maybe not this time." Pence and Boehner's efforts "to rid Congress of its earmark addiction" will "be supported in the administration by Portman. The test comes next week."

Emerson Apologizes For Profanity In Letter To Constituent. A letter from Rep. Jo Ann Emerson to a constituent, ends with a profane insult. According to the AP (4/20, Hananel) the letter concludes with a seven latter profanity starting with a: "I think you're an a-------." Emerson "says she can't explain how the offensive language made it into the letter, which otherwise reads like a typical response to a citizen's question about last year's testimony of oil executives before the Senate Commerce Committee. 'There is no excuse for this inappropriate letter having been sent, and every apology has been made to the individual who received it,' Emerson said in a statement to The Associated Press."

Marine One Grounded By Technical Problems. NBC Nightly News (4/19, story 3, 0:40, Williams, 9.87M) reported on the "eventful morning at the Bush White House." After "Scott McClellan's resignation scene there on the lawn, the President headed for his helicopter, Marine One. He boarded, as usual, they cranked up the rotors and then it all came to a grinding halt. The President then bounded off the very familiar white top Sikorsky aircraft, which was apparently in no condition to fly today. The problem, it turned out – air-to-ground communications; the radio. And so the Secret Service threw together a motorcade and minutes later the boss was off, by land, to Andrews Air Force Base."

OTHER NEWS:

Oil Prices Reach New Record As US Gasoline Prices Continue To Climb. The price of oil reached a new record of $72.17 this afternoon, up 82 cents, as Iranian President Mahmoud Ahmadinejad said he believed the oil was undervalued. ABC World News Tonight (4/19, story 3, 2:40, Stark, 8.78M) reported geopolitics "once again dominated the oil market today. This time, it was the president of Iran, declaring oil prices were undervalued at over $70 a barrel. Americans don't get oil from Iran; Iranian oil has been embargoed for more than a decade. But it proves just how vulnerable the US is to suppliers all over the globe. The United States consumes almost 21 million barrels a day, and produces only 8 million. Foreign producers provide 60% of its needs, a dicey proposition in a fractious world." Michelle Billig, PIRA Energy Group: "And then you look at the top five countries that we get oil from. Four of them are particularly risky places." NBC Nightly News (4/19, story 6, 0:30, Williams, 9.87M) also reported, "It was another wild day on the oil markets today with prices surging to yet another record-high close."

The CBS Evening News (4/19, story 3, 0:30, Mitchell, 7.66M) reported, "The price of gasoline is rising about a penny a day of late, and the pennies are adding up. Two months ago, you could fill a 15-gallon tank for less then $34. Today, it's going to cost you $42. Fill up once a week and that's an increase of nearly $437 a year. In some places like this station in New York City, regular is already well over three bucks a gallon."

USA Today (4/20, Healey, 2.31M) reports on the gas prices under the headline "Drivers Curb Use As Gas Goes Up," and says "gas use last month was 0.6% less than a year ago, the American Petroleum Institute reported, because 'high fuel prices have led to decreased demand for gasoline and other refined oil products.'" The US Energy Information Administration (EIA) "said gasoline use the past four weeks was up a slight 0.6% vs. a year ago. Typical is an increase of 1.5%, and that's the growth rate assumed in many industry, analyst and government forecasts." The Wall Street Journal (4/20, 2.11M) also reports on the rising fuel prices.

Bartlett Says Administration Never Said Iraq War Would Result In Cheaper Gasoline Prices. White House Communications Director Dan Bartlett was asked on MSNBC's Hardball (4/19) about pre-war claims that the Iraq war "would help us get cheaper gas." Bartlett said, "That's not correct. The president or no one else never said that the war was going to result in cheaper gas prices." Asked again if anyone in the Administration "ever said that we would have cheaper gas because of the war in Iraq," Bartlett said, "I don't recall anybody ever saying that. What we have said is that the resources for Iraq, the oil resources there, that was not the motivation of going into Iraq. The motivation was to rid that country of a brutal dictator that was a threat to the American people and we have done that."

US Automakers Seek To Get Ahead Of Flex Fuel Vehicle Market. The CBS Evening News (4/19, story 4, 2:35, Mason, 7.66M) reported, "When GM unveiled its new Chevy Avalanche this year, they drove it through a giant box of popcorn, because like many new flexfuel GM vehicles, the Avalanche can run on either gas or E85 ethanol, a corn-based fuel. GM's even putting its money behind a national ad campaign urging Americans to live green by going yellow." GM Vice Chairman Bob Lutz: "No, we're very serious about this, and we've made the investment for the vehicles. We are prepared to convert more and more of our fleet." Mason: "Together, GM and Ford plan to make nearly 700,000 flexfuel vehicles this year. Add that to at least five million already on the road. The problem isn't production, it's where do you fill them up?" E85 "can be more expensive than gas, and less fuel efficient." Of the "165,000 gas stations in the country, only 650, mostly in the Midwest, now sell E85. That's

DOJ_NMG_0026214

expected to grow to 2,000 by the end of the year, but Lutz says they need more."

Fueled By Gas Prices, Inflation Gauge Higher In March. The Washington Post (4/20, D1, Henderson, 744K) reports, "Climbing gasoline prices helped push inflation higher last month, the government reported yesterday, heightening concerns that businesses may be passing more of their energy costs to consumers." The Labor Department's consumer price index, "a widely followed inflation gauge, rose 0.4 percent in March after edging up a mild 0.1 percent the month before." The report "caused analysts to reconsider predictions that the Federal Reserve will soon stop raising interest rates to keep inflation under control." The Post adds, "Much of the March increase in the CPI reflected a 3.6 percent jump in gasoline prices." USA Today (4/20, Kirchhoff, 2.31M) titles its story "March Consumer Prices Jump More Than Expected," and says the numbers could "possibly" complicate "the Federal Reserve's job as it tries to decide when to wind up its nearly two-year campaign of interest rate increases."

The Wall Street Journal (4/20, Conkey, Phillips, 2.11M) also says the Federal Reserve "may have more work to do in its effort to contain inflation." Edward McKelvey, senior economist with Goldman Sachs, "said yesterday's inflation data 'creates a perceptual issue' for the Fed. 'Markets have just sort of digested this idea that maybe they're close to done,' Mr. McKelvey said. 'This appears to send a different message.'"

Poll Finds Consumers Expect Housing Bubble to Burst. The Wall Street Journal (4/20, Morrisey, 2.11M) reports, "More than 70% of US consumers believe a national housing bubble will burst and home prices will collapse within the next year, although 56% believe it's unlikely to happen in the area where they live, according a new survey." The Experian-Gallup Personal Credit Index study, released yesterday, "found that 71% of the 1,004 adults surveyed believe a bubble exists and could burst within the next 12 months. Only 24% believe it's unlikely to happen and 5% said they didn't know." However, "most consumers don't think it will happen where they live -- at least not in the next three years."

Stock Markets Continue Rally. NBC Nightly News (4/19, story 6, 0:30, Williams, 9.87M) reported that despite the new record oil price, "stocks managed to hang on to yesterday's big gains and add a bit. The Dow was up 10 points on the day [to close at 11,278.77]. NASDAQ gained almost 15 points [to close at 2,370.88]." USA Today (4/20, Shell, 2.31M) reports the Standard & Poor's 500 index "edged up 2.28 points, or 0.2%, to 1309.93." The Wall Street Journal (4/20, Patterson, 2.11M), among other newspapers, also reports the stock numbers.

IMF Forecast Criticizes US Budget, Trade Deficits. The Los Angeles Times (4/20, Havemann, 958K) reports, "Clearly irritating U.S. economic officials, the International Monetary Fund faulted the United States on Wednesday for its budget and trade deficits and its failure to provide universal health insurance, predicting that the dollar would inevitably decline in value against the world's other currencies." In its "semiannual report on the world economic outlook, the IMF painted a generally rosy picture, with the global economy growing by 4.9% in 2006." But the IMF "said 'global imbalances' loomed as risks to that scenario. Among the imbalances, it singled out U.S. budget and trade deficits."

Plame To Attend White House Correspondents Dinner. Editor and Publisher (4/19, Strupp) reports, "E&P has confirmed" that Valerie Plame is "slated to attend this year's" White House correspondents dinner, "along with her husband Joseph Wilson and several other notable non-journalist guests, such as Alex Trebek and Ben Rothlisberger, according to organizers." It is "unlikely she will be seated next to" columnist Robert Novak, "but perhaps Bush may have a good view of her from the dais. She and Wilson will be guests of ABC News."

Abramoff Ties Said To Be Hurting Reed's Candidacy. Georgia lieutenant governor candidate Ralph Reed's work is becoming a drag on his candidacy, according to the Wall Street Journal (4/20, 2.11M). Several surveys "show Mr. Reed still holding a narrow lead, but with high unfavorable ratings and many voters undecided. While the Abramoff scandal has affected other campaigns, such as the re-election bid of Montana Republican Sen. Conrad Burns, the Georgia race appears the most competitive. So Mr. Reed's dilemma raises the question: Will Mr. Reed, a star of the national Republican Party, become the first campaign casualty of the Abramoff scandal when he squares off with state Sen. Casey Cagle in the July 18 primary?"

Giuliani To Speak At Reed Fundraiser Next Month. CNN's The Situation Room (4/19 Snow) reported, "Just two days after Rudy Giuliani was publicly snubbed by Christian conservative leader the Reverend Jerry Falwell, Ralph Reed, former leader of the Christian Coalition, is aligning himself with the former New York City mayor. Reed is running for Georgia's lieutenant governor. And Giuliani will speak at a fund- raiser for him next month."

Nagin Seen As Frontrunner In New Orleans Mayoral Race. The Washington Post (4/20, A9, Whoriskey, 744K) reports that "to the astonishment of some who had assumed that his missteps and post-Katrina despair would doom his reelection bid," New Orleans Mayor Ray Nagin "is also counted as a front-runner as voters head to the

DOJ_NMG_0026215

polls on Saturday" in the New Orleans mayoral race. Nagin and others credit his post-storm performance for his standing, and many still fondly recall him telling federal authorities to 'get off their asses' as the city slipped into chaos. But one of the reasons for his recent appeal, and by some estimates the most powerful force in this historic election, is race. … Even as his white support drifts to his challengers, some of those black voters who spurned Nagin four years ago are embracing him, political analysts said."

The Washington Times (4/20, Debose, 90K) reports, "The 20 other candidates are taking shots mostly at the mayor, but many New Orleanians think he will prevail, perhaps in a squeaker."

"Delayed Recovery" Designation For Some New Orleans Neighborhoods Opposed. Susan E. Howell, a political science professor at the University of New Orleans, and John B. Vinturella, a business consultant, write in the New York Times (4/20, 1.19M) that the Bring New Orleans Back Commission "has designated parts of New Orleans East 'delayed recovery,' meaning that residents can rebuild only at their own risk, without any guarantee that there will be basic services, like working sewers or police protection, in the near future. … These are people who overcame the odds, played by the rules, broke out of the infamous 'cycle of poverty,' bought homes, built families and enjoyed a taste of what Americans define as success. And they are being told that their community is not on the immediate recovery list. It should come as no surprise that these residents are fighting the commission and the planners to save their neighborhood."

DNC Meeting To Begin In New Orleans Today.

The Democratic National Committee will begin a three day meeting is set to begin in New Orleans today. The AP (4/20, Sidoti) reports that the choice of New Orleans for the meeting "was part of a political calculation, as is a three-day agenda for the 400 delegates that combines party business with community service." Democrats "plan to clean out hurricane-ravaged homes in this slowly recovering city, a project designed to highlight the party's criticism of the Bush administration." Democrats "hope their reconstruction work leaves an image with voters that lasts through the congressional midterm elections." The AP adds, "Republicans chalked up the Democrats' New Orleans meeting to grandstanding."

Dean Proposes Six-Point Agenda For Democrats. CQ (4/19, Giroux) reports Dean has "proposed that Democratic candidates across the country emphasize six major points: honesty and openness in government operations; a strong national defense; promoting American jobs through energy independence; building a health care system that 'works for everybody;' strengthening public education; and promoting retirement security." Dean also "said that this national agenda will include a 'values piece' that probably will be unveiled in September."

Dean Says Character Is Key Campaign Issue In 2006. The Christian Science Monitor (4/20, Cook, 61K) reports on a recent "Monitor Breakfast" with DNC Chairman Howard Dean. Dean said the biggest issues in the 2006 election "are character issues. ... They are going to go to the President's and the Republicans' trustworthiness and honesty and their competence. And they are going to lose big on both those issues. After that we get to Iraq, we get to the economy, we get to healthcare."

Attempts To Override Kaine Vetoes Fail.

Attempts to override seven vetoes by Virginia Gov. Tim Kaine failed in the Virginia legislature Wednesday. The Washington Post (4/20, A1, Shear, 744K) reports, "Republicans in the House of Delegates and Senate had attempted to strip Kaine and all future governors of the power to pick members of two tobacco policy panels and the board that directs the state's transportation program. Kaine vetoed the bills, calling them an unwise shift in power to the legislative branch. Lawmakers also failed to override Kaine's veto of a gun rights measure that would have allowed Virginians to store guns unseen in their cars without a concealed weapons permit. Kaine had called the bill a danger to police. Shortly after concluding a seven-hour debate over the governor's vetoes and his amendments to other bills, both chambers gaveled right back into the special session that is now in its fourth week."

WPost Blasts Virginia GOP Lawmakers' Objection To Transportation Taxes. An editorial in the Washington Post (4/20, A24, 744K) says, "L. Scott Lingamfelter, a Republican from Prince William County in Virginia's House of Delegates, would prefer to sacrifice a possible $1.5 billion in federal matching funds for Metro rather than compromise what he ringingly calls 'our principles.' By that, he and other Republicans in the legislature mean that they will oppose any new taxation, even to improve the state's jampacked roads or expand its mass transit system, because Virginians are already overtaxed. It's a fine argument. If only it were true. … It is galling coming from Mr. Lingamfelter, whose own constituents would be among the main beneficiaries of a revenue shot in the arm for the region's roads and rails."

Bush, Hu To Discuss Trade Issues During DC Visit.

The CBS Evening News (4/19, story 11, 3:00, Mitchell, 7.66M) reported, "President Bush is getting ready to welcome China's president to the White House. President Hu Jintao was in the Seattle area today before flying to Washington, DC. His talks with Mr. Bush will focus largely on trade. China enjoyed a more than $200 billion advantage over the US last year."

DOJ_NMG_0026216

ABC World News Tonight (4/19, story 4, :30, Vargas, 8.78M) reported, "One more reason for the higher oil prices is the soaring demand for oil in China. China uses 6.5 million barrels of oil a day, second to only the US. This is one of the topics that President Bush and China's President, Hu Jintao will discuss tomorrow. Today, Mr. Hu toured the Boeing plant outside Seattle. He indicated China is eager to buy more jets from Boeing. It was an attempt to ease trade tensions with the US, ahead of meeting Mr. Bush."

The AP (4/20, Klug) reports, "For Bush, the success of Hu's visit will be judged largely by whatever concessions Washington wins on a long list of complaints. Those include allegations that China mistreats its citizens, that an undervalued currency hampers U.S. competition, that China's growing military strength could lead to conflict in the Taiwan Strait, and that Beijing has pursued energy deals with countries the United States considers tyrannical. For Hu, the visit provides a chance to burnish China's image at a time when Americans are wrestling with what China's new economic and political clout means here."

The Washington Post (4/20, A20, Kessler, 744K) reports that when Bush and Hu meet today, some of the biggest foreign policy challenges facing the United States will be on the table, including the nuclear ambitions of Iran and North Korea. Increasingly, administration officials believe, the key to these issues and other overseas problems may lie in Beijing, a reflection of the pivotal position China has come to play on the international stage."

The Financial Times (4/20, Dinmore) reports, "China's close relationship with Iran's defence industry" will be under the spotlight. Visitors "include representatives from China North Industries Corporation – Norinco – a company singled out in 2003 for the most punitive US sanctions against a Chinese entity for its alleged aid to Iran's ballistic missile programme. … Pressure from China and lobbying by big US customers for a range of Norinco products – from optical fibre to hunting rifles – led to a removal of the import ban last year."

Bush Expected To "Talk Tough" With Hu. The Washington Times (4/20, Curl, 90K) reports that President Bush "is prepared to talk tough with the communist leader, who is making his first state visit to the U.S. since taking power. Mr. Bush will urge Mr. Hu to do more to cut his country's swelling trade surplus with the United States and join efforts to isolate Iran because of its nuclear program. The talks between the leaders will be frank, one U.S. official said this week."

Pelosi Says Administration Should Stand Up To Beijing. House Minority Leader Nancy Pelosi writes in the Los Angeles Times (4/20, 958K), "Hu will receive the best welcome U. taxpayer money can buy, including full military honors and a 21-gun salute. … While open dialogue is essential, many of us on both sides of the aisle in Congress oppose the celebratory nature of this official visit." Pelosi adds, "We must have engagement with China, but it should be sustainable engagement that enables us to maintain our values, continue our economic growth and uphold our national security. … The American people want the administration to show resolve in standing up to Beijing, to demonstrate that we believe that the Chinese people deserve freedom.

Hu Tours Boeing Plant In Seattle. Hu spent the second day of his four-day visiting a Boeing plant outside Seattle. The Wall Street Journal (4/20, 2.11M) reports that in address to Boeing employees, Hu "touted China's purchase of billions of dollars of Boeing airplanes in an address to the aerospace company's employees. In a luncheon speech later to some 600 dignitaries and business leaders, Mr. Hu recited statistics highlighting the benefits of U.S. trade and investment relations with China."

The Washington Post (4/20, A20, Harden, 744K) reports that Hu "was effusive and optimistic about the importance of trade to the future of both countries. At the same time, though, he announced no new proposals for cutting his country's huge trade surplus with the United States, revaluing its currency or limiting China's oil purchases from rogue countries such as Iran."

The New York Times (4/20, Kahn, 1.19M) reports that Hu "continued a charm offensive directed mainly at commercial interests and offered an overview of economic relations that broke little new ground but displayed a prodigious memory for statistical data." The Times adds, "Mr. Hu acknowledged that some problems existed in ties between the countries, calling them 'hardly avoidable.' But unlike the Bush administration, which has laid out concerns about China's military spending, currency policy and quest for oil in considerable detail, Mr. Hu offered mostly oratorical platitudes."

A front page story in the Wall Street Journal (4/20, 2.11M) reports that China's economic growth surged ahead by 10.2% in the first quarter of 2006, adding "to US pressure on President Hu Jintao to let the yuan appreciate." Yesterday in Seattle, "Hu reiterated a pledge to gradually liberalize China's currency policy, but reaffirmed his commitment to keep its exchange rate 'basically stable at an adaptive and equilibrium level' -- underlining a reluctance to move too precipitously on currency policy."

The New York Times (4/20, Bradsher, 1.19M) reports that the topic of the yuan "is likely to be near the top of the agenda when President Hu Jintao of China meets President Bush in Washington on Thursday. A currency appreciation would make Chinese exports more expensive in foreign markets and foreign goods more competitive in China." The yuan "has risen against the dollar by 3.3 percent since July, and already there are side effects: businesses across China are concluding that their survival may depend on following

DOJ_NMG_0026217

Japanese and South Korean companies up the economic ladder as quickly as possible, selling more advanced products with fatter profit margins. As a result, China is gradually moving from competing with countries like Thailand and Indonesia to vying with South Korea, southern Europe and eventually, with the likes of Germany, Japan and the United States."

Professor Says Yuan/Dollar Rate Should Be Left Where It Is. Ronald McKinnon, a professor of economics at Stanford, writes in the Wall Street Journal (4/20, 2.11M), "Section 3004 of Public Law 100-418 requires that the secretary of the Treasury assess whether countries such as China that have global current account surpluses or large bilateral trade surpluses with the U.S. are manipulating their exchange rates to prevent effective balance of payments adjustment or to gain an unfair competitive advantage in international trade. The question of whether the beleaguered treasury secretary, John Snow, is willing to classify China as a 'currency manipulator,' with unspecified economic sanctions to follow if he does, is the current serious flashpoint in China-U.S. relations." McKinnon adds that "whether or not such a broad agreement is implemented, Secretary Snow's narrower job of interpreting Section 3004 is straightforward: China is not a currency manipulator and the yuan/dollar rate is best left more or less where it is."

China Is Fastest Growing Market For US Exports. USA Today (4/20, Lynch, 2.31M) reports that the fastest-growing market for American exports is China. Last year's "$41.8 billion in U.S. exports to China represented a 157% increase compared with 2000's $16.3 billion. Over the five-year period, exports to China grew more than five times as fast as exports to the rest of the world, making China the USA's No. 4 export market, behind only Mexico, Canada and Japan. … Companies prospering by exporting to China run the gamut from hardwood lumber suppliers to manufacturers of sophisticated coal-mining equipment."

US Families Seen As Becoming Dependent On Inexpensive Chinese Products. The CBS Evening News (4/19, story 11, 3:00, Peterson, 7.66M) reported on the Bongiorni family's experiment of not buying anything manufactured in China for a year. The goods "the Bongiorni's became so dependent on came from factories just like this one here in China and because of these factories, Americans get a bargain every time they go shopping, and these people get a chance at a better life. China's economy, at one time run by the state, is now all about private enterprise. 15 years ago, private industry contributed $5.3 billion to the economy. Now the number is more like $288 billion -- an increase of more than 5,000% and still climbing because of factories like this one."

China Said To "Trample Shamelessly" On Basic Human Rights. Rebecca MacKinnon, who was CNN's Beijing bureau chief from 1998 to 2001, and is now a research fellow at Harvard's Berkman Center for Internet & Society, writes in the Washington Post (4/20, A25, 744K) about the growing number of "state kidnappings" in China. According to MacKinnon, "Their extralegality and the lack of official records make it impossible to count them. Human rights organizations try to keep count, but the outside world generally hears about only those victims whose friends and family manage to overcome police pressure to stay quiet and who are also well-connected or savvy enough to get the story out somehow." MacKinnon adds, "With Chinese President Hu Jintao in the United States this week, Americans have an opportunity to assess his regime. What is this country to think? On the one hand his government has raised the living standards of millions of its citizens with economic reform and international trade. On the other hand his underlings trample shamelessly on his people's basic human rights."

WSJournal Says Internal Pressures Will Drive Change In China. An editorial in the Wall Street Journal (4/20, 2.11M) says that changes in China "aren't taking place because the U.S. demands it. China's burgeoning middle class, created and buoyed by economic growth, will drive internal change. That's why Congressional threats to impose tariffs or brand China a 'currency manipulator' are so dangerous. They damage American business interests, and they could also endanger the prosperity that will drive China's political change."

WPost Criticizes Lack Of Bush-Hu Press Conference. An editorial in the Washington Post (4/20, A24, 744K) faults the Bush's Administrations "acquiescence to a Chinese demand" that there be no news conference "at which American and Chinese journalists can ask unscripted questions." The Post that the lack of such a news conference means Hu will "not be subjected to possibly embarrassing queries about political prisoners, religious freedom or censorship of the Internet symbolizes a major element of Mr. Bush's policy -- his willingness to relegate China's worsening performance on political freedom and human rights to a back burner."

NYTimes Says Bush Can't Criticize Hu On China's Oil Consumption. An editorial in the New York Times (4/20, 1.19M) says, "When President Bush welcomes the Chinese president, Hu Jintao, to the White House today, the American complaint will be that China's appetite for oil affects its stance on Iran, Sudan and other trouble spots. In other words, China is acting just like everyone else: subjugating its foreign policy to its energy concerns." The Times adds, "Clearly, Mr. Bush and Mr. Hu must tackle energy in a real and meaningful way. That can be done only if the United States both helps China find alternative energy sources and shows that America is doing the same thing itself. … Asking other countries to lay off the world's oil supply so America can continue to support its gas-guzzling Hummers doesn't really cut it."

DOJ_NMG_0026218

Administration Said To Be Preparing For Possible Military Conflict With China. The Wall Street Journal (4/20, King, 2.11M) reports that the Bush Administration views China's claim that it poses no long-term threat to the US "skeptically." The Bush Administration "behind the scenes is busy preparing for a possible military conflict with China. And to better gird itself, the U.S. is reaching out to a willing partner: Japan." The Administration "is pushing what it calls a long-range 'hedging strategy.' The tactic -- essentially a bet on the safe side in case China turns hostile -- has wide support across the administration, originating in the Pentagon but extending into the White House and the State Department. … The strategy also puts a premium on bolstering Washington's decades-long military ties to Japan."

The Washington Times (4/20, Gertz, 90K) reports, "The Pentagon is engaged in an extensive buildup of military forces in Asia as part of a covert strategy to strengthen and position U.S. and allied forces to deter -- or defeat -- China. The buildup includes changes in deployments of aircraft-carrier battle groups, the conversion of nuclear-missile submarines and the regular dispatch of bombers to areas close to targets in China, according to senior Bush administration officials and a three-month investigation by The Washington Times." President Bush "approved elements of the first phase of the strategy within the past several months. The key architect is Defense Secretary Donald H. Rumsfeld. The State Department's point man on the strategy is Deputy Secretary of State Robert B. Zoellick, who has led three rounds of strategic talks with China in the past several months."

Papers Link China To Missile Smuggling Plot. Court papers made public yesterday in the case of Chao Tung Wu, a California man who pleaded guilty to trying to smuggle antiaircraft missiles into the US indicate that a Chinese general and a state-run manufacturer are linked to the crime. The Washington Times (4/20, Gertz, 90K) reports, "Wu and a second defendant who is awaiting trial, Yi Qing Chen, met an undercover FBI agent and sought to sell 200 QW-2s, as well as launcher and operational hardware for the missiles, according to court papers. A statement of facts read in court yesterday revealed that Wu had offered to provide enough missiles 'for a regiment' of soldiers. … Documents provided to the agent included a proposal for the sale from the Xinshidai company, which makes the QW-2 and other missiles."

Taiwan President Says China Errs "On The Side Of Aggression With Taiwan." Chen Shui-Ban, president of Taiwan, writes in the Wall Street Journal (4/20, 2.11M) that China's "approach to Taiwan seems to err on the side of aggression rather than caution. Politically, Beijing has refused to interact with Taiwan's democratically elected government for the past six years. … The Taiwan people can never forget that, despite skepticism and criticism from the international community as well as strong public opposition in Taiwan, the Chinese government deliberately proceeded to unilaterally change the status quo by passing legislation codifying non-peaceful measures against Taiwan." Chen adds, "We believe in democracy and uphold the principle of popular sovereignty, which means that Taiwan's future and our relations with China can only be determined by the will of Taiwan's 23 million people. We oppose the non-democratic approach that Beijing has taken against its own people and against the people of Taiwan."

US Won't Rule Out Military Option On Iran, Considers Turning To IAEA. The AP (4/20, Jahn) reports that Undersecretary of State Nicholas Burns, "echoing a statement Tuesday by President Bush, did not reject the possibility of a military response" to Iran's nuclear aspirations. Also, the United States may turn to the IAEA "to exert more pressure on Iran out of frustration with Russian and Chinese opposition to firm Security Council action." While the anonymous officials "emphasized that no decisions had been made on the idea," just "the fact that Washington was contemplating such action was significant."

USA Today (4/20, 2.31M) reports Secretary of State Condoleezza Rice "told the Chicago Council on Foreign Relations that the international community agrees Iran should not be permitted to develop nuclear weapons. 'We are prepared to use measures at our disposal -- political, economic, others -- to dissuade Iran,' Rice said. The United States has not ruled out military action." In Moscow, US Undersecretary of State Nicholas Burns "said after meetings with the Group of Eight industrialized nations and permanent members of the United Nations Security Council that most favor sanctions against Iran in the dispute over its nuclear program." Burns "said there are differences over what action to take, but there is "a greater sense of urgency" after Iran said last week that it had enriched uranium."

The Washington Post (4/20, A19, Finn, 744K), under the headline "Envoys Remain Split On Plan Against Iran," says that "for weeks, the United States, Britain and France have been pressing for tough steps against Iran, while Russia and China have argued that a hard line might backfire. All have expressed public concern over Iran's program." Javier Solana, the European Union's foreign policy chief, "said last week that the EU was considering targeted sanctions, but he added that 'any military action is absolutely [off] the table for us.'"

Negroponte Says Iran Still Years Away From Building Nuclear Weapon. NBC Nightly News (4/19, story 5, 2:20, Mitchell, 9.87M) spoke with Director of National Intelligence John Negroponte in his first TV interview. Asked

DOJ_NMG_0026219

"how quickly" Iran would be capable of building a nuclear weapon, Negroponte said, "Our assessment is that the prospects of an Iranian weapon are still a number of years off and probably into the next decade." Mitchell: "But he doesn't rule out that Iran's radical leaders could be lying about their recent breakthroughs." Negroponte: "Why their leadership makes some of the statements that they make? It's conceivable that they are exaggerating their progress." Mitchell: "Now Iran is priority number one. He has added assets, spies, and analysts, as well as an Iran mission manager and put in failsafe tests to verify intelligence reports."

Iran Seen As Forming Mideast "Axis." Under the headline "Mideast 'Axis' Forms Against West," the Christian Science Monitor (4/20, Blanford, 61K) reports, "Rising tension between the West and Iran is coinciding with the emergence of a loose anti-Western alliance -- Israel now dubs it an 'axis of terror' -- spanning the Middle East, presenting a new challenge to the US's regional ambitions. Centered on Iran, this alignment has hardened in recent months, analysts say." Tehran is "shoring up old alliances and strengthening ties with countries (Syria and Iraq) and with groups (Hizbullah, Hamas, and Islamic Jihad) that share its hostility toward Israel and the US."

Annan Calls For Iranian Cooperation On Lebanon. The AP (4/20, Lederer) reports, "Secretary-General Kofi Annan has urged Iran as well as Syria to cooperate in trying to disarm Lebanese militias that still control parts of the country, the first time the U.N. chief has issued a report linking Tehran to instability in Lebanon." U.S. Ambassador John Bolton "praised Annan's remarks," saying "they showed" the effects of "Iran's financing terrorist groups in Lebanon and Syria." While "the secretary-general did not mention the financing of terrorist groups," he noted "the 'close ties, with frequent contacts and regular communication,'" between Lebanon's Hezbollah guerrillas, Syria and Iran. The Washington Post (4/20, A26, Lynch, 744K) runs a similar report under the headline "Annan Presses Syria And Iran Over Hezbollah."

Iran Urges Gulf Nations To Remain Neutral. The AP (4/20, Elias) reports that Former Iranian President Hashemi Rafsanjani "seemed to be signaling Gulf nations that they should not take sides in the U.S.-Iran standoff." He "said that if the United States ever attacked his country, he was certain that Kuwait…would not take sides," and "on Monday, Rafsanjani was even more pointed, saying Iran was certain the 'Persian Gulf countries will not help the United States to attack Iran.'" He also "called on Iran's neighbors, such as Kuwait, and all Muslims to 'defend Iran and support it.'"

Reid Blasts Bush's Efforts On Iran. The AP (4/20) reports, "The Bush administration is relying too heavily on other countries in the international effort to stop Iran from developing nuclear weapons, according to Sen. Harry Reid." Reid " said the administration should be taking the lead, but instead is relying on Germany, France and Great Britain to convince Iran to end its uranium enrichment program. 'It is hard to comprehend,' Reid said Tuesday in Reno. 'We should be involved at trying to arrive at a diplomatic solution. ... Not just these three countries.'"

UK Believes US Won't Take Military Action. However, the AFP (4/20) reports that UK Foreign Secretary Jack Straw said "he did not believe the United States would take military action against Iran." While "the United States has 'not taken any option off the table, but in practice, as both President George Bush and Secretary of State Condoleezza Rice say they are pursuing the diplomatic option as vigorously as the Europeans and Russia and China."

Iranian Official Entered US Using Green Card. The Washington Times (4/20, Kralev, Mcelhatton, 90K) reports, "An Iranian government official who recently entered the United States used a green card issued 13 years ago, and U.S. officials said yesterday that they were investigating whether he broke the law by accepting a position with a state sponsor of terrorism." Mohammad Nahavandian, "an economics and technology aide to Iran's top nuclear negotiator, Ali Larijani, raised questions about his immigration status when he arrived in the United States two weeks ago, apparently to attend a conference." Iranian officials "are banned from traveling to the United States, unless they are granted a special visa."

Bush Urged To Reinstitute Selective Service To Prepare US For Possible War. Paul Kane, "a Marine who served in Iraq and a fellow at the Kennedy School of Government," writes in the New York Times (4/20, 1.19M), "The American public needs to be prepared for what is shaping up to be a clash of colossal proportions between the West and Iran. President Franklin D. Roosevelt masterfully prepared Americans before the United States entered World War II by initiating a peacetime draft under the Selective Training and Service Act of 1940. Now, President Bush and Congress should reinstitute selective service under a lottery without any deferments." He adds, "This single action will send a strong message to three constituencies in the crisis over Iran's nuclear intentions -- Iran, outside powers like China and Russia and Americans at home -- and perhaps lead to a peaceful resolution."

Hamas Denies Hiding Arms In Jordan. The New York Times (4/20, Myre, 1.19M) reports, "Hamas on Wednesday denied accusations by Jordan that it had hidden a cache of weapons inside Jordan's borders." Jordan "said Tuesday that it had uncovered Hamas's weapons, prompting it to postpone a visit by the Palestinian foreign minister, Mahmoud Zahar, who is also a senior Hamas leader." Hamas, "which now controls the Palestinian government, said it regretted the decision to delay talks."

DOJ_NMG_0026220

Palestinian Journalists Critical Of Hamas Rulers. The Washington Times/AP (4/20, El Deeb) reports, "The Hamas government's toughest detractors have popped up at home, criticizing the Islamic militant rulers in Palestinian newspaper cartoons, TV commentaries and radio talk shows. Such friction between the government and the press is rare for the Arab world." But "the Hamas government has proven an easy target. It's broke and internationally isolated because of its refusal to moderate its hard-line views, and has been unable to pay the salaries of tens of thousands of government employees." Hamas "remains defiant, claiming it'll be able to govern without Western aid."

Cheney To Visit Lithuania, Kazakhstan, Croatia. The AP (4/20) reports, "Vice President Dick Cheney will visit Lithuania, Kazakhstan and Croatia next month for meetings with European leaders." The Vice President "will address a summit of the leaders of the Baltic and Black Sea regions on May 4 in Vilnius, Lithuania." The White House "said Cheney would emphasize the importance of the region's democratic transformation and President Bush's goal of advancing freedom."

Responsibility For Turkish Bombings Is Unclear. The Washington Post (4/20, A16, Vick, Borg, 744K) reports that Turks are wondering who is behind the wave of recent "small explosions." While "experts do see the involvement of [Kurdish] militants in several of the attacks," the Post writes that "one scenario holds that hardened elements of the Turkish government are promoting a conflict that justifies a stern, militaristic response." The bombings and crackdown "may endanger a crucial shift by Turkey's elected government away from stern measures."

Chavez Pulls Out Of Andean Community Over Members Trade Deals With US. The AP (4/20, Rey) reports Venezuelan President Hugo Chavez "said Wednesday that his country is pulling out of the five-nation Andean Community trade bloc, calling the group 'fatally wounded' after other members Colombia and Peru finalized free-trade deals with the US." The AP calls Chavez "a staunch opponent of US free-trade deals" and says "his government was looking to leave the Andean Community, which also includes Bolivia, Ecuador, Colombia and Peru." Chavez has moved his nation towards membership in the Mercosur bloc, of which Venezuela is currently an associate member and whose members include "left-leaning governments such as Argentina, Brazil and Uruguay, as well as Paraguay."

Old Latin American Parties Lose Ground To New Populist Movements. The New York Times (4/20, Forero, 1.19M) reports, "Disillusioned by corruption and a failure to deliver prosperity, [Latin American] voters are increasingly captivated by new, mostly leftist movements promising to redistribute wealth, punishing traditional parties and turning political systems on their heads." The change is most drastic in "the five Andean countries." However, voters in countries like Bolivia and Peru have thus turned away from older parties that "offered stability, a clear ideology and experienced functionaries."

Cuba Will Buy More Food From Nebraska. AP (4/20, Rodriguez) reports, "Cuba agreed Wednesday to buy another $30 million in food from Nebraska, strengthening trade relations with a US farm state already selling corn, wheat, soybeans and other products to the communist island." Nebraska Lt. Gov. Rick "Sheehy said the new deal will include the export of pork, cattle, poultry, wheat, corn, soybeans, dry beans and dairy in the next 18 months." An "exception [to the US embargo] created in 2000 allows food and agricultural products to be sold directly on a cash-only basis" to Cuba.

Canada's Mad Cow Case Puts Pressure On USDA. This week's news about a new case of mad cow disease in Canada, the Christian Science Monitor (4/20, Knickerbocker, 61K) reports, "has led to calls for a ban on imports of Canadian cattle" and "also raises questions about the US Department of Agriculture's testing and tracking procedures, as well as its controversial prohibition on private testing." These disputes, the Monitor says, "point up the potential conflict between the USDA's two basic mandates: Promoting US agricultural products domestically and abroad even as it is ensuring the safety of those products, which could sometimes require revealing bad news to consumers."

Johanns To Meet With Canadian Ag Minister Thursday. The Dow Jones Newswire (4/20, Klassen) reports Agriculture Secretary Mike Johanns will meet Thursday with Canadian Agriculture Minister Chuck Strahl in Washington to "discuss a number of issues affecting the agricultural sectors in Canada and the US, including World Trade Organization agriculture negotiations, bilateral trade issues and avian influenza preparedness," as well as Canada's latest mad cow case.

Wolfowitz Fills Two Key Posts At World Bank. The Washington Post (4/20, D1, Blustein, 744K) reports that World Bank President Paul D. Wolfowitz "has selected a New Zealander and a Salvadoran to be managing directors, the topmost staff rank at the bank, according to a senior bank economist. The two are Juan Jose Daboub, a former minister of finance and head of El Salvador's largest telecommunications company, and Graeme Wheeler, the bank's acting managing director." The Post says the appointments "are by far the most important move to date by

DOJ_NMG_0026221

Wolfowitz to fill vacancies at senior levels. … The large number of vacancies has aroused intense concern among staffers that Wolfowitz is being too slow in giving them direction; many of them have also chafed about the influence wielded by several Americans with ties to the Bush administration, including two who worked with Wolfowitz during his years as deputy secretary of defense and were given high-ranking staff posts. The selections of Wheeler and Daboub may dampen some of that dissension."

US-Japanese Beef Dispute Could Touch Off Trade War. USA Today (4/20, Wiseman, 2.31M) reports that "a mistake at a Brooklyn meatpacking company and public hysteria in Japan about mad cow disease are raising tensions between the United States and Japan, reviving memories of the bitter trade disputes of the 1980s." Japan has banned all American beef since January 20, when a Brooklyn meatpacker "shipped to Tokyo boxes of veal containing a spinal column, considered a 'specified risk material' for mad cow disease." USA Today writes, "US lawmakers are losing patience, raising the specter of sanctions against Japanese goods and a possible trade war."

Japanese-South Korean Tensions Over Islet Group Rise. The Washington Post (4/20, A16, Faiola, 744K) reports that Japan and South Korea are disputing the ownership of "rocky outcroppings controlled by South Korea," called "Dokdo in Korean and Takeshima in Japanese." South Korea sent a "flotilla of 20 patrol ships" to confront "Japanese coast guard" vessels sent to "conduct an official survey." The Post writes that "Washington's two biggest allies in the region" are feuding evens "when they are struggling to present a united front on China's military rise and North Korea's nuclear belligerence."

Private International Aid Donors Far Surpass US Government. The Washington Times (4/20, Price, 90K) reports that "US foreign aid from private sources totaled $71.2 billion in 2004, a sum more than 3½ times greater than the foreign aid the US government provided that year." A Hudson Institute study found "support from foundations, charities, corporations and religious groups accounts for only a third of all the private donations made abroad. The other two-thirds comes from immigrants living in this country, who send money home."

Developing Nations Block UN Reforms. The Washington Times (4/20, Sands, Pisik, 90K) reports, "The president of the UN General Assembly yesterday defended the world body's overhaul of its human rights panel, but warned that in the days ahead, the United Nations faces an even more difficult fight over critical management reforms." Swedish diplomat Jan Eliasson "said in an interview with reporters and editors at The Washington Times. 'We have problems ahead of us. I will not hide the fact that the management issues are very difficult and we face a polarization of the membership.'" That "polarization reared its head late Tuesday, when a bloc of developing nations introduced a resolution that could postpone indefinitely the progress on reforms sought by wealthier states." UN "officials called it a 'classic blocking tactic,' and US Ambassador John R. Bolton told The Washington Times in New York yesterday that the ploy could sabotage reforms sought by the United States."

Court Ratifies Prodi's Win In Italy. The Washington Post (4/20, A22, Delaney, 744K) reports, "Italy's top court confirmed Wednesday that Romano Prodi and his opposition coalition won a majority in the lower house of Parliament in national elections last week. His rival, Prime Minister Silvio Berlusconi, continued to refuse to concede defeat in the bitterly contested balloting." The Court of Cassation "said Prodi's Union coalition had defeated the House of Liberties bloc led by Berlusconi by a mere 24,755 votes, enough to claim victory and receive extra seats that will give it a 55 percent majority in the lower house, the Chamber of Deputies." The Los Angeles Times (4/20, Wilkinson, 958K) also reports the story.

Berlusconi Said To Be Angling For Presidency. Despite the ruling, the New York Times (4/20, Fisher, 1.19M) reports Prime Minister Silvio Berlusconi "still would not concede defeat. Instead, there were strong signs that he was possibly opening a new campaign: to be named the nation's president, or at least have a strong say in the choice."

India Tries To Halt Nepalese Crisis. Under the headline, "Army Fires at Protesters as Nepal's Political Crisis Deepens," the New York Times (4/20, Sengupta, 1.19M) reports, "The Royal Nepalese Army fired at pro-democracy protesters in an eastern town on Wednesday, as the death toll climbed to at least eight in two weeks of defiant demonstrations and the country appeared headed toward a dangerous brink. The brink of what remained unclear." Political parties allied with Maoist rebels plan another set of protests today. The Post continues, "What King Gyanendra is prepared to do to ease the crisis remains a mystery," and "there was little disagreement that the king's own actions had narrowed his options, and that he would ultimately be compelled to concede more than he would have only a few weeks ago."

The Financial Times (4/20, Johnson, Bhattarai) keys on the Indian effort, saying Saran will tell Gyanendra "to restore multi-party democracy with immediate effect or risk seeing his throne swept away by the tide of protests engulfing the Himalayan kingdom."

DOJ_NMG_0026222

Gazprom Warns EU Not To Interfere With Its Goals. The Financial Times (4/20, Buckley, Ostrovsky) reports that "Gazprom, Russia's state-controlled gas monopoly, on Wednesday told European Union countries not to block its international ambitions, warning that it could redirect supplies to other markets." Gazprom is bridling at efforts to thwart "its ambitions to move into downstream gas distribution in Europe," such as the British government's desire to "block a potential takeover of [Britain's] biggest gas supplier by Gazprom."

Corporate "Thugs" Intimidate Smaller Russian Businesses. Under the headline "In Russia, Corporate Thugs Use Legal Guise," the Washington Post (4/20, A1, Finn, 744K) reports that a "new breed of Russian financial predator" is targeting "small and medium-size companies. Often the goal is not the company itself, but the real estate it occupies, acquired in the privatizations of the early 1990s." The raiders work with "corrupt lawyers, accountants, judges, bureaucrats and police to exploit weaknesses in Russia's fledgling corporate legal system," causing the government to fear the growing perception "that rule of law remains illusory in the country."

"NATO-Style Oil Alliance" Predicted. Jim Pinkerton argues in the Financial Times (4/20) that "America is likely to lead the way" in formalizing "energy policy into national security policy." He contends, "Opec has already cartelised the producing nations; we are now likely to see a counter-cartel of consuming nations."

Hoagland Urges Quick Congressional Action In Favor Of India Nuclear Deal. Jim Hoagland writes in his column in the Washington Post (4/20, A25, 744K) that "India is a strategic maverick" in that it "has chosen this moment to forge a close partnership with Washington and to speak up positively about American power in world affairs." Now, "for me that flaws in the nuclear draft agreement are heavily outweighed by the advantages it brings in cutting global pollution, easing pressure on oil markets and bringing a substantial part of India's nuclear program under international supervision." As "India is moving from a past of shaking an angry finger in the American face to providing a helping hand for U.S. power in the future," Congress "should move expeditiously to set this transformation in motion."

WSJournal Praises Estonian Leader. An editorial in the Wall Street Journal (4/20, 2.11M) praises "former Estonian Prime Minister Mart Laar" for his stewardship of the Estonian economy. Laar has won the "biennial Milton Friedman Prize for Advancing Liberty." The Journal says, "Estonia ranks seventh among the world's freest economies in the annual Heritage Foundation/Wall Street Journal Index of Economic Freedom, the only ex-Soviet bloc country in the top 10. It has a flat-rate income tax, a currency board that pegs its kroon to the euro for stability, and a low external tariff rate."

Today's Events In Washington.
White House:

PRESIDENT BUSH — South Lawn arrival ceremony for the President of China; meets with the President of China; hosts social lunch for the President of China, East Room; speaks to recipients of the President's Environmental Youth Awards, Room 450, Eisenhower EOB.

VICE PRESIDENT CHENEY — No public schedule.

US Senate: No Scheduled Events.

US House: No Scheduled Events.

Other: CHINESE PRESIDENT HU JINTAO _ Highlights: Afternoon. Meets with members of Congress and retired officials. Blair House. 9:25 a.m. Welcoming ceremony. White House. 10 a.m. Meets with President Bush. White House. 1:15 p.m. Lunch with President Bush. 7:30 p.m. Delivers speech a a dinner meeting of the U.S.-China Business Council, the National Committee on U.S.-China Relations and the U.S. Chamber of Commerce, others. Marriott Wardman Park. Note: Media registration at 6-7 p.m., 24th St. entrance.

MEDICARE PART D _ The Medicaid Health Plans of America holds a conference, ``Medicare Part D: The First 100 Days." Highlights: 9 a.m. Dr. Georges Benjamin of the American Public Health Association discusses future trends. Location: Washington Renaissance Hotel, 999 9th St. NW.

WORLD BANK-IMF _ News conference and briefing schedule for the 2006 spring meeting of the World Bank and IMF. Highlights: 11 a.m. Press briefing by World Bank Group President Paul Wolfowitz. Main Press Briefing Room, Room B-702, IMF Headquarters.

SCIENCE-TECHNOLOGY _ The American Association for the Advancement of Science holds its 31st annual Forum on Science and Technology Policy. Highlights: 9 a.m. Keynote address: John Marburger III, Director, White House Office of Science and Technology Policy. 12 p.m. Luncheon address: CDC Director Julie Gerberding. 2 p.m. Concurrent session on energy challenges of the 21st century, coping with uncertainty about pandemic flue and other health threats; security and homeland security. Location: Washington Court Hotel, 525 New Jersey Ave. NW, unless otherwise noted.

BIOETHICS _ 9 a.m. Meeting of the President's Council on Bioethics, Agenda includes children and clinical research and organ procurement and transplants. Location: Madison Hotel, 1175 15th St. NW.

JOHANNS _ 7:30 a.m. Agriculture Secretary Johanns gfives the keynote address to the Council for Agricultural Science and Technology Executive Committee and Board of Governors Group. Location: Washington Plaza Hotel, 10 Thomas Circle.

BUSH-HU _ 9:30 a.m. The Chinese Constitutionalist Association holds a news conference to call on President Bush to push the Chinese government to speed up political reforms. Location: National Press Club.

DOMESTIC SPYING _ 10 a.m. The ACLU holds a telephone news briefing to announce the filing of friend-of-the-court briefs in its lawsuit challenging the NSA's domestic spying program. Contacts: Erica Pelletreau, 212-519-7829. Notes: Callin number: 800-762-4758.

GONZALES-MISSING CHILDREN _ 10 a.m. Attorney General Alberto R. Gonzales will make remarks on the Department's efforts to combat child pornography at the National Center for Missing and Exploited Children. Prior to his remarks, the Attorney General will meet with employees and view a demonstration. Location: Charles B. Wang International Children's Building, 699 Prince St., Alexandria, Va.

HOMELAND SECURITY _ 11 a.m. Homeland Security Secretary Chertoff, and ICE Assistant Secretary Julie Myers

DOJ_NMG_0026224

hold a press conference to announce a comprehensive immigration enforcement strategy for the nation's interior. They will also announce results of a nationwide enforcement operations. Location: Garcia Conference Room, 6th floor, ICE, 425 ``Eye'' St. NW.

LEBANON _ 11 a.m. Prime Minister Fuad Abdel Basset Siniora of Lebanon speaks at the Wilson Center for International Scholars on issues facing the Arab world. Location: Flom Auditorium, 6th floor, Wilson Center, Reagan Trade Building.

CHINA-ANIMALS _ 11:30 a.m. Members of In Defense of Animals and people for the Ethical Treatment of Animals screen animal cruelty video and urge China to introduce and enforce meaningful welfare standards for animals within the fur industry. Location: In front of the White House, Pennsylvania Ave. NW.

EUROPE-IMMIGRATION _ 12 p.m. The SAIS Center for Transatlantic Relations and Dutch Ambassador Boudewijn J. van Eenennaam host a luncheon on ``The Balance of Faith and State: The Challenges of Immigration in Europe,'' with Frits Bolkestein, a Dutch politician and former EU commissioner; Gregory Maniatis, senior European policy fellow at the Migration Policy Institute; and Zeyno Baran, director of the Center for Eurasian Policy at the Hudson Institute. Location: Dutch Ambassador's residence, 2347 S St. NW.

ELECTRONICS JOBS _ 12 p.m. - 1:15 p.m. The American Electronics Association releasies its yearly report on jobs and wages, ``Cyberstates.'' This state-by-state analysis includes: High-tech employment; High-tech average wages; High-tech exports ; High-tech R&D expenditures; High-tech businesses; High-tech payroll; Ranking of the states. Location: Room 1537, Longworth House Office Building.

DISASTER PREPAREDNESS-FEMA _ 12 p.m. - 1:30 p.m. FEMA's Acting Deputy Director of Operations, Deidre Lee, speaks on disaster preparedness at meeting of the Northern Virginia Government Contractors Council. Location: Sheraton Premiere Tysons Corner, Vienna, Va.

PLO _ 12:30 p.m. Amb. Afif Safieh, head of the PLO Mission to the U.S. discusses current events and challenges facing the Palestinian people, sponsored by Georgetown University. Location: CCAS Board room, ICC, room 241, on campus.

CLIMATE CHANGE _ 1:30 p.m. The Environmental and Energy Study Institute holds a briefing on recent polls on the public perceptions of climate change. Location: Room 2318, Rayburn.

IMMIGRATION-PRIVACY _ 2 p.m. The AFL-CIO and the ACLU hold a joint briefing to discuss concerns with immigration legislation that proposals would violate worker privacy. Location: 915 15th St. NW.

INTERIOR-AWARDS _ 2 p.m. Acting Secretary of the Interior Lynn Scarlett presents the 2005 Presidential Rank Awards. Location: South Penthouse, Interior Dept., 1849 C St. N.W.

PURPLE HEART CEREMONY _ 2 p.m. Deputy Secretary of Defense Gordon England and Vice Chief of Staff USA Gen. Richard Cody will participate in a unique Purple Heart Ceremony. Location: Mount Vernon, George Washington's home, located at the south end of the George Washington Memorial Parkway, 16 miles from Washington.

GONZALES-VICTIMS' RIGHTS _ 6:30 p.m. Attorney General Alberto R. Gonzales will deliver remarks following his introduction by Regina B. Schofield, Assistant Attorney General for the Office of Justice Programs, at the National Crime Victims' Rights Week Candlelight Vigil. Other participants include Kenneth L. Wainstein, United States Attorney, District of Columbia John W. Gillis, Director, Office for Victims of Crime, OJP; and Sharon Rocha, Mother of Laci Peterson and Grandmother of Conner and aauthor of ``For Laci: A Mother's Story of Love, Loss & Justice.'' Location: U.S. Chamber of Commerce, 1615 H St. NW.

BROKAW _ 7:30 p.m. Former NBC News anchor Tom Brokaw delivers keynote address at the Howard University Johnson School of Communications 35th Anniversary Gala. Location: J.W. Marriott.

US reveals names of Guantánamo detainees

Thursday 20th April 2006 The US government has released its first official list of detainees at the Guantánamo Bay prison camp.

The list of 558 people comprises three-quarters of the total number of detainees who have passed through the camp, which was set up in 2002 after the end of the war in Afghanistan.

Secrecy surrounding the camp, and persistent reports of human rights violations, have attracted notoriety for the prison, in the US naval base in Guantánamo Bay, Cuba.

The people named on the detainee list come from 41 countries, although nearly two-thirds are from Afghanistan, Saudi Arabia and Yemen.

Former officials of Afghanistan's Taliban regime are particularly prominent on the tally. The Taliban's former defence ministry chief of staff Mullah Mohammed Fazil is still in custody along with intelligence officials Abdul Haq Wasiq and Gholam Ruhani.

Kabul's former ambassador to Pakistan, Abdul Salam Zaeef, is also included, although he was released from the prison camp late last year.

Also included on the list is David Hicks, an Australian for whom lawyers are currently fighting to establish British citizenship via his mother, who was born in south London.

The court of appeal last week rejected a home office claim that he was not entitled to register his citizenship on account of his previous alleged membership of al-Qaida.

The Guardian today reported that foreign secretary Jack Straw had written to US secretary of state Condoleezza Rice demanding the release from Guantánamo Bay of UK resident Bisher al-Rawi.

Mr Rawi, an Iraqi citizen, took the British government to court last month claiming he had been hired by MI5 to track an alleged Muslim extremist and was only arrested after British intelligence passed false information to the US.

Another detainee named on the list is Muhammed al-Qahtani, accused of being the 20th hijacker in the September 11 attacks. The Saudi citizen was stopped as he tried to enter the US in Orlando, Florida, shortly before the attacks.

Details of Qahtani's interrogation caused outrage and shed fresh light on the techniques used in Guantánamo Bay when a logbook was leaked to Time magazine last year.

He was frequently awoken at 4am and interrogated until after midnight, with requests for toilet breaks refused until he wet himself, while Christina Aguilera music was played at him if he dozed off.

The list has previously been seen by members of the Red Cross, but was only publicly released after the Associated Press news agency sued\l "l" US\l "l" authorities under the freedom of information act.

It numbers all the detainees who have appeared at hearings in Guantánamo Bay to determine their combatant status.

The hearings took place between July 2004 and January 2005. All detainees at the prison between those dates received a hearing, but only 38 of them were determined to be "no longer enemy combatants" by the military tribunals, and only 29 of those were released.

A total of around 750 people are believed to have passed through the camp, and 490 are currently believed to be in custody there.

Groups working for the release of detainees welcomed the release of the list. Sayeed Sharif Youssefi, an official from Afghanistan's independent peace and reconciliation commission, said it would help in his efforts to obtain the release of Afghan detainees.

"This is very good news and it helps us because now it is easy for us to identify the Afghans in Guantánamo, learn how many there are and from which provinces they come from," he said.

Bill Goodman, legal director of the Centre for Constitutional Rights said: "This is information that should have been released a long time ago, and it's a scandal that it hasn't been."

Inside CMS

April 20, 2006

APPEAL CONTINUES COURT FIGHT OVER CMS FEEDING ASSISTANT REGULATION

The legal battle over a CMS rule authorizing the use of semi-skilled workers to feed nursing home residents is advancing, this time in a federal appeals court where advocates are seeking to reverse a lower court ruling upholding the regulation.

Nursing home resident advocates are asking the U.S. court of Appeals for the Ninth Circuit to overturn the ruling and direct HHS to rescind the policy, which they claim violates federal Nursing Home Reform Law. The key issue in the case playing out in California is whether the help feeding assistants give residents who do not have complicated feeding problems constitutes "nursing or nursing-related services."

Under nursing home law, staff providing nursing or nursing-related services -- a term the statute does not define - must have at least 75 hours of training as a certified nurse aide. Advocates argue that this applies to the task of feeding residents but HHS and the Department\l "l" of\l "l" Justice\l "l" (DOJ) disagree.

In recent court filings, DOJ says because feeding assistants help residents who do not have complicated feeding needs they do not require the more extensive 75-hour training and, therefore, their tasks are not nursing or nursing-related.

DOJ is asking the court to uphold the U.S. District Court for the Western District of Washington's ruling last September in favor of the CMS rule, which permits Medicare and Medicaid nursing homes to hire workers with as little as eight hours of state-approved training to feed and hydrate residents without complicated needs.

But advocates say that feeding residents is a nursing or nursing-related service and therefore under nursing law requires staff training of at least 75 hours as a certified nurse aide (CNA).

"The Reform Law's purpose and structure indicate that 'nursing and nursing-related services' must be interpreted to include feeding a resident," a recent brief by the advocates states. Moreover, this applies to all residents, not just those with complicated feeding problems, they argue.

CMS' 2003 feeding assistant regulation represents a U-turn in HHS policy. Previously, the department had held that only volunteers, licensed health professionals, or CNAs with 75 hours training could help a resident eat. But the Bush administration reversed that stance, citing the success of feeding assistant programs in Wisconsin and North Dakota and the need to address the nation's shortage of CNAs.

Advocates say the administration reversed policy without adequate explanation, calling the evidence HHS referenced from Wisconsin and North Dakota as being of "dubious quality." They say Congress did not give the HHS secretary discretion to exempt the task of feeding from the more extensive 75-hour training requirement. But DOJ counters that the district court was right to uphold the regulation.

Advocates and a coalition of consumer groups supporting their appeal say the use of feeding assistants degrades the quality of care. However, the American Health Care Association (AHCA), which strongly supports the regulation, told the appeals court in an amicus brief that there is no evidence that feeding assistants degrade care. Rather, AHCA says these staffers have "dramatically enhanced" care. Advocates, however, charge that the group's assertion relies on letters and declarations almost entirely from its own members.

The consumer groups supporting the advocates' appeal is calling the use of lesser trained staff to provide

direct care an "enormous step backwards." SEIU has also written in support of the advocates' appeal.

Guest Opinion: Congress needs to settle Indian account lawsuit

Some members of Congress are getting upset over how the new Iraqi government is handling its money. Rep. Rahm Emanuel, D-Ill., complained the other day that it looks as if $10 billion is missing over there.

Emanuel thinks Congress ought to investigate what happened to the money, given the billions that the United States is pouring into the country.

To anyone in Indian Country, that's hardly surprising news. We've been complaining about missing billions for decades. And not one cent of it was U.S. money sent overseas.

It was money that the U.S. government promised to hold in trust accounts for individual Indians, some of the poorest people in our country.

The trouble is few people in Congress or the Bush administration seem to care about what's been happening to these forgotten Americans. In fact, numerous studies confirm that the Interior Department did a horrible job running the trust programs.

Now the department seems determined to suggest that the Indians' money really didn't disappear at all. It was just sloppy bookkeeping by the clerks out in Indian Country, they say.

Concern in Congress

For Indians, the good news about this is that some lawmakers in Washington are beginning to care about what happened to both the money in Iraq and the money that was supposed to be held in trust by the U.S. government for the benefit of some 500,000 Native Americans.

Given the yawns that some lawmakers are expressing about the missing $10 billion in Iraq, the cost of settling the Indian dispute seems like pocket change for Uncle Sam. Indeed, it would be a great bargain for taxpayers.

Although we Indians have argued that we could be due as much as $170 billion for the money the government failed to place in our accounts, the leaders of Indian Country have offered to settle the dispute for $27.5 billion. That assumes that the government could prove it made 80 percent of the required payments to Indians on time and to the proper trust accounts.

Bargain-basement deal

Given the massive number of trust documents that are missing and the time and billions it would cost the government to attempt a reconstruction of the records, the price tag the Indians have set seems like a bargain-basement deal. It would end the 10-year-old court fight over Individual Indian Trust accounts, and it would stop bleeding taxpayers for costly repairs to the admittedly broken trust program. If left

undeterred, government bureaucrats are planning to spend $12 billion trying to re-create the long-lost trust records.

That would be yet another huge waste of government funds, one that Congress can stop now. It needs to heed the calls of a growing number of lawmakers who want to settle the dispute with the nation's first Americans.

Senate Indian Affairs Chairman John McCain, R-Ariz., and his vice chairman, Byron Dorgan, D-N.D., as well as House Resources Chairman Richard Pombo, R-Calif., and ranking member Nick Rahall, D-W.Va., are seeking to put trust back into the much-maligned Indian Trust Program.

It will cost billions of dollars to solve this disappearing-money problem. But, unlike the money disappearing in the Middle East, this money will go to needy Americans, helpless people who were robbed by their own government.

Regardless of what you think of our involvement in Iraq, solving the government's admitted decades of abuse of Indian trust beneficiaries makes sense for all Americans. And compared with Iraq, this solution is dirt cheap. A settlement by Congress will end this fighting.

Elouise Cobell, a Blackfeet tribal member from Browning, is the lead plaintiff in a class-action lawsuit filed in 1996 on behalf of 500,000 Native Americans.

Search for Altria lawsuit's outcome becoming a habit

April 20, 2006

If it is Thursday, it must be Engle-watch.

Every Thursday at 11am, tobacco lawyers, investors and journalists browse the website of the Florida Supreme Court in the hopes the justices have reached their long-awaited decision in the Engle class action lawsuit.

Altria Group, the US conglomerate that owns the Philip Morris tobacco unit and 87 per cent of Kraft Foods, has a lot riding on the outcome.

The maker of Marlboro cigarettes is preparing to restructure and spin off of its Kraft Foods division but has repeatedly said the break-up hinges on continuing improvements in the litigation environment.

This incudes three lawsuits: Engle, Price/Miles, and the government's civil racketeering case against the industry.

The Engle suit, led by Howard Engle, a retired paediatrician, was filed more than a decade ago and was the first class-action brought by smokers to go to trial.

A July 2000 verdict in the case produced the largest punitive damages award in US history - $145bn - after jurors found the five largest cigarette companies liable for the illnesses of thousands of Florida smokers.

The state's highest court is considering whether to reinstate the original ruling after an appellate court in 2003 unanimously overturned the judgment, saying the trial plan was flawed, the damages excessive, and the original trial proceedings "irretrievably tainted" by the "misconduct" of lawyers representing the smokers.

In a strongly worded ruling, the judges ordered the class be decertified, saying the individual issues were too diverse to be lumped together in one class.

A year later, however, Florida's Supreme Court unexpectedly agreed to review the case.
Oral arguments were heard 17 months ago.

Christine Farkas, analyst at Merrill Lynch, said Engle is "critical" to Altria "as a decision against tobacco could derail its promised restructuring until such time as it ultimately prevails".

In the Price/Miles "lights" class action, the Illinois Supreme Court in December threw out the $10.1bn verdict, handing cigarette makers a big win. It is now deciding whether to reconsider that decision.
Ms Farkas said both the Engle and Price/Miles claims "have the ability to delay or - in the worst case - prevent" Altria's plans.

Altria is also awaiting news on the Department of Justice's racketeering case.

US District Judge Gladys Kessler is expected to rule in the near future but the case no longer poses the crippling financial threat it once did.

Last year the government reduced its requested "remedy," should it prevail, to $14bn from $130bn.
Analysts expect the ruling to be financially manageable for the industry.

Litigation is not the only issue tobacco investors will be thinking about this Thursday.

Altria reports first quarter results this morning. The consensus forecast is for earnings of $1.27 a share. In the year ago quarter, earnings from continuing operations, including one-time items, were $1.24 a share. Investors will likely focus on Philip Morris International and challenges in Western Europe, particularly Germany and Spain.

Qui Tam Law: The Whistleblower's Sword

By Wilson P. Dizard III

Thursday, April 20, 2006

Frauds committed against the E-Rate program often are addressed under the federal and state qui tam, or whistleblower, laws.

The laws, which date back to common-law principles established in 13th century England, allow private citizens to recover part of the funds that a company or individual has taken from the government by fraud. Under the federal qui tam law, the government can recover triple damages.

Sometimes the defendant pays only double damages, as a result of cooperating with the government.

The whistleblower, or “relator,” can receive 10 percent to 30 percent of the funds recovered.

The main federal qui tam law—the Federal Civil False Claims Act—dates back to 1863. President Abraham Lincoln sought to enlist private citizens and their attorneys in the struggle against military contractors who sold rancid beef, broken rifles, lame horses, unseaworthy ships and other defective products.

The “Lincoln Law” spawned few cases, however, because of the legal risks and costs whistleblowers faced. Congress further weakened the law in 1943, and it fell into disuse until the military buildup of the 1980s.

By 1985, nine of the top 10 military contractors were under criminal indictment, and Uncle Sam reached for the qui tam hammer again.

With bipartisan support and President Ronald Reagan’s approval, Congress amended the law in 1986 and ushered in a new era of whistleblower activity.

Under the False Claims Act’s qui tam process, a whistleblower collects evidence about a fraud and presents it to the Justice Department in the form of a request for federal intervention in the case.

If Justice’s Civil Division or the local U.S. Attorney’s Office decides that the evidence is strong and the potential recovery large, the government joins the case and usually takes over the probe.

Once the Justice Department gets involved in the case, the investigation is sealed to protect the probe itself, the reputation of the potential defendants and the whistleblower. However, the underlying fraud is not sealed.

After the federal attorneys and the FBI gather more evidence, they generally call in the targets of the investigation for a meeting at which the government presents a summary of the case.

The defendants then have the option of rejecting the government’s offer of a plea bargain and contesting the charges in a trial.

However, defendants usually take the plea bargain, according to attorneys who specialize in the field. As a general rule, Justice attorneys and FBI investigators, as well as the whistleblowers and their lawyers, routinely have collected such conclusive evidence that a courtroom battle would be fruitless and expensive, attorneys say.

Justice does, at times, include criminal counts in its settlement agreements, to which the corporations and individuals plead guilty.

The department also sometimes specifies that corporations who are defendants adopt strict compliance programs and ethics rules.

Justice attorneys generally have their pick of qui tam cases, because the department’s resources for the civil cases are limited and many cases come over the transom. “This isn’t low-hanging fruit, it’s fallen fruit,” said one specialist in the field.

Qui Tam by the Numbers

- Between fiscal years 1987 and 2005, settlements and judgments in favor of the federal government as a result of qui tam, or whistleblower, cases brought under the Federal Civil False Claims Act amounted to $9.6 billion. The cases accounted for 64 percent of all funds recovered under the law.

- The Justice Department’s Civil Division received 5,129 qui tam False Claims Act cases between fiscal year 1987 and 2005. That figure does not include additional, typically smaller cases brought by U.S. attorneys.

- A study of 2,490 closed, unsealed cases showed that they were filed in 92 federal district courts. Health care and procurement fraud cases accounted for about 79 percent of all the cases. Total recoveries in health care cases amounted to just over $5 billion, while total recoveries in procurement cases amounted to $1.6 billion.

- The federal government recovered a median of $784,597 in qui tam cases closed and unsealed between 1987 and 2005. The mean sum recovered was $10 million, which partly reflects the fact that there were 18 cases in which settlements and judgments topped $100 million. Whistleblowers recovered a median of $123,885 from each case in the same period. The mean whistleblower share was $1.7 million.

Subject: Anti-Methamphetamine Coordination Subcommittees
Attachments: Memo - Walgreens.wpd; IC Meth Best Pratices.pdf; meth.subcommittees.wpd

All,

Thank you for coming together and contributing to last week's successful Anti-Methamphetamine Coordination Committee meeting. We believe it was a good step in the right direction toward Department coordination. In order to continue this effort, please see the attached Anti-Methamphetamine Coordination Committee Update. The attached has a list of the members on the Subcommittees. Please let us know if you have any questions.

The Demand Reduction Subcommittee will have its first meeting on Friday, April 21, 2006, at 10:00 a.m. The Supply Reduction Subcommittee will have its first meeting on Thursday, May 4, 2006, at 3:00 p.m. More details will be sent out to the individual subcommittee members.

Also, please let us know as soon as possible if you would like to add information to the Department Methamphetamine Initiative. At some point, this may be a scaled-down public document, so we would like to have most--if not all--components represented in the Department Meth Initiative.

As mentioned, we are working on a DOJ Meth Accomplishments report. We need to have a short summary from each component outlining your efforts and/or accomplishments toward combating Methamphetamine. Please include this year's efforts and next year's goals. **The summary paragraphs as well as the monthly reports are needed by COB Monday, May 8, 2005.**

In addition, attached are Meth documents for your files from Greg Scott, USA EDCA and

the Office of Tribal Justice.

If you have any questions or comments please feel free to call Mark Grider at 202-514-8500. Also, on all e-mail responses please include Kristi Macklin.

Thanks.

Stuart Nash
Rachel Brand

FINDINGS AND BEST PRACTICES REGARDING METHAMPHETAMINE ISSUES IN INDIAN COUNTRY

- Federal, tribal, state and local law enforcement should collaborate and coordinate their efforts in addressing public safety issues related to methamphetamine in Indian Country (IC).

- Methamphetamine creates serious issues related to law enforcement, addiction, treatment and prevention. Public safety, public health, judicial and other federal, state and tribal officials should collaborate and coordinate their efforts to address methamphetamine problems. Regular conferences between federal and tribal government representatives regarding issues related to drugs, including methamphetamine, will enhance this effort.

- Regional multi-jurisdictional investigative task forces have proven to be very effective in addressing drug issues, including methamphetamine, in IC. Law enforcement leaders with jurisdiction in IC should consider creating such task forces as means for addressing methamphetamine. The following considerations can enhance the effectiveness of such task forces:

    - Tribal law enforcement officers, the Bureau of Indian Affairs Law Enforcement Officers (BIA) and the Drug Enforcement Agency (DEA) should be included in the task force.

    - Cross-designation of state, local and tribal members of such task forces should be seriously considered. Such cross-designation arrangements effectively overcome jurisdictional uncertainty which is common in IC investigations.

    - Law enforcement leaders should have regular meetings with tribal leaders.

    - Regular meetings should occur between the task force representatives and assigned prosecutors and the affected tribal councils.

    - Prosecutors should work, in conjunction with the task force, to develop confidentiality procedures for task force operations and task force work product.

    - Prosecutors should work, in conjunction with the task force, to develop policies and procedures addressing the sharing of asset forfeiture proceeds with the tribal law enforcement agencies.

- Methamphetamine is a national and international problem. Currently the majority of methamphetamine is manufactured in Mexico and transported from the Southwest Border into and through the rest of the United States, including IC. National intelligence sharing is essential. Law enforcement leaders should develop processes for communicating case-related intelligence to law enforcement agencies working in different jurisdictions.

- Because a successful regional task force will necessarily include law enforcement personnel not accustomed to working in IC, law enforcement leaders should conduct culturally-specific training for task force members. This is recommended so that Native American customs and culture are respected by task force members during law enforcement operations on a reservation.

- Tribal participation in the response to the methamphetamine problem is essential. In addition to the active involvement of tribal law enforcement and public health agencies, tribal courts should be encouraged to develop appropriate responses, such as Drug Courts.

- Drug quantities on reservations are generally smaller than in most non-Indian communities. Investigation and prosecution drug quantity thresholds should be based on a specific investigation or prosecution strategy. Threshold amounts should be adjusted as necessary, based on communication between investigators and prosecutors and the needs of each community.

- Many children in Indian Country and elsewhere are exposed to methamphetamine, leading to a generation of drug endangered children (DEC). These children suffer physical or psychological harm or neglect resulting from exposure to methamphetamine or exposure to dangerous environments where methamphetamine is manufactured or chemicals used to make methamphetamine are accessible. Law enforcement and public health leaders should either initiate DEC Teams in their communities or actively support existing DEC Teams.

- During the past ten years, Mexican drug trafficking organizations have become the dominant methamphetamine manufacturing and distribution group in communities in the Midwest and the West, including IC. These drug trafficking organizations are known to enlist allies from government organizations and/or agencies. Evidence of public corruption in methamphetamine cases should be aggressively investigated.

- Law enforcement leaders should develop plans for methamphetamine lab cleanup in IC and for disseminating information for lab cleanup options to tribal law enforcement.

- Chronic methamphetamine abuse can lead to psychotic behavior including intense paranoia, visual and auditory hallucinations, and out-of-control rages that can result in violent episodes. Law enforcement leaders and regional task forces should work with heath care providers, public service workers and political leaders serving IC to develop safety plans for medical providers, patients, civil servants and the public in public facilities such as hospitals and government buildings.

DRAFT

Last week at the AGAC meeting, it was mentioned that EOUSA might be putting together a list of Top 20 Cases to highlight our efforts in the fight against methamphetamine. I provide you below with the summary of our recent settlement with Walgreens Co. for possible inclusion in that list as it presents a significant story on how one case and the joint effort of four districts has changed the way the nation's largest drugstore chain and its 4,859 stores operating in 45 states handles pseudoephedrine. This case was the joint effort of the United States Attorneys from the Eastern, Northern and Western Districts of Oklahoma and the Eastern District of Texas.

1. Background

In response to the ever -increasing methamphetamine in Oklahoma, in April 2004, Oklahoma lawmakers classified pseudoephedrine as a Schedule V drug and required that pseudoephedrine-based pill and tablet products were required to be sold only in licensed pharmacies and required that these items be kept behind store counters. 63 Okla. State. Ann. § 2-212. Pill and tablets that are dispensed, sold or distributed in a pharmacy were to be sold under the supervision of a licensed pharmacist or a registered pharmacy technician. Moreover, any person purchasing such product would be required to produce photo identification showing the person's date of birth and must sign a written log, receipt, or other program or mechanism approved by the Oklahoma Bureau of Narcotics and Dangerous Drugs Control (OBN), showing the date of the transaction, name of the person, and the amount of the product purchased. In addition, no person was allowed to purchase, receive or otherwise acquire more than nine grams of a pseudoephedrine-based product within any thirty-day period (approximately 10 boxes), unless the product was prescribed by a physician. The law created a rebuttable presumption that any person possessing more than nine grams of a pseudoephedrine-based product has the intent to use the product to manufacture methamphetamine or another controlled substance. 63 Okla. State. Ann. § 2-332A. The law was passed in April 2004.

According to OBN statistics, in the 15 months prior to the passage of the Oklahoma law in April 2004, there were 1,338 meth labs were seized. In the 15 months since the law was passed, only 349 meth labs were seized – a reduction of 74%. The law was having a positive

effect.

However, one area of the state was not showing a decrease of meth activity. That area centered around Enid, Oklahoma.

2. Enid, Oklahoma - Walgreens

In July 2004, Enid Police Department Patrolman Jason Priest was called to Walgreen's Pharmacy to investigate a call of two women suspected of shoplifting. Each of the women bought a box of cold medicine containing pseudoephedrine. Priest then used the pharmacy's logbook to identify the two women and realized he recognized a lot of the names in the logbook as being involved with local meth distribution. Officer Priest realized that the log books from all local pharmacies would provide possible insight into local meth activity. After making copies of the logbooks from all pharmacies in Enid, Priest began creating a database of the names in the logbooks. By November 2004 he had identified 150 individuals who had purchased pseudoephedrine exceeding the limits allowed by the new Oklahoma law.

On January 27, 2005, the Enid police launched early morning raids based upon his logbook work, netting a total of 19 arrests with 93 felony charges and six misdemeanor charges. On June 23, 2005, another early morning raid was launched. This time the bust yielded 16 arrests and a total of 73 felony drug charges. All told, the logbook investigations have resulted in charges against 73 defendants, 101 cases, seizure of more than $10,000 and two vehicles, 16 major charges, 23 charges of possession of methamphetamine, 10 labs seized, and 10 charges of possession with intent to distribute.

What was evident from both the logbooks and statements of the arrested individuals was that the Walgreens store in Enid was not complying with the Oklahoma law to monitor the logbooks and limit pseudoephedrine sales.

In September 2004, the OBN advised a Walgreens representative that they needed to comply with the new law. In October 2004, the Deputy General Counsel for the OBN told a Walgreens representative that the company had a duty to guard against diversion by monitoring their logs. In December 2004, the Director of OBN advised Walgreens that they needed to comply with monitoring requirements. In December 2004, the Director of the Oklahoma Pharmacy Board also advised Walgreens that they were responsible for the monitoring of the sale of pseudoephedrine in their stores.

In early 2005, DEA and OBN agents began an investigation of Walgreens compliance with federal and state law. The investigation revealed the following:

a. Undercover investigations revealed that thirty-five (35) Oklahoma Walgreen's stores permitted purchases of over nine (9) grams of regulated pseudoephedrine-based products during a thirty day period.

b. A review of the pseudoephedrine purchase logs of all sixty-five (65) Oklahoma Walgreen's stores demonstrated that sixty-one (61) stores sold regulated pseudoephedrine-based products to individuals in excess of nine (9) grams during a thirty day period.

c. A review of the pseudoephedrine purchase logs of all sixty-five (65) Oklahoma

DOJ_NMG_0026240

Walgreen's stores demonstrated that fifty-eight (58) stores failed on several occasions to record the amount of pseudoephedrine sold during a regulated transaction. This failure makes it impossible to determine whether the sale resulted in a violation of the statutory standard. During a ninety day period one store failed to record the amount sold during a regulated transaction three hundred and thirty-two (332) times.

d. A review of the pseudoephedrine purchase logs of all sixty-five (65) Oklahoma Walgreen's stores demonstrated that a majority of the stores routinely omitted the date of sale or purchaser information (first or last name, ID number, date of birth).

e. A review of the pseudoephedrine purchase logs of the Walgreen 's in Enid, Oklahoma revealed numerous record keeping violations. The store omitted the quantity of sale eight hundred and eighty-four (884) times. Required purchaser identifying information was omitted on seventy-two (72)occasions. Two sales were made to individuals under the age of eighteen (18). One sale was made to an individual who signed his name as "Buggs Bunny."

f. A review of the pseudoephedrine purchase logs of all sixty-five (65) Oklahoma Walgreen's stores demonstrated that sales in violation of Oklahoma and federal regulatory limits were made to twenty-three (23) individuals with prior charges for manufacture of controlled substances and sixty-three (63) individuals with prior charges for distribution or possession of controlled substances. These individuals were in addition to the seventy-three (73) persons charged as a result of the sales in the Enid, Oklahoma Walgreens location.

g. Reflecting the corporation's reckless attitude toward the regulatory requirements and the maintenance of the pseudoephedrine purchase logs, a PowerPoint presentation produced by corporate officials in 2004, stated that "it is now no longer the responsibility of the pharmacist or pharmacy technician to attempt to ensure that persons have purchased 9gm or less within any 30-day time period."

h. During a discussion with a DEA investigator in January 2005, a Walgreen's pharmacist stated, "I was told not to enforce the law," and "I don't like the law, it's not my job to monitor cold medicine, that's what Walgreen's has told us."

i. During September 2004, the Walgreen's store in Enid, Oklahoma sold 1,604. grams of pseudoephedrine (not including 144 sales in an unrecorded amount). During the same period, similarly situated competitors in Enid, Oklahoma sold no more than 365 grams of pseudoephedrine.

3. Eastern District of Texas

At the time of the Oklahoma Walgreens investigation, an civil investigation was open in the Eastern District of Texas regarding the sale of pseudoephedrine by a Walgreens in Denton,

DOJ_NMG_0026241

Texas.

In April 2002, local Texas law enforcement and the DEA served a search warrant on a suspected clandestine lab site. Recovered from the lab site were over 50,000 tablets of pseudoephedrine and receipts from the Denton Walgreens store. The Denton Police Department obtained the surveillance video of April 4, 2002 from Walgreen #05161. The video tape showed one of the individuals who had been arrested during the service of the April search warrant entering the store on two separate occasions, once at midnight and the second time at 5:00 a.m., and making multiple purchases of pseudoephedrine, spending approximately $28,000.00 cash.

During April and May of 2002, the DEA interviewed employees of the Walgreens store. Low level employees stated that they were suspicious of the sales being made, because the cash register system notifies the cashier that an excessive purchase has been made. Employees stated when they brought this to management's attention, they were instructed to continue to make the sales as long as the customers were paying cash. Further, they were instructed, if there is not enough PSE in stock, have the customer call in advance and as much as they needed would be ordered.

Walgreens corporate management was notified that continued sales of his type would be considered violations of federal law. Walgreens assured investigators that such sales would not continue. However, on March 31, 2003, Denton Police participated in another investigation of a clandestine lab, from which approximately 50,000 tablets of pseudoephedrine had been recovered – including receipts of purchase from this Walgreens store.

4. Federal Case and Settlement

On May 3, 2005, the United States Attorney for the Western District of Oklahoma sent Walgreens a contact letter and began negotiations in reaching a civil resolution on behalf of all three districts in Oklahoma and the EDTX. The federal action was premised on a civil action alleging not less than thirty separate counts of statutory violations against Walgreens pursuant to Title 21 U.S.C. §§ 842 (a)(11), and a pattern and corporate practice of distribution of a laboratory supply (pseudoephedrine) to persons who used, or attempted to use, the laboratory supply to manufacture methamphetamine. In addition, it was alleged that Walgreen's sales of laboratory supply material were in reckless disregard for the illegal use of that laboratory supply.

On July 28, 2005, a settlement agreement was finalized between Walgreens Co. and the United States (by the U.S. Attorneys for the WDOK, EDOK, NDOK and EDTX, and the DEA) and the OBN. In that agreement, Walgreens agreed to pay a penalty of $1,333,333.00 cash payment to resolve civil claims by the United States and the State of Oklahoma that Walgreens sold pseudoephedrine products in violation of both the federal and state laws. In addition, Walgreens entered into compliance obligations to implement an electronic monitoring system for pseudoephedrine sales throughout Oklahoma and also in the EDTX estimated to cost in excess of $1 Million, to issue a revised "Pseudoephedrine Compliance Policy" to all of its stores, to provide compliance reports to the government and to arrange for an independent monitor to conduct performance checks of compliance through 2008.

DOJ_NMG_0026242

5. Change in National Practice and Policy for Walgreens

One week after the settlement, on August 5, 2005, Walgreens issued its own press release (found on the Walgreens website) announcing that it would move all products containing pseudoephedrine , including liquids and gels, behind the pharmacy counter by the end of October – **and that the policy would apply to all stores nationwide**. Walgreens cites to its own concern for the meth abuse problem facing many communities as the motivation behind this national policy change.

The Walgreens case resulted in a change of practice and policy for the nation's largest drugstore chain and its 4,859 stores operating in 45 states.

TERRORISM NEWS:

Moussaoui Prosecutors Stipulate Reid Role In 9/11 "Highly Unlikely." At the sentencing trial of Zacarias Moussaoui yesterday, the defense rested after calling more 9/11 victims' family members to the stand, and psychiatrist Raymond Patterson testified in the government's rebuttal that Moussaoui is not a paranoid schizophrenic. However, most press coverage focused on the written stipulation in which the prosecution acknowledged that it is "highly unlikely" al Qaeda intended shoe-bomber Richard Reid to play a role in 9/11.

NBC Nightly News (4/20, story 3, 2:45, P. Williams, 9.87M) reported, "The jury has how heard from 13 family members as defense witnesses, including the sister of Jeremy Glick and the mother of Mark Bingham, two men who helped lead the passenger revolt on Flight 93." In the Reid stipulation, "the government said there's no evidence that Reid was ever instructed by al Qaeda leadership to conduct an operation with Moussaoui. Reid named Moussaoui the beneficiary in his will, something the FBI says he would not have done if the two were to be part of the same suicide operation."

Under the headline "Moussaoui, Shoe Bomber Link Called 'Highly Unlikely' by FBI," The Washington Post (4/21, A3, Markon, Dwyer, 744K) adds, "It was unclear how the FBI's analysis would resonate with jurors and whether it would raise questions about the truthfulness of Moussaoui's testimony. Jurors will start deliberating Monday." FBI spokesman Richard Kolko "would not comment beyond the stipulation. Prosecutors declined to comment." The AP (4/21, Sniffen) also notes, "Reid named Moussaoui as the beneficiary in his will and two FBI analysts concluded that was an unlikely decision for him to make if they were going to be on a joint suicide mission, the statement said.

The New York Times (4/21, Lewis, 1.19M) reports, "The significance of the document is that the Justice Department has now acknowledged that the government's principal investigators on the case are highly skeptical of an important part" of Moussaoui's testimony about his role in 9/11," which "was widely viewed as an important element in persuading the jury to find him eligible for the death penalty." CNN's The Situation Room (4/20, Blitzer) similarly noted that the stipulation about Reid "could make the difference on whether the confessed al Qaeda conspirator gets the death penalty."

The Los Angeles Times (4/21, Serrano, 958K) and Bloomberg (4/21, Arthur, Elsibai) also report on the stipulation and testimony from victims' family members.

FBI Review Raises Questions In Detroit Terror Case. The AP (4/20, Solomon) reports, "A new FBI analysis of evidence in a bungled Detroit terrorism trial undercuts the recent indictment of the former prosecutor in the case, creating fresh conflict in a legal drama that has embarrassed the Bush administration." The AP continues, "The 13-page report by FBI Agent Paul George concludes that satellite photos of a Jordanian hospital closely match hand-drawn sketches found in 2001 inside the apartment of four Detroit men who the government claimed had surveyed the site as part of a terrorist plot. … The new analysis conflicts with the Justice Department's argument that photographic evidence did not match the sketches." The AP adds, "George testified at the 2003 Detroit terrorism trial and produced the new analysis around the time he was called to testify late last year before a grand jury that eventually indicted the prosecutor for wrongdoing in the case, officials said. The agent's report was obtained by The Associated Press. … Convictions of three of the four Detroit men — arrested shortly after the Sept. 11 attacks — were tossed out in 2004 after the Justice Department told the court its own prosecutors withheld photos from defense lawyers that could have helped prove the defendants innocence. … Last month, former Assistant U.S. Attorney Richard G. Convertino and a State Department investigator were indicted on charges they conspired at the trial to withhold the pictures because they would have shown that the drawings were not surveillance sketches of the hospital, as Convertino and trial witnesses had portrayed. … Department officials said they were aware of George's report, but remained confident they could prove the ex-prosecutor and the State Department official lied about the existence of the photos, which were e-mailed to Convertino before the trial and were not turned over to defense lawyers. Convertino said he never saw the e-mail or photos. … 'The pending prosecution is not about the guilt or innocence of the defendants' in the original terror case, Justice spokesman Bryan Sierra said. 'This is about lies

DOJ_NMG_0026251

perpetrated by a federal prosecutor and a federal agent, as alleged in the indictment. It's about perjury and the integrity and fairness of the judicial system.'"

The Detroit News (4/21, Egan) notes Convertino lawyer Jeffrey Del Fuoco said, "It's extremely damaging to the government's case. They were in possession of this information prior to bringing this indictment and they brought it anyway." However, DOJ spokesman Bryan Sierra noted, "The pending prosecution is not about the guilt or innocence of the defendants. This is about lies perpetrated by a federal prosecutor and a federal agent, as alleged in the indictment."

Number Of Terror Attacks Rose "Dramatically" In 2005. Knight Ridder (4/20, Strobel) reports that the number of terrorist attacks documented by US intelligence agencies increased dramatically in 2005, according to counterterrorism officials and documents obtained by Knight Ridder. According to Knight Ridder, the number attacks crossed 10,000 for the first time in 2005. Knight Ridder adds, "Officials caution that much of the increase, due to be reported publicly next week, stems from a change last year in how terror attacks are counted, coupled with a more aggressive effort to tally such violence worldwide. But the documents say, and officials confirm, that some of the rise is traceable to the war in Iraq, where foreign terrorists, a homegrown insurgency and sectarian strife have all contributed to political bloodshed."

List Of Guantanamo Detainees Sparks Outcry. In the wake of the Pentagon's release of a secret list of names and nationalities of 558 people held at the US military prison at Guantanamo Bay, the AP (4/20, Garwood) reported that a "chorus of complaints against the Bush administration." Britain "said its citizen should be freed after being held for years without charges. Afghanistan's peace and reconciliation commission vowed to send a delegation to the prison to make sure Afghans are not being mistreated. China demanded custody of a group of Muslim separatists so it can prosecute them on terrorism charges." The AP adds, "About 490 detainees from about 40 countries are now at the base. The Red Cross — the only outside agency the United States has allowed to visit the detainees — previously had access to the list but was not allowed to make it public."

Accused Enemy Combatant's Case Gets Increased Attention. The Washington Post (4/21, A3, Eggen, 744K) says Ali Saleh Kahlah al-Marri, the last man held as an enemy combatant on US soil, "is poised to take center stage in the ongoing fight over presidential powers in a time of war." The Qatari national, who is accused of being an al Qaeda sleeper, "has been held in a military brig in South Carolina since June 2003. … He is challenging the government's right to hold him as an enemy combatant." The Post adds that "a remarkable document filed in federal court in South Carolina this month," portrays Marri "as an important terrorist soldier who trained for more than a year at al-Qaeda camps. … Marri's attorneys dismiss the newly disclosed allegations as 'triple hearsay evidence' inadmissible in court and say many of them may have been obtained through torture."

Hayat Trial Judge Tells Jurors Not To Consider Cash Transfer "Material Support." The Sacramento Bee (4/21, Korber, 301K) reports, "The federal judge in the Lodi terrorism case instructed deliberating jurors Thursday they were not to consider a proposed transfer of cash as evidence that Hamid Hayat provided material support to terrorism. … In a hearing out of the jury's presence, the judge said he had studied the indictment and concluded that the reference to 'tangible or intangible property or service' should be stricken from the instruction. Attorneys for both the prosecution and the defense agreed." The Stockton Record (4/21, Hood) also reports on the material support ruling and adds, "Hamid Hayat's jurors sent U.S. District Judge Garland E. Burrell Jr. a note Thursday asking if FBI agents were required to read Hayat his constitutional rights before questioning him at his home on June 3. According to defense attorney Wazhma Mojaddidi, Burrell replied in the telephone conference that it's not a matter for jurors to decide."

Georgia Tech Student Indicted For Allegedly Attending Pakistan Terror Camp. The Atlanta Journal-Constitution (4/21, Torpy, 430K) reports Georgia Tech engineering student Syed Haris Ahmed "has been charged with giving 'material support' to a terrorist organization," and "the FBI believes he attended a training camp in Pakistan last year, sources say. He was in religious school there, his family says." Ahmed pleaded not guilty to the charge on Wednesday, US Magistrate Joel Feldman ordered him held without bail. "Gregory Jones, FBI Special Agent in Charge of the Atlanta office, would not say what

DOJ_NMG_0026252

started the investigation." The AJC adds, "In a separate case that may be related, a 19-year-old Roswell man was arrested Monday in Bangladesh. Ehsanul Islam Sadequee was arrested by Bengali authorities after at least eight months of federal investigation of him and his family, his sister…said Thursday." The New York Times (4/21, Goodman, 1.19M) notes Jones said at a press conference yesterday, "This case will be very seminal to those goals we've set to thoroughly investigate any information brought to our attention. We want to get it well before the point that somebody puts a bomb in a car."

The AP (4/21) adds that Jones said, "Let me assure you that at no time were we aware of an immediate dangers to the Atlanta area of the United States." Although "officials said the investigation of Ahmed was unrelated to other terrorism investigations," Sadequee's family "said they had been contacted recently by a man resembling the Georgia Tech student, who said he had been questioned by the FBI." CNN.com (4/20) reports, "U.S. law enforcement sources confirmed Thursday that Sadequee's arrest was linked to Ahmed's arrest by the FBI last month."

Former Salah Attorney Testifies About Harsh Israeli Interrogation Techniques. The AP (4/21, Burghart) reports, "Suspects subjected to days of interrogation techniques used by Israeli security agents often will do whatever necessary to put a stop to their 'desperate situation,' according to an attorney who testified Thursday in a hearing in the case of his former client, Muhammad Salah," who "is accused of laundering money to finance terrorist operations by…Hamas." Israeli defense and human rights lawyer Avigdor Feldman "testified that Salah told him while in custody he was forced to wear a foul-smelling hood, deprived of sleep, made to sit in an awkward position in a tiny chair with uneven legs and kept in a cell so cold it was called 'the refrigerator.' Salah said Israeli security agents told him he could be held indefinitely if he did not confess and that FBI agents in the United States would harm his family back home, Feldman said."

EU Official Sees No Evidence Of Secret CIA Flights. The EU's anti-terrorism coordinator said yesterday that investigators have found n o evidence that the CIA moved prisoners through European airports en routs to secret detention centers. USA Today (4/21, 2.31M) reports, "Gijs de Vries told a European Parliament committee that investigators have not identified any human rights violations, despite more than 50 hours of testimony by human rights activists and individuals who claimed to have been abducted by U.S. intelligence agents."

The New York Times (4/21, Bilefsky, 1.19M) reports that de Vries "came under criticism from some legislators who called the hearing a whitewash. Kathalijne Buitenweg, a Dutch member of Parliament from the Green Party, said that even without definitive proof, 'the circumstantial evidence is stunning.'"

HOMELAND RESPONSE:

Negroponte Defends First Year As DNI. Director of National Intelligence John Negroponte yesterday defended his first year on the job, saying he has made progress integrating the 16 agencies of the US intelligence community and adding that "remaking a loose confederation into a unified enterprise" will take time. The Washington Post (4/21, A7, Pincus, 744K) reports, that Negroponte speaking at the National Press Club, "said he has instituted 'institutional innovations, most of which are system-wide procedural improvements' designed to 'optimize the community's total performance.'"

Negroponte Reveals Number Of US Intelligence Workers. ABC World News Tonight (4/20, story 8, :25, Vargas, 8.78M) reported, "We learned something today, that was previously secret about how many people work for US intelligence around the world. John Negroponte, the Director of National Intelligence, gave a speech in Washington, on his first anniversary in that newly-created post. And Negroponte revealed that the intelligence community includes almost 100,000 Americans in 16 Federal Departments and agencies. He added that public understanding is important."

Negroponte Suggests US Is No Closer To Finding Bin Laden. The Los Angeles Times (4/21, 958K) reprints a Chicago Tribune (Hedges, 643K) story that reported that Negroponte "suggested that the US government was no closer to apprehending Al Qaeda chief Osama bin Laden, although he said Bin Laden's ability to operate had been significantly reduced." The Times adds that Negroponte "declined to discuss specific criticism of his office or the agencies that report to him."

Ignatius Says Bush Administration Has Made US Intelligence Problems Worse. David Ignatius writes in the Washington Post (4/21, A23, 744K) that a reorganization of the

DOJ_NMG_0026253

US intelligence community that was "supposed to bring greater coordination has instead produced a layering of responsibilities and bureaucratic confusion. A demoralized CIA that needed professional management is chafing under a Republican former congressman who has proved to be the most political and ineffective director in the agency's history." Ignatius adds, "Look at the organizational chart of the new Office of the Director of National Intelligence and you wonder if America has become a Third World country with a rival intelligence agency for each patch of turf." Ignatius concludes, "You would have thought it was impossible to make our intelligence problems even worse, but the Bush administration has accomplished that. This is a dangerous situation for the country, and it needs to be fixed, now."

Chertoff Vows To Redirect DHS Grant Spending. Homeland Security Director Michael Chertoff has promised to redirect grant spending based on risk of a terrorist attack aid word that fire departments are using DHS grants to buy gym equipment, sponsor puppet and clown shows and turn first responders into fitness trainers. The Washington Times (4/21, Hudson, 90K) reports, "The spending choices are allowable under the guidelines of the Assistance to Firefighters grant administered by the Homeland Security Department, which has awarded nearly 250 grants since February totaling more than $25 million out of the current spending pot of $545 million. … The Bush administration has specifically asked Congress not to allow funding for physical fitness, but the members who run Congress' appropriation committees keep inserting the language into the department's budget, officials say."

TSA Says 20 Airports Will Start "Registered Traveler" Programs. The TSA said yesterday that only 20 airports will be allowed to start so-called "registered traveler" programs that speed trusted travelers through airport security. USA Today (4/21, Frank, 2.31M) reports, "The TSA imposed the limit so it can test technology needed for the program's goal: a nationwide network of airports offering pre-screened passengers a fast pass through security. Airports could start the program as early as this summer when TSA begins approving applications, agency chief Kip Hawley said. Once 20 airports are approved, no more will be added until TSA finishes a year of taking public comment on Registered Traveler and refining the program."

The Wall Street Journal (4/21, Zhang, 2.11M) repots, "Participating airports will be chosen based on factors such as passenger volume, security measures, layout of airports and checkpoint configurations. The agency expects to roll out the program by June 20 and make a final rule for its expansion nationwide next year."

Security Test Glitch Causes Massive Delays At Atlanta Airport. ABC World News Tonight (4/20, story 9, :30, Vargas, 8.78M) reported, "There were massive delays at Atlanta's Hartsfield-Jackson Airport, after security screeners spotted what looked like a bomb on an X-ray machine yesterday. The security system was shut down when she was unable to locate the bag involved. Today, officials said it was a test. But because of a computer glitch, the screener didn't know. And therefore, all the confusion and delays ensued."

Pataki Adviser Says Planned Ground Zero Memorial Is "Attractive Target." James Kallstrom New York Gov. George Pataki's senior adviser for counterterrorism has concluded that the design for a memorial at ground zero leaves is vulnerable to terrorist attack. The New York Times (4/21, Dunlap, 1.19M) reports that Kallstrom said the memorial is an "attractive target" and has "called on the architects to consider revising several critical aspects." Kallstrom's findings "were laid out in a confidential letter to the Lower Manhattan Development Corporation, dated March 3. A copy of the six-page letter was mailed anonymously to The New York Times and received this week. There was no way to assess the sender's motives."

GAO Audit Says $7.8 Million Wasted On Portable Classrooms For Katrina Zone. The AP2 (4/21, Yen) reports the government "overpaid by 20 percent on a $39.5 million, no-bid Hurricane Katrina contract for portable classrooms because the Army Corps of Engineers passed up chances to negotiate a lower price, a federal audit says." A draft Government Accountability Office report "on the contract with Akima Site Operations LLC, a subsidiary of an Alaska Native-owned firm, said the government wasted at least $7.8 million on the classrooms in Mississippi. It's the latest in a series of audits detailing waste of hundreds of millions of taxpayer dollars in the hurricane recovery effort."

GAO Report Criticizes SBA Response To Hurricane Katrina. The New York Times (4/21, Nixon, Eaton, 1.19M) reports the Government Accountability Office says "the federal

DOJ_NMG_0026254

government's main program for helping the victims of Hurricane Katrina rebuild their homes and businesses, operated by the Small Business Administration, has been plagued by inadequate leadership and poor planning." The GAO "found that the agency was hampered in its hurricane response by its failure to participate in disaster drills and to prepare for a disaster of the hurricane's magnitude, according to written testimony and briefings it has given Congressional committees." SBA says "it has approved more than $8.3 billion in loans to more than 126,000 homeowners, renters and business owners and that it has processed 90 percent of the 2.4 million loan applications it has received since the hurricanes. More than 40 percent of the applications were approved, according to agency data." But Congressional critics "say the agency actually rejected close to 70 percent of applicants, and that so far only a small amount of loan proceeds — about $336 million — has gotten into the hands of disaster victims."

NYTimes Says Katrina Highlights Need For Relocation, Medical Care. The New York Times (4/21, 1.19M) says in an editorial that the lessons of Hurricane Katrina "have highlighted two important ways that the country will need to change its disaster relief before the next hurricane season begins in June. The federal government must do a better job of relocating evacuated families into permanent homes in functional communities instead of into hotels and trailer parks. And the authorities need to provide ongoing medical care for the displaced."

New Orleans Mayoral Race Comes Down To Three Candidates, Race. USA Today (4/21, Axtman, 2.31M) reports on the "eve of the election — one of the most unusual for a major city in U.S. history — it comes down to this. The black incumbent and two white challengers are locked in a tight contest where race is playing a dominant role." The outcome is "unpredictable. About the only thing that political observers agree on is that a runoff election looks inevitable." Two Tulane University political scientists "released a poll this week. It showed Louisiana Lt. Gov. Mitch Landrieu leading with 25.9% of the respondents' vote. Mayor Ray Nagin was second with 21.4%." Ron Forman, "president of the Audubon Nature Institute, took third with 17.9%." What is "making things difficult, says Brian Brox, one of the Tulane pollsters, is that over 17% of respondents say they are still undecided. Another 17.3% are voting for one of the other 20 candidates who are also on the ballot. Most of those candidates are political newcomers." Political experts "predict that no one will get a majority vote and the race will end up in a runoff on May 20."

The Wall Street Journal (4/21, Dade, 2.11M) reports "efforts to bus thousands of displaced African-American voters from Atlanta, Houston and other southern cities back to their hometown appear to be faltering -- a development that could hurt incumbent Ray Nagin in a tightly contested mayoral race." Whether Nagin "advances to a potential runoff next month could well turn on which and how many displaced residents return to vote. If Mr. Nagin fails, the margin of defeat may be found in the missing votes of those who were too consumed with piecing their lives together elsewhere to make the trek back to New Orleans." The Journal also reports the results of the Tulane University poll.

DNC Members To Repair Hurricane Damage During New Orleans Meeting. The AP (4/20, Sidoti) reports members of the Democratic National Committee "plan to clean out hurricane-ravaged homes in this slowly recovering city, a project designed to highlight the party's criticism of the Bush administration." The choice "of New Orleans for the Democratic National Committee meeting that begins Thursday was part of a political calculation, as is a three-day agenda for the 400 delegates that combines party business with community service." Democratic strategist Steve McMahon said, "It's reinforcing an impression that is widely held among the public and one that will be a critical theme for Democrats across the country — namely that this administration is dangerously incompetent."

WAR NEWS:

Al-Jaafari Drops Bid To Remain Iraqi Prime Minister. In a move that potentially could break the logjam preventing the formation of the Iraqi government, Shiite politician Ibrahim al-Jaafari announced he would not seek an additional term as prime minister. The CBS Evening News (4/20, story 6, 0:15, Schieffer, 7.66M) reported, "The political logjam that has blocked formation of a unity government in Iraq may have finally broken today." ABC World News Tonight (4/20, story 2, :30, Vargas, 8.78M) says "there's one giant note of caution. At times, in the past, al-Jaafari has not kept his word."

DOJ_NMG_0026255

USA Today (4/21, Johnson, 2.31M) reports Jaafari said in a televised address, "The one thing I cannot compromise is my dedication to this heroic people. … I cannot allow myself to be an obstacle, or appear to be an obstacle to that." The Washington Times (4/21, Behn, 90K) reports Jaafari's "change of heart came after a series of meetings with Iraq's most powerful Shi'ite cleric Grand Ayatollah Ali al-Husseini al-Sistani, United Nations envoy Ashraf Qazi and radical cleric Muqtada al-Sadr."

The Financial Times (4/21, Negus) notes the announcement "was followed by the postponement of a planned session of parliament, delayed until Saturday, to allow members of the UIA to vote for leadership candidates, including a prime minister." President Jalal Talabani "predicted that key posts could be filled within days." The New York Times (4/21, Semple, Oppel, 1.19M) says "leaders from each of Iraq's main factions -- Sunni Arab, Shiite and Kurd -- called the decision a breakthrough."

The Washington Post (4/21, A14, Hernandez, Sebti, Ibrahim, 744K) reports, "Among the people mentioned as alternatives to Jafari are two members of his Dawa party: Jawad al-Maliki, its spokesman, and Ali al-Adeeb, a prominent politician whose ties to Iran disturb many Sunni Arabs." The AP (4/21, Reid), Los Angeles Times (4/21, Wallace, 958K) and Knight Ridder (4/21, Fadel) run similar reports.

Meanwhile the New York Times (4/21, 1.19M), in an editorial titled "A Glimmer Of Hope In Iraq," says "the most likely replacement nominees now being talked about are far from ideal. But the only conceivable path to a better future than civil war and chaos in Iraq is lined with distasteful compromise and leaps of faith. No one believes that success is certain. … A new start is desperately needed."

US Iraq War Death Toll, Costs Continue To Rise. The CBS Evening News (4/20, story 7, 0:30, Schieffer, 7.66M) reported, "As the Iraqis have continued to wrangle over forming a government, the price the United States is paying for the war just keeps going up. At least 2,374 American servicemen and women have now been killed. And in a new study, a Washington think tank reports US military spending on the war has skyrocketed. The report estimates the cost this year at $94 billion. That is nearly twice what it was the year the United States invaded Iraq."

Kennedy Says Vote Against Iraq War Is Best Senate Vote He Ever Cast. Sen. Ted Kennedy was asked on CNN's Larry King Live (4/20) about his vote against the Iraq war. Kennedy said, "The best vote, best vote I cast in the United States Senate. … I'm on the Armed Services Committee and I was inclined to support the Administration when we started the hearings in the Armed Services Committee. And, it was enormously interesting to me that those that had been -- that were in the armed forces that had served in combat were universally opposed to going. … And the second point that influenced me was in the time that we were having the briefings and these were classified. They've been declassified now. Secretary Rumsfeld came up and said 'There are weapons of mass destruction north, south, east and west of Baghdad.' This was his testimony in the Armed Services Committee. And at that time Senator Levin, who is an enormously gifted, talented member of the Armed Services Committee said, 'Well, we're now providing this information to the inspectors aren't we?' This is just before the war. "Oh, yes, we're providing that.' 'But are they finding anything?' 'No.'"

Iraqi Special Forces Recruits Take Great Risks. The CBS Evening News (4/20, story 8, 3:15, Logan, 7.66M) reported, "They are Iraq's Green Berets, in training, and the Special Forces instructors taking them through their paces are all Iraqis. That's a long way from where they were nearly three years ago, when this elite unit was first formed by American Green Berets." Quitting is "still an option for these new recruits on the Special Forces selection course. It's day 5 and of the 400 who signed up, 121 have already dropped out. The day after these pictures were taken, one of these recruits would end up in detention after they discovered he's a member of a militia that's been targeting the Special Forces commandos."

Afghan Parliament Backs Karzai's Cabinet Picks. The New York Times (4/21, Gall, 1.19M) reports, "President Hamid Karzai won broad approval from Parliament for his reshuffled cabinet in daylong voting Thursday, with only 5 of the 25 ministerial nominees rejected. Some members of Parliament raised objections about the way three of the ministers were confirmed, and their cases may be re-examined on Saturday." This year "for the first time Mr. Karzai's cabinet appointments are subject to confirmation by Parliament."

DOJ_NMG_0026256

Mount Vernon Hosts Purple Heart Ceremony. The Washington Post (4/21, B1, Morello, 744K) reports a "journey of pain and loss, beginning with roadside bombs in Iraq and pausing at Walter Reed Army Medical Center, brought seven soldiers to Mount Vernon yesterday in a Purple Heart ceremony filled with reminders of war's sacrifice." The "dusty, clamorous war zones of Iraq seemed a distant memory and yet achingly close as the six men and one woman arrived by bus at a lawn dappled by sunlight. All seven soldiers and a four-star general who spoke came dressed in desert camouflage uniforms that contrasted sharply with the expanse of green grass and flowering shrubs. Three soldiers were in wheelchairs, although one, Spec. Sergio Lopez of Bolingbrook, Ill., had a cane, which he used for support as he struggled to his feet to receive his medal."

DOJ:

Columnist Questions McNally Testimony In Ryan Case. In a column for the Chicago Tribune (4/20), John Kass writes, "U.S. Senators Richard Durbin and Barack Obama have asked the Bush Justice Department to investigate federal prosecutor Ed McNally, until recently the U.S. attorney for the Southern District of Illinois, for circumstances surrounding his testimony on behalf of convicted former Republican Gov. George Ryan." Kass continues, "Durbin's letter to the Justice Department's Office of Professional Responsibility, and Obama's statement--both released to me on Wednesday--demanded to know the following: … Whether McNally violated procedure by failing to disclose a serious apparent financial conflict of interest with Winston & Strawn, the law firm that gave Ryan an estimated $20 million in free legal defense work. … And whether McNally, as suggested by prosecutors in the Ryan trial, illegally taped a crucial interview between Ryan and federal investigators, when McNally was Ryan's lawyer." Kass adds, "The letter from Durbin, who is on the Senate Judiciary Committee, is just the thing to chill McNally's morning coffee and the lattes sipped at Winston & Strawn, which is run by Ryan's buddy, former Republican Gov. Big Jim Thompson. … McNally is not penny ante. The former Ryan defense lawyer with Republican clout was a partner in now-defunct firm Altheimer & Gray. He left before it went bankrupt and started working for the Department of Justice after the Sept. 11, 2001, terrorist attacks. He was made the interim U.S. attorney for the Southern District in November 2005 just in time. … You know, just in time to testify." Kass concludes, "In a response faxed to me late Wednesday, McNally, speaking as a private citizen, said he sought extensive legal advice before testifying and that any investigation 'will demonstrate I acted in compliance with legal, ethical and other obligations.' … Justice Department spokesmen would not confirm an investigation. They would not say who recommended McNally for the Southern District post, just in time for Ryan's trial. … I have a hard time believing in coincidences. Do you?"

CORPORATE SCANDALS:

Prosecutor Attacks Skilling's Credibility As Testimony Ends. The Wall Street Journal (4/21, Emshwiller, McWilliams) reports, "During eight grueling days on the witness stand here, former Enron Corp. President Jeffrey Skilling battled old friends and new enemies in a bid to win over 12 strangers to his version of what happened at the fallen energy giant. … If he is convicted of the conspiracy and fraud charges against him, he might look back and wonder if he was undone by an ex-girlfriend." The Journal continues, "Having waited years to defend himself against the government's charges, Mr. Skilling did better than expected, given his reputation for outbursts, some observers say. Though he frequently sparred with prosecutor Sean Berkowitz over three days of cross-examination, Mr. Skilling largely kept his cool. He often appeared to be earnestly trying to explain Enron's complexities and conveyed a sense of pride in Enron. … By the time he finished his testimony Thursday morning, Mr. Skilling and his attorney, Daniel Petrocelli, had used reams of data and charts aimed at neutralizing the prosecution and a string of government witnesses. … Many of those witnesses were Mr. Skilling's former Enron colleagues, who were testifying as part of criminal plea bargains. At the least, the Skilling defense team succeeded, in many instances, in presenting alternative, innocent interpretations of activities that prosecutors maintain were part of a criminal conspiracy at Enron. … But given the complexities of Enron's finances and operations, 'everything comes down to credibility,' says Jacob Zamansky, a New York attorney, who sat through much of Mr. Skilling's testimony. 'If the jury doesn't think Skilling is credible, his whole testimony goes down the drain.'"

DOJ_NMG_0026257

USA Today (4/21, Farrell) reports that Skilling "first admitted on cross-examination Monday that he invested $180,000 in a company run by a woman he dated in 1997 and 1998 — a company that did almost half a million dollars in business with Enron. … He confessed that, according to Enron's code of ethics manual, he probably should have done a better job of notifying the company's board about the apparent conflict of interest. But Wednesday, after the government's original round of cross-examination ended, Skilling's lead attorney, Dan Petrocelli, found another portion of the ethics manual that appeared to exempt Skilling from presenting the matter formally to the board: Given that Skilling had alerted Enron chairman Ken Lay of the situation, there was no need for a written notice. … But Thursday morning, in his last opportunity to confront Skilling directly …Berkowitz revisited the topic. He displayed two checks Skilling wrote to his then-girlfriend, Jennifer Binder, worth $10,000 each, one dated in December 1997 and another in March 1998. … Although the checks were three months apart, they were both cashed on March 13, 1998, and bore consecutive numbers, indicating that one had been written right after the other. When Berkowitz displayed the check immediately preceding the December payment, it was dated in March of 1998, suggesting that Skilling had backdated a check to avoid having to pay taxes on gifts exceeding $10,000 in one year. … Skilling insisted that he paid all his taxes, and that he simply had no memory of the checks or why they were written."

The Washington Post (4/21, Johnson) reports, "Skilling's character was the issue for most of Thursday, as his lawyers called half a dozen witnesses to attest to his integrity and to counter the government portrayal of a man who they say led a plot to deceive investors about Enron's financial health. … One such witness, Carol Baxter, is the widow of Skilling's best friend, dealmaker Cliff Baxter, who committed suicide in early 2002, as investigations of the company's collapse into bankruptcy protection heightened. Carol Baxter said she discussed Skilling's exhaustion with him three months before he abruptly resigned from Enron in August 2001 -- offering a measure of support for Skilling's statement that he departed for personal reasons, not because he knew the company was on the verge of disaster, as prosecutors contend. … Skilling's former wife, Susan Skilling Lowe, took the witness stand to tell jurors that she sold $14 million worth of Enron options in November 2000 without talking to Skilling about the sale. Prosecutors pointed out that Skilling sold $21 million in Enron stock a month earlier and that his current wife, Rebecca Carter, sold $1.65 million one month later -- all around the time a deal to sell Enron's underperforming international assets cratered. Lowe disputed the idea of a link, saying she rarely talked with Skilling except on issues related to their three children."

The New York Times (4/21, Barrionuevo) reports that during his testimony "Skilling accomplished much of what he needed to do in front of the jury hearing his criminal case, avoiding any major gaffes while staunchly maintaining his innocence. … But in the end, the performance by Enron's former chief executive was far from perfect, and may have revealed to the jury more than he and his lawyer wanted." The Times continues, "The portrait of Mr. Skilling that emerged in his criminal fraud trial here was more complex than the caricature frequently drawn of him as the greedy, arrogant executive with a Darwinian view of the world who transformed Enron from a humdrum pipeline company into a renowned energy-trading colossus. … Instead, Mr. Skilling showed himself to be a vulnerable, emotional, even affable character who saves his hostility, these days, for the government that charged him with defrauding Enron's investors. … But jurors in the federal trial also saw a side of him that had increasingly bothered managers at Enron. This was a man who did not like to be questioned, to be told he was wrong, to be asked, even, just to listen. … And whether Mr. Skilling helped himself on the stand more than he hurt his defense will ultimately depend on how the jury weighs those two sides of his personality."

The Houston Chronicle (4/21, Roper, Fowler) reports, "The gamble by the defense to put Jeff Skilling on the stand as its key weapon to fight the 28 charges against him may have paid off, legal observers said. … 'Did it work? Absolutely,' said Houston criminal defense attorney Brian Wice, who has been monitoring the trial daily, including Skilling's final day on the stand today." The Chronicle adds, "Still, some believe prosecutors did exactly what they needed to do — give the strong-willed Skilling just enough room to outsmart himself. … 'For days he's been arguing two-plus-two is not really four, that everything was not as it appeared on its face and that only a very few smart people could understand,' said Michael Wynne, a former federal prosecutor who also is a regular observer of the trial."

Sentencing Of Former Qwest Official Delayed. The AP (4/21, Shore) reports, "A federal judge agreed Wednesday to a three-month delay in sentencing ex-

DOJ_NMG_0026258

Qwest finance chief Robin Szeliga for insider trading but rejected a prosecutor's request to put it off until year end." The AP continues, "U.S. Attorney Bill Leone sought the postponement because of Szeliga's ongoing cooperation with an insider trading case against former Chief Executive Officer Joe Nacchio, which has yet to be set for trial. Under the terms of her plea agreement, Szeliga's prison term could be reduced if her cooperation is deemed substantial." The AP adds, "U.S. District Judge Walker Miller told Leone the case needed to completed in a timely manner and refused to delay Szeliga's sentencing past July, a deadline set in her plea agreement. … Szeliga pleaded guilty July 14 to a single count of insider trading amid the multibillion-dollar accounting scandal at Denver-based Qwest Communications International Inc. She admitted improperly selling 10,000 shares of Qwest stock in 2001 for a net profit of $125,000. … Prosecutors alleged Szeliga sold the stock based on nonpublic information that some Qwest business units would fail to meet revenue targets and that nonrecurring revenue was improperly used to meet those goals. … Szeliga faces up to 10 years in prison and $1 million fine, although sentencing guidelines recommend a term of 15 months to 21 months."

Freddie Mac Settles Shareholder Lawsuit For $410 Million. The New York Times (4/21, 1.19M) reports, "Freddie Mac, the mortgage financer, agreed yesterday to pay $410 million in cash to settle a shareholder lawsuit over accounting mistakes that led it to restate three years of earnings." The settlement "will reduce first-quarter net income for 2005 by about $220 million after tax, Freddie Mac, a government-chartered company, said yesterday." Shareholders "sued Freddie Mac after the company's directors found executives had manipulated accounting rules to reduce earnings volatility." The Washington Post (4/21, Day, Shin, 744K) also reports the story.

Rate Of CEO Pay Increases Slowing Despite Raymond, McGuire Earnings. NBC Nightly News (4/20, story 7, 2:25, Williams, 9.87M) reported on the "stratospheric sums that some CEOs make in this country," such as Lee Raymond, "ExxonMobil's recently retired CEO -- his salary alone was over $51 million last year; then there's William McGuire, CEO of United Health Group -- he received stock options that could end up totaling a staggering $1.6 billion." NBC (Thompson) added, "Though both Exxon and United Health Care prospered, and so did their shareholders under Raymond and McGuire's leadership, some still see their huge compensation packages as CEO pay run amok." Prof. Rakesh Khurana, Harvard Business School: "We've seen in the cases of Exxon for example that the compensation of CEO is largely being determined by events that are outside of the CEO's control, in this case the price for oil." Thompson: "And those who determine the CEO's pay, the board of directors, are all too often people chosen by the CEO." But "the rate of pay has slowed. A shareholder advocacy group reports CEO packages went up by a median of 11% last year, compared to 30% the year before. Still, the outrage remains, with the average CEO taking home by one estimate 431 times what the average worker does."

CRIMINAL LAW:

Gonzales Provides Graphic Description Of Online Child Porn. Attorney General used what the AP (4/21, Sherman) calls "strikingly graphic language" to "focus attention on online child pornography and said Internet services companies are not doing enough to combat the problem." In a speech at the National Center for Missing and Exploited Children in Alexandria, Gonzales said that while his descriptions "could make people uncomfortable" he wanted "to make sure people knew what was going on." After describing some of the material he has seen, Gonzales noted, "Viewing this was shocking and it makes my stomach turn." Gonzales said "said some investigations have been hampered by the failure of Internet service providers to retain certain records long enough to help authorities identify purveyors of child pornography. He did not propose a remedy Thursday."

CNN.com (4/21, Frieden) reports, "To highlight the Justice Department's growing concern, (Gonzales) traveled to the National Center for Missing and Exploited Children in Alexandria, Virginia, to deliver his speech. … Gonzales praised the center for its help, but said the public 'does not yet appreciate the scope, the nature and the import of this criminal activity and the threat it poses to our kids.'" CNN adds, "The attorney general said one of every five children online is now solicited. He cited a recent estimate that 50,000 predators are online at any given time prowling for children. … Gonzales said the public must not consider child porn a victimless crime. … 'There are images of graphic sexual and

DOJ_NMG_0026259

physical abuse of innocent children, even babies,' he said. 'It is brutal; it is heinous, and it is criminal.'"

CNET News (4/21, Broache) reports, "The failure of some Internet service providers to retain user logs for a 'reasonable amount of time' is hampering investigations into gruesome online sex crimes," Gonzales said. "'The investigation and prosecution of child predators depends critically on the availability of evidence that is often in the hands of Internet service providers,' Gonzales said … 'Record retention by Internet service providers (that is) consistent with the legitimate privacy rights of Americans is an issue that must be addressed,' he added." CNET adds, "Congress is now considering policy changes … At least one U.S. House of Representatives leader indicated he is mulling legislation that would require data retention. The topic surfaced at two hearings--convened recently by a House subcommittee--about online sexual exploitation and child pornography. Investigators of Internet sex crimes said they would like to see at least several months--and ideally, a year or more--of mandatory records retention. … The Justice Department and the Federal Bureau of Investigation took heat from subcommittee politicians for failing to send representatives to either hearing. Gonzales' talk was likely an attempt to show that the Bush administration is serious about taking new steps to root out child pornography. His remarks focused largely on what he termed an 'epidemic' in the movies and images depicting the sexual abuse of children, exacerbated by the Internet's ability to create an anonymous haven for pedophiles."

IDG News Service (4/21, Gross) reports that the Justice Department "will push for new legislation that requires all commercial Web sites to label every page that includes adult material in an effort to protect Web surfers from pornography, the agency announced today. … The Justice Department, in an initiative aimed at child pornography, also wants legislation that would prohibit commercial Web sites from initially displaying sexually explicit material without further action, such as an additional click, by the viewer. " IDG adds, "Gonzales also called for the U.S. Congress to triple current criminal fines levied against Internet service providers that knowingly fail to report child pornography on their systems. The new fines would be $150,000 for the initial violation and $300,000 for each additional violation. … The Justice Department wants Congress to add the new provisions to the Children's Safety and Violent Crime Reduction Act, passed by the House of Representatives in March. The bill, now pending in the Senate, is a wide-ranging proposal targeting sex offenders, gangs, and child pornography. The bill requires local law enforcement agencies to make sex offender registries available online, and it increases the penalties of sex offenses against children."

AIPAC Classified Documents Case Raises Concerns Among Lobbyists, Journalists. In a front-page story, the Washington Post (4/21, Birnbaum, 744K) that the prosecution of former AIPAC officials Steven Rosen and Lawrence Weissman "has roiled official Washington" and "spotlighted a murky type of advocacy that Rosen helped create -- an amalgam of intelligence gathering and lobbying on behalf of a narrow interest. Lobbyists who routinely pass along sensitive information wonder how much leeway they will have to do their jobs if Rosen is convicted. The case has also angered some journalists who worry that it could further cool their already strained relationships with national security sources in the aftermath of the CIA leak probe." The Post notes that defense lawyers "have enlisted a surprising ally: Viet D. Dinh, former head of the Justice Department's Office of Legal Policy and an author of the Bush administration's USA Patriot Act. Dinh helped write a memorandum that called for the dismissal of the Espionage Act charges against the lobbyists."

Despite Potential Violence, Sex Offender Registries Seen As Here To Stay. The AP (4/21, Crary) reports, "The killings of two men listed on the state of Maine's Internet sex offender registry may offer a grim lesson about the consequences of such registry laws, but defense lawyers and crime researchers question whether a thoughtful national debate on the subject is possible." The AP continues, "In a climate where politicians seek ever-tougher punishment and ostracism of sex offenders, they say, few are willing to examine the fairness and risks of registry requirements. … 'We've basically dehumanized these people with words such as "predator,"' said psychiatrist Fred Berlin, founder of the Johns Hopkins Sexual Disorders Clinic in Baltimore. … 'Every decent human being wants to protect children,' he said, but even suggesting that criminals who have done their time are entitled to rebuild their lives can tarnish a politician. … 'It's close to heresy,' Berlin said." The AP notes, "Every U.S. state has an online registry with photographs and personal information about convicted sex offenders, often to be posted for at least 20 years and

DOJ_NMG_0026260

sometimes for life. Many states, including Maine, provide offenders' exact street address; that information apparently was used by a Canadian man to locate and fatally shoot two registered sex offenders Sunday. … There have been many cases of vigilantism in the past, ranging from harassment and arson to the slayings of two convicted child rapists in Washington state. A man mistaken for his sex-offender brother was nearly beaten to death with a baseball bat in New Jersey - the state where the 1994 killing of 7-year-old Megan Kanka by a neighbor gave rise to the nationwide trend of 'Megan's Law' registries."

Prosecutor Grills Former Nevada Commissioner For Second Day. The AP (4/21, Ritter) reports, "Former Clark County Commissioner Dario Herrera finished a grueling second day of testimony Thursday, declaring himself not guilty of federal corruption charges. … Prosecutor Daniel Schiess spent the day chipping away at Herrera's story…as he tried to shake Herrera's insistence that he never traded votes for money from strip club operator Michael Galardi or Galardi's lobbyist, Lance Malone." The AP adds, "Schiess led Herrera through detailed accounting of his personal and campaign finances, and got Herrera to admit that while he knew Galardi paid for golf outings and lap dances, Herrera never reported them. In one FBI telephone wiretap recording, Galardi offers to give Herrera a Lincoln Navigator. … In another, Herrera solicits thousands of dollars in campaign contributions from Galardi and Galardi employees."

Chicago FBI Shifting Resources To Corruption Probes. The Northwest Indiana Times/Medill News Service (4/20, McEvoy) reported that over the past two years, "the Chicago FBI has moved agents and money from its other law enforcement branches, including drug enforcement and organized crime, in the fight against public corruption, an agency spokesman said Wednesday. But no cuts were made in the anti-terrorism unit, said Ross Rice, special agent spokesman for the Chicago FBI." The Times noted, "Despite former Gov. George H. Ryan's guilty verdict, the FBI says it isn't resting on its laurels. 'I don't see it letting up any time soon,' said Marshall Stone, supervisory special agent for the Springfield FBI. When asked how many Chicago agents are presently working on public corruption cases, Rice said, 'Not enough.' Robert D. Grant, special agent-in-charge of the Chicago FBI, on Monday said he hoped the Ryan verdict would signal the end of politics-as-usual in Illinois. … But Rice was unsure it will change a culture of political corruption."

Ryan Lawyers Sought Dismissal Of Six Jurors. The Chicago Tribune (4/21, Higgins, 643K) reports, "Lawyers for former Gov. George Ryan argued that jurors who failed to disclose arrests, including some that occurred more than 20 years ago, were liars who could not be trusted to render a fair verdict, according to newly unsealed court filings. Ryan's defense team said that five such jurors — and another juror who failed to disclose her involvement in civil litigation — should have been removed from the case, which would have left fewer than 12 jurors to deliberate and triggered a mistrial. But in a key legal victory, federal prosecutors persuaded U.S. District Judge Rebecca Pallmeyer to use a more delicate calculus to decide each juror's fate."

Squitieri Pleads Guilty To Racketeering, But Not To Running Gambino Family. The AP (4/21, Neumeister) reports, "The reputed head of the Gambino crime family pleaded guilty Thursday to racketeering and extortion charges after getting an assurance from a judge that he was not saying he was a Gambino." Arnold Squitieri "entered the plea in U.S. District Court in Manhattan in a deal that calls for a sentence ranging from seven years and three months to nine years." The AP notes, "The indictment was brought last year, when prosecutors announced that they had built a case with the help of an undercover FBI agent who infiltrated the Gambino organization and became so well trusted that he was offered membership. The indictment charged 32 defendants…with engaging in racketeering crimes for more than a decade." The New York Daily News (4/21, 729K) reports the story under the headline "Gambino? What's a Gambino?"

Leader Of Violent New Jersey Gang Sentenced To 18 Years In Prison. The Newark Star-Ledger (4/19, Coscarelli, 420K) reported, "The head of a violent Jersey City gang was sentenced yesterday to 18 years in federal prison for conspiring to assault and murder his rivals. 'I'm not sure that anything less than keeping you off the streets for as long as I can is going to be a deterrence,' Senior U.S. District Judge William Bassler told Tommy Terrell Thompson," and Assistant US Attorney Karl Buch "described Thompson, founder and five-star general of the Sex, Money, Murder faction of the Bloods gang, as a 'ruthless leader.'"

DOJ_NMG_0026261

The Star Ledger noted, "In July, Thompson pleaded guilty to conspiracy and related charges, including ordering the December 2003, shooting of a wheelchair-dependent man who he thought had cooperated with the FBI and Hudson County law enforcement."

Former President Of Kansas City Charter School Indicted For Embezzlement, Fraud. The Kansas City Business Journal (4/21) reports James Elliott Coleman, former head of Westport Allen Village School "was indicted Thursday on a charge of embezzling" $47,368 from the charter school. A federal grand jury also indicted him "on a separate charge of engaging in mortgage and investment fraud schemes." Coleman had held "a variety of positions for the school, including business manager, treasurer and president. He resigned as president in May 2003." The school opened under the sponsorship of the University of Missouri-Kansas City and was operated by Edison Schools. It "continues to operate and had 2005 enrollment of 422 students." Coleman is accused of making "unauthorized withdrawals from the school's account." The mortgage and investment fraud indictment accuses him of using "proceeds from the investment fraud scheme to repay money embezzled from the charter school."

MySpace Posting Leads Kansas Police To Thwart School Shooting Plot. In a story including a comment by FBI Spokesman Richard Kolko about the response to school attack threats, ABC World News Tonight (4/20, story 10, 2:20, Vargas, 8.78M) reported, "It was seven years ago today that students went on a murderous rampage at Colorado's Columbine high school. Today, there is breaking news from rural Southeast Kansas, with an alleged plot with chilling echoes to that tragedy. Five high school boys have been arrested, accused of plotting to kill fellow classmates. Law enforcement was tipped off to the plot after one of the teens revealed it on" MySpace.com. ABC (Thomas) added that "Cherokee County sheriffs say they discovered guns, knives and ammunition in the bedroom of one of the suspects. According to a recent Justice Department study, school shootings have been declining. … The primary reason, according to authorities: parents, teachers and law enforcement are much more sensitive to any warning signs." FBI Spokesman Richard Kolko: "Anytime information is reported with any threat-type information, whether it's related to schools or any other areas, that law enforcement and its partners, FBI, domestic, state and local, has to take these very seriously." NBC Nightly News (4/20, story 8, 0:25, Williams, 9.87M) and the AP (4/21) also reported on the thwarted Kansas plot.

FBI Assisting Investigation Of Threat At Minnesota School. The Grand Forks (MN) Herald (4/21, Lee) reports, "FBI agents are assisting Red Lake Tribal Police in an investigation involving reported threats made by students at the Red Lake school," where student Jeffrey Weise killed nine people in March 2005. "Paul McCabe, spokesman for the FBI, said today that the agents are assisting Red Lake police but said he could not comment on the situation. McCabe referred a Herald reporter to the Red Lake police." The Herald adds, "A school employee said the schools, including a separate building for kindergarten and Head Start about a mile from the high school and middle school, have been in 'lockdown' since Tuesday because of the reported threats."

Robberies On DC-Area Latino Communities On The Rise. The Washington Post (4/21, Vargas) reports on the growing incidence of street robberies among Latino communities in the DC area. The Post reports, "For the Latino community in Prince William County, street robberies have become almost commonplace, so much so that even the most brutal are spoken of in a monotone reserved for the mundane." The Post continues, "Like some of their Asian counterparts who have fallen victim to home invasions because of a tendency to keep their money in their homes instead of banks, Latino immigrants, who often carry large amounts of cash instead of depositing it, have become a growing target in the region, according to police. … Even as Prince William police announced this week that the county's overall crime rate for 2005 dipped to its lowest level in five years, robberies against Hispanics doubled in the county last year. Manassas also experienced a 50 percent increase in robberies, with Latinos being the victims in most cases. … 'These folks, for the most part, make absolutely the perfect victims,' said Maj. Don McKinnon of the Manassas police. 'You have a perfect formula -- a victim who wants no contact with police, who has a lot of money [on him] and who is there on the street.'" The Post notes, "Many area police departments said they do not distinguish robbery victims by ethnicity and could not say whether there have been increases. But Latino day laborers working on homes in Northeast Washington were targeted recently, D.C. police

DOJ_NMG_0026262

said. And in Prince George's County, 448 Hispanics were robbed last year, compared with 289 the year before."

Police Take Evidence From Duke Dorm. USA Today (4/21, Dorell) reports, "Investigators seized an envelope and a news article from the dorm room of one of two suspects arrested in the Duke University lacrosse team rape case." A cab driver "told MSNBC that he was '100%' sure he picked up [Reade] Seligmann and other players at 12:19 a.m., took them to a bank and a hamburger stand, then dropped them off at a Duke dormitory," a timeline that apparently supports Seligmann's innocence.

Sales Of Team Merchandise Boom. The Washington Times (4/21, Lemke) reports that sales of Duke lacrosse merchandise "increased in the past month." Sales have reportedly "more than tripled" in the on-campus stores.

Few Men Contract HIV In Prison. The Washington Post (4/21, Brown) reports, "Although male prisoners have a relatively high rate of HIV infection, very few of them acquire the virus while behind bars." A CDC study reported this finding, which contradicts the stereotype that "prisons are hotbeds of the AIDS epidemic." The Post notes that the study found that, of those inmates who contracted HIV in prison and admitted to having gay sex in prison, "half reported that their partners were prison staff members, not other inmates."

NYTimes Op-Ed Explains Provenzano's Long Success In Eluding Capture. Author Andrea Camillari in the New York Times (4/21) writes that Sicilian mob boss Bernardo Provenzano escaped arrest for 43 years because of a "vast, intricate, durable and invisible web of protection that had been created around him. Much of this network consisted of supporters above suspicion, including prominent politicians, high-level businessmen and successful professionals." She adds that, as original protectors died, the duties of shielding Provenzano passed on to "sons, grandsons, relatives, friends and associates." Until some high-ranking accomplices are caught, "a successor to Mr. Provenzano might use them to similar ends."

Op-Ed Deplores Violent Youth. College instructor Adrienne Washington writes in the Washington Times (4/21) that the DC carjacking spree illustrates that "criminals are getting bolder -- and younger." A security expert in her piece pleads for a "focus on a comprehensive, balanced approach of intervention, prevention and arrest and incarceration." Washington concludes, "No jobs, no skills, no moral compass and the lack of political will is an unsavory recipe for real and random acts of 'Grand Theft Auto.'"

CIVIL LAW:

Judge Rules Air Force Ignored FOIA. The AP (4/21, Locy) reports, "The U.S. Air Force engaged in a pattern of ignoring requests for the release of classified documents dating to the Vietnam War, establishing a response rate that is worse than the CIA's, a federal judge ruled." The AP continues, "U.S. District Judge Rosemary M. Collyer ruled Wednesday in favor of the Washington-based National Security Archive, the largest non-governmental library of declassified documents, in significant parts of a lawsuit the group filed against the Air Force in 2005." The AP adds, "Collyer found that the Air Force had no defense - or essentially conceded - that it had failed to respond to requests under the Freedom of Information Act for up to 18 years in at least one case. The Air Force also ignored appeals of its denials of access to records for up to nine years, she said. … But the judge refused to order the Air Force to immediately turn over records pertaining to 82 pending requests by the National Security Archive. Instead, she ordered the Air Force to determine which portions of the documents could be declassified and released to the archive. … She also ordered the service to send an officer to a court hearing on May 22 who has authority "to order that things be done." … Attorney David P. Dean, who represents the archive, said Collyer's message is clear: 'The time for the Air Force to comply with FOIA has finally arrived, and this court is watching.'"

Judge Reduces Amount General Dynamics Must Pay For Breaking Contract. The Washington Post (4/21, Merle) reports, "A federal judge has reduced from $137.9 million to $19.87 million the amount that General Dynamics Corp. must pay for breaking a contract with onetime partner Final Analysis Communication Services Inc., a small Lanham satellite firm." The Post continues, "The case centered on whether General Dynamics, which has headquarters in Falls Church, violated agreements to help Final Analysis develop a $400 million project to launch low-flying satellites for data transmission, including paging and text-message services. A jury ruled in favor of Final Analysis after a seven-week trial in September."

DOJ_NMG_0026263

The Post adds, "In his ruling Monday, U.S. District Judge Peter J. Messitte also certified the jury's decision that Final Analysis pay General Dynamics $8 million from a countersuit, reducing the total amount due the smaller firm to $11.87 million, according to the court documents. An appeal of the judge's ruling is expected, the company said in a Securities and Exchange Commission filing yesterday."

NCLB Has Produced Windfall For Contractors. The AP (4/21, Feller, Welsh-Huggins) reports that the No Child Left Behind law has "benefited an industry of vendors, who collect public money and help schools meet the law's requirements. Revenues for products and services sold to public schools hit almost $22 billion in 2004-05, according to Eduventures, a market research company. That was up 6 percent from the year before, and revenues are expected to keep growing at that kind of rate. … In particular, money is flowing to testing, tutoring and teacher training. All three areas have direct ties to deadlines under the No Child law."

CIVIL RIGHTS:

Indiana SAC Touts FBI Civil Rights Investigations. The Northwest Indian Times (4/20, Robinson) reported, "Investigating civil rights violations is a higher priority for the FBI than violent crimes and the agency wants the area to know all about it." FBI Indiana SAC Keith Lordeau "came on Wednesday to Merrillville to speak to media representatives about the different aspects of civil rights violations. If anyone suspects their civil rights have been violated, they don't have to wait for another law enforcement agency to contact the FBI. The victim can do that directly by calling the Merrillville office…Lordeau said." The Times notes, "Local FBI investigator Michael Prendergast said he's involved with the shooting in Gary that sparked several citizen protests," and "Lordeau said in 2005, the FBI nationwide looked into 1,124 color-of-law cases, which represent 67 percent of all civil rights investigations."

The Northwest Indiana Post-Tribune (4/20, Quinn) also reports on Lourdreau's appearance in Merryville and adds that Special Agent Tom Gancarz said that "the FBI has also turned its sights to involuntary servitude or slavery, otherwise known as human trafficking." Gancarz noted that "as many as 18,000 to 20,000 people per year are brought into the United States not only illegally, but against their will. 'We need to be concerned,' he said, pointing out that there have been reports of human trafficking in Northwest Indiana."

Governor Bush Talks To Protestors About Boot Camp Death. The AP (4/21, Fanta) reports, "A group of college students ended a two-day sit-in at (Florida) Gov. Jeb Bush's office Thursday after he met with the parents of a teenage boy who was beaten at a boot camp and later died." The AP continues, "Parents Gina Jones and Robert Anderson said they were happy to talk with Bush about their grief over their son's death in January. The boy died a day after guards were videotaped beating, kicking and dragging him at a juvenile boot camp. … 'I was shocked he wanted to talk to me, after four months,' Jones said after the hourlong meeting." The AP adds, "The parents have criticized officials for what they say is a cover-up of the events leading to the death of 14-year-old Martin Lee Anderson. … Benjamin Crump, the family's attorney, said the governor reported that he was pressing investigators. … Bay County has closed its boot camp, and the House Justice Appropriations committee wants to replace camps statewide with residential programs. The U.S. Justice Department is also investigating possible civil rights violations in the case."

The Los Angeles Times (4/21, Hollis, 958K) reported, "An apologetic Gov. Jeb Bush met privately Thursday with the parents of a teen who died after a beating by guards at a Panama City boot camp, and rejected criticism he hasn't done enough to bring justice in a case that has inflamed Florida's black community." Benjamin Crump, the family's attorney, said, "He offered his condolences and apologized. He assured us they [governor's office employees] were every day calling down to the special prosecutor's office, [offering] all the resources of the state of Florida … to get the justice sooner than later." The Times adds that although "the governor's remorseful pose with Anderson's parents and their attorneys was intended to ease tensions, it had little effect on some black political leaders throughout the state. Bush made no statements after the hourlong meeting."

Court Upholds School Ban On Anti-Gay T-Shirt. In a 2-1 decision the 9th US Circuit Court of Appeals has ruled that schools in the western US can forbid students from wearing T-shirts denigrating gay and lesbian students. The Los Angeles Times (4/21, Weinstein, 958K) reports that the "sharply divided" court "said that a T-shirt that proclaimed "Be Ashamed, Our School Embraced What God Has

DOJ_NMG_0026264

Condemned' on the front and 'Homosexuality Is Shameful' on the back was 'injurious to gay and lesbian students and interfered with their right to learn.' The court said that the shirt can be barred on a public high school campus without violating the 1st Amendment."

Neuarth Says South Dakota Is National Battleground For Abortion. Al Neuarth writes in USA Today (4/21, 2.31M) that South Dakota "has become the nation's battleground over whether abortion is the answer for women with unwanted pregnancies. … The outcome ultimately may have national impact on the 1973 Roe v. Wade U.S. Supreme Court decision giving women the right to terminate pregnancy." Neuarth adds, "My lifelong belief is that a woman's right of privacy includes abortion. But my wife Rachel and I are the adoptive parents of six precious chosen children. From those two perspectives, the best possible outcome of this issue would be encouragement and support for pregnant women everywhere who are willing to carry an unwanted embryo to birth, and then finding proper adoptive parents."

ANTITRUST:

Former South Carolina School Employee Indicted For E-Rate Fraud. The AP (4/21) reports, "A former Bamberg District 1 employee has been indicted on charges she defrauded a federal program that helps poor schools and libraries connect to the Internet out of nearly half a million dollars, U.S. Justice Department officials announced Thursday." The AP continues, "Cynthia Ayer is the former director of technology for the district. Between 1999 and 2003, she used her position to submit fraudulent applications for the E-Rate program and award technology contracts to her own company, Go Between Communications, according to an indictment returned Wednesday. … E-Rate is managed by the Federal Communications Commission's Universal Service Company. During that time, Ayer submitted applications to that agency for more than $3.5 million to and received $468,496 in payments." The AP adds, "If she is found guilty, Ayer faces a maximum of five years for each count of mail fraud committed before July 30, 2002, and 20 years for each count committed on or after that date, as well as a $250,000 fine, officials said. Each count of wire fraud carries a maximum penalty of 20 years and a $250,000 fine. … A total of 11 individuals and 10 companies have been charged as part of an ongoing federal investigation into the E-Rate program, officials said. So far, six companies and three individuals have either pleaded guilty, agreed to plead guilty or have entered civil settlements. The defendants have agreed to pay fines and restitution totaling more than $40 million, and two people have been sentenced to six years of prison time, officials said."

The Internet News (4/21, Mark) reports, "According to a 12-count indictment returned by a Columbia, S.C., federal grand jury, Cynthia K. Ayer used her position as the technology director of the school district to award $3.5 million of E-rate contracts to her company, Go Between Communications, without competitive bidding. … 'Committing fraud upon the E-Rate program harms already underprivileged school districts,' Thomas O. Barnett, assistant attorney general in charge of the DoJ's Antitrust Division, said in a statement. 'The Antitrust Division will continue to vigorously pursue those who cheat the competitive process and take advantage of this federal program.'"

FTC Conditionally Approves Boston Scientific-Guidant Deal. The New York Times (4/21, Meier, Bajaj) reports, "Boston Scientific, which paid top dollar in January for the Guidant Corporation, the troubled maker of heart devices, may not have the luxury of sitting back and enjoying its purchase. … Since January, when it offered $27 billion to wrest Guidant from a competing bidder, Johnson & Johnson, Boston Scientific has seen warning signs that the market for heart defibrillators, Guidant's main revenue generator, may be cooling off." The Times adds, "The Federal Trade Commission approved the deal yesterday with certain conditions, and Boston Scientific said it expected to close the transaction today."

The AP (4/21, Press) reports, "The FTC voted 4-0, with one member recusing herself, to consent to conditions imposed on the deal by the commission staff in an agreement announced April 6. The approval also clears the way for a related third-party deal involving Abbott Laboratories Inc." The AP notes, "Boston Scientific has said the FTC's conditions did not require substantial changes to the deal the Natick-based company reached in January to end a nearly two-month bidding war for Guidant with Johnson & Johnson. … The combined company is expected to surpass Fridley, Minn.-

DOJ_NMG_0026265

based Medtronic Inc. as the world's largest maker of cardiovascular devices."

Dow Jones (4/21, Kamp) reports, "The FTC required Boston Scientific to sell all assets, including intellectual property, related to Guidant's vascular business to a third party - Abbott - enabling that third party to sell multiple vascular products, including a key stent device. … Boston Scientific and Abbott plan to jointly market Guidant's 'Xience' stent, and Boston Scientific said Tuesday it expects to launch the device in Europe at the end of the third quarter or the beginning of the fourth quarter. Stents are tiny mesh tubes used to prop open arteries."

Bloomberg (4/21, Goldstein) reports, "Boston Scientific, already the biggest maker of stents for the U.S., would immediately become the second-biggest producer of heart-rhythm devices behind Minneapolis-based Medtronic Inc. Doctors annually implant about $10 billion of the silver dollar-sized devices, including pacemakers for speeding up heart rates that are too slow and defibrillators for electrically shocking faltering hearts into a healthy rhythm."

JP Morgan Settles IPO Case For $425 Million. The Wall Street Journal (4/21, Smith and Sidel) reports, "J.P. Morgan Chase & Co. agreed to pay $425 million to settle civil charges of improperly awarding hot new stock issues during the market bubble." The Journal writes, "The lawsuit accused underwriters of improperly pumping extra air into the stock-market bubble in 1999 and 2000 by requiring investors who got shares of hot initial public offerings to buy more shares at higher prices once trading began." The New York Times (4/21, Dash and Anderson) writes that Morgan "is the first" of 55 investment bank defendants to settle. The Times adds that the large amount "could set the stage for a multibillion-dollar total settlement." It theorizes that Morgan settled so soon because of "lessons learned" from paying "$2 billion, the most of any bank, as the last to resolve a class action stemming from the collapse of WorldCom" in 2005.

Bloomberg (4/21) reports, "JPMorgan, the No. 3 U.S. bank by assets, would be the first to resolve the allegations, leaving Morgan Stanley, Credit Suisse, and Goldman Sachs Group Inc. among the remaining defendants. The agreement may pressure more banks to settle, as happened in suits against Enron Corp. and WorldCom Inc." Bloomberg notes, "Seventeen banks that were sued over the WorldCom accounting fraud paid a total of more than $6 billion after Citigroup Inc. was first to settle. The largest payment in a similar class- action was the $7.2 billion accord in a securities-fraud case brought by Enron investors. Most was paid by Enron's banks."

The AP (4/21, Powell) reports, "The civil suits against JPMorgan Chase are among more than 300 brought by Milberg Weiss alleging that companies that went public and the underwriters who helped them do it manipulated the market. … The suits allege that JPMorgan Chase and 54 other underwriters induced customers who received allocations of IPOs to place orders for additional shares in the aftermarket, artificially inflating the share prices. They also allege that the compensation received by the underwriters was concealed."

Schumer Says Congress Should Consider Breaking Up Oil Giants. The Buffalo News (4/21, Turner) reports, "Sen. Charles E. Schumer says competition in the gasoline business has been undermined by mergers and Congress should consider breaking up the combines." The News continues, "The New York Democrat also asked the Federal Trade Commission to monitor the relationship between U.S. refining capacity and gasoline prices to ensure that the new oil conglomerates artificially drive up prices. … 'In general, after oil companies switch to producing their summer blends refineries typically operate at or above 90 percent,' Schumer said. 'This is a regular occurrence.' … 'This year however, refining capacity is still hovering at 85 percent which leads some experts to believe that the oil companies may be dragging this along to drive up prices.'" The News adds, "Schumer, a member of the Judiciary Subcommittee on antitrust issues, said 'oil companies should be using their maximum refining capacity instead of possibly minimizing it, and the FTC needs to make sure this process is completely transparent so that prices don't continue to shoot up.' … He said he hopes that either the Senate Commerce Committee headed by Ted Stevens, R-Alaska, or the Energy Committee chaired by Sen. Pete V. Domenici, R-N.M., would call hearings on the surge in gasoline prices and summon the FTC in to explain what it is doing about it. … The commission has not cited an oil company for anti-competitive behavior since 2001. That resulted from an investigation started during the Clinton administration."

Sprint Will Buy UbiquiTel. The Wall St. Journal (4/21, Sharma) writes, "U.S. wireless carrier Sprint Nextel Corp. agreed to acquire regional affiliate UbiquiTel Inc. for

DOJ_NMG_0026266

about $1 billion, ending litigation between the companies." Sprint merged with Nextel in 2004. The Journal writes, "Several affiliates, including UbiquiTel, sued Sprint after the Nextel merger was announced, saying the deal would violate Sprint's pledge not to compete with affiliates in their territories. By acquiring UbiquiTel, Sprint will bring its litigation with that company to an end."

New York Court Quashes Microsoft Bid For IBM Documents In EU Case. The AP (4/21) reports, "A U.S. court in New York on Thursday quashed a Microsoft Corp. subpoena for International Business Machines Corp.'s documents related to the software company's European antitrust case." The AP continues, "Judge Colleen McMahon said Microsoft's subpoena amounted to a "blatant end run" on the European Commission's authority. The judge said that the Brussels-based regulator strongly opposed Microsoft's request, and that enforcing such a subpoena could harm U.S. sovereignty if a foreign court were used to obtain documents in a U.S. proceeding." The AP adds, "Redmond, Wash.-based Microsoft says the commission is colluding with Armonk, N.Y.-based IBM and other rivals, and denying the company a fair chance to review key evidence. The regulator has refused to give Microsoft access to some documents, citing confidentiality concerns and rivals' 'fear of retaliation,' according to a Boston court ruling earlier this week in which a judge quashed a similar Microsoft request for documents held by Novell Inc. … Last month, a U.S. federal court in California rejected Microsoft's request for documents from Oracle Corp. and Sun Microsystems Inc. Microsoft appealed that decision, but then withdrew the appeal following the New York court's ruling."

ENVIRONMENT:

US Fines Louisiana Refinery For Pollution Violation. The AP (4/21) reports, "Chalmette Refining was ordered to pay a $200,000 fine stemming from a water pollution violation in 2000." The AP continues, "The refinery pleaded guilty on Jan. 25 to a one-count violation of the Clean Water Act. The case stemmed from a benzene discharge into the Mississippi River that appeared to be affecting the water at the St. Bernard Parish Water Treatment Plant." The AP adds, "A treatment plant worker noticed the uptick in benzene in the water coming into the plant from the river and was the first to notify the Louisiana Department of Environmental Quality. Water plant workers shut down the treatment plant's intake quickly to minimize the threat the benzene leak posed to residents, authorities said. … U.S. Attorney Jim Letten said Wednesday that when Chalmette Refining engineers discovered the leak they repaired it right away, but the discharge of benzene into the river and the fact that a water treatment worker reported it before the company meant a violation still took place."

Man Pleads Guilty To Violating Endangered Species Law. The Palm Beach Post (FL) (4/21, Prohaska) reports, "A former Port St. Lucie (FL) man who admitted to using a Web site called Deadzoo.com to sell such items as baby tiger mounts and leopard skins in violation of federal endangered species laws was sentenced Thursday to more than two years in prison." The Post continues, "After he spends 25 months in federal prison, Kevin McMaster, 35, then must serve three years of supervised release, U.S. District Judge Donald Graham ordered Thursday during a hearing in Miami. … McMaster has shut down his Web site and no longer works at a Port St. Lucie store on Bayshore Boulevard called Exotic and Unique Gifts." The Post adds, "McMaster, who now lives in Pennsylvania, pleaded no contest in January to two counts of violating the endangered species act by selling or offering for sale endangered or threatened wildlife through interstate commerce. He also pleaded no contest to two counts of transporting endangered or threatened species that was knowingly sold in violation of federal law. … Federal prosecutors and attorneys with the U.S. Justice Department alleged that in 2003 and 2004, McMaster either sold or offered for sale across state lines more than $200,000 worth of endangered species, including tiger, snow leopard and jaguar skins, an elephant trunk, gorilla and tiger skulls and baby tiger mounts. … Federal agents began investigating after an undercover U.S. Fish and Wildlife Service investigator received an unsolicited email from McMaster offering 'cat skins for sale,' according to prosecutors."

Spanish Fishing Magnate Charged With Illegally Importing Protected Seabass. The AP (4/21, Anderson) reports, "A Spanish fishing magnate charged with illegally importing more than 26 tons of protected Chilean seabass pleaded not guilty Thursday in his first appearance in a U.S. courtroom (in Miami)." The AP continues, "A federal magistrate judge set bond at $500,000

DOJ_NMG_0026267

for Antonio Vidal Pego, who was indicted along with the Uruguayan company Fadilur S.A. by a U.S. grand jury last September. Vidal, who owns a large commercial fishing fleet, was likely to be released later Thursday or Friday, his attorney said. … The indictment in September marked the first time the United States has brought criminal charges for illegal importation and sale of the Chilean seabass, also known as the Patagonian and Antarctic toothfish - a species that has been overfished and is the subject of international protection efforts." The AP adds, "Vidal faces up to 35 years in prison and $1 million in fines if convicted on all counts, according to the U.S. Justice Department. … Vidal and Fadilur S.A. attempted to import about 53,000 pounds of seabass valued at nearly $315,000 from Singapore to Miami, according to the indictment. Vidal is also charged with obstruction of justice and false labeling. … Vidal was arrested Wednesday after arriving at Miami International Airport. He had been an international fugitive before that, with authorities on three continents searching for him and a warrant for his arrest circulated on Interpol."

New Research Shows Global Warming Will Not Be As Severe As Predicted. Duke University scientists announced yesterday announced that the effects of global warming may not be as dramatic as some have predicted. The Washington Times (4/21, Harper, 90K) reports, "Using temperature readings from the past 100 years, 1,000 computer simulations and the evidence left in ancient tree rings," the scientists found that "the magnitude of future global warming will likely fall well short of current highest predictions." The Times adds, "Supported by the National Oceanic and Atmospheric Administration, the Department of Energy and the National Science Foundation, the Duke researchers noted that some observational studies predicted that the Earth's temperature could rise as much as 16 degrees in this century because of an increase in carbon dioxide or other so-called greenhouse gases. The Duke estimates show the chances that the planet's temperature will rise even by 11 degrees is only 5 percent, which falls in line with previous, less-alarming predictions that meteorologists made almost three decades ago."

Friedman Urges College Students To Be "Greenest Generation." In his column in the New York Times (4/21, 1.19M), Thomas Freidman urges college students to become "the Greenest Generation," and "build the institutions, alliances and programs that will turn back the black tide of climate change and petro-authoritarianism, which, if unchecked, will surely poison your world and your future as much as fascism once threatened to do to your parents' world and future."

WPost Says Federal Flu Pandemic Plans Are Inadequate. An editorial in the Washington Post (4/21, A22, 744K) notes that none of the flu pandemic plans the federal government has announced "has honestly confronted the central question of any pandemic: what to do with hundreds -- or hundreds of thousands -- of sick people. No one has produced an effective flu vaccine. Until someone does, any contagious flu virus -- or bioengineered virus -- will make many people ill. And neither America's hospitals nor any other part of the medical system is ready to deal with them." The Post concludes, "Until this central question has been dealt with, almost all other federal government 'preparations,' however impressive-sounding, are of lesser importance."

NYTimes Urges Federal Regulators To Check Effectiveness Of Mumps Vaccine. An editorial in the New York Times (4/21, 1.19M) says that the striking thing about the recent mumps outbreak in Iowa "is that it is affecting mainly relatively young and healthy people, a vast majority of whom have been vaccinated at least once with a mumps-containing vaccine, and usually twice. Federal health officials say there is no reason to suspect any problems with the vaccine. … Even so, federal and state health officials will need to look hard for any signs that the mumps vaccine is less effective than we previously thought or that its effectiveness diminishes over time."

FBI/DEA/ATF/USMS:

Miller Defends FBI Request To Search Anderson Papers. NPR's All Things Considered (4/20, Folkenflik) reported, "The Federal Bureau of Investigation wants to comb through thousands of documents from the professional papers of the late investigative reporter Jack Anderson to see whether they contain classified documents. … Some journalists and lawyers say this is the latest effort by the government to intimidate sources and choke the flow of information to the public." But FBI Assistant Director of Public Affairs John Miller "tells NPR the search has nothing to do

DOJ_NMG_0026268

with the media." Miller said, "The discussion in the public front, particularly among journalists, has become a little shrill. I think a number of them want to make this a showdown at high noon between the big, bad FBI and the first amendment and a free press. It has very little to do with that." NPR added, "Despite the resistance from Anderson's family, Miller says the FBI is still in negotiations to inspect the documents and fully expects to do so. Former federal prosecutor Jim Martin says the FBI is on solid ground," but former New York Times general counsel James Goodale "says the FBI's interest is sinister," comparing it to the Nixon administration's attempt to block publication of the Pentagon Papers.

Meanwhile, The (UK) Guardian (4/21, Goldenberg) reports that "the FBI wants to rifle through" Anderson's papers. "Amid a widening crackdown on leaks by the Bush administration, the attempt to investigate a journalist who stopped reporting in 1990 and who has been dead since December caused outrage yesterday from civil libertarians and from Anderson's family." The Guardian adds, "The FBI maintains that it is unlawful for individuals to possess classified documents, and that the material belongs to the government."

FDA Rejects Using Marijuana For Medical Treatment. The FDA's statement on the use of marijuana for medical purposes received wide coverage, with news outlets making nearly 200 references to the story. For example, the AP (4/21) reports the FDA "said Thursday that it does not support the use of marijuana for medical purposes. The FDA said in a statement that it and other agencies with the Health and Human Services Department had 'concluded that no sound scientific studies supported medical use of marijuana for treatment in the United States, and no animal or human data supported the safety or efficacy of marijuana for general medical use.' … The statement contradicts a 1999 finding from the Institute of Medicine, part of the National Academy of Sciences, which reported that 'marijuana's active components are potentially effective in treating pain, nausea, the anorexia of AIDS wasting and other symptoms, and should be tested rigorously in clinical trials.'" The Washington Post, San Francisco Chronicle, Miami Herald, USA Today, Forbes, and Cleveland Plain Dealer are among the news outlets that published in newspapers and/or posted on Web sites the AP story.

The New York Times (4/21, Harris) reports, "Eleven states have legalized medicinal use of marijuana, but the Drug Enforcement Administration and the director of national drug control policy, John P. Walters, have opposed those laws. … Tom Riley, a spokesman for Mr. Walters, hailed the food and drug agency's statement, saying it would put to rest what he called 'the bizarre public discussion' that has led to some legalization of medical marijuana." The Times also reports that Representative Maurice D. Hinchey of New York "said the statement reflected the influence of the Drug Enforcement Administration, which he said had long pressured the FDA to help in its fight against marijuana." The New York Times story also was published in newspapers and/or posted on the Web sites of the South Florida Sun-Sentinel, Arizona Daily Star, Detroit News, Indianapolis Star, and Salt Lake Tribune.

The Washington Times/ UPI (4/21) writes, "Citing conclusions by the U.S. Drug Enforcement Agency, which administers the Controlled Substances Act, the FDA said there is 'sound evidence that smoked marijuana is harmful.'"

Local TV Coverage. KTVU-TV, San Francisco-Oakland-San Jose (4/20, 10:00 p.m.) reported, "Those attending the San Francisco marijuana [conference] will be disappoint today to learn that the Bush administration today dismissed claims of marijuana's medical benefits. The Food and Drug Administration issued a statement saying that no sound scientific study supports the use of medical marijuana. The statement contradicts [a] 1999 finding by the Institute of Medicine. That review found marijuana could help treat nausea and vomiting."

Hells Angels Arrested In San Francisco In Drugs, Money Laundering Investigation. The San Francisco Chronicle (4/21, Van Derbeken) reports two leaders of the San Francisco chapter of the Hells Angels motorcycle club "were arrested Thursday along with several associates of the gang in raids conducted as part of a six-month federal and local investigation into drug trafficking and money laundering in the Bay Area. … The club's president, Joseph Wilson, 35, was arrested along with Jason Peterson, 32, according to sources close to the investigation. … The FBI led the raid, but investigators took part from the Drug Enforcement Administration, San Francisco police, and narcotics task force agents from San Mateo County and West Contra Costa County."

Police Commander Killed In Mexico Following Death Threats. The Los Angeles Times

DOJ_NMG_0026269

(4/21) reports, "The drug war in southern Mexico took a gruesome turn Thursday with the discovery of the decapitated head of a police commander who had resigned his post just days earlier in the face of death threats. 'So that you learn to respect,' read a message scrawled on a red sheet attached to a Guerrero state government building in Acapulco, where passersby in the early morning hours discovered the heads of two men. One was determined to be that of former Cmdr. Mario Nuñez Magana, 35, of the Acapulco Municipal Preventive Police; the other man was not immediately identified."

Canadian Troops Avoid Confrontation With Opium Poppy Farmers In Afghanistan. According to the Canadian Press (4/20), when the commander of Canadian troops in southern Afghanistan's poppy-rich Helmand province "gives his word to village elders that his soldiers are not there to rip up their fields, he means it. In fact, Maj. Bill Fletcher takes great care to ensure his armored vehicles don't wreck the green pastures, or generally cause damage to the plants that produce a scourge of drug addiction in the West. … So far the farmers, whose livelihood depends on the opium crop, haven't caught on to the fact that the Canadian, British and U.S. governments support the eradication efforts with money, training and alternative crop programs."

Number Of Drug Addicts Increases In Afghanistan. The Kashar News (4/20) reports the number of drug addicts "is increasing in northern Kapisa Province, where there is no drug rehabilitation centre to provide them with treatment and bring them out of the quagmire of narcotics. … Chief of the Counter-Narcotics Department Col Abdol Fatah said that the number of druggies went up to 290 from 200 in the last six months. … Director of Public Health Department Mirza Mohammad said the number of addicts was far more than the registered."

Chicago Police Say Tainted Heroin Did Not Deter Drug Users. The Chicago Tribune (4/21, Noel) reports police said that as word "circulated this week of people passing out from potent heroin on Chicago's South Side, drug users didn't recoil with fear. They turned out in droves for a taste. By the end of Wednesday, 25 people between the ages of 17 and 73 had overdosed, including a 51-year-old woman who died at her home."

The Chicago Sun-Times (4/20) writes police "announced Thursday that several suspects are in custody regarding the passing out of tainted heroin to drug users. Chicago Police Supt. Philip Cline met with officials of local health and law enforcement agencies to discuss the recent outbreak of heroin overdoses that have resulted in at least 10 fatalities since early February."

The AP (4/20, Johnson) reports witnesses "told police that dealers in some neighborhoods gave free samples of drugs to entice users. … Victims suffered immediate difficulty breathing after injecting the drug."

Colorado Firefighter Pleads Not Guilty To New Weapons Charges. The Rocky Mountain News (4/21) reports Denver firefighter Stan Ford, "who also faces charges of selling illegal machine guns in another case," pleaded not guilty yesterday "to a 19-count federal indictment accusing him of selling guns without a license," and US Magistrate Judge Michael Watanabe set a tentative trial date of June 12. "In the machine gun case, Ford is scheduled to go on trial May 8. He was accused of selling three illegal machine guns to an undercover FBI informant in 2005."

Tennessee Man Sentenced To Five Years For Weapons Violations. The Cleveland (TN) Daily Banner (4/21, Kaylor) reports, "A Bradley County (TN) man who had a cache of weapons when federal law enforcement authorities searched his home last year, entered a guilty plea to two counts in U.S. District Court in January." The Banner continues, "He was sentenced to spend five-years in a federal prison Wednesday. Donald Pippenger will also be on three-years probation after his release. … When agents served the warrants, they found approximately 20 weapons, including M-16 and M-1 rifles along with ammunition, during their search at Pippenger's residence and those of a relative and an acquaintance. … Also found during the search were components of a meth lab and a fuseless hand grenade, according to reports." The Banner adds, "Pippenger, 50, was arrested in July after Bradley County Sheriff's officers, agents of the Bureau of Alcohol, Tobacco, Firearms and Explosives Division and Cleveland Police officers executed three search warrants in the eastern section of the county."

DOJ_NMG_0026270

IMMIGRATION:

US Signals Aggressive Crackdown On Hiring Of Illegal Aliens. The Washington Post/AP (4/21, A6) reports, "The government plans to crack down ever harder on employers who harbor and hire illegal immigrants, pursuing companies that ignore the law so they can exploit cheap labor." Federal agents Wednesday "arrested seven current and former managers of IFCO Systems, a manufacturer of crates and pallets, on criminal charges, and more than 1,100 people were arrested on administrative immigration charges at more than 40 IFCO sites in the United States." Homeland Security Secretary Michael Chertoff, appearing on ABC News' Nightline (4/20), said the raids were "part of our effort to be strategic in striking at those people who are systematically employing illegal workers as their business model." Chertoff added, "We don't want to go after small-time, ones and twos. We want to look at high impact businesses."

The CBS Evening News (4/20, story 3, 2:20, Pitts, 7.66M) ran a follow-up report on Wednesday's raids on IFCO systems. CBS reported that "mixed in" with the "nearly 1200 undocumented workers busted in a nationwide raid were their employers, 7 corporate executives of IFCO systems -- a manufacturing company. Men who in the past might only face fines now could serve up to ten years in Federal prison." Chertoff was shown sating, "We use intelligence to define the scope of the organization and then we use all of the tools we have, whether it's criminal enforcement or the immigration laws, to make sure we come down as hard as possible and break the back of those organizations." Pitts: "It's all part of a new get tough policy aimed at the 11 million illegal immigrants in the US, but it's a crackdown with consequences. Detention centers nationwide are already at, near, and in some cases over capacity."

The Financial Times (4/21, Alden) says the arrests "were used to highlight renewed efforts by the Bush administration to enforce existing laws against companies hiring undocumented workers." The White House "is urging Congress to pass an immigration reform bill that would permit more legal guest workers, but is facing opposition from many Republicans demanding aggressive enforcement of existing laws." The action "drew immediate praise from Tom Tancredo, the Colorado Republican congressman who has led demands for tougher enforcement against illegal immigrants."

The Christian Science Monitor (4/21, Jonsson, 61K) says, "To critics of the administration's immigration policies, the Department of Homeland Security sent out a strong message this week: Current laws can discourage illegal immigrants and those who hire them." However, "few observers believe this week's action represents more than a drop in the bucket in the battle to stem the flow of illegal immigration." Moreover, the Wall Street Journal (4/21, Kronholz, 2.11M) reports, DHS' "aggressive new stance faces a tough political future, though, and depends on Congress's willingness to finance a crackdown on some industries that are fueling the economic boom."

The Los Angeles Times (4/21, Gauette, 958K) says "Wednesday's raids, the culmination of a yearlong investigation, came at a sensitive time. Congress is returning from spring recess next week deeply divided on how to overhaul immigration laws." The Times adds, "Reaction to the raids reflected the well-drawn lines in the debate. Senate Minority Leader Harry Reid (D-Nev.) said in a statement, ' photo-op crackdown by [the Bush administration's Homeland Security Department] to prove a political point won't erase its failed record.'" But "conservative Republicans hailed the action."

The Philadelphia Inquirer (4/21, Montgomery) reports, "Chertoff said the roundup surpassed the 2005 total of 1,125 work-site arrests. ICE agents, assisted by the Justice Department, executed search warrants at 40 plant sites, including one in Burlington, N.J., that opened in 2004 and makes recycled plastic containers and wooden pallets."

The New York Times (4/21, Lipton, 1.19M) also notes "the arrests took place just days before the Senate reconvenes with immigration laws on its agenda. Earlier this month, the Senate faltered in its efforts to develop a proposal that would have given most illegal immigrants a chance to become citizens while intensifying border patrol and deportation efforts. And in recent weeks, hundreds of thousands of immigrants and their supporters have demonstrated in response to a bill passed in the House in December that would speed deportations, tighten border security and criminalize illegal immigrants." The Times adds, "As part of the campaign against illegal hiring, Mr. Chertoff and Julie L. Myers, assistant secretary at Immigration and Customs Enforcement, plan to hire 171 more work-site enforcement agents. … Separately, the department is adding 17 special teams of investigators, for a total of 52, to search for some of the 590,000 immigrants in the country who have

DOJ_NMG_0026271

ignored orders to leave." The Washington Times (4/21, Seper, 90K) reports Myers, who heads ICE, "said the agency will seek to build a 'strong compliance and enforcement system for employers,' adding that the agency will continue to 'find creative ways to partner with employers' who want to avoid hiring illegal aliens."

DHS Looking For Access To Social Security Data. The Wall Street Journal (4/21, Kronholz, 2.11M) reports, "The Department of Homeland Security is asking Congress for access to Social Security data in its effort to crack down on illegal immigration by going after employers who accept counterfeit identity and work documents." Chertoff's plans depend "on gaining authority from Congress to look at lists of 'no-match' Social Security numbers. Those occur when a new hire gives the employer a name or Social Security number that doesn't match names or numbers on file with the agency."

Immigration Reform Said To Be A Huge Challenge For Rove. The White House Bulletin/US News (4/20) reported, "One of Karl Rove's biggest challenges now is how to deal with the deeply divisive immigration issue, which is expected to come up when Congress returns from its spring recess next week. It is a long-standing belief of Rove's that Bush needs, above all, to maintain his popularity with his conservative base as the cornerstone of his political strategy. But the base is strongly in favor of tough border enforcement policies and rejects the kind of guest-worker program that Bush has endorsed." Many conservatives "consider that guest-worker program a form of amnesty that they cannot accept. But Rove and many moderate Republicans are worried that the get-tough border-security approach contained in the House immigration bill will alienate Latino voters and turn them against the GOP for a generation. Many GOP strategists prefer the evolving Senate version, which is considered closer to the President's wishes up to now."

Increased Number Of Border Patrol Officers Hasn't Boosted Arrests. USA Today (4/21, Kiely, 2.31M) reports, "The US Border Patrol is poised to become the federal government's largest law enforcement agency, but it's not clear that more agents have slowed illegal immigration." The Border Patrol "will soon rival the FBI in terms of the number of agents each agency has in the field. By the end of September, the Border Patrol will have 12,100 agents, according to spokesman Salvador Zamora. As of March, the FBI had 12,515. A 2004 law calls for expanding the Border Patrol to 21,000 agents by the end of the decade." However, "a recent analysis by Transactional Records Access Clearinghouse, a Syracuse University-based data research center, found that increasing the size of the Border Patrol has not yielded more arrests." In 1995, "the agency reported apprehending more than 1.3 million illegal immigrants. In 2005, with more than twice the number of agents as in 1995, the Border Patrol apprehended just under 1.2 million illegal immigrants."

State Legislators Seek To Address Costs Of Illegal Immigration. The Washington Times (4/21, Seper, 90K) reports, "State lawmakers across the nation are grappling with how to control the rising cost and effect of illegal aliens, with 368 bills pending or being debated in 42 states." The bills, "with more expected, target a number of constituency concerns, including the rising costs of education and medical care for illegal aliens, exploding crime, punishment for employers who exploit illegal aliens and the federal government's inability to secure the US border."

Minutemen To Build Border Fence On Private Land. The Washington Times (4/21, Seper, 90K) reports, "The Minuteman Civil Defense Corps (MCDC), which has placed hundreds of civilian volunteers on the Southwest border to stop illegal aliens from entering the country, announced plans yesterday to build a high-security fence on private land along the US-Mexico border." MCDC President Chris Simcox "said six landowners and two construction companies have partnered with the organization to break ground and begin construction on a state-of-the-art security fence similar to one proposed last year by a Pennsylvania-based advocacy group."

Immigration Officials Arrest 52 Convicted Child Sex Offenders. The CBS Evening News (4/20, story 4, 0:20, Schieffer, 7.66M) reported, "It turns out that immigration laws are also useful tools for getting sexual predators off the streets. Seen in this exclusive CBS News video, Immigration & Customs enforcement agents in New York arrested 52 convicted child sex offenders today from 14 countries. They'll all be deported for immigration violations."

TAX:

Symantec Fights $1 Billion Tax Bill. The Wall St. Journal (4/21, Boessenkool) reports that Symantec intends to fight a $1 billion bill from the IRS. The Journal notes, "Symantec and other companies grant licenses for a fee to foreign subsidiaries, and those licenses generate profits

DOJ_NMG_0026272

overseas. The Symantec dispute is over whether the company got fair value -- and paid taxes for that value -- on the licenses it granted." The IRS is disputing the value of licenses possessed by two Symantec subsidiaries in Ireland.

Polygamists Fight Property Taxes. The New York Times (4/21, Johnson) reports that a $1.3 million property tax bill faces "8,000 or so adherents of the Fundamentalist Church of Jesus Christ of Latter Day Saints, an offshoot of the Mormon Church that had long paid the property taxes of its members." Their system of tax collection is "in shambles" after the founder fled sex-related charges and after "the church's remaining leaders have told people living in the houses not to pay." Threatened with possible eviction, the members "could disperse to other parts of the West or to Canada, taking a page from the Mormons of old who came to Utah in 1847 to avoid persecution. Others fear violence."

CONGRESS-ADMINISTRATION:

Bush-Hu Summit Said To Have Accomplished Little. President Bush yesterday hosted Chinese President Hu Jintao at the White House for talks on energy, trade, and human rights. Most print reports state the summit produced virtually no tangible results on those issues. The Washington Post (4/21, A1, Baker, Kessler, 744K), for example, headlines its report "Bush, Hu Produce Summit of Symbols," and says Bush "came away with no specific agreements in a summit emphasizing symbolism over breakthroughs." CNN's The Situation Room (4/20, Blitzer) reported there was "a lot of talk but no real breakthroughs." The Wall Street Journal (4/21, King, Solomon, Dean, 2.11M) reports Hu "offered cooperation on issues from trade to nuclear proliferation," but he also "pointedly declined to give…Bush concrete promises on key economic and foreign-policy disputes." Likewise, The New York Times (4/21, Kahn, 1.19M) says the two leaders "broke no new ground," and the meeting "underscored the intractable nature of a long list of grievances."

The New York Times (4/21, Sanger, 1.19M) also runs an analysis piece titled "An Old Presidential Predicament: China Proves Tough To Influence," in which it says "just about every American president since Richard M. Nixon has confronted the fact that his influence over China is far more limited than he once hoped." Bush "is now facing that reality midway through his second term, at a moment when the Chinese clearly sense his weakness." Hu "apparently no longer feels, as past Chinese leaders did, that he must come to the United States bearing gifts." The AP (4/21, Loven) says Bush and Hu "made little measurable headway," and AFP (4/21) reports the leaders "showed little progress in healing rifts dividing the two powers." Likewise, Knight Ridder (4/21, Hutcheson) reports "some analysts expressed frustration that Bush and Hu failed to make significant progress."

A similar Chicago Tribune story (4/21, Silva) reports, "The fact that the two leaders had scant progress to cite after their meeting is emblematic of the strain that permeates US-Chinese relations," and it is "likely to spur new interest among members of Congress already pursuing trade sanctions against China, according to American experts on US-Chinese relations." Along those same lines, the Wall Street Journal (4/21, Harwood, 2.11M) reports in its "Washington Wire" column, "Sens. Grassley and Baucus will gauge outcome of Hu's visit and Treasury's currency report before deciding whether to press China trade legislation."

The Washington Times (4/21, Curl, 90K) also reports "there was little to show for the daylong talks," and adds "perhaps the biggest achievement of the day was an assurance by Mr. Hu to work to make the Chinese currency more 'flexible.'" The Times also reports, "The two leaders failed to find common ground on how to deal with Iran's nuclear ambitions." Focusing on the Iran issue, the Los Angeles Times (4/21, Richter, 958K) titles its story "Hu Keeps Cards Close to His Vest," and says it was "clear that Hu left Bush unsatisfied on his request for help to restrain the nuclear ambitions of Iran and North Korea." Hu "said little about China's intentions on the Iranian nuclear issue, except to repeat statements that Beijing intends to work through diplomacy." Meanwhile, the Financial Times (4/21, McGregor, Daniel) reports, "A senior White House official said Mr Bush had made an 'impassioned plea' to Mr Hu to support international efforts to pressure Sudan, a major supplier of oil to China, but without success."

On the network newscasts, the story was the lead on each show, which also ran follow-up reports later in their newscasts for a total of approximately 17 minutes of airtime. The networks offered similar assessments of the apparent lack of progress in key issues, but they focused their attention on two incidents that were described as marring the event. During the leaders' joint appearance on the White House lawn, a Falun Gong protester was able to get press

DOJ_NMG_0026273

credentials and cause a commotion during Hu's remarks. In a second incident, an announcer mistakenly referred to the People's Republic of China by using the formal name for Taiwan, which China regards as a renegade province. The embarrassing images were censored on Chinese TV reports, as were reports on the censorship itself. ABC World News Tonight (4/20, lead story, 4:10, Raddatz, 8.78M) reported, "The visit was meant to improve ties between the two countries on energy, trade and nuclear proliferation." But "just as the Chinese President was talking about deepening trust with the US," a "lone but very loud voice coming from the press area, shouting 'President Bush, stop him from killing. President Bush, stop him from persecuting Falun Gong.'" President Bush "appears irritated. President Hu, confused. But with the encouragement of President Bush, the Chinese leader continued. It took nearly three minutes before the Secret Service removed the woman." The two Presidents "did meet privately this afternoon, with Mr. Bush spending much of the meeting urging the Chinese leader to use his influence to curb North Korea's nuclear proliferation and to support UN sanctions against Iran for its nuclear program. But there were no agreements announced." The CBS Evening News (4/20, lead story, 2:40, Schieffer, 7.66M) led its report with the two gaffes, saying, "This was not the best day the White House ever had." NBC Nightly News (4/20, lead story, 3:10, Gregory, 9.87M) said the Falon Gong protest was "considered to the President a major embarrassment." The "outburst was a major irritant to the Chinese leader since the White House gave" the Falon Gong dissenter "a day pass to attend the event." A "veteran diplomat who was on hand today said there's no way that the Chinese won't think that this was an intentional move by the Administration."

The Washington Times (4/21, Curl, 90K) runs a story on the Falun Gong incident, the Washington Post (4/21, A2, Milbank, 744K), in its "Washington Sketch" section, also focuses on the "protocol breach," noting "Bush and Hu looked…stunned. It took so long to silence her -- a full three minutes -- that Bush aides began to wonder if the Secret Service's strategy was to let her scream herself hoarse. … 'You're okay,' Bush gently reassured Hu." But "he wasn't okay, not really. The protocol-obsessed Chinese leader suffered a day full of indignities -- some intentional, others just careless."

Chinese Feel "Slighted" By Lack Of State Dinner For Hu. The New York Times (4/21, Sanger, 1.19M) reports "the Chinese, ever sensitive to questions of status, made clear they felt slighted by Mr. Bush's decision not to offer up a full state dinner for the leader of 1.3 billion people." The Washington Post (4/21, A18, Kessler, 744K) says the "subtext" of the summit "was the future -- and how these two countries will share the international stage. At every turn, Hu sought to stress the equality between the two nations, which, as he put it in a luncheon toast, are the 'largest developing country and the largest developed country.'" For his part, "Bush tried to signal that China is not all that equal. The White House would not grant Hu the state dinner he dearly wanted, offering instead a lunch that fell just short of the pomp and circumstance for close allies. Meeting with reporters, Bush simply said, 'It's a very important relationship.'"

USA Today (4/21, Jackson, 2.31M) notes "US and Chinese officials disputed the very description of the meeting. The Chinese called it a 'state visit,' the most formal and prestigious welcome, while the administration referred to it as an 'official visit.'" Hu "did not receive an evening, black-tie state dinner, but was guest of honor at a special luncheon featuring a performance by the Nashville Bluegrass Band." The Washington Post's "Reliable Source" column (4/21, C3, Argetsinger, Roberts) also addresses that issue, reporting "the delicate compromise was a very fancy luncheon in the East Room for more than 150, complete with a receiving line and the requisite number of prominent Chinese Americans and celebrity guests: figure skater Michelle Kwan, who sat next to President Bush , former secretary of state Henry Kissinger , designer Derek Lam , NBC's Tim Russert , Chicago Mayor Richard Daley , actor Ron Silver , concert pianist Lang Lang -- not to mention Dick Cheney , Condoleezza Rice , Don Rumsfeld, first daughter Barbara Bush and a slew of business types including the heads of Ford, Citibank, FedEx, Goldman Sachs, Pepsi, Motorola and Wal-Mart." Guests "dined on corn broth with dumpling, halibut and melon, then were entertained by the Nashville Bluegrass Band."

China Said To Have Been Involved In Iran's Nuclear Program For Over A Decade. The Washington Times (4/21, Gertz, Scarborough, 90K) reports in its "Inside the Ring" column that as President Bush seeks help from Chinese President Hu Jintao to resolve the issue of Iran's nuclear program, US officials are "playing down" the fact that China "has been directly involved in Iran's nuclear and missile programs for more than a decade. National security officials tell us the effort to enlist Beijing's support on Iran is like Samuel Johnson's quip about a second marriage: the triumph of hope over experience. Classified U.S. intelligence reports dating from the early 1990s reveal that Beijing has

DOJ_NMG_0026274

been covertly backing Iranian nuclear efforts, as it did in Pakistan, with training and equipment."

Hadley Says Bush, Hu Agree That Nuclear Iran Isn't In Interest Of Regional Stability. National Security Adviser Stephen Hadley said on CNN's The Situation Room (4/20) that President Bush and President Hu "have the same strategic view that a nuclear Iran is not in the interest of regional stability, not in the interest of the nonproliferation structure. So, there was an agreement on a need to -- a common strategic assessment of the situation, and agreement that we needed to work together towards trying to convince Iran to listen to the clear message of the entire international community and step back from this nuclear program that they are pursuing."

Hadley Says US Will Keep Human Rights Issue At Forefront With China. Hadley was also asked on CNN's The Situation Room (4/20) if President Bush made any progress on the human rights issue with Hu. Hadley said, "We've been raising this issue for a while. The President gave a list of about six people who are in detention in China that he hoped would be released. We've talked about other issues, focusing heavily on freedom of religion, the right of people to worship in their homes, and educate their children, and the like. These are issues that are ongoing with China. We have raised those issues. There are a couple things that the Chinese have indicated they will be trying to do in the next weeks ahead. It's important for us to keep these issues on the forefront."

Pentagon Speaks About Hedging China As Hu Visits White House. The AFP (4/21) reports that even "as Chinese President Hu Jintao was at the White House to meet with President George W. Bush on a range of trade and security issues, and to assure US leaders they have nothing to fear from China's rising might," Pentagon spokesman Bryan Whitman said "the United States is shifting its military might to the Asia-Pacific region and equipping its forces for high-tech warfare as a hedge against China's military buildup," adding that "there is also a lack of transparency and some uncertainty surrounding China's future path."

Demonstrators Protest Hu's Visit. The Washington Times (4/21, Emerling, 90K) reports, "Hundreds of demonstrators from across the country yesterday lined Lafayette Park and areas near the White House to protest the first US visit by Hu Jintao." An "estimated 500 protesters massed outside the iron gates near Lafayette Park and another 500 protesters gathered along the west side of 17th Street in Northwest." Both groups "held signs bearing slogans like 'China Lies People Die' and 'China's New Era Begins When the Communist Party Ends.'" The Wall Street Journal (4/21, Harwood, 2.11M) reports in its "Washington Wire" column, "Yale braces for demonstrations today as President Hu visits New Haven. Security precautions close several city streets and part of the campus near Sprague Hall, where he is to speak."

China Seen As Driving Increase In Oil Prices. The CBS Evening News (4/20, story 2, 2:05, Schieffer, 7.66M) reported, "Fred Bergsten, author of a book on the Chinese economy, says the US remains the largest consumer of crude, 20 million barrels a day. But China is now the second-largest using 6.5 million barrels daily, and the Energy Department predicts China's demand will more than double by 2025." OPEC "can't meet that kind of demand, so prices are surging in the trading pits and at the pumps. According to a new congressional report, China's demand could add between 19 and 33 cents to the cost of a gallon of gas over the next five years."

NBC Nightly News (4/20, story 2, 2:15, Mitchell, 9.87M) reported, "By 2020, its energy needs will increase by 150 percent, so China is buying oil anywhere it can find it." John Kilduff, oil trader: "They are willing to do business with a lot of countries that the US would find repugnant." Mitchell: "Hot spots like Iran, Venezuela, Nigeria, and Sudan." China's "extraordinary growth is one reason oil supplies are now razor-thin. What used to be a worldwide cushion of 6 million barrels a day 4 years ago is now down to 1 million barrels, not enough to withstand a crisis in oil-producing countries. And who's doing more to conserve, China or the US?" Elizabeth Economy, China expert: "They have much more ambitious plans than we here in the United States do. They want to have 15% of all their energy come from renewable energy sources by 2020."

China Exporting More High-End Goods. ABC World News Tonight (4/20, story 6, 2:30, Vargas, 8.78M) reported, "Americans bought $243 billion in Chinese goods last year. We're all familiar with the low-priced clothing and electronics pouring into this country, helping to fuel China's $202 billion trade surplus. But there's been quite an effort by Chinese companies, recently, to conquer the markets for many high-end products, as well." ABC (Litke) added, "Quality is fast becoming the norm with Chinese products, from high fashion to high-tech. And" musical instrument manufacturer Eastman "is no exception. Most of Eastman's workers are peasants

DOJ_NMG_0026275

from the countryside. Yet, they're well-trained and very dedicated."

Roberts Taps Duff To Head US Courts Office.

The Washington Post/Bloomberg (4/21, A21, Stohr) reports that Chief Justice John Roberts yesterday selected Washington lawyer James Duff as director of the Administrative Office of the US Courts. Roberts said the appointment "represents a 'fresh start' in the judiciary's sometimes stormy relations with Congress." Duff "will head a 900-person office that provides support for courts around the country and serves as the judiciary's liaison with Congress."

The Legal Times (4/21, Mauro) reports, "Duff, 53, is a popular and familiar face at the sprawling judiciary, having served as administrative assistant to the late Chief Justice William Rehnquist from 1996 to 2000. There, Duff won praise as a low-key team player and a skillful behind-the-scenes negotiator. Duff was a close witness to history when he served as aide-de-camp to Rehnquist while the chief justice presided over the 1999 Senate impeachment trial of President Bill Clinton." The Times adds, "Duff will replace Leonidas Ralph Mecham, who has held the job for 20 years with a sometimes-combative style. Mecham, who is retiring when Duff takes over, was given a standing ovation. … Members of both houses, mostly Republicans, have been critical of the judiciary in recent years for exerting too much power over the elected branches and for operating with little or no accountability. For varying reasons, bills that are unappealing to many in the judiciary have gained support if not passage in recent years, including one that would bar citation of foreign law in cases and another that would hasten camera access into federal court proceedings. Congress also controls the $5 billion-plus budget of the judiciary."

Bolten Raises Possibility Of Replacing Miers As Counsel.

The New York Times (4/21, Bumiller, Rutenberg, 1.19M) reports White House Chief of Staff Joshua Bolten "has raised the possibility of moving Harriet E. Miers from her job as President Bush's counsel as part of a continuing shake-up of the West Wing, an influential Republican with close ties to Mr. Bolten said Thursday." The Republicans source said Bolten "had floated the idea among confidants, but that it was unclear whether he would follow through or if the move would be acceptable to Mr. Bush, who has a longtime personal bond with Ms. Miers." Meanwhile, Republicans said that Fox News commentator Tony Snow "was in negotiations for the job of White House press secretary." Snow "had surgery for colon cancer last year and is awaiting an clearance from doctors before making a deal." The White House "has also been interested in a communications job for Dan Senor, the former spokesman for the United States in Iraq who is now a Republican consultant and Fox News analyst. But Republicans said Mr. Senor was cool to the idea and faced complications because of his wife, Campbell Brown, sometimes fills in as anchor of the 'NBC Nightly News' and is the co-host of 'Weekend Today.'"

In Press Secretary, Bolten Looking For More Than A Fresh Face. The White House Bulletin/US News (4/20) reported, "Credibility and a strong intellectual background are the leading drivers in White House Chief of Staff Josh Bolten's search for a new press secretary. Insiders today said that Bolten's apparent decision to look outside the administration was an indication that he felt credibility had suffered in recent months and that a new person from the outside, such as frontrunner Tony Snow of Fox News and Dan Senor, a Fox analyst who used to be the administration's spokesman in Iraq, would revive the standing of the White House in the public's eyes." By "turning to an outsider like Snow, however, Bolten gets more than a fresh face, said those following the job search."

Snow Discusses Possibility Of Replacing McClellan. Tony Snow was asked on Fox News' The O'Reilly Factor (4/20) if he is interested in replacing Scott McClellan as White house spokesman. Snow said, "Look, it's very interesting. I am trying to balance two sets of things. On the one hand, you have a White House press spokesman as a piñata. And the other side of the ledger is family time. My kids need to see more of me. And you have a massive cut in pay. You have a lot of inconvenience. You don't have as much time to yourself. There's a lot of stuff going on, plus there are no guarantees after you get out of the White House whether there is any landing place. We have seen lots of people who went out to glory in the White Houses and came out with tin cups filled with pencils."

Website Taking Bets On Replacement For McClellan. The Washington Post (4/21, C3, Argetsinger, Roberts, 744K) reports in its "Reliable Source" column that the Scott McClellan "replacement odds are posted, for those too wonky for those highbrow 'American Idol' elimination wagers. Since Wednesday afternoon, BetUS.com has taken 186 bets with an average of $70 per bet (maximum is $100):

DOJ_NMG_0026276

Deputy Press Secretary Dana Perino is tied with presidential counselor Dan Bartlett (6-5), followed by Fox News host Tony Snow (4-1), perpetual presidential adviser David Gergen (8-1) and former Pentagon spokeswoman Torie Clark and former Iraq occupation spokesman Dan Senor (both 12-1). Perino has the lead with almost 60 percent of all bets placed, Bartlett is the runner-up with almost 25 percent, and four delusional guys are hoping to make more than $20,000 with former Clinton buddy George Stephanopoulos (80-1)."

Republicans Looking For More "New Blood" In White House Shuffle. The White House Bulletin/US News (4/20) reported, "'Where's the fresh thinking, the new blood?' asks a senior Republican who advised past GOP presidents." This official "described the changes so far as a 'botox injection' for the West Wing that will change its appearance but not alter the underlying reality -- of a president who has adopted unpopular or controversial policies on Iraq, immigration, Social Security, and other issues and so far can't find a way to improve his job-approval ratings." "What President Bush wants is the symbolism of change but not the substance," this prominent Republican tells US News and the Bulletin. Another concern inside the GOP is that Bush has yet to reach outside his tight group of loyalists for a senior adviser.

Leader Of Effort To Create National Health Information Network Resigning. The Financial Times (4/21, Timmins) reports, "Dr David Brailer, the man charged by President Bush with ensuring that half of all Americans have a portable electronic health record within a decade, is to step down two years after taking on the job." Brailer "said on Thursday he was leaving his job as national co-ordinator for health information technology for family reasons and because the programme 'is now mature and moving in the right direction.'" He "has commissioned a string of initiatives aimed at getting hospitals, doctors, health plans and IT vendors working together to deliver an initiative intended to improve the quality of care and potentially lower its cost." The Wall Street Journal (4/21, Harwood, 2.11M) in its "Washington Wire" column briefly notes the move, "Bush's health-technology czar David Brailer resigns, but will keep assisting with national health-information network."

NYTimes Says Bush Choice Of Schwab For USTR Undercuts WTO Negotiations. The New York Times (4/21, 1.19M) says in an editorial that former US Trade Representative Charlene Barshefsky "commanded respect internationally, particularly from China," while Robert Portman "made up for his lack of international clout with political expertise." Susan Schwab, "the woman President Bush has nominated to succeed Mr. Portman, has neither asset. That lack does not bode well for the crucial trade talks that are now under way at the WTO." The "most important byproduct of President Bush's much-discussed White House shake-up may be the torpedoing of any real progress in these critical trade negotiations."

Dionne Says Rove "Demotion" Shows Shift In Administration Goals. In his Washington Post column (4/21, A23), E.J. Dionne says the "real meaning of the White House shake-up and the redefinition of Karl Rove's role in the Bush presidency" is that the Administration's "one and only domestic priority in 2006 is hanging on to control of Congress." Rove is "simply moving to where all the action will, of necessity, be."

Kennedy Says Second Term Staff Changes Are Not Untypical. Sen. Ted Kennedy said on CNN's Larry King Live (4/20), "I think it's not untypical that a president in the second term is going to make these adjustments and I think particularly given the kind of conditions that he's facing in terms of the support that he has here at home and generally around the world that he's going to make some shifts and some changes. I think the real overarching issue does this really mean a change of policy, a change in direction and priorities here at home? And, I think those are real legitimate questions and I doubt whether it will make much of a change in policy with regards to Iraq, which is the overarching issue of our time." Kennedy added, "I don't think we're going to get much of a change of a direction on domestic policies or in foreign policy but we'll have to see."

Rumsfeld Critics Turn His Praise Of Change Against Him. The New York Times (4/21, Gordon, 1.19M) reports Defense Secretary Donald H. Rumsfeld "has described himself as an agent of change and suggested that the complaints come from old thinkers who oppose reforming the military." Convinced that "the generals were locked in a cold-war mindset -- 'legacy thinking,' he dubbed it -- Mr. Rumsfeld promoted the virtues of relying on precision weapons and fast-paced operations instead of huge numbers of troops." But "as a half-dozen retired Army and Marine generals have called for Mr. Rumsfeld's resignation, some criticize him in his own terms. The change-agent defense secretary, they say, is resistant to change." Rumsfeld, "the critics assert, was slow to acknowledge a growing insurgency in Iraq and to counter it. The military is overstretched by the

DOJ_NMG_0026277

occupations of Iraq and Afghanistan, but Mr. Rumsfeld has also resisted expanding the Army and Marines."

Kennedy Says Rumsfeld Is Not Incompetent. Sen. Ted Kennedy was asked on CNN's Larry Ling Live (4/20) if Rumsfeld is incompetent. Kennedy said, "No, I don't think he's incompetent. I think that there was a rush to war. … There was a thirst to go to war. There was no question about it. And they carefully selected and picked intelligence and off it was. And, I think that that was a catastrophic mistake."

Murtha Says Rumsfeld Should Take Blame For Iraq Mistakes. CNN's The Situation Room (4/20, Blitzer) reported that Rep. John Murtha says Defense Secretary Donald Rumsfeld "should take the blame for mistakes in Iraq."

Schieffer Unsure Rumsfeld Will Remain At Defense For Long. The Daily Record (NJ) (4/21, Jennings) reports that in remarks at a Drew University forum attended by 275 this week, CBS anchor Bob Schieffer "said he wasn't sure that Defense Secretary Donald Rumsfeld, under fire for his handling of the war in Iraq, would endure much longer in his post. He didn't put much stock in President Bush's recent declaration of support for Rumsfeld." Schieffer said, "t was also this president who said, 'Brownie, you're doing a heckuva job,' and that was just before Brownie got canned." Schieffer was "not optimistic about U.S. prospects in Iraq."

Krauthammer Says Uniformed Rumsfeld Critics Have Set "Dangerous Precedent." In his Washington Post column (4/21, A23), Charles Krauthammer comments on the retired generals who have come forth to criticize Secretary Rumsfeld, saying, "We've always had discontented officers in every war and in every period of our history. But they rarely coalesce into factions. That happens in places such as Hussein's Iraq, Pinochet's Chile or your run-of-the-mill banana republic. And when it does, outsiders (including the United States) do their best to exploit it, seeking out the dissident factions to either stage a coup or force the government to change policy." It is "precisely this kind of division that our tradition of military deference to democratically elected civilian superiors was meant to prevent. Today it suits the antiwar left to applaud the rupture of that tradition. But it is a disturbing and very dangerous precedent that even the left will one day regret."

Editorial Opinion On Rumsfeld Varied. USA Today (4/21, 2.31M) runs an "Opinionline" sampler of editorial opinion around the country on the retired generals who have called on Secretary Rumsfeld to resign. On one end of the spectrum, the Beaver County (Pa.) Times editorializes, "The American people need to listen to them before it is too late. Our military might is being squandered because of this administration's lethal combination of arrogance and bungling." On the end, the Amarillo (Texas) Globe News says, "What's missing in this discussion, though, has been a keen understanding of the nature of the relationship between senior military officers and their civilian bosses. It is filled with friction. It always has been that way and likely always will be."

Administration Says It Has Exceeded Enrollment Goal For Drug Benefit. The AP (4/21, Abrams) reports, "Another 1.7 million seniors have signed up for the new Medicare prescription drug benefit in the past month, and administration officials said Thursday they have exceeded their goal for the year with 25 days left before the enrollment deadline." The officials "rejected demands from some lawmakers that the May 15 deadline be extended to give people more time to study the plan alternatives, saying that would only lead to fewer enrollees." Health and Human Services Secretary Mike Leavitt said in a telephone news conference that "more than 30 million Medicare beneficiaries are new receiving prescription drug coverage, surpassing projections of 28 million to 30 million enrollees in the first year of the program."

The Wall Street Journal (4/21, Lueck, 2.11M) casts doubt on the government's numbers, "At first glance, information released Thursday by Medicare seems to indicate that 30 million people are getting prescription-drug insurance from the federal health program for the elderly and disabled. Not exactly." While the government claims 30 million seniors are receiving coverage, "a smaller number is actually enrolled in the new program, and some of that group had coverage before. As of April 18, 19.7 million beneficiaries are getting drug insurance from Medicare. Of that group, 5.8 million already had coverage from Medicaid, the state-federal program for the poor. An additional 6.8 million people are getting drug coverage from former employers; the coverage is partially subsidized by Medicare." That "means a total of 26.5 million people now are benefiting from the Medicare drug program." To get to 30 million, government officials also "counted 3.5 million people who have drug coverage from the military's TRICARE program or federal-employee benefits, but aren't signed up for the Medicare benefit."

Beneficiaries Could Pay As Mush As 7% More Next Year. The Los Angeles Times (4/21, Alonso-Zaldivar, 958K)

DOJ_NMG_0026278

reports, "With the deadline for signing up for the Medicare prescription benefit approaching, the government has announced that seniors and disabled beneficiaries may pay as much as 7% more next year for their benefit."

Large Insurers Seen As Biggest Winners So Far. The Wall Street Journal (4/21, 2.11M) reports that while the deadline is 25 days away, "the massive effort has produced clear winners and losers among businesses and seniors. The early winners include some of the nation's largest health plans, which are peddling the drug coverage. … Also buoyed: drug makers, which are reporting increased demand for some products used by seniors, such as drugs for chronic conditions. Many seniors are also giving the benefit good reviews, despite initial confusion about which plan to choose. … Dozens of smaller health insurers, meanwhile, are seeing only minimal enrollment gains, and independent pharmacists are criticizing the lower payments and suffering cash-flow problems." The Journal adds, "By far, the biggest winner in the race to sign up seniors is UnitedHealth Group Inc."

Congress Returns With Broad Agenda As Public Anger Deepens. The Washington Post (4/21, A5, Weisman, 744K) reports Congress returns "next week to face deep challenges including a budget morass in the House and an immigration quagmire in the Senate, while new polls indicate that voters increasingly view the legislative branch as dysfunctional." Republican leaders' success in navigating "their way through the legislative mess could greatly influence the outcome of the midterm elections in November, suggests a poll released yesterday by the nonpartisan Pew Research Center for the People and the Press." Republican leaders "have laid out an ambitious agenda for the coming months, from health-care legislation to the most sweeping immigration changes in a generation. But they will have just 72 legislative days to achieve it before the scheduled date of adjournment. And they will have to overcome divisions in their own ranks to secure even the basics, such as a budget."

Congress Not Following Through With E-911 Funding. After authorizing $250 million a year to pay for "E-911," enhanced 911 service for cellular telephone systems, Congress has failed to appropriate the money, leaving the project stalled. The CBS Evening News (4/20, story 9, 2:55, Brzezinski, 7.66M) reported, "911 centers around the country are driving blind, unable to identify cell phone caller's locations because they haven't upgraded their call tracking technology. Here's how it is supposed to work. When someone dials 911 on a cell phone, satellites pick up and relay the data to the nearest 911 call center, where computers display the caller's location within about a city block for margin of error. But if that call came on an old cell phone or if the 911 center doesn't have the technology upgrade, all bets are off." Sen. Hillary Clinton, New York: "Well, our 911 system is stuck in the 20th century." Brzezinski: "Since the attacks of 9/11, New York Sen. Hillary Clinton has worked to get the entire country's 911 system up to par, but still, more than 40% of country's call centers, known as PSAPS, are poorly equipped. If there were another terrorist attack right now, would we be in the same situation we were in 9/11?" Sen. Clinton: "That would depend upon what cell phone you used, what part of the country you were in, whether the PSAP answering your call had the capacity to locate you." Brzezinski: "A congressional study just out found that at least four states collected the money to fix the problem through phone bill surcharges but instead spent it elsewhere."

Board Strives To "Practice Merit" Under New Federal Pay Systems. The Washington Post (4/21, D4, Barr, 744K) reports in its "Federal Diary" column that the US Merit Systems Protection Board "strives to ensure fair treatment for civil service employees and hears appeals of major disciplinary actions when workers believe they have not received a square deal from their agencies. But the government's workplace rules are in flux. Congress has freed a number of agencies over the years from civil service law and most recently launched the departments of Defense and Homeland Security on efforts to shake up their pay and personnel systems. The changes in pay rules raise the question of 'how to practice merit' when operating outside civil service law, MSPB Chairman Neil A.G. McPhie said yesterday."

Kennedy Book Called "Blistering Critique" Of Bush Administration. Eric Pianin reviews Sen. Edward Kennedy's new book "America Back on Track" in the Washington Post (4/21 ,A21, 744K). Pianin says the book is "Kennedy's blistering critique of the Bush administration and his prescriptions for what ails the country. … Kennedy asserts that President Bush has systematically and ruthlessly chipped away at constitutional protections in the name of national security and the war on terrorism." Pianin adds that the book

DOJ_NMG_0026279

"plows a lot of familiar ground, and many of Kennedy's proposals seem more like liberal cant than pragmatic programs that might actually bridge the huge partisan and ideological divide in Washington."

OTHER NEWS:

Dow Industrials Close At Six-Year High. ABC World News Tonight (4/20, story 4, :15, Vargas, 8.78M) reported, "Blue chip stocks closed at more than a six-year high today. The Dow Jones Industrial Average gained 64 points to close at 11,342. The last time the Dow was this high was in January of 2000." NBC Nightly News (4/20, story 6, 0:15, Williams, 9.87M) also noted the Dow reached "a 6-year high in fact." The Nasdaq "lost a bit of ground, however, down just over 8 points on the day [to close at 2,362.55]."

The Wall Street Journal (4/21, Karmin, 2.11M) reports the Dow "powered to a six-year high, supported by easing crude-oil prices and upbeat earnings news from several blue-chip stocks including beleaguered General Motors Corp. … Crude-oil prices, falling from recent highs, finished at $71.95 a barrel, down 22 cents." USA Today (4/21, Shell, 2.31M), however, titles its story "Stocks Rise In Spite Of Increasing Price Of Oil,"

Jobless Claims Down Sharply. The Wall Street Journal (4/21, Blackstone, 2.11M) reports, "The number of US workers filing initial claims for unemployment benefits fell more sharply than expected last week, suggesting that underlying job fundamentals remain strong. Initial jobless claims declined by 10,000 to a seasonally adjusted 303,000 in the week ended April 15, the Labor Department said Thursday." Last week's "decline in unemployment claims was more pronounced than Wall Street expectations. The median estimate of 13 economists surveyed by Dow Jones Newswires and CNBC projected jobless claims would fall by just 5,000 in the April 15 week to 308,000."

Economy Seen As Likely To Hurt GOP In Fall. Under the headline "Why A Strong Economy Is No GOP Asset," the Christian Science Monitor (4/21, Feldmann, 61K) reports, "Of all the problems Republicans face heading into the fall political season, one of the most exasperating is the economy. In many ways, they say, these are the best of times: Unemployment is at 4.7 percent, lower than the averages of the 1970s, '80s, and '90s. The economy is showing strong, consistent growth, without significant inflation. And the stock market is roaring along." Yet "many Americans just aren't impressed. A majority tell pollsters they trust the Democrats more than the GOP to handle the economy. … Independent pollster John Zogby sees the public's skepticism over the economy as part of a larger picture of overall concern over the direction of the nation and a president struggling to recapture Americans' confidence."

Mortgage Rates Reach Four-Year High. ABC World News Tonight (4/20, story 3, 1:25, Vargas, 8.78M) reported, "Mortgage rates have risen to a nearly four-year high. The average rate for a 30-year fixed rate mortgage is above 6.5%." ABC (B. Stark) added, "There are now 30% more homes for sale this month than last. That means that buyers should have more bargaining power in some markets." The higher rates mean "for sure a slower economy in the second half of the year."

Foreign Firms Reducing Spending In US. The Wall Street Journal (4/21, Conkey, 2.11M) reports, "Amid political controversy over foreign investment in the US, new data suggest that foreign companies steadily reduced their work forces and capital spending in the U.S. from 2001 to 2004 despite rising sales here." In an annual report on its survey of multinational corporations, the US Commerce Department "said foreign firms other than banks doing business in the U.S. employed nearly 5.1 million employees in 2004 -- slightly less than one of every 20 workers in the private sector." That was "down 10% from 5.6 million in 2001."

Democrats Using Rising Gasoline Prices As Political Issue Against GOP Opponents. The New York Times (4/21, Janofsky, 1.19M) reports, "Democrats running for Congress are moving quickly to use the most recent surge in oil and gasoline prices to bash Republicans over energy policy, and more broadly, the direction of the country. … To varying degrees, Democrats around the country are following a similar script that touches on economic anxiety and populist resentment against oil companies." Sen. Charles E. Schumer of New York, chairman of the Democratic Senatorial Campaign Committee, said, "It's a metaphor for an economy that keeps biting people despite overall good numbers." Schumer also "said Democratic candidates in 10 of the 34 Senate races this year had scheduled campaign events this week focusing on gasoline prices."

The Washington Post (4/21, A1, Mufson, 744K) says that "in the absence of a clear explanation" for the rising prices, "members of Congress have jumped into the fray.

DOJ_NMG_0026280

'These major oil companies have hooked their hose up to the pocketbooks of American citizens and are sucking money from ordinary Americans into the treasury of the giant oil companies,' said Sen. Byron L. Dorgan (D-N.D.), a member of both the Senate Commerce and Energy committees." Schumer on Tuesday "called on the Federal Trade Commission to make sure the major oil companies weren't intentionally keeping refinery capacity offline to jack up prices. He cited a 5-percentage-point decline in refinery utilization rates."

Price Tops $3 A Gallon In California. The Los Angeles Times (4/21, Sanchez, 958K) reports, "The average price of a gallon of gasoline in California topped $3 for the first time this year, and motorists are not expected to see any relief from spiking prices until after Memorial Day, according to industry observers." California pump prices "are rapidly closing in on the record high reached in September, when a gallon of regular unleaded peaked at $3.054, according to AAA." USA Today (4/21, Hagenbaugh, 2.31M) says California "became the first state in the continental USA to see average gasoline prices go above $3 a gallon in 2006, while the price at the pump in Los Angeles hit an all-time high." The average price for a gallon of regular gas in California "hit $3.015 Thursday, up 3 cents from the day before and up 34 cents from a month ago."

Democratic Ad Targets GOP On Homeland Security. The AP (4/21, Sidoti) reports Democrats "believe they can turn a Republican political strength — homeland security — into a vulnerability. They are testing that theory with a television ad that accuses the Bush administration and the president's GOP supporters of disregarding port security." Americans United, a group "with close ties to congressional Democrats, is spending at least $500,000 to run the ad, starting Thursday, on cable news channels and during NBC's 'Meet the Press,' which airs Sundays." The 30-second ad "shows a longshoreman involved in port security in Long Beach, Calif., talking about the thousands of containers that move through U.S. ports each day."

Democrats Said To Lack Consensus On Message. The AP (4/20, Sidoti) reports that if you ask Democratic leaders "to identify their party's election-year message," you "get everything but consensus. Ahead in polls, Democrats are divided over whether they already have – or even need – a national theme that tells voters exactly where the party stands." In "more than a dozen interviews, Democrats who gathered here for the DNC's spring meeting rattled off lists of what they believe to be their party's message in 2006. Each had a different take." Some said "their party stands for affordable health care, lobbying reform, lower federal deficits. Others mentioned human rights, the well-being of families and the search for new energy sources. Still others cited education money, Medicare that works, a reliable Social Security program and world peace. Lots of issues. No single message."

Eleven States, DC, Competing For Early Primary Slots At DNC Meeting. The Washington Post (4/21, A4, Balz, 744K) reports Democratic state delegations are arriving in New Orleans to "compete for the chance to help start the presidential nominating process in 2008." Nevada Democrats "distributed a costly and colorful brochure, and aired the slickest video of the day to promote their state's rapidly changing electorate as an ideal testing ground for candidates." Arkansas Democrats "touted their many venues for retail politicking, including VIP toad races at the annual Toad Suck Daze festival. Hawaii offered perfect weather for winter campaigning." The states were "scrambling to take advantage of coming changes to the Democratic primary and caucus calendar in 2008, which will alter a system that long has given top early billing to Iowa's caucuses and New Hampshire's primary." In 2008, Iowa "will still have the first caucus and New Hampshire the first primary. But as many as four other states will be added to early weeks of the season -- one or two between Iowa and New Hampshire, and one or two immediately after. On Thursday, Democratic leaders from 11 states and the District began bidding for the available slots."

The AP (4/21, Sidoti) reports the DNC's "rules and bylaws panel heard pitches from the District of Columbia and 10 states that have applied to move up their contests to select the presidential nominee. Nebraska also applied but did not make a presentation." The states that "applied for early status" are "Alabama, Arizona, Arkansas, Colorado, Washington, D.C., Michigan, Mississippi, Nebraska, Nevada, South Carolina, West Virginia and Hawaii."

Senate Democrats Outraise Republicans, Have 2-1 Cash-On-Hand Advantage. The Washington Post (4/21, A4, Edsall, 744K) reports FEC data show the Democratic Senatorial Campaign Committee "continued to outpace the National Republican Senatorial

DOJ_NMG_0026281

Committee in fundraising, bringing in more contributions and finishing the quarter with twice as much money in the bank." There have been "growing complaints in Republican circles about the chairmanship of Sen. Elizabeth Dole (N.C.), who was elected to the post in part because of her reputation as a fundraiser." The DSCC reported raising $6.9 million in March for a total of $56.4 million in the 2005-06 cycle, and $32.1 million cash on hand. The NRSC "reported raising $5 million in March, bringing its total to $50.4 million for the cycle, with $16.5 million in the bank." In an "equally significant development, the Democratic Congressional Campaign Committee reported having $23 million in the bank, almost equaling -- for the first time in memory -- the cash balance of the National Republican Congressional Committee, which was $24.4 million."

CNN's The Situation Room (4/20, Blitzer) reported, "New financial reports in this midterm election year show that Senate Democrats still hold a 2-1 advantage over their Republican counterparts. The Democrats have about $32 million in the bank. The Republicans have about $16 million. But the Republican Party still holds a huge fund-raising edge over the Democratic Party. The RNC has about $43 million in the bank. The DNC has about $10 million on hand."

Democrats' Advantage On Generic Ballot Said To Be Overstated. The Washington Times (4/21, Lambro, 90K) reports pollsters are "churning out a stream of voter surveys that show Republicans trailing by 10 percent or more in congressional elections, although they acknowledge these 'generic' polls overstate the Democratic vote." The latest USA Today/Gallup poll, "conducted from April 7 to April 9, found that the Democrats lead Republicans by 52 percent to 42 percent among all registered voters surveyed." But Gallup "and other election pollsters who conduct generic polls acknowledge that the turnout rate for registered voters is much less than it is for Americans who say they are 'regular voters.' When Gallup polled a subgroup of people who say they vote on a regular basis, the Democratic lead fell to seven points, 51 percent to 44 percent." Republican pollsters "often complain that the results of generic surveys are tilted in favor of the Democrats and do not accurately reflect the partisan division among people who actually vote in their states and districts. It is a complaint that the Gallup Poll itself acknowledges in an analysis of its latest polling results."

Pew Poll Finds Anti-Incumbent Mood Strongest Since 1994. The AP (4/21, Sidoti) reports the "anti-incumbent mood of the public is as high as it has been since the midterm elections of 1994. A majority of people in this country say they do not want to see most members of Congress re-elected this November, and almost three in 10 say that about their own representative to Congress, according to a poll by the Pew Research Center for the People & the Press." Fifty-three percent "said they do not want most members of Congress re-elected, the poll found. In October 1994, 56 percent felt that way. Also, 28 percent said they want to see their own representative defeated in the midterm elections, compared with 29 percent in October 1994."

"Dysfunctional" Democrats Seen As Unlikely To Exploit GOP's Weakness. In an editorial, The Economist (4/20) says in a leader that the Democrats "hope to win this year's congressional elections in November and, on the back of those, to capture the White House in 2008. They need a net gain of 15 seats to take over the House and six seats to take over the Senate." With "two-thirds of Americans convinced that their country is heading in the wrong direction, this might appear to be easy. It isn't. First, various technical factors -- from the power of incumbency to gerrymandering -- will help the Republicans in November. More important, if the Republicans reek of decay, the Democrats ooze dysfunctionality: Divided, beholden to interest-groups and without a coherent policy on anything that matters to America and the world." Since 2004, the "Republican incompetence has exceeded even our worst fears. How depressing to report that Democratic incoherence has soared too. America deserves better."

Ehrlich, BGE Reach Deal On Rate Hike. Maryland Gov. Robert Ehrlich and Baltimore Gas and Electric Co. have reached a deal to phase in a 72 percent electricity rate increase over 18 months, Ehrlich announced Thursday. The Washington Times (4/21, Miller, 90K) reports, "By making the deal with BGE officials, Mr. Ehrlich avoided having to call a special session of the Democrat-controlled General Assembly, which ended its regular session last week without reaching an agreement on the electricity-rate issue."

The Washington Post (4/21, B1, Mosk, Wagner, 744K) reports, "The deal described yesterday is similar to one Pepco announced two days earlier. Under the terms, which state regulators must approve, 1 million Baltimore Gas and

DOJ_NMG_0026282

Electric customers will be given an option of shouldering the entire 72 percent increase starting in July or phasing it in over 18 months. Those who choose to phase in the increase will have to pay additional charges of about $15 a month extra for the average customer over two years. An additional $600 million in relief -- about $4 a month for the average customer -- would hinge on whether BGE's parent company, Constellation Energy Group, gets approval for a merger with a Florida power company. If not, customers who deferred rate increases would have to pay more interest."

Betty Ford Hospitalized. NBC Nightly News (4/20, story 5, 0:15, Williams, 9.87M) reported, "In other news tonight, we got word this morning that former First Lady Betty Ford was hospitalized for tests today. A family spokesperson said the visit to Eisenhower Medical Center in Rancho Mirage, California was routine and that the 88-year-old is in good health."

Krugman Says Conservative Tide Is Receding. Paul Krugman writes in the New York Times (4/21, 1.19M) that President Bush's "temporarily sky-high approval ratings were the aberration; the public never supported his real policy agenda." Krugman adds that Democrats "will almost surely make gains" this fall. Krugman concludes that the 2004 election 'looks like the high-water mark of a conservative tide that is now receding."

WSJournal Opposes Restoring Dues-Checkoff Privilege For NYC Transit Union. An editorial in the Wall Street Journal (4/21, 2.11M) says New York City may be bucking the trend of unions representing government employees getting "whatever they want, and with little accountability." The Journal notes that last December, the city's Transit Worker's Union "struck for three days in violation of the law." As penalty for the illegal strike, a judge rules that the union's right "to the automatic deduction of dues from workers' paychecks should be suspended for 90 days, and possibly longer." The Journal adds, "We wonder why the TWU should have its dues-checkoff privileges restored at all. Let it raise its money the old-fashioned way -- by providing a service that its members are willing to pay for."

Hamas Appoints Militant As Head Of New Security Force. The AP (4/21, Barzak) reports, "The Hamas government on Thursday named a Palestinian whose group has attacked Israel and was blamed for bombing a U.S. convoy to head a new security force made up of Islamic militants." The move "is a direct challenge to the authority of President Mahmoud Abbas, and was quickly denounced by Israel and the United States." Hamas Interior Minister Said Siyam "issued a decree appointing Jamal Abu Samhadana, the head of the Popular Resistance Committees, as director general of his ministry." His group "is responsible for many of the homemade rockets launched at Israel in recent weeks." It also is "suspected by some of involvement in the attack on a US Embassy convoy in Gaza that killed three Marine security guards in October 2003." The Washington Post (4/21, A16, 744K) runs a similar AP story on the appointment, while Knight Ridder (4/21, Nissenbaum) reports Samhadana is "one of Israel's most wanted militants," and notes he "an Israeli assassination attempt ."

The New York Times (4/21, Myre, 1.19M) says the move is "likely to increase friction between the Hamas-led Palestinian government and…Abbas." The Washington Times (4/21, Mitnick, 90K) also refers to the "tug of war between Hamas and…Abbas for control of the Palestinian security services." In recent weeks Abbas "has made several appointments aimed at consolidating his authority over multiple paramilitary police forces that he controls." The Los Angeles Times (4/21, King, 958K) runs a similar report.

US Diplomats' Union Says "Risk-Averse Culture" Stymies Award Nominations. The Washington Times (4/21, Kralev, 90K) reports the American Foreign Service Association, "the union representing American diplomats," said yesterday "it has had a difficult time soliciting nominations for its annual awards for 'constructive dissent'in the Foreign Service because its members are reluctant to be perceived as mavericks." Barbara Berger, coordinator for the awards, "said the Foreign Service is a risk-averse culture and its members are preoccupied with important daily responsibilities around the world." The Times adds, "None of the nominations this year is related to a controversial foreign policy issue such as Iraq, Iran, North Korea or the Israeli-Palestinian conflict."

White House Backs Lebanon On Territorial Dispute With Syria. The AP (4/21, Schweid) reports, "The Bush administration urged Syria on Thursday to negotiate with Lebanon on the future of a strip of disputed territory occupied by Israel." Israel seized Chebaa Farms in the Six-Day War. However, "The United Nations has

DOJ_NMG_0026283

determined the area is Syrian and has called for Syria and Israel to determine its fate in negotiations. But Syria says the area is Lebanese, and Lebanon has claimed Chebaa Farms." The US is calling for a "negotiated solution" and "normal diplomatic relations" between Syria and Lebanon.

Iranian Official Who Entered US Is Permanent Resident. The Washington Times (4/21, Kralev, 90K) reports, ""Mohammad Nahavandian, an economics and technology aide to Iran's top nuclear negotiator, Ali Larijani" who entered the US last month, is a "legal permanent US resident." However, DHS is now investigating him for "suspected violations that could result in revoking his green card." Nahavandian reportedly flew into Philadelphia on March 25. One official said "there were no records" that Nahavandian had left the US, "although he noted that such records would exist only if he departed by air."

Young Iranians Are Frustrated. The Washington Post (4/21, A1, Vick, 744K) reports, "While the world focuses on Iran's nuclear ambitions, Iranians focus on the unmet aspirations of the two-thirds of the population that is younger than 30." Iranians have "seen average income shrink under a religious government that has cultivated an elite of its own atop a profoundly dysfunctional economy"; problems include 15% inflation and 80% of the population working in the private sector, which is only 20% of the economy.

WSJournal Urges Bush To Prepare For Tough Iranian Situation. An editorial in the Wall Street Journal (4/21, 2.11M) tells President Bush to "begin to educate the American public about what is at stake in Iran and what the U.S. might be prepared to do about it." The editorial argues that "the chances of the international community imposing sanctions -- and sticking to them -- are vanishingly small" and that the president faces "a revolutionary regime seeking to spread its ideology and power by force and intimidation." It warns that offering concessions to Iran will likely fail, as they did with North Korea.

IADE Study To Suggest Greater Global Use Of Nuclear Power. The Financial Times (4/21, Hoyos) reports, "The International Energy Agency, which represents 26 developed countries, is to support a study highly likely to make the case for greater reliance on nuclear power." The study by the West's "energy watchdog" comes "amid growing fears about the reliability of natural gas supplies, particularly out of Iran and Russia." Greater use of nuclear power would end "the decades of moratoriums and stalled reactor programmes that followed the Chernobyl accident 20 years ago."

Uzbek Nuclear Waste Returned To Russia. The Washington Post (4/21, A15, Kole, 744K) reports, "Spent nuclear fuel containing enough weapons-grade uranium to produce at least two bombs was safely returned to Russia from Uzbekistan this week in a high-security and classified operation." The guarded shipments were "part of the Global Threat Reduction Initiative, an effort to ensure that high-risk nuclear and radiological materials do not fall into the wrong hands."

DOJ Investigates Russian Gas Supplier. The Wall Street Journal (4/21, 2.11M) reports, "The Justice Department is investigating Rosukrenergo AG, the company that supplies billions of dollars in Russian and Central Asian natural gas to Ukraine." Ruskrenergo's "cloudy workings and ownership structure have been attacked as a threat to Europe's energy security and Ukraine's political stability." The secretive company "is now reconsidering plans for a public share offering that would have required disclosure of the company's true owners."

Kurdish Satellite TV From Denmark Angers Turkey. The Christian Science Monitor (4/21, Schleifer, 61K) reports, "The Turkish government is lobbying Denmark to rein in Roj, accusing the two-year-old station of being nothing more than a mouthpiece for Kurdish terrorists." Based in Denmark, Roj "frequently airs footage provided by the [PKK] of its guerrillas in action against Turkish security forces." Turkey accuses Roj of being "part of the PKK," while Denmark calls the controversy "a matter for the courts." Kurdish viewers in southeastern Turkey have "added to the list of grievances" the Turkish government's efforts to shut down Roj.

US Troop Presence Creating Angst In Dominican Republic. The Los Angeles Times (4/21, Williams, 958K) reports anyone "casting a glance across the acres of armored vehicles, aircraft and olive-drab shelters arrayed around an abandoned airstrip" in the Dominican Republic "might be forgiven for assuming the U.S. armed forces have come to stay." The seaside territory "is abuzz with Black Hawk helicopter sorties and successive waves of arriving soldiers, all part of a four-month humanitarian and training mission under a Pentagon program known as

DOJ_NMG_0026284

Operation New Horizons." The US military "aims to build four prefabricated medical clinics and train 3,500 troops, mostly reservists, shuttling into this remote western port in two-week rotations." But the "scale of the operation and a U.S. aircraft carrier group's deployment to the Caribbean for two months of maneuvers have raised eyebrows and protests among those who see the American military presence as a threat to their sovereignty, or a show of force against leftist Latin American leaders."

Berlusconi Refuses To Leave Scene. The New York Times (4/21, Fisher, 1.19M) reports that defeated Prime Minister Silvio Berlusconi is not likely to plan a "quiet retirement." The Times reports, "Staying in politics brings an unquestionable bounty of advantages for a man like Mr. Berlusconi." He can protect his business empire and use parliamentary immunity to ward off "allegations of bribes and corruption over many years." Berlusconi has already vowed "to work to bring down the government as quickly as possible."

Nepalese Police Shoot Three Demonstrators. The Washington Post (4/21, A14, Lancaster, 744K) reports, "Police opened fire on pro-democracy demonstrators in the capital Thursday, killing three and wounding scores of others. The Post reports that the most recent protests in Kathmandu are the largest "since the parties launched their campaign" to bring back democratic rule. Diplomatic efforts by India, the US, and others are characterized as "intensive but apparently inconclusive." ABC World News Tonight (4/20, story 7, :25, Vargas, 8.78M) reported that in Nepal, "100,000 pro-democracy demonstrators defied a curfew to demand an end to the king and his dictatorship … Diplomats said there are signs the king may make concessions, possibly appointing a prime minister or reinstating parliament."

Chadian President Fights To Stay In Power. The New York Times (4/21, Lacey, 1.19M) reports that Chadian President Idriss Déby is beset by relatives and outsiders seeking his ouster: "Two of Mr. Déby's uncles, for example, defected from their positions as top military commanders in February to become rebels, and two of his nephews, once top presidential aides, broke ranks a few months … Some speak against Mr. Déby from opposition parties while others pick up arms against him. The government of Sudan has taken advantage of this popular disaffection, analysts say, by aiding some of the roughly 12 Chadian groups trying to unseat Mr. Déby." Diplomats worry that if Déby goes, a new government could favor Sudan's Darfur-tainted government or could sell oil to China.

US Tourists Can Visit North Korea This Summer. USA Today (4/21, Clark, 2.31M) reports, "Tours of North Korea being offered late this summer are, as one tour operator puts it, 'selling like hotcakes.'" USA Today writes, "The so-called Hermit Kingdom will grant visas to Americans during its annual Grand Mass Gymnastic and Artistic Performance, or Arirang festival, for select dates from August to October." The rare opportunity for Americans comes with restrictions: "Two North Korean guides [are] assigned to foreign travel groups. …Travel is arranged through a government agency (akin to the former Soviet Intourist), and Americans are charged more than other foreigners."

Snow Says Addressing Global Imbalances A Shared Responsibility. Treasury Secretary John Snow writes in the Washington Post (4/21, A23, 744K), "Today the International Monetary Fund is hosting a conference on global imbalances, the popular catchphrase for the capital and trade flows that have resulted from uneven regional growth, inflexible exchange rates and some regions' overdependence on exports -- especially to the United States -- to fuel their growth. … Too many discussions of this topic have labeled the United States the sole cause of, and solution to, the challenge." Snow adds, "Addressing global imbalances is a shared responsibility. The United States is doing its part -- we have adopted policies to reduce our fiscal deficit and increase national savings -- but the other major economies must do their parts as well. … Today's conference provides an opportunity for my colleagues and me to begin an intellectually honest debate on the responsibility we all share."

Bush Urged To Be Tough With Aliyev. In the Financial Times (4/21), columnist Philip Stephens urges President Bush to advocate human rights and democratization with Azeri leader Ilham Aliyev: "If Mr Bush's words are to mean anything at all, they must be shown to have substance precisely in places like this." Stephens argues that Aliyev is "susceptible" to pressure because his country needs "the west's approval and investment." However, Stephens pessimistically expects Washington to do no more than "a few

DOJ_NMG_0026285

gentle admonitions about trying to make the country's next elections a little bit fairer than the last."

O'Grady Criticizes "Rerun" of Venezuela In Bolivia. In the Wall Street Journal (4/21, 2.11M), columnist Mary O'Grady writes, "Military ambition is not the only threat that [Hugo] Chávez presents to hemispheric security. There is also his obsession with ending pluralistic democracy around the region." O'Grady argues that "Bolivia is his most advanced project," where President Evo Morales has taken Chavez-like steps such as purging "the top generals in the Bolivian military and [promising] to nationalize the country's natural resources." Morales has another policy meant to eliminate potential opposition: "a draconian salary cut for legislators, judges and commissioners."

WPost Hails Opening Of Nazi Archive. An editorial in the Washington Post (4/21, A22, 744K) hails the German decision to open "the archives of the International Tracing Service, a vast collection of documents thought to contain information on more than 17 million victims of the Holocaust, Nazi slave labor camps and postwar camps for displaced persons." The editorial takes a cautious tone, saying, "The test, now, is whether and how fast the Germans will make good on their promise." It urges rapid digitization and reproduction to benefit "survivors and historians, some of whom have been waiting more than 60 years."

WASHINGTON'S SCHEDULE:

Today's Events In Washington.
White House:

PRESIDENT BUSH — Participates in a panel discussion on the American Competitiveness Initiative. Cisco Systems, Inc., San Jose, Calif.; the president will overnight in St. Helena, Calif.

VICE PRESIDENT CHENEY — Arrives at Indianapolis International Airport; departs Indianapolis International Airport; arrives at airport from local events, Morgantown, W.Va.

US Senate: No Scheduled Events.

US House: No Scheduled Events.

Other: CHINESE PRESIDENT HU JINTAO _ Highlights: Morning. Departs Washington.

CANADIAN FINANCE MINISTER JAMES FLAHERTY _ Highlights: 11 a.m. Meeting with World Bank President Paul Wolfowitz; 11:45 a.m. Meeting with U.S. Treasury Secretary John W. Snow.

COUNTERTERRORISM _ The Fifth Annual International Counterrrorism Conference, focusing on private and public partnerships, is held. Highlights: 9 a.m. Session on critical infrastructure, Patricia Hassard of the Canadian Public Safety and Emergency Preparedness Agency, Morgan Wright of Cisco Systems, others. 11 a.m. Keynote address on bioterrorism, with James Young, advisor, Public Safety and Emergency Preparedness Canada. 11:30 a.m. Assistant DHS Secretary Stewart Baker. 1:15 p.m. Session on port security, Gerry Frappier of Transport Canada, Shawn James of Lockheed Martin, others. 4 p.m. Keynote address - former DHS Secretary Tom Ridge. Location: Ritz-Carlton Hotel, 1150 22nd St. NW.

SCIENCE-TECHNOLOGY _ The American Association for the Advancement of Science holds its 31st annual Forum on Science and Technology Policy. Highlights: 7:45 a.m. Breakfast address by John Hamre, President, Center for Strategic and International Studies. 9 a.m. Shirley Ann Jackson, President of Rensselaer Polytechnic Institute, moderates plenary session on the global innovation challenge. 12 p.m. Luncheon address by Energy Secretary Bodman. Location: Washington Court Hotel, 525 New Jersey Ave. NW, unless otherwise noted.

BIOETHICS _ 9 a.m. Meeting of the President's Council on Bioethics, Agenda includes children and clinical research and organ procurement and transplants. Location: Madison Hotel, 1175 15th St. NW.

G-7 MEETING _ Annual G-7 meeting. Highlights: 7:30 p.m. Treasury Secretary Snow holds the G-7 news conference. Location: St. Regis Hotel, 16th and K Sts. NW.

NATIONAL SECURITY LAW _ 9:30 a.m. American University's Washington College of Law holds first annual Conference on Professional Issues in National Security. Participants include attorney Mark Zaid, Krieger and Zaid; Bruce Fein, The Lichfield Group; Tony Lord, British Embassy; former CIA officer Burton Gerber; and former 9/11 Commission counsel Daniel Marcus. Location: Room 401, 4801 Massachusetts Ave. NW.

PENTAGON-IRAQ _ 9 a.m. Army Colonel David R. Gray, commander of the 1st Brigade, 101st Airborne Division, will brief live from Iraq to provide an update on ongoing security operations in Iraq. Location: DOD Briefing Studio, Pentagon 2E579.

IRAQ STRATEGY _ 9:30 a.m. The Middle East Policy Council holds a forum on a responsible exit strategy from Iraq, with Lawrence Korb of the Center for American Progress, Barry Posen of MIT, others. Location: Room HC-5, Capitol.

ECONOMIC GROWTH-PROSPERITY _ 10:30 a.m. The Heritage Foundation holds a discussion on promoting economic growth and prosperity, with Lawrence Lindsey, former OMB Director James Miller, others. Location:

DOJ_NMG_0026287

Lehrman Auditorium, Heritage Foundation, 214 Massachusetts Ave. NE.

NATIONAL SECURITY-INVESTMENT _ 10:30 a.m. The American Enterprise Institute holds a forum on reform of the Committee on Foreign Investment in the U.S. and the Exon-Florio provisions of the Defense Production Act, with Clark Ervin of the Aspen Institute, Kristin Forbes of MIT, others. Location: 12th floor, AEI, 1150 17th St. NW.

MOUSSAOUI _ 11 a.m. The case United States v. Zacarias Moussaoui resumes. Location: Albert V. Bryan U.S. Courthouse, 401 Courthouse Square, Alexandria, Va.

CHINA _ 12:30 p.m. The School of Advanced International Studies holds a discussion with Peng Zhongying of the China Reform Forum on China's Role in Asia and beyond. Location: Room 812, 1619 Massachusetts Ave. NW.

DOHA ROUND _ 12:30 p.m. The School of Advanced International Studies holds a discussion with Sandra Polaski of the Carnegie Endowment for International Peace on the winners and losers in the Doha Round of trade talks. Location: Room 200, 1619 Massachusetts Ave. NW.

CLIMATE CHANGE _ 1 p.m. The Earth Day Network holds a discussion on climate change, with Vicki Arroyo of the Pew Center on Global Climate Change, David Battisti of the University of Washington, John Harte of UC Berkeley; John Reilly of MIT, and Daniel Schrag of Harvard. Location: AARP Broadcast Center, 601 E St. NW.

CRIME VICTIMS _ 2:30 p.m. National Crime Victims' Rights Week Awards ceremony, with Attorney General Gonzales, others. Location: Mellon Auditorium, 13th St. and Constitution Ave. NW.

EUROPE-HUMAN RIGHTS _ 5:30 p.m. Judge Luzius Wildhaber, president of the European Court of Human Rights, speaks at American University on the present and the future of the European Court of Human Rights. Introduction by Supreme Court Justice Stephen Breyer. Location: Room 603, Washington College of Law, 4801 Massachusetts Ave. NW.

Today's Events In Washington 34

DOJ_NMG_0026290

TERRORISM NEWS:

Moussaoui Prosecutors Stipulate Reid Role In 9/11 "Highly Unlikely." At the sentencing trial of Zacarias Moussaoui yesterday, the defense rested after calling more 9/11 victims' family members to the stand, and psychiatrist Raymond Patterson testified in the government's rebuttal that Moussaoui is not a paranoid schizophrenic. However, most press coverage focused on the written stipulation in which the prosecution acknowledged that it is "highly unlikely" al Qaeda intended shoe-bomber Richard Reid to play a role in 9/11.

NBC Nightly News (4/20, story 3, 2:45, P. Williams, 9.87M) reported, "The jury has how heard from 13 family members as defense witnesses, including the sister of Jeremy Glick and the mother of Mark Bingham, two men who helped lead the passenger revolt on Flight 93." In the Reid stipulation, "the government said there's no evidence that Reid was ever instructed by al Qaeda leadership to conduct an operation with Moussaoui. Reid named Moussaoui the beneficiary in his will, something the FBI says he would not have done if the two were to be part of the same suicide operation."

Under the headline "Moussaoui, Shoe Bomber Link Called 'Highly Unlikely' by FBI," The Washington Post (4/21, A3, Markon, Dwyer, 744K) adds, "It was unclear how the FBI's analysis would resonate with jurors and whether it would raise questions about the truthfulness of Moussaoui's testimony. Jurors will start deliberating Monday." FBI spokesman Richard Kolko "would not comment beyond the stipulation. Prosecutors declined to comment." The AP (4/21, Sniffen) also notes, "Reid named Moussaoui as the beneficiary in his will and two FBI analysts concluded that was an unlikely decision for him to make if they were going to be on a joint suicide mission, the statement said.

The New York Times (4/21, Lewis, 1.19M) reports, "The significance of the document is that the Justice Department has now acknowledged that the government's principal investigators on the case are highly skeptical of an important part" of Moussaoui's testimony about his role in 9/11," which "was widely viewed as an important element in persuading the jury to find him eligible for the death penalty." CNN's The Situation Room (4/20, Blitzer) similarly noted that the stipulation about Reid "could make the difference on whether the confessed al Qaeda conspirator gets the death penalty."

The Los Angeles Times (4/21, Serrano, 958K) and Bloomberg (4/21, Arthur, Elsibai) also report on the stipulation and testimony from victims' family members.

FBI Review Raises Questions In Detroit Terror Case. The AP (4/20, Solomon) reports, "A new FBI analysis of evidence in a bungled Detroit terrorism trial undercuts the recent indictment of the former prosecutor in the case, creating fresh conflict in a legal drama that has embarrassed the Bush administration." The AP continues, "The 13-page report by FBI Agent Paul George concludes that satellite photos of a Jordanian hospital closely match hand-drawn sketches found in 2001 inside the apartment of four Detroit men who the government claimed had surveyed the site as part of a terrorist plot. … The new analysis conflicts with the Justice Department's argument that photographic evidence did not match the sketches." The AP adds, "George testified at the 2003 Detroit terrorism trial and produced the new analysis around the time he was called to testify late last year before a grand jury that eventually indicted the prosecutor for wrongdoing in the case, officials said. The agent's report was obtained by The Associated Press. … Convictions of three of the four Detroit men — arrested shortly after the Sept. 11 attacks — were tossed out in 2004 after the Justice Department told the court its own prosecutors withheld photos from defense lawyers that could have helped prove the defendants innocence. … Last month, former Assistant U.S. Attorney Richard G. Convertino and a State Department investigator were indicted on charges they conspired at the trial to withhold the pictures because they would have shown that the drawings were not surveillance sketches of the hospital, as Convertino and trial witnesses had portrayed. … Department officials said they were aware of George's report, but remained confident they could prove the ex-prosecutor and the State Department official lied about the existence of the photos, which were e-mailed to Convertino before the trial and were not turned over to defense lawyers. Convertino said he never saw the e-mail or photos. … 'The pending prosecution is not about the guilt or innocence of the defendants' in the original terror case, Justice spokesman Bryan Sierra said. 'This is about lies perpetrated by a federal prosecutor and a federal agent, as alleged in the indictment. It's about perjury and the integrity and fairness of the judicial system.'"

The Detroit News (4/21, Egan) notes Convertino lawyer Jeffrey Del Fuoco said, "It's extremely damaging to the government's case. They were in possession of this information prior to bringing this indictment and they brought it anyway." However, DOJ spokesman Bryan Sierra noted, "The pending prosecution is not about the guilt or innocence of the defendants. This is about lies perpetrated by a federal prosecutor and a federal agent, as alleged in the indictment."

DOJ_NMG_0026291

Number Of Terror Attacks Rose "Dramatically" In 2005. Knight Ridder (4/20, Strobel) reports that the number of terrorist attacks documented by US intelligence agencies increased dramatically in 2005, according to counterterrorism officials and documents obtained by Knight Ridder. According to Knight Ridder, the number attacks crossed 10,000 for the first time in 2005. Knight Ridder adds, "Officials caution that much of the increase, due to be reported publicly next week, stems from a change last year in how terror attacks are counted, coupled with a more aggressive effort to tally such violence worldwide. But the documents say, and officials confirm, that some of the rise is traceable to the war in Iraq, where foreign terrorists, a homegrown insurgency and sectarian strife have all contributed to political bloodshed."

List Of Guantanamo Detainees Sparks Outcry. In the wake of the Pentagon's release of a secret list of names and nationalities of 558 people held at the US military prison at Guantanamo Bay, the AP (4/20, Garwood) reported that a "chorus of complaints against the Bush administration." Britain "said its citizen should be freed after being held for years without charges. Afghanistan's peace and reconciliation commission vowed to send a delegation to the prison to make sure Afghans are not being mistreated. China demanded custody of a group of Muslim separatists so it can prosecute them on terrorism charges." The AP adds, "About 490 detainees from about 40 countries are now at the base. The Red Cross — the only outside agency the United States has allowed to visit the detainees — previously had access to the list but was not allowed to make it public."

Accused Enemy Combatant's Case Gets Increased Attention. The Washington Post (4/21, A3, Eggen, 744K) says Ali Saleh Kahlah al-Marri, the last man held as an enemy combatant on US soil, "is poised to take center stage in the ongoing fight over presidential powers in a time of war." The Qatari national, who is accused of being an al Qaeda sleeper, "has been held in a military brig in South Carolina since June 2003. … He is challenging the government's right to hold him as an enemy combatant." The Post adds that "a remarkable document filed in federal court in South Carolina this month," portrays Marri "as an important terrorist soldier who trained for more than a year at al-Qaeda camps. … Marri's attorneys dismiss the newly disclosed allegations as 'triple hearsay evidence' inadmissible in court and say many of them may have been obtained through torture."

Hayat Trial Judge Tells Jurors Not To Consider Cash Transfer "Material Support." The Sacramento Bee (4/21, Korber, 301K) reports, "The federal judge in the Lodi terrorism case instructed deliberating jurors Thursday they were not to consider a proposed transfer of cash as evidence that Hamid Hayat provided material support to terrorism. … In a hearing out of the jury's presence, the judge said he had studied the indictment and concluded that the reference to 'tangible or intangible property or service' should be stricken from the instruction. Attorneys for both the prosecution and the defense agreed." The Stockton Record (4/21, Hood) also reports on the material support ruling and adds, "Hamid Hayat's jurors sent U.S. District Judge Garland E. Burrell Jr. a note Thursday asking if FBI agents were required to read Hayat his constitutional rights before questioning him at his home on June 3. According to defense attorney Wazhma Mojaddidi, Burrell replied in the telephone conference that it's not a matter for jurors to decide."

Georgia Tech Student Indicted For Allegedly Attending Pakistan Terror Camp. The Atlanta Journal-Constitution (4/21, Torpy, 430K) reports Georgia Tech engineering student Syed Haris Ahmed "has been charged with giving 'material support' to a terrorist organization," and "the FBI believes he attended a training camp in Pakistan last year, sources say. He was in religious school there, his family says." Ahmed pleaded not guilty to the charge on Wednesday, US Magistrate Joel Feldman ordered him held without bail. "Gregory Jones, FBI Special Agent in Charge of the Atlanta office, would not say what started the investigation." The AJC adds, "In a separate case that may be related, a 19-year-old Roswell man was arrested Monday in Bangladesh. Ehsanul Islam Sadequee was arrested by Bengali authorities after at least eight months of federal investigation of him and his family, his sister…said Thursday." The New York Times (4/21, Goodman, 1.19M) notes Jones said at a press conference yesterday, "This case will be very seminal to those goals we've set to thoroughly investigate any information brought to our attention. We want to get it well before the point that somebody puts a bomb in a car."

The AP (4/21) adds that Jones said, "Let me assure you that at no time were we aware of an immediate dangers to the Atlanta area of the United States." Although "officials said the investigation of Ahmed was unrelated to other terrorism investigations," Sadequee's family "said they had been contacted recently by a man resembling the Georgia Tech student, who said he had been questioned by the FBI." CNN.com (4/20) reports, "U.S. law enforcement sources confirmed Thursday that Sadequee's arrest was linked to Ahmed's arrest by the FBI last month."

Former Salah Attorney Testifies About Harsh Israeli Interrogation Techniques. The AP (4/21,

DOJ_NMG_0026292

Burghart) reports, "Suspects subjected to days of interrogation techniques used by Israeli security agents often will do whatever necessary to put a stop to their 'desperate situation,' according to an attorney who testified Thursday in a hearing in the case of his former client, Muhammad Salah," who "is accused of laundering money to finance terrorist operations by…Hamas." Israeli defense and human rights lawyer Avigdor Feldman "testified that Salah told him while in custody he was forced to wear a foul-smelling hood, deprived of sleep, made to sit in an awkward position in a tiny chair with uneven legs and kept in a cell so cold it was called 'the refrigerator.' Salah said Israeli security agents told him he could be held indefinitely if he did not confess and that FBI agents in the United States would harm his family back home, Feldman said."

EU Official Sees No Evidence Of Secret CIA Flights. The EU's anti-terrorism coordinator said yesterday that investigators have found n o evidence that the CIA moved prisoners through European airports en routs to secret detention centers. USA Today (4/21, 2.31M) reports, "Gijs de Vries told a European Parliament committee that investigators have not identified any human rights violations, despite more than 50 hours of testimony by human rights activists and individuals who claimed to have been abducted by U.S. intelligence agents."

The New York Times (4/21, Bilefsky, 1.19M) reports that de Vries "came under criticism from some legislators who called the hearing a whitewash. Kathalijne Buitenweg, a Dutch member of Parliament from the Green Party, said that even without definitive proof, 'the circumstantial evidence is stunning.'"

HOMELAND RESPONSE:

Negroponte Defends First Year As DNI. Director of National Intelligence John Negroponte yesterday defended his first year on the job, saying he has made progress integrating the 16 agencies of the US intelligence community and adding that "remaking a loose confederation into a unified enterprise" will take time. The Washington Post (4/21, A7, Pincus, 744K) reports, that Negroponte speaking at the National Press Club, "said he has instituted 'institutional innovations, most of which are system-wide procedural improvements' designed to 'optimize the community's total performance.'"

Negroponte Reveals Number Of US Intelligence Workers. ABC World News Tonight (4/20, story 8, :25, Vargas, 8.78M) reported, "We learned something today, that was previously secret about how many people work for US intelligence around the world. John Negroponte, the Director of National Intelligence, gave a speech in Washington, on his first anniversary in that newly-created post. And Negroponte revealed that the intelligence community includes almost 100,000 Americans in 16 Federal Departments and agencies. He added that public understanding is important."

Negroponte Suggests US Is No Closer To Finding Bin Laden. The Los Angeles Times (4/21, 958K) reprints a Chicago Tribune (Hedges, 643K) story that reported that Negroponte "suggested that the US government was no closer to apprehending Al Qaeda chief Osama bin Laden, although he said Bin Laden's ability to operate had been significantly reduced." The Times adds that Negroponte "declined to discuss specific criticism of his office or the agencies that report to him."

Ignatius Says Bush Administration Has Made US Intelligence Problems Worse. David Ignatius writes in the Washington Post (4/21, A23, 744K) that a reorganization of the US intelligence community that was "supposed to bring greater coordination has instead produced a layering of responsibilities and bureaucratic confusion. A demoralized CIA that needed professional management is chafing under a Republican former congressman who has proved to be the most political and ineffective director in the agency's history." Ignatius adds, "Look at the organizational chart of the new Office of the Director of National Intelligence and you wonder if America has become a Third World country with a rival intelligence agency for each patch of turf." Ignatius concludes, "You would have thought it was impossible to make our intelligence problems even worse, but the Bush administration has accomplished that. This is a dangerous situation for the country, and it needs to be fixed, now."

Chertoff Vows To Redirect DHS Grant Spending. Homeland Security Director Michael Chertoff has promised to redirect grant spending based on risk of a terrorist attack aid word that fire departments are using DHS grants to buy gym equipment, sponsor puppet and clown shows and turn first responders into fitness trainers. The Washington Times (4/21, Hudson, 90K) reports, "The spending choices are allowable under the guidelines of the Assistance to Firefighters grant administered by the Homeland Security Department, which has awarded nearly 250 grants since February totaling more than $25 million out of the current spending pot of $545 million. … The Bush administration has specifically asked Congress not to allow funding for physical fitness, but the members who run Congress' appropriation committees keep inserting the language into the department's budget, officials say."

TSA Says 20 Airports Will Start "Registered Traveler" Programs. The TSA said yesterday that only 20 airports will be allowed to start so-called "registered traveler" programs that speed trusted travelers through

DOJ_NMG_0026293

airport security. USA Today (4/21, Frank, 2.31M) reports, "The TSA imposed the limit so it can test technology needed for the program's goal: a nationwide network of airports offering pre-screened passengers a fast pass through security. Airports could start the program as early as this summer when TSA begins approving applications, agency chief Kip Hawley said. Once 20 airports are approved, no more will be added until TSA finishes a year of taking public comment on Registered Traveler and refining the program."

The Wall Street Journal (4/21, Zhang, 2.11M) repots, "Participating airports will be chosen based on factors such as passenger volume, security measures, layout of airports and checkpoint configurations. The agency expects to roll out the program by June 20 and make a final rule for its expansion nationwide next year."

Security Test Glitch Causes Massive Delays At Atlanta Airport. ABC World News Tonight (4/20, story 9, :30, Vargas, 8.78M) reported, "There were massive delays at Atlanta's Hartsfield-Jackson Airport, after security screeners spotted what looked like a bomb on an X-ray machine yesterday. The security system was shut down when she was unable to locate the bag involved. Today, officials said it was a test. But because of a computer glitch, the screener didn't know. And therefore, all the confusion and delays ensued."

Pataki Adviser Says Planned Ground Zero Memorial Is "Attractive Target." James Kallstrom New York Gov. George Pataki's senior adviser for counterterrorism has concluded that the design for a memorial at ground zero leaves is vulnerable to terrorist attack. The New York Times (4/21, Dunlap, 1.19M) reports that Kallstrom said the memorial is an "attractive target" and has "called on the architects to consider revising several critical aspects." Kallstrom's findings "were laid out in a confidential letter to the Lower Manhattan Development Corporation, dated March 3. A copy of the six-page letter was mailed anonymously to The New York Times and received this week. There was no way to assess the sender's motives."

GAO Audit Says $7.8 Million Wasted On Portable Classrooms For Katrina Zone. The AP2 (4/21, Yen) reports the government "overpaid by 20 percent on a $39.5 million, no-bid Hurricane Katrina contract for portable classrooms because the Army Corps of Engineers passed up chances to negotiate a lower price, a federal audit says." A draft Government Accountability Office report "on the contract with Akima Site Operations LLC, a subsidiary of an Alaska Native-owned firm, said the government wasted at least $7.8 million on the classrooms in Mississippi. It's the latest in a series of audits detailing waste of hundreds of millions of taxpayer dollars in the hurricane recovery effort."

GAO Report Criticizes SBA Response To Hurricane Katrina. The New York Times (4/21, Nixon, Eaton, 1.19M) reports the Government Accountability Office says "the federal government's main program for helping the victims of Hurricane Katrina rebuild their homes and businesses, operated by the Small Business Administration, has been plagued by inadequate leadership and poor planning." The GAO "found that the agency was hampered in its hurricane response by its failure to participate in disaster drills and to prepare for a disaster of the hurricane's magnitude, according to written testimony and briefings it has given Congressional committees." SBA says "it has approved more than $8.3 billion in loans to more than 126,000 homeowners, renters and business owners and that it has processed 90 percent of the 2.4 million loan applications it has received since the hurricanes. More than 40 percent of the applications were approved, according to agency data." But Congressional critics "say the agency actually rejected close to 70 percent of applicants, and that so far only a small amount of loan proceeds — about $336 million — has gotten into the hands of disaster victims."

NYTimes Says Katrina Highlights Need For Relocation, Medical Care. The New York Times (4/21, 1.19M) says in an editorial that the lessons of Hurricane Katrina "have highlighted two important ways that the country will need to change its disaster relief before the next hurricane season begins in June. The federal government must do a better job of relocating evacuated families into permanent homes in functional communities instead of into hotels and trailer parks. And the authorities need to provide ongoing medical care for the displaced."

New Orleans Mayoral Race Comes Down To Three Candidates, Race. USA Today (4/21, Axtman, 2.31M) reports on the "eve of the election — one of the most unusual for a major city in U.S. history — it comes down to this. The black incumbent and two white challengers are locked in a tight contest where race is playing a dominant role." The outcome is "unpredictable. About the only thing that political observers agree on is that a runoff election looks inevitable." Two Tulane University political scientists "released a poll this week. It showed Louisiana Lt. Gov. Mitch Landrieu leading with 25.9% of the respondents' vote. Mayor Ray Nagin was second with 21.4%." Ron Forman, "president of the Audubon Nature Institute, took third with 17.9%." What is "making things difficult, says Brian Brox, one of the Tulane pollsters, is that over 17% of respondents say they are still undecided. Another 17.3% are voting for one of the other 20 candidates who are also on the ballot. Most of those candidates are political newcomers." Political experts

DOJ_NMG_0026294

"predict that no one will get a majority vote and the race will end up in a runoff on May 20."

The Wall Street Journal (4/21, Dade, 2.11M) reports "efforts to bus thousands of displaced African-American voters from Atlanta, Houston and other southern cities back to their hometown appear to be faltering -- a development that could hurt incumbent Ray Nagin in a tightly contested mayoral race." Whether Nagin "advances to a potential runoff next month could well turn on which and how many displaced residents return to vote. If Mr. Nagin fails, the margin of defeat may be found in the missing votes of those who were too consumed with piecing their lives together elsewhere to make the trek back to New Orleans." The Journal also reports the results of the Tulane University poll.

DNC Members To Repair Hurricane Damage During New Orleans Meeting. The AP (4/20, Sidoti) reports members of the Democratic National Committee "plan to clean out hurricane-ravaged homes in this slowly recovering city, a project designed to highlight the party's criticism of the Bush administration." The choice "of New Orleans for the Democratic National Committee meeting that begins Thursday was part of a political calculation, as is a three-day agenda for the 400 delegates that combines party business with community service." Democratic strategist Steve McMahon said, "It's reinforcing an impression that is widely held among the public and one that will be a critical theme for Democrats across the country — namely that this administration is dangerously incompetent."

WAR NEWS:

Al-Jaafari Drops Bid To Remain Iraqi Prime Minister. In a move that potentially could break the logjam preventing the formation of the Iraqi government, Shiite politician Ibrahim al-Jaafari announced he would not seek an additional term as prime minister. The CBS Evening News (4/20, story 6, 0:15, Schieffer, 7.66M) reported, "The political logjam that has blocked formation of a unity government in Iraq may have finally broken today." ABC World News Tonight (4/20, story 2, :30, Vargas, 8.78M) says "there's one giant note of caution. At times, in the past, al-Jaafari has not kept his word."

USA Today (4/21, Johnson, 2.31M) reports Jaafari said in a televised address, "The one thing I cannot compromise is my dedication to this heroic people. … I cannot allow myself to be an obstacle, or appear to be an obstacle to that." The Washington Times (4/21, Behn, 90K) reports Jaafari's "change of heart came after a series of meetings with Iraq's most powerful Shi'ite cleric Grand Ayatollah Ali al-Husseini al-Sistani, United Nations envoy Ashraf Qazi and radical cleric Muqtada al-Sadr."

The Financial Times (4/21, Negus) notes the announcement "was followed by the postponement of a planned session of parliament, delayed until Saturday, to allow members of the UIA to vote for leadership candidates, including a prime minister." President Jalal Talabani "predicted that key posts could be filled within days." The New York Times (4/21, Semple, Oppel, 1.19M) says "leaders from each of Iraq's main factions -- Sunni Arab, Shiite and Kurd -- called the decision a breakthrough."

The Washington Post (4/21, A14, Hernandez, Sebti, Ibrahim, 744K) reports, "Among the people mentioned as alternatives to Jafari are two members of his Dawa party: Jawad al-Maliki, its spokesman, and Ali al-Adeeb, a prominent politician whose ties to Iran disturb many Sunni Arabs." The AP (4/21, Reid), Los Angeles Times (4/21, Wallace, 958K) and Knight Ridder (4/21, Fadel) run similar reports.

Meanwhile the New York Times (4/21, 1.19M), in an editorial titled "A Glimmer Of Hope In Iraq," says "the most likely replacement nominees now being talked about are far from ideal. But the only conceivable path to a better future than civil war and chaos in Iraq is lined with distasteful compromise and leaps of faith. No one believes that success is certain. … A new start is desperately needed."

US Iraq War Death Toll, Costs Continue To Rise. The CBS Evening News (4/20, story 7, 0:30, Schieffer, 7.66M) reported, "As the Iraqis have continued to wrangle over forming a government, the price the United States is paying for the war just keeps going up. At least 2,374 American servicemen and women have now been killed. And in a new study, a Washington think tank reports US military spending on the war has skyrocketed. The report estimates the cost this year at $94 billion. That is nearly twice what it was the year the United States invaded Iraq."

Kennedy Says Vote Against Iraq War Is Best Senate Vote He Ever Cast. Sen. Ted Kennedy was asked on CNN's Larry King Live (4/20) about his vote against the Iraq war. Kennedy said, "The best vote, best vote I cast in the United States Senate. … I'm on the Armed Services Committee and I was inclined to support the Administration when we started the hearings in the Armed Services Committee. And, it was enormously interesting to me that those that had been -- that were in the armed forces that had served in combat were universally opposed to going. … And the second point that influenced me was in the time that we were having the briefings and these were classified. They've been declassified now. Secretary Rumsfeld came up and said 'There are weapons of mass destruction north, south, east and west of Baghdad.' This was his testimony in the Armed Services Committee. And at that time Senator Levin,

DOJ_NMG_0026295

who is an enormously gifted, talented member of the Armed Services Committee said, 'Well, we're now providing this information to the inspectors aren't we?' This is just before the war. "Oh, yes, we're providing that.' 'But are they finding anything?' 'No.'"

Iraqi Special Forces Recruits Take Great Risks. The CBS Evening News (4/20, story 8, 3:15, Logan, 7.66M) reported, "They are Iraq's Green Berets, in training, and the Special Forces instructors taking them through their paces are all Iraqis. That's a long way from where they were nearly three years ago, when this elite unit was first formed by American Green Berets." Quitting is "still an option for these new recruits on the Special Forces selection course. It's day 5 and of the 400 who signed up, 121 have already dropped out. The day after these pictures were taken, one of these recruits would end up in detention after they discovered he's a member of a militia that's been targeting the Special Forces commandos."

Afghan Parliament Backs Karzai's Cabinet Picks. The New York Times (4/21, Gall, 1.19M) reports, "President Hamid Karzai won broad approval from Parliament for his reshuffled cabinet in daylong voting Thursday, with only 5 of the 25 ministerial nominees rejected. Some members of Parliament raised objections about the way three of the ministers were confirmed, and their cases may be re-examined on Saturday." This year "for the first time Mr. Karzai's cabinet appointments are subject to confirmation by Parliament."

Mount Vernon Hosts Purple Heart Ceremony. The Washington Post (4/21, B1, Morello, 744K) reports a "journey of pain and loss, beginning with roadside bombs in Iraq and pausing at Walter Reed Army Medical Center, brought seven soldiers to Mount Vernon yesterday in a Purple Heart ceremony filled with reminders of war's sacrifice." The "dusty, clamorous war zones of Iraq seemed a distant memory and yet achingly close as the six men and one woman arrived by bus at a lawn dappled by sunlight. All seven soldiers and a four-star general who spoke came dressed in desert camouflage uniforms that contrasted sharply with the expanse of green grass and flowering shrubs. Three soldiers were in wheelchairs, although one, Spec. Sergio Lopez of Bolingbrook, Ill., had a cane, which he used for support as he struggled to his feet to receive his medal."

DOJ:

Columnist Questions McNally Testimony In Ryan Case. In a column for the Chicago Tribune (4/20), John Kass writes, "U.S. Senators Richard Durbin and Barack Obama have asked the Bush Justice Department to investigate federal prosecutor Ed McNally, until recently the U.S. attorney for the Southern District of Illinois, for circumstances surrounding his testimony on behalf of convicted former Republican Gov. George Ryan." Kass continues, "Durbin's letter to the Justice Department's Office of Professional Responsibility, and Obama's statement--both released to me on Wednesday--demanded to know the following: … Whether McNally violated procedure by failing to disclose a serious apparent financial conflict of interest with Winston & Strawn, the law firm that gave Ryan an estimated $20 million in free legal defense work. … And whether McNally, as suggested by prosecutors in the Ryan trial, illegally taped a crucial interview between Ryan and federal investigators, when McNally was Ryan's lawyer." Kass adds, "The letter from Durbin, who is on the Senate Judiciary Committee, is just the thing to chill McNally's morning coffee and the lattes sipped at Winston & Strawn, which is run by Ryan's buddy, former Republican Gov. Big Jim Thompson. … McNally is not penny ante. The former Ryan defense lawyer with Republican clout was a partner in now-defunct firm Altheimer & Gray. He left before it went bankrupt and started working for the Department of Justice after the Sept. 11, 2001, terrorist attacks. He was made the interim U.S. attorney for the Southern District in November 2005 just in time. … You know, just in time to testify." Kass concludes, "In a response faxed to me late Wednesday, McNally, speaking as a private citizen, said he sought extensive legal advice before testifying and that any investigation 'will demonstrate I acted in compliance with legal, ethical and other obligations.' … Justice Department spokesmen would not confirm an investigation. They would not say who recommended McNally for the Southern District post, just in time for Ryan's trial. … I have a hard time believing in coincidences. Do you?"

CORPORATE SCANDALS:

Prosecutor Attacks Skilling's Credibility As Testimony Ends. The Wall Street Journal (4/21, Emshwiller, McWilliams) reports, "During eight grueling days on the witness stand here, former Enron Corp. President Jeffrey Skilling battled old friends and new enemies in a bid to win over 12 strangers to his version of what happened at the fallen energy giant. … If he is convicted of the conspiracy and fraud charges against him, he might look back and wonder if he was undone by an ex-girlfriend." The Journal continues, "Having waited years to defend himself against the government's charges, Mr. Skilling did better than expected, given his reputation for outbursts, some observers say. Though he frequently sparred with prosecutor Sean

DOJ_NMG_0026296

Berkowitz over three days of cross-examination, Mr. Skilling largely kept his cool. He often appeared to be earnestly trying to explain Enron's complexities and conveyed a sense of pride in Enron. … By the time he finished his testimony Thursday morning, Mr. Skilling and his attorney, Daniel Petrocelli, had used reams of data and charts aimed at neutralizing the prosecution and a string of government witnesses. … Many of those witnesses were Mr. Skilling's former Enron colleagues, who were testifying as part of criminal plea bargains. At the least, the Skilling defense team succeeded, in many instances, in presenting alternative, innocent interpretations of activities that prosecutors maintain were part of a criminal conspiracy at Enron. … But given the complexities of Enron's finances and operations, 'everything comes down to credibility,' says Jacob Zamansky, a New York attorney, who sat through much of Mr. Skilling's testimony. 'If the jury doesn't think Skilling is credible, his whole testimony goes down the drain.'"

USA Today (4/21, Farrell) reports that Skilling "first admitted on cross-examination Monday that he invested $180,000 in a company run by a woman he dated in 1997 and 1998 — a company that did almost half a million dollars in business with Enron. … He confessed that, according to Enron's code of ethics manual, he probably should have done a better job of notifying the company's board about the apparent conflict of interest. But Wednesday, after the government's original round of cross-examination ended, Skilling's lead attorney, Dan Petrocelli, found another portion of the ethics manual that appeared to exempt Skilling from presenting the matter formally to the board: Given that Skilling had alerted Enron chairman Ken Lay of the situation, there was no need for a written notice. … But Thursday morning, in his last opportunity to confront Skilling directly …Berkowitz revisited the topic. He displayed two checks Skilling wrote to his then-girlfriend, Jennifer Binder, worth $10,000 each, one dated in December 1997 and another in March 1998. … Although the checks were three months apart, they were both cashed on March 13, 1998, and bore consecutive numbers, indicating that one had been written right after the other. When Berkowitz displayed the check immediately preceding the December payment, it was dated in March of 1998, suggesting that Skilling had backdated a check to avoid having to pay taxes on gifts exceeding $10,000 in one year. … Skilling insisted that he paid all his taxes, and that he simply had no memory of the checks or why they were written."

The Washington Post (4/21, Johnson) reports, "Skilling's character was the issue for most of Thursday, as his lawyers called half a dozen witnesses to attest to his integrity and to counter the government portrayal of a man who they say led a plot to deceive investors about Enron's financial health. … One such witness, Carol Baxter, is the widow of Skilling's best friend, dealmaker Cliff Baxter, who committed suicide in early 2002, as investigations of the company's collapse into bankruptcy protection heightened. Carol Baxter said she discussed Skilling's exhaustion with him three months before he abruptly resigned from Enron in August 2001 -- offering a measure of support for Skilling's statement that he departed for personal reasons, not because he knew the company was on the verge of disaster, as prosecutors contend. … Skilling's former wife, Susan Skilling Lowe, took the witness stand to tell jurors that she sold $14 million worth of Enron options in November 2000 without talking to Skilling about the sale. Prosecutors pointed out that Skilling sold $21 million in Enron stock a month earlier and that his current wife, Rebecca Carter, sold $1.65 million one month later -- all around the time a deal to sell Enron's underperforming international assets cratered. Lowe disputed the idea of a link, saying she rarely talked with Skilling except on issues related to their three children."

The New York Times (4/21, Barrionuevo) reports that during his testimony "Skilling accomplished much of what he needed to do in front of the jury hearing his criminal case, avoiding any major gaffes while staunchly maintaining his innocence. … But in the end, the performance by Enron's former chief executive was far from perfect, and may have revealed to the jury more than he and his lawyer wanted." The Times continues, "The portrait of Mr. Skilling that emerged in his criminal fraud trial here was more complex than the caricature frequently drawn of him as the greedy, arrogant executive with a Darwinian view of the world who transformed Enron from a humdrum pipeline company into a renowned energy-trading colossus. … Instead, Mr. Skilling showed himself to be a vulnerable, emotional, even affable character who saves his hostility, these days, for the government that charged him with defrauding Enron's investors. … But jurors in the federal trial also saw a side of him that had increasingly bothered managers at Enron. This was a man who did not like to be questioned, to be told he was wrong, to be asked, even, just to listen. … And whether Mr. Skilling helped himself on the stand more than he hurt his defense will ultimately depend on how the jury weighs those two sides of his personality."

The Houston Chronicle (4/21, Roper, Fowler) reports, "The gamble by the defense to put Jeff Skilling on the stand as its key weapon to fight the 28 charges against him may have paid off, legal observers said. … 'Did it work? Absolutely,' said Houston criminal defense attorney Brian Wice, who has been monitoring the trial daily, including Skilling's final day on the stand today." The Chronicle adds, "Still, some believe prosecutors did exactly what they needed to do — give the strong-willed Skilling just enough room to outsmart himself. … 'For days he's been arguing two-plus-two is not really four, that everything was not as it appeared on its face and that only a very few smart people could

DOJ_NMG_0026297

understand,' said Michael Wynne, a former federal prosecutor who also is a regular observer of the trial."

Sentencing Of Former Qwest Official Delayed. The AP (4/21, Shore) reports, "A federal judge agreed Wednesday to a three-month delay in sentencing ex-Qwest finance chief Robin Szeliga for insider trading but rejected a prosecutor's request to put it off until year end." The AP continues, "U.S. Attorney Bill Leone sought the postponement because of Szeliga's ongoing cooperation with an insider trading case against former Chief Executive Officer Joe Nacchio, which has yet to be set for trial. Under the terms of her plea agreement, Szeliga's prison term could be reduced if her cooperation is deemed substantial." The AP adds, "U.S. District Judge Walker Miller told Leone the case needed to completed in a timely manner and refused to delay Szeliga's sentencing past July, a deadline set in her plea agreement. … Szeliga pleaded guilty July 14 to a single count of insider trading amid the multibillion-dollar accounting scandal at Denver-based Qwest Communications International Inc. She admitted improperly selling 10,000 shares of Qwest stock in 2001 for a net profit of $125,000. … Prosecutors alleged Szeliga sold the stock based on nonpublic information that some Qwest business units would fail to meet revenue targets and that nonrecurring revenue was improperly used to meet those goals. … Szeliga faces up to 10 years in prison and $1 million fine, although sentencing guidelines recommend a term of 15 months to 21 months."

Freddie Mac Settles Shareholder Lawsuit For $410 Million. The New York Times (4/21, 1.19M) reports, "Freddie Mac, the mortgage financer, agreed yesterday to pay $410 million in cash to settle a shareholder lawsuit over accounting mistakes that led it to restate three years of earnings." The settlement "will reduce first-quarter net income for 2005 by about $220 million after tax, Freddie Mac, a government-chartered company, said yesterday." Shareholders "sued Freddie Mac after the company's directors found executives had manipulated accounting rules to reduce earnings volatility." The Washington Post (4/21, Day, Shin, 744K) also reports the story.

Rate Of CEO Pay Increases Slowing Despite Raymond, McGuire Earnings. NBC Nightly News (4/20, story 7, 2:25, Williams, 9.87M) reported on the "stratospheric sums that some CEOs make in this country," such as Lee Raymond, "ExxonMobil's recently retired CEO -- his salary alone was over $51 million last year; then there's William McGuire, CEO of United Health Group -- he received stock options that could end up totaling a staggering $1.6 billion." NBC (Thompson) added, "Though both Exxon and United Health Care prospered, and so did their shareholders under Raymond and McGuire's leadership, some still see their huge compensation packages as CEO pay run amok." Prof. Rakesh Khurana, Harvard Business School: "We've seen in the cases of Exxon for example that the compensation of CEO is largely being determined by events that are outside of the CEO's control, in this case the price for oil." Thompson: "And those who determine the CEO's pay, the board of directors, are all too often people chosen by the CEO." But "the rate of pay has slowed. A shareholder advocacy group reports CEO packages went up by a median of 11% last year, compared to 30% the year before. Still, the outrage remains, with the average CEO taking home by one estimate 431 times what the average worker does."

CRIMINAL LAW:

Gonzales Provides Graphic Description Of Online Child Porn. Attorney General used what the AP (4/21, Sherman) calls "strikingly graphic language" to "focus attention on online child pornography and said Internet services companies are not doing enough to combat the problem." In a speech at the National Center for Missing and Exploited Children in Alexandria, Gonzales said that while his descriptions "could make people uncomfortable" he wanted "to make sure people knew what was going on." After describing some of the material he has seen, Gonzales noted, "Viewing this was shocking and it makes my stomach turn." Gonzales said "said some investigations have been hampered by the failure of Internet service providers to retain certain records long enough to help authorities identify purveyors of child pornography. He did not propose a remedy Thursday."

CNN.com (4/21, Frieden) reports, "To highlight the Justice Department's growing concern, (Gonzales) traveled to the National Center for Missing and Exploited Children in Alexandria, Virginia, to deliver his speech. … Gonzales praised the center for its help, but said the public 'does not yet appreciate the scope, the nature and the import of this criminal activity and the threat it poses to our kids.'" CNN adds, "The attorney general said one of every five children online is now solicited. He cited a recent estimate that 50,000 predators are online at any given time prowling for children. … Gonzales said the public must not consider child porn a victimless crime. … 'There are images of graphic sexual and physical abuse of innocent children, even babies,' he said. 'It is brutal; it is heinous, and it is criminal.'"

CNET News (4/21, Broache) reports, "The failure of some Internet service providers to retain user logs for a 'reasonable amount of time' is hampering investigations into gruesome online sex crimes," Gonzales said. "'The investigation and prosecution of child predators depends critically on the availability of evidence that is often in the

DOJ_NMG_0026298

hands of Internet service providers,' Gonzales said … 'Record retention by Internet service providers (that is) consistent with the legitimate privacy rights of Americans is an issue that must be addressed,' he added." CNET adds, "Congress is now considering policy changes … At least one U.S. House of Representatives leader indicated he is mulling legislation that would require data retention. The topic surfaced at two hearings--convened recently by a House subcommittee--about online sexual exploitation and child pornography. Investigators of Internet sex crimes said they would like to see at least several months--and ideally, a year or more--of mandatory records retention. … The Justice Department and the Federal Bureau of Investigation took heat from subcommittee politicians for failing to send representatives to either hearing. Gonzales' talk was likely an attempt to show that the Bush administration is serious about taking new steps to root out child pornography. His remarks focused largely on what he termed an 'epidemic' in the movies and images depicting the sexual abuse of children, exacerbated by the Internet's ability to create an anonymous haven for pedophiles."

IDG News Service (4/21, Gross) reports that the Justice Department "will push for new legislation that requires all commercial Web sites to label every page that includes adult material in an effort to protect Web surfers from pornography, the agency announced today. … The Justice Department, in an initiative aimed at child pornography, also wants legislation that would prohibit commercial Web sites from initially displaying sexually explicit material without further action, such as an additional click, by the viewer. " IDG adds, "Gonzales also called for the U.S. Congress to triple current criminal fines levied against Internet service providers that knowingly fail to report child pornography on their systems. The new fines would be $150,000 for the initial violation and $300,000 for each additional violation. … The Justice Department wants Congress to add the new provisions to the Children's Safety and Violent Crime Reduction Act, passed by the House of Representatives in March. The bill, now pending in the Senate, is a wide-ranging proposal targeting sex offenders, gangs, and child pornography. The bill requires local law enforcement agencies to make sex offender registries available online, and it increases the penalties of sex offenses against children."

AIPAC Classified Documents Case Raises Concerns Among Lobbyists, Journalists. In a front-page story, the Washington Post (4/21, Birnbaum, 744K) that the prosecution of former AIPAC officials Steven Rosen and Lawrence Weissman "has roiled official Washington" and "spotlighted a murky type of advocacy that Rosen helped create -- an amalgam of intelligence gathering and lobbying on behalf of a narrow interest. Lobbyists who routinely pass along sensitive information wonder how much leeway they will have to do their jobs if Rosen is convicted. The case has also angered some journalists who worry that it could further cool their already strained relationships with national security sources in the aftermath of the CIA leak probe." The Post notes that defense lawyers "have enlisted a surprising ally: Viet D. Dinh, former head of the Justice Department's Office of Legal Policy and an author of the Bush administration's USA Patriot Act. Dinh helped write a memorandum that called for the dismissal of the Espionage Act charges against the lobbyists."

Despite Potential Violence, Sex Offender Registries Seen As Here To Stay. The AP (4/21, Crary) reports, "The killings of two men listed on the state of Maine's Internet sex offender registry may offer a grim lesson about the consequences of such registry laws, but defense lawyers and crime researchers question whether a thoughtful national debate on the subject is possible." The AP continues, "In a climate where politicians seek ever-tougher punishment and ostracism of sex offenders, they say, few are willing to examine the fairness and risks of registry requirements. … 'We've basically dehumanized these people with words such as "predator,"' said psychiatrist Fred Berlin, founder of the Johns Hopkins Sexual Disorders Clinic in Baltimore. … 'Every decent human being wants to protect children,' he said, but even suggesting that criminals who have done their time are entitled to rebuild their lives can tarnish a politician. … 'It's close to heresy,' Berlin said." The AP notes, "Every U.S. state has an online registry with photographs and personal information about convicted sex offenders, often to be posted for at least 20 years and sometimes for life. Many states, including Maine, provide offenders' exact street address; that information apparently was used by a Canadian man to locate and fatally shoot two registered sex offenders Sunday. … There have been many cases of vigilantism in the past, ranging from harassment and arson to the slayings of two convicted child rapists in Washington state. A man mistaken for his sex-offender brother was nearly beaten to death with a baseball bat in New Jersey - the state where the 1994 killing of 7-year-old Megan Kanka by a neighbor gave rise to the nationwide trend of 'Megan's Law' registries."

Prosecutor Grills Former Nevada Commissioner For Second Day. The AP (4/21, Ritter) reports, "Former Clark County Commissioner Dario Herrera finished a grueling second day of testimony Thursday, declaring himself not guilty of federal corruption charges. … Prosecutor Daniel Schiess spent the day chipping away at Herrera's story…as he tried to shake Herrera's insistence that he never traded votes for money

DOJ_NMG_0026299

from strip club operator Michael Galardi or Galardi's lobbyist, Lance Malone." The AP adds, "Schiess led Herrera through detailed accounting of his personal and campaign finances, and got Herrera to admit that while he knew Galardi paid for golf outings and lap dances, Herrera never reported them. In one FBI telephone wiretap recording, Galardi offers to give Herrera a Lincoln Navigator. … In another, Herrera solicits thousands of dollars in campaign contributions from Galardi and Galardi employees."

Chicago FBI Shifting Resources To Corruption Probes. The Northwest Indiana Times/Medill News Service (4/20, McEvoy) reported that over the past two years, "the Chicago FBI has moved agents and money from its other law enforcement branches, including drug enforcement and organized crime, in the fight against public corruption, an agency spokesman said Wednesday. But no cuts were made in the anti-terrorism unit, said Ross Rice, special agent spokesman for the Chicago FBI." The Times noted, "Despite former Gov. George H. Ryan's guilty verdict, the FBI says it isn't resting on its laurels. 'I don't see it letting up any time soon,' said Marshall Stone, supervisory special agent for the Springfield FBI. When asked how many Chicago agents are presently working on public corruption cases, Rice said, 'Not enough.' Robert D. Grant, special agent-in-charge of the Chicago FBI, on Monday said he hoped the Ryan verdict would signal the end of politics-as-usual in Illinois. … But Rice was unsure it will change a culture of political corruption."

Ryan Lawyers Sought Dismissal Of Six Jurors. The Chicago Tribune (4/21, Higgins, 643K) reports, "Lawyers for former Gov. George Ryan argued that jurors who failed to disclose arrests, including some that occurred more than 20 years ago, were liars who could not be trusted to render a fair verdict, according to newly unsealed court filings. Ryan's defense team said that five such jurors — and another juror who failed to disclose her involvement in civil litigation — should have been removed from the case, which would have left fewer than 12 jurors to deliberate and triggered a mistrial. But in a key legal victory, federal prosecutors persuaded U.S. District Judge Rebecca Pallmeyer to use a more delicate calculus to decide each juror's fate."

Squitieri Pleads Guilty To Racketeering, But Not To Running Gambino Family. The AP (4/21, Neumeister) reports, "The reputed head of the Gambino crime family pleaded guilty Thursday to racketeering and extortion charges after getting an assurance from a judge that he was not saying he was a Gambino." Arnold Squitieri "entered the plea in U.S. District Court in Manhattan in a deal that calls for a sentence ranging from seven years and three months to nine years." The AP notes, "The indictment was brought last year, when prosecutors announced that they had built a case with the help of an undercover FBI agent who infiltrated the Gambino organization and became so well trusted that he was offered membership. The indictment charged 32 defendants…with engaging in racketeering crimes for more than a decade." The New York Daily News (4/21, 729K) reports the story under the headline "Gambino? What's a Gambino?"

Leader Of Violent New Jersey Gang Sentenced To 18 Years In Prison. The Newark Star-Ledger (4/19, Coscarelli, 420K) reported, "The head of a violent Jersey City gang was sentenced yesterday to 18 years in federal prison for conspiring to assault and murder his rivals. 'I'm not sure that anything less than keeping you off the streets for as long as I can is going to be a deterrence,' Senior U.S. District Judge William Bassler told Tommy Terrell Thompson," and Assistant US Attorney Karl Buch "described Thompson, founder and five-star general of the Sex, Money, Murder faction of the Bloods gang, as a 'ruthless leader.'" The Star Ledger noted, "In July, Thompson pleaded guilty to conspiracy and related charges, including ordering the December 2003, shooting of a wheelchair-dependent man who he thought had cooperated with the FBI and Hudson County law enforcement."

Former President Of Kansas City Charter School Indicted For Embezzlement, Fraud. The Kansas City Business Journal (4/21) reports James Elliott Coleman, former head of Westport Allen Village School "was indicted Thursday on a charge of embezzling" $47,368 from the charter school. A federal grand jury also indicted him "on a separate charge of engaging in mortgage and investment fraud schemes." Coleman had held "a variety of positions for the school, including business manager, treasurer and president. He resigned as president in May 2003." The school opened under the sponsorship of the University of Missouri-Kansas City and was operated by Edison Schools. It "continues to operate and had 2005 enrollment of 422 students." Coleman is accused of making "unauthorized withdrawals from the school's account." The mortgage and investment fraud indictment accuses him of using "proceeds from the investment fraud scheme to repay money embezzled from the charter school."

MySpace Posting Leads Kansas Police To Thwart School Shooting Plot. In a story including a comment by FBI Spokesman Richard Kolko about the response to school attack threats, ABC World News Tonight (4/20, story 10, 2:20, Vargas, 8.78M) reported, "It was seven years ago today that students went on a murderous rampage at Colorado's Columbine high school. Today, there is

DOJ_NMG_0026300

breaking news from rural Southeast Kansas, with an alleged plot with chilling echoes to that tragedy. Five high school boys have been arrested, accused of plotting to kill fellow classmates. Law enforcement was tipped off to the plot after one of the teens revealed it on" MySpace.com. ABC (Thomas) added that "Cherokee County sheriffs say they discovered guns, knives and ammunition in the bedroom of one of the suspects. According to a recent Justice Department study, school shootings have been declining. … The primary reason, according to authorities: parents, teachers and law enforcement are much more sensitive to any warning signs." FBI Spokesman Richard Kolko: "Anytime information is reported with any threat-type information, whether it's related to schools or any other areas, that law enforcement and its partners, FBI, domestic, state and local, has to take these very seriously." NBC Nightly News (4/20, story 8, 0:25, Williams, 9.87M) and the AP (4/21) also reported on the thwarted Kansas plot.

FBI Assisting Investigation Of Threat At Minnesota School. The Grand Forks (MN) Herald (4/21, Lee) reports, "FBI agents are assisting Red Lake Tribal Police in an investigation involving reported threats made by students at the Red Lake school," where student Jeffrey Weise killed nine people in March 2005. "Paul McCabe, spokesman for the FBI, said today that the agents are assisting Red Lake police but said he could not comment on the situation. McCabe referred a Herald reporter to the Red Lake police." The Herald adds, "A school employee said the schools, including a separate building for kindergarten and Head Start about a mile from the high school and middle school, have been in 'lockdown' since Tuesday because of the reported threats."

Robberies On DC-Area Latino Communities On The Rise. The Washington Post (4/21, Vargas) reports on the growing incidence of street robberies among Latino communities in the DC area. The Post reports, "For the Latino community in Prince William County, street robberies have become almost commonplace, so much so that even the most brutal are spoken of in a monotone reserved for the mundane." The Post continues, "Like some of their Asian counterparts who have fallen victim to home invasions because of a tendency to keep their money in their homes instead of banks, Latino immigrants, who often carry large amounts of cash instead of depositing it, have become a growing target in the region, according to police. … Even as Prince William police announced this week that the county's overall crime rate for 2005 dipped to its lowest level in five years, robberies against Hispanics doubled in the county last year. Manassas also experienced a 50 percent increase in robberies, with Latinos being the victims in most cases. … 'These folks, for the most part, make absolutely the perfect victims,' said Maj. Don McKinnon of the Manassas police. 'You have a perfect formula -- a victim who wants no contact with police, who has a lot of money [on him] and who is there on the street.'" The Post notes, "Many area police departments said they do not distinguish robbery victims by ethnicity and could not say whether there have been increases. But Latino day laborers working on homes in Northeast Washington were targeted recently, D.C. police said. And in Prince George's County, 448 Hispanics were robbed last year, compared with 289 the year before."

Police Take Evidence From Duke Dorm. USA Today (4/21, Dorell) reports, "Investigators seized an envelope and a news article from the dorm room of one of two suspects arrested in the Duke University lacrosse team rape case." A cab driver "told MSNBC that he was '100%' sure he picked up [Reade] Seligmann and other players at 12:19 a.m., took them to a bank and a hamburger stand, then dropped them off at a Duke dormitory," a timeline that apparently supports Seligmann's innocence.

Sales Of Team Merchandise Boom. The Washington Times (4/21, Lemke) reports that sales of Duke lacrosse merchandise "increased in the past month." Sales have reportedly "more than tripled" in the on-campus stores.

Few Men Contract HIV In Prison. The Washington Post (4/21, Brown) reports, "Although male prisoners have a relatively high rate of HIV infection, very few of them acquire the virus while behind bars." A CDC study reported this finding, which contradicts the stereotype that "prisons are hotbeds of the AIDS epidemic." The Post notes that the study found that, of those inmates who contracted HIV in prison and admitted to having gay sex in prison, "half reported that their partners were prison staff members, not other inmates."

NYTimes Op-Ed Explains Provenzano's Long Success In Eluding Capture. Author Andrea Camillari in the New York Times (4/21) writes that Sicilian mob boss Bernardo Provenzano escaped arrest for 43 years because of a "vast, intricate, durable and invisible web of protection that had been created around him. Much of this network consisted of supporters above suspicion, including prominent politicians, high-level businessmen and successful professionals." She adds that, as original protectors died, the duties of shielding Provenzano passed on to "sons, grandsons, relatives, friends and associates." Until some high-ranking accomplices are caught, "a successor to Mr. Provenzano might use them to similar ends."

Op-Ed Deplores Violent Youth. College instructor Adrienne Washington writes in the Washington Times (4/21) that the DC carjacking spree illustrates that "criminals are

DOJ_NMG_0026301

getting bolder -- and younger." A security expert in her piece pleads for a "focus on a comprehensive, balanced approach of intervention, prevention and arrest and incarceration." Washington concludes, "No jobs, no skills, no moral compass and the lack of political will is an unsavory recipe for real and random acts of 'Grand Theft Auto.'"

CIVIL LAW:

Judge Rules Air Force Ignored FOIA. The AP (4/21, Locy) reports, "The U.S. Air Force engaged in a pattern of ignoring requests for the release of classified documents dating to the Vietnam War, establishing a response rate that is worse than the CIA's, a federal judge ruled." The AP continues, "U.S. District Judge Rosemary M. Collyer ruled Wednesday in favor of the Washington-based National Security Archive, the largest non-governmental library of declassified documents, in significant parts of a lawsuit the group filed against the Air Force in 2005." The AP adds, "Collyer found that the Air Force had no defense - or essentially conceded - that it had failed to respond to requests under the Freedom of Information Act for up to 18 years in at least one case. The Air Force also ignored appeals of its denials of access to records for up to nine years, she said. … But the judge refused to order the Air Force to immediately turn over records pertaining to 82 pending requests by the National Security Archive. Instead, she ordered the Air Force to determine which portions of the documents could be declassified and released to the archive. … She also ordered the service to send an officer to a court hearing on May 22 who has authority "to order that things be done." … Attorney David P. Dean, who represents the archive, said Collyer's message is clear: 'The time for the Air Force to comply with FOIA has finally arrived, and this court is watching.'"

Judge Reduces Amount General Dynamics Must Pay For Breaking Contract. The Washington Post (4/21, Merle) reports, "A federal judge has reduced from $137.9 million to $19.87 million the amount that General Dynamics Corp. must pay for breaking a contract with onetime partner Final Analysis Communication Services Inc., a small Lanham satellite firm." The Post continues, "The case centered on whether General Dynamics, which has headquarters in Falls Church, violated agreements to help Final Analysis develop a $400 million project to launch low-flying satellites for data transmission, including paging and text-message services. A jury ruled in favor of Final Analysis after a seven-week trial in September." The Post adds, "In his ruling Monday, U.S. District Judge Peter J. Messitte also certified the jury's decision that Final Analysis pay General Dynamics $8 million from a countersuit, reducing the total amount due the smaller firm to $11.87 million, according to the court documents. An appeal of the judge's ruling is expected, the company said in a Securities and Exchange Commission filing yesterday."

NCLB Has Produced Windfall For Contractors. The AP (4/21, Feller, Welsh-Huggins) reports that the No Child Left Behind law has "benefited an industry of vendors, who collect public money and help schools meet the law's requirements. Revenues for products and services sold to public schools hit almost $22 billion in 2004-05, according to Eduventures, a market research company. That was up 6 percent from the year before, and revenues are expected to keep growing at that kind of rate. … In particular, money is flowing to testing, tutoring and teacher training. All three areas have direct ties to deadlines under the No Child law."

CIVIL RIGHTS:

Indiana SAC Touts FBI Civil Rights Investigations. The Northwest Indian Times (4/20, Robinson) reported, "Investigating civil rights violations is a higher priority for the FBI than violent crimes and the agency wants the area to know all about it." FBI Indiana SAC Keith Lordeau "came on Wednesday to Merrillville to speak to media representatives about the different aspects of civil rights violations. If anyone suspects their civil rights have been violated, they don't have to wait for another law enforcement agency to contact the FBI. The victim can do that directly by calling the Merrillville office…Lordeau said." The Times notes, "Local FBI investigator Michael Prendergast said he's involved with the shooting in Gary that sparked several citizen protests," and "Lordeau said in 2005, the FBI nationwide looked into 1,124 color-of-law cases, which represent 67 percent of all civil rights investigations."

The Northwest Indiana Post-Tribune (4/20, Quinn) also reports on Lourdreau's appearance in Merryville and adds that Special Agent Tom Gancarz said that "the FBI has also turned its sights to involuntary servitude or slavery, otherwise known as human trafficking." Gancarz noted that "as many as 18,000 to 20,000 people per year are brought into the United States not only illegally, but against their will. 'We need to be concerned,' he said, pointing out that there have been reports of human trafficking in Northwest Indiana."

Governor Bush Talks To Protestors About Boot Camp Death. The AP (4/21, Fanta) reports, "A group of college students ended a two-day sit-in at (Florida) Gov. Jeb Bush's office Thursday after he met with the parents of a teenage boy who was beaten at a boot camp and later died." The AP continues, "Parents Gina Jones and Robert Anderson said they were happy to talk with Bush about their

DOJ_NMG_0026302

grief over their son's death in January. The boy died a day after guards were videotaped beating, kicking and dragging him at a juvenile boot camp. … 'I was shocked he wanted to talk to me, after four months,' Jones said after the hourlong meeting." The AP adds, "The parents have criticized officials for what they say is a cover-up of the events leading to the death of 14-year-old Martin Lee Anderson. … Benjamin Crump, the family's attorney, said the governor reported that he was pressing investigators. … Bay County has closed its boot camp, and the House Justice Appropriations committee wants to replace camps statewide with residential programs. The U.S. Justice Department is also investigating possible civil rights violations in the case."

The Los Angeles Times (4/21, Hollis, 958K) reported, "An apologetic Gov. Jeb Bush met privately Thursday with the parents of a teen who died after a beating by guards at a Panama City boot camp, and rejected criticism he hasn't done enough to bring justice in a case that has inflamed Florida's black community." Benjamin Crump, the family's attorney, said, "He offered his condolences and apologized. He assured us they [governor's office employees] were every day calling down to the special prosecutor's office, [offering] all the resources of the state of Florida … to get the justice sooner than later." The Times adds that although "the governor's remorseful pose with Anderson's parents and their attorneys was intended to ease tensions, it had little effect on some black political leaders throughout the state. Bush made no statements after the hourlong meeting."

Court Upholds School Ban On Anti-Gay T-Shirt. In a 2-1 decision the 9th US Circuit Court of Appeals has ruled that schools in the western US can forbid students from wearing T-shirts denigrating gay and lesbian students. The Los Angeles Times (4/21, Weinstein, 958K) reports that the "sharply divided" court "said that a T-shirt that proclaimed "Be Ashamed, Our School Embraced What God Has Condemned' on the front and 'Homosexuality Is Shameful' on the back was 'injurious to gay and lesbian students and interfered with their right to learn.' The court said that the shirt can be barred on a public high school campus without violating the 1st Amendment."

Neuarth Says South Dakota Is National Battleground For Abortion. Al Neuarth writes in USA Today (4/21, 2.31M) that South Dakota "has become the nation's battleground over whether abortion is the answer for women with unwanted pregnancies. … The outcome ultimately may have national impact on the 1973 Roe v. Wade U.S. Supreme Court decision giving women the right to terminate pregnancy." Neuarth adds, "My lifelong belief is that a woman's right of privacy includes abortion. But my wife Rachel and I are the adoptive parents of six precious chosen children. From those two perspectives, the best possible outcome of this issue would be encouragement and support for pregnant women everywhere who are willing to carry an unwanted embryo to birth, and then finding proper adoptive parents."

ANTITRUST:

Former South Carolina School Employee Indicted For E-Rate Fraud. The AP (4/21) reports, "A former Bamberg District 1 employee has been indicted on charges she defrauded a federal program that helps poor schools and libraries connect to the Internet out of nearly half a million dollars, U.S. Justice Department officials announced Thursday." The AP continues, "Cynthia Ayer is the former director of technology for the district. Between 1999 and 2003, she used her position to submit fraudulent applications for the E-Rate program and award technology contracts to her own company, Go Between Communications, according to an indictment returned Wednesday. … E-Rate is managed by the Federal Communications Commission's Universal Service Company. During that time, Ayer submitted applications to that agency for more than $3.5 million to and received $468,496 in payments." The AP adds, "If she is found guilty, Ayer faces a maximum of five years for each count of mail fraud committed before July 30, 2002, and 20 years for each count committed on or after that date, as well as a $250,000 fine, officials said. Each count of wire fraud carries a maximum penalty of 20 years and a $250,000 fine. … A total of 11 individuals and 10 companies have been charged as part of an ongoing federal investigation into the E-Rate program, officials said. So far, six companies and three individuals have either pleaded guilty, agreed to plead guilty or have entered civil settlements. The defendants have agreed to pay fines and restitution totaling more than $40 million, and two people have been sentenced to six years of prison time, officials said."

The Internet News (4/21, Mark) reports, "According to a 12-count indictment returned by a Columbia, S.C., federal grand jury, Cynthia K. Ayer used her position as the technology director of the school district to award $3.5 million of E-rate contracts to her company, Go Between Communications, without competitive bidding. … 'Committing fraud upon the E-Rate program harms already underprivileged school districts,' Thomas O. Barnett, assistant attorney general in charge of the DoJ's Antitrust Division, said in a statement. 'The Antitrust Division will continue to vigorously pursue those who cheat the competitive process and take advantage of this federal program.'"

FTC Conditionally Approves Boston Scientific-Guidant Deal. The New York Times (4/21, Meier, Bajaj)

DOJ_NMG_0026303

reports, "Boston Scientific, which paid top dollar in January for the Guidant Corporation, the troubled maker of heart devices, may not have the luxury of sitting back and enjoying its purchase. … Since January, when it offered $27 billion to wrest Guidant from a competing bidder, Johnson & Johnson, Boston Scientific has seen warning signs that the market for heart defibrillators, Guidant's main revenue generator, may be cooling off." The Times adds, "The Federal Trade Commission approved the deal yesterday with certain conditions, and Boston Scientific said it expected to close the transaction today."

The AP (4/21, Press) reports, "The FTC voted 4-0, with one member recusing herself, to consent to conditions imposed on the deal by the commission staff in an agreement announced April 6. The approval also clears the way for a related third-party deal involving Abbott Laboratories Inc." The AP notes, "Boston Scientific has said the FTC's conditions did not require substantial changes to the deal the Natick-based company reached in January to end a nearly two-month bidding war for Guidant with Johnson & Johnson. … The combined company is expected to surpass Fridley, Minn.-based Medtronic Inc. as the world's largest maker of cardiovascular devices."

Dow Jones (4/21, Kamp) reports, "The FTC required Boston Scientific to sell all assets, including intellectual property, related to Guidant's vascular business to a third party - Abbott - enabling that third party to sell multiple vascular products, including a key stent device. … Boston Scientific and Abbott plan to jointly market Guidant's 'Xience' stent, and Boston Scientific said Tuesday it expects to launch the device in Europe at the end of the third quarter or the beginning of the fourth quarter. Stents are tiny mesh tubes used to prop open arteries."

Bloomberg (4/21, Goldstein) reports, "Boston Scientific, already the biggest maker of stents for the U.S., would immediately become the second-biggest producer of heart-rhythm devices behind Minneapolis-based Medtronic Inc. Doctors annually implant about $10 billion of the silver dollar-sized devices, including pacemakers for speeding up heart rates that are too slow and defibrillators for electrically shocking faltering hearts into a healthy rhythm."

JP Morgan Settles IPO Case For $425 Million. The Wall Street Journal (4/21, Smith and Sidel) reports, "J.P. Morgan Chase & Co. agreed to pay $425 million to settle civil charges of improperly awarding hot new stock issues during the market bubble." The Journal writes, "The lawsuit accused underwriters of improperly pumping extra air into the stock-market bubble in 1999 and 2000 by requiring investors who got shares of hot initial public offerings to buy more shares at higher prices once trading began." The New York Times (4/21, Dash and Anderson) writes that Morgan "is the first" of 55 investment bank defendants to settle. The Times adds that the large amount "could set the stage for a multibillion-dollar total settlement." It theorizes that Morgan settled so soon because of "lessons learned" from paying "$2 billion, the most of any bank, as the last to resolve a class action stemming from the collapse of WorldCom" in 2005.

Bloomberg (4/21) reports, "JPMorgan, the No. 3 U.S. bank by assets, would be the first to resolve the allegations, leaving Morgan Stanley, Credit Suisse, and Goldman Sachs Group Inc. among the remaining defendants. The agreement may pressure more banks to settle, as happened in suits against Enron Corp. and WorldCom Inc." Bloomberg notes, "Seventeen banks that were sued over the WorldCom accounting fraud paid a total of more than $6 billion after Citigroup Inc. was first to settle. The largest payment in a similar class- action was the $7.2 billion accord in a securities-fraud case brought by Enron investors. Most was paid by Enron's banks."

The AP (4/21, Powell) reports, "The civil suits against JPMorgan Chase are among more than 300 brought by Milberg Weiss alleging that companies that went public and the underwriters who helped them do it manipulated the market. … The suits allege that JPMorgan Chase and 54 other underwriters induced customers who received allocations of IPOs to place orders for additional shares in the aftermarket, artificially inflating the share prices. They also allege that the compensation received by the underwriters was concealed."

Schumer Says Congress Should Consider Breaking Up Oil Giants. The Buffalo News (4/21, Turner) reports, "Sen. Charles E. Schumer says competition in the gasoline business has been undermined by mergers and Congress should consider breaking up the combines." The News continues, "The New York Democrat also asked the Federal Trade Commission to monitor the relationship between U.S. refining capacity and gasoline prices to ensure that the new oil conglomerates artificially drive up prices. … 'In general, after oil companies switch to producing their summer blends refineries typically operate at or above 90 percent,' Schumer said. 'This is a regular occurrence.' … 'This year however, refining capacity is still hovering at 85 percent which leads some experts to believe that the oil companies may be dragging this along to drive up prices.'" The News adds, "Schumer, a member of the Judiciary Subcommittee on antitrust issues, said 'oil companies should be using their maximum refining capacity instead of possibly minimizing it, and the FTC needs to make sure this process is completely transparent so that prices don't continue to shoot up.' … He said he hopes that either the Senate Commerce Committee headed by Ted Stevens, R-Alaska, or the Energy Committee chaired by Sen. Pete V. Domenici, R-N.M., would call hearings on the surge in gasoline prices and summon the

DOJ_NMG_0026304

FTC in to explain what it is doing about it. … The commission has not cited an oil company for anti-competitive behavior since 2001. That resulted from an investigation started during the Clinton administration."

Sprint Will Buy UbiquiTel. The Wall St. Journal (4/21, Sharma) writes, "U.S. wireless carrier Sprint Nextel Corp. agreed to acquire regional affiliate UbiquiTel Inc. for about $1 billion, ending litigation between the companies." Sprint merged with Nextel in 2004. The Journal writes, "Several affiliates, including UbiquiTel, sued Sprint after the Nextel merger was announced, saying the deal would violate Sprint's pledge not to compete with affiliates in their territories. By acquiring UbiquiTel, Sprint will bring its litigation with that company to an end."

New York Court Quashes Microsoft Bid For IBM Documents In EU Case. The AP (4/21) reports, "A U.S. court in New York on Thursday quashed a Microsoft Corp. subpoena for International Business Machines Corp.'s documents related to the software company's European antitrust case." The AP continues, "Judge Colleen McMahon said Microsoft's subpoena amounted to a "blatant end run" on the European Commission's authority. The judge said that the Brussels-based regulator strongly opposed Microsoft's request, and that enforcing such a subpoena could harm U.S. sovereignty if a foreign court were used to obtain documents in a U.S. proceeding." The AP adds, "Redmond, Wash.-based Microsoft says the commission is colluding with Armonk, N.Y.-based IBM and other rivals, and denying the company a fair chance to review key evidence. The regulator has refused to give Microsoft access to some documents, citing confidentiality concerns and rivals' 'fear of retaliation,' according to a Boston court ruling earlier this week in which a judge quashed a similar Microsoft request for documents held by Novell Inc. … Last month, a U.S. federal court in California rejected Microsoft's request for documents from Oracle Corp. and Sun Microsystems Inc. Microsoft appealed that decision, but then withdrew the appeal following the New York court's ruling."

ENVIRONMENT:

US Fines Louisiana Refinery For Pollution Violation. The AP (4/21) reports, "Chalmette Refining was ordered to pay a $200,000 fine stemming from a water pollution violation in 2000." The AP continues, "The refinery pleaded guilty on Jan. 25 to a one-count violation of the Clean Water Act. The case stemmed from a benzene discharge into the Mississippi River that appeared to be affecting the water at the St. Bernard Parish Water Treatment Plant." The AP adds, "A treatment plant worker noticed the uptick in benzene in the water coming into the plant from the river and was the first to notify the Louisiana Department of Environmental Quality. Water plant workers shut down the treatment plant's intake quickly to minimize the threat the benzene leak posed to residents, authorities said. … U.S. Attorney Jim Letten said Wednesday that when Chalmette Refining engineers discovered the leak they repaired it right away, but the discharge of benzene into the river and the fact that a water treatment worker reported it before the company meant a violation still took place."

Man Pleads Guilty To Violating Endangered Species Law. The Palm Beach Post (FL) (4/21, Prohaska) reports, "A former Port St. Lucie (FL) man who admitted to using a Web site called Deadzoo.com to sell such items as baby tiger mounts and leopard skins in violation of federal endangered species laws was sentenced Thursday to more than two years in prison." The Post continues, "After he spends 25 months in federal prison, Kevin McMaster, 35, then must serve three years of supervised release, U.S. District Judge Donald Graham ordered Thursday during a hearing in Miami. … McMaster has shut down his Web site and no longer works at a Port St. Lucie store on Bayshore Boulevard called Exotic and Unique Gifts." The Post adds, "McMaster, who now lives in Pennsylvania, pleaded no contest in January to two counts of violating the endangered species act by selling or offering for sale endangered or threatened wildlife through interstate commerce. He also pleaded no contest to two counts of transporting endangered or threatened species that was knowingly sold in violation of federal law. … Federal prosecutors and attorneys with the U.S. Justice Department alleged that in 2003 and 2004, McMaster either sold or offered for sale across state lines more than $200,000 worth of endangered species, including tiger, snow leopard and jaguar skins, an elephant trunk, gorilla and tiger skulls and baby tiger mounts. … Federal agents began investigating after an undercover U.S. Fish and Wildlife Service investigator received an unsolicited email from McMaster offering 'cat skins for sale,' according to prosecutors."

Spanish Fishing Magnate Charged With Illegally Importing Protected Seabass. The AP (4/21, Anderson) reports, "A Spanish fishing magnate charged with illegally importing more than 26 tons of protected Chilean seabass pleaded not guilty Thursday in his first appearance in a U.S. courtroom (in Miami)." The AP continues, "A federal magistrate judge set bond at $500,000 for Antonio Vidal Pego, who was indicted along with the Uruguayan company Fadilur S.A. by a U.S. grand jury last September. Vidal, who owns a large commercial fishing fleet, was likely to be released later Thursday or Friday, his

DOJ_NMG_0026305

attorney said. … The indictment in September marked the first time the United States has brought criminal charges for illegal importation and sale of the Chilean seabass, also known as the Patagonian and Antarctic toothfish - a species that has been overfished and is the subject of international protection efforts." The AP adds, "Vidal faces up to 35 years in prison and $1 million in fines if convicted on all counts, according to the U.S. Justice Department. … Vidal and Fadilur S.A. attempted to import about 53,000 pounds of seabass valued at nearly $315,000 from Singapore to Miami, according to the indictment. Vidal is also charged with obstruction of justice and false labeling. … Vidal was arrested Wednesday after arriving at Miami International Airport. He had been an international fugitive before that, with authorities on three continents searching for him and a warrant for his arrest circulated on Interpol."

New Research Shows Global Warming Will Not Be As Severe As Predicted. Duke University scientists announced yesterday announced that the effects of global warming may not be as dramatic as some have predicted. The Washington Times (4/21, Harper, 90K) reports, "Using temperature readings from the past 100 years, 1,000 computer simulations and the evidence left in ancient tree rings," the scientists found that "the magnitude of future global warming will likely fall well short of current highest predictions." The Times adds, "Supported by the National Oceanic and Atmospheric Administration, the Department of Energy and the National Science Foundation, the Duke researchers noted that some observational studies predicted that the Earth's temperature could rise as much as 16 degrees in this century because of an increase in carbon dioxide or other so-called greenhouse gases. The Duke estimates show the chances that the planet's temperature will rise even by 11 degrees is only 5 percent, which falls in line with previous, less-alarming predictions that meteorologists made almost three decades ago."

Friedman Urges College Students To Be "Greenest Generation." In his column in the New York Times (4/21, 1.19M), Thomas Freidman urges college students to become "the Greenest Generation," and "build the institutions, alliances and programs that will turn back the black tide of climate change and petro-authoritarianism, which, if unchecked, will surely poison your world and your future as much as fascism once threatened to do to your parents' world and future."

WPost Says Federal Flu Pandemic Plans Are Inadequate. An editorial in the Washington Post (4/21, A22, 744K) notes that none of the flu pandemic plans the federal government has announced "has honestly confronted the central question of any pandemic: what to do with hundreds -- or hundreds of thousands -- of sick people. No one has produced an effective flu vaccine. Until someone does, any contagious flu virus -- or bioengineered virus -- will make many people ill. And neither America's hospitals nor any other part of the medical system is ready to deal with them." The Post concludes, "Until this central question has been dealt with, almost all other federal government 'preparations,' however impressive-sounding, are of lesser importance."

NYTimes Urges Federal Regulators To Check Effectiveness Of Mumps Vaccine. An editorial in the New York Times (4/21, 1.19M) says that the striking thing about the recent mumps outbreak in Iowa "is that it is affecting mainly relatively young and healthy people, a vast majority of whom have been vaccinated at least once with a mumps-containing vaccine, and usually twice. Federal health officials say there is no reason to suspect any problems with the vaccine. … Even so, federal and state health officials will need to look hard for any signs that the mumps vaccine is less effective than we previously thought or that its effectiveness diminishes over time."

FBI/DEA/ATF/USMS:

Miller Defends FBI Request To Search Anderson Papers. NPR's All Things Considered (4/20, Folkenflik) reported, "The Federal Bureau of Investigation wants to comb through thousands of documents from the professional papers of the late investigative reporter Jack Anderson to see whether they contain classified documents. … Some journalists and lawyers say this is the latest effort by the government to intimidate sources and choke the flow of information to the public." But FBI Assistant Director of Public Affairs John Miller "tells NPR the search has nothing to do with the media." Miller said, "The discussion in the public front, particularly among journalists, has become a little shrill. I think a number of them want to make this a showdown at high noon between the big, bad FBI and the first amendment and a free press. It has very little to do with that." NPR added, "Despite the resistance from Anderson's family, Miller says the FBI is still in negotiations to inspect the documents and fully expects to do so. Former federal prosecutor Jim Martin says the FBI is on solid ground," but former New York Times general counsel James Goodale "says the FBI's interest is sinister," comparing it to the Nixon administration's attempt to block publication of the Pentagon Papers.

Meanwhile, The (UK) Guardian (4/21, Goldenberg) reports that "the FBI wants to rifle through" Anderson's papers. "Amid a widening crackdown on leaks by the Bush administration, the attempt to investigate a journalist who

DOJ_NMG_0026306

stopped reporting in 1990 and who has been dead since December caused outrage yesterday from civil libertarians and from Anderson's family." The Guardian adds, "The FBI maintains that it is unlawful for individuals to possess classified documents, and that the material belongs to the government."

FDA Rejects Using Marijuana For Medical Treatment. The FDA's statement on the use of marijuana for medical purposes received wide coverage, with news outlets making nearly 200 references to the story. For example, the AP (4/21) reports the FDA "said Thursday that it does not support the use of marijuana for medical purposes. The FDA said in a statement that it and other agencies with the Health and Human Services Department had 'concluded that no sound scientific studies supported medical use of marijuana for treatment in the United States, and no animal or human data supported the safety or efficacy of marijuana for general medical use.' … The statement contradicts a 1999 finding from the Institute of Medicine, part of the National Academy of Sciences, which reported that 'marijuana's active components are potentially effective in treating pain, nausea, the anorexia of AIDS wasting and other symptoms, and should be tested rigorously in clinical trials.'" The Washington Post, San Francisco Chronicle, Miami Herald, USA Today, Forbes, and Cleveland Plain Dealer are among the news outlets that published in newspapers and/or posted on Web sites the AP story.

The New York Times (4/21, Harris) reports, "Eleven states have legalized medicinal use of marijuana, but the Drug Enforcement Administration and the director of national drug control policy, John P. Walters, have opposed those laws. … Tom Riley, a spokesman for Mr. Walters, hailed the food and drug agency's statement, saying it would put to rest what he called 'the bizarre public discussion' that has led to some legalization of medical marijuana." The Times also reports that Representative Maurice D. Hinchey of New York "said the statement reflected the influence of the Drug Enforcement Administration, which he said had long pressured the FDA to help in its fight against marijuana." The New York Times story also was published in newspapers and/or posted on the Web sites of the South Florida Sun-Sentinel, Arizona Daily Star, Detroit News, Indianapolis Star, and Salt Lake Tribune.

The Washington Times/ UPI (4/21) writes, "Citing conclusions by the U.S. Drug Enforcement Agency, which administers the Controlled Substances Act, the FDA said there is 'sound evidence that smoked marijuana is harmful.'"

Local TV Coverage. KTVU-TV, San Francisco-Oakland-San Jose (4/20, 10:00 p.m.) reported, "Those attending the San Francisco marijuana [conference] will be disappoint today to learn that the Bush administration today dismissed claims of marijuana's medical benefits. The Food and Drug Administration issued a statement saying that no sound scientific study supports the use of medical marijuana. The statement contradicts [a] 1999 finding by the Institute of Medicine. That review found marijuana could help treat nausea and vomiting."

Hells Angels Arrested In San Francisco In Drugs, Money Laundering Investigation. The San Francisco Chronicle (4/21, Van Derbeken) reports two leaders of the San Francisco chapter of the Hells Angels motorcycle club "were arrested Thursday along with several associates of the gang in raids conducted as part of a six-month federal and local investigation into drug trafficking and money laundering in the Bay Area. … The club's president, Joseph Wilson, 35, was arrested along with Jason Peterson, 32, according to sources close to the investigation. … The FBI led the raid, but investigators took part from the Drug Enforcement Administration, San Francisco police, and narcotics task force agents from San Mateo County and West Contra Costa County."

Police Commander Killed In Mexico Following Death Threats. The Los Angeles Times (4/21) reports, "The drug war in southern Mexico took a gruesome turn Thursday with the discovery of the decapitated head of a police commander who had resigned his post just days earlier in the face of death threats. 'So that you learn to respect,' read a message scrawled on a red sheet attached to a Guerrero state government building in Acapulco, where passersby in the early morning hours discovered the heads of two men. One was determined to be that of former Cmdr. Mario Nuñez Magana, 35, of the Acapulco Municipal Preventive Police; the other man was not immediately identified."

Canadian Troops Avoid Confrontation With Opium Poppy Farmers In Afghanistan. According to the Canadian Press (4/20), when the commander of Canadian troops in southern Afghanistan's poppy-rich Helmand province "gives his word to village elders that his soldiers are not there to rip up their fields, he means it. In fact, Maj. Bill Fletcher takes great care to ensure his armored vehicles don't wreck the green pastures, or generally cause damage to the plants that produce a scourge of drug addiction in the West. … So far the farmers, whose livelihood depends on the opium crop, haven't caught on to the fact that the Canadian, British and U.S. governments support the eradication efforts with money, training and alternative crop programs."

Number Of Drug Addicts Increases In Afghanistan. The Kashar News (4/20) reports the number of drug addicts "is increasing in northern Kapisa Province, where there is no

DOJ_NMG_0026307

drug rehabilitation centre to provide them with treatment and bring them out of the quagmire of narcotics. … Chief of the Counter-Narcotics Department Col Abdol Fatah said that the number of druggies went up to 290 from 200 in the last six months. … Director of Public Health Department Mirza Mohammad said the number of addicts was far more than the registered."

Chicago Police Say Tainted Heroin Did Not Deter Drug Users. The Chicago Tribune (4/21, Noel) reports police said that as word "circulated this week of people passing out from potent heroin on Chicago's South Side, drug users didn't recoil with fear. They turned out in droves for a taste. By the end of Wednesday, 25 people between the ages of 17 and 73 had overdosed, including a 51-year-old woman who died at her home."

The Chicago Sun-Times (4/20) writes police "announced Thursday that several suspects are in custody regarding the passing out of tainted heroin to drug users. Chicago Police Supt. Philip Cline met with officials of local health and law enforcement agencies to discuss the recent outbreak of heroin overdoses that have resulted in at least 10 fatalities since early February."

The AP (4/20, Johnson) reports witnesses "told police that dealers in some neighborhoods gave free samples of drugs to entice users. … Victims suffered immediate difficulty breathing after injecting the drug."

Colorado Firefighter Pleads Not Guilty To New Weapons Charges. The Rocky Mountain News (4/21) reports Denver firefighter Stan Ford, "who also faces charges of selling illegal machine guns in another case," pleaded not guilty yesterday "to a 19-count federal indictment accusing him of selling guns without a license," and US Magistrate Judge Michael Watanabe set a tentative trial date of June 12. "In the machine gun case, Ford is scheduled to go on trial May 8. He was accused of selling three illegal machine guns to an undercover FBI informant in 2005."

Tennessee Man Sentenced To Five Years For Weapons Violations. The Cleveland (TN) Daily Banner (4/21, Kaylor) reports, "A Bradley County (TN) man who had a cache of weapons when federal law enforcement authorities searched his home last year, entered a guilty plea to two counts in U.S. District Court in January." The Banner continues, "He was sentenced to spend five-years in a federal prison Wednesday. Donald Pippenger will also be on three-years probation after his release. … When agents served the warrants, they found approximately 20 weapons, including M-16 and M-1 rifles along with ammunition, during their search at Pippenger's residence and those of a relative and an acquaintance. … Also found during the search were components of a meth lab and a fuseless hand grenade, according to reports." The Banner adds, "Pippenger, 50, was arrested in July after Bradley County Sheriff's officers, agents of the Bureau of Alcohol, Tobacco, Firearms and Explosives Division and Cleveland Police officers executed three search warrants in the eastern section of the county."

IMMIGRATION:

US Signals Aggressive Crackdown On Hiring Of Illegal Aliens. The Washington Post/AP (4/21, A6) reports, "The government plans to crack down ever harder on employers who harbor and hire illegal immigrants, pursuing companies that ignore the law so they can exploit cheap labor." Federal agents Wednesday "arrested seven current and former managers of IFCO Systems, a manufacturer of crates and pallets, on criminal charges, and more than 1,100 people were arrested on administrative immigration charges at more than 40 IFCO sites in the United States." Homeland Security Secretary Michael Chertoff, appearing on ABC News' Nightline (4/20), said the raids were "part of our effort to be strategic in striking at those people who are systematically employing illegal workers as their business model." Chertoff added, "We don't want to go after small-time, ones and twos. We want to look at high impact businesses."

The CBS Evening News (4/20, story 3, 2:20, Pitts, 7.66M) ran a follow-up report on Wednesday's raids on IFCO systems. CBS reported that "mixed in" with the "nearly 1200 undocumented workers busted in a nationwide raid were their employers, 7 corporate executives of IFCO systems -- a manufacturing company. Men who in the past might only face fines now could serve up to ten years in Federal prison." Chertoff was shown sating, "We use intelligence to define the scope of the organization and then we use all of the tools we have, whether it's criminal enforcement or the immigration laws, to make sure we come down as hard as possible and break the back of those organizations." Pitts: "It's all part of a new get tough policy aimed at the 11 million illegal immigrants in the US, but it's a crackdown with consequences. Detention centers nationwide are already at, near, and in some cases over capacity."

The Financial Times (4/21, Alden) says the arrests "were used to highlight renewed efforts by the Bush administration to enforce existing laws against companies hiring undocumented workers." The White House "is urging Congress to pass an immigration reform bill that would permit more legal guest workers, but is facing opposition from many Republicans demanding aggressive enforcement of existing laws." The action "drew immediate praise from Tom Tancredo, the Colorado Republican congressman who has

DOJ_NMG_0026308

led demands for tougher enforcement against illegal immigrants."

The Christian Science Monitor (4/21, Jonsson, 61K) says, "To critics of the administration's immigration policies, the Department of Homeland Security sent out a strong message this week: Current laws can discourage illegal immigrants and those who hire them." However, "few observers believe this week's action represents more than a drop in the bucket in the battle to stem the flow of illegal immigration." Moreover, the Wall Street Journal (4/21, Kronholz, 2.11M) reports, DHS' "aggressive new stance faces a tough political future, though, and depends on Congress's willingness to finance a crackdown on some industries that are fueling the economic boom."

The Los Angeles Times (4/21, Gauette, 958K) says "Wednesday's raids, the culmination of a yearlong investigation, came at a sensitive time. Congress is returning from spring recess next week deeply divided on how to overhaul immigration laws." The Times adds, "Reaction to the raids reflected the well-drawn lines in the debate. Senate Minority Leader Harry Reid (D-Nev.) said in a statement, ' photo-op crackdown by [the Bush administration's Homeland Security Department] to prove a political point won't erase its failed record.'" But "conservative Republicans hailed the action."

The Philadelphia Inquirer (4/21, Montgomery) reports, "Chertoff said the roundup surpassed the 2005 total of 1,125 work-site arrests. ICE agents, assisted by the Justice Department, executed search warrants at 40 plant sites, including one in Burlington, N.J., that opened in 2004 and makes recycled plastic containers and wooden pallets."

The New York Times (4/21, Lipton, 1.19M) also notes "the arrests took place just days before the Senate reconvenes with immigration laws on its agenda. Earlier this month, the Senate faltered in its efforts to develop a proposal that would have given most illegal immigrants a chance to become citizens while intensifying border patrol and deportation efforts. And in recent weeks, hundreds of thousands of immigrants and their supporters have demonstrated in response to a bill passed in the House in December that would speed deportations, tighten border security and criminalize illegal immigrants." The Times adds, "As part of the campaign against illegal hiring, Mr. Chertoff and Julie L. Myers, assistant secretary at Immigration and Customs Enforcement, plan to hire 171 more work-site enforcement agents. … Separately, the department is adding 17 special teams of investigators, for a total of 52, to search for some of the 590,000 immigrants in the country who have ignored orders to leave." The Washington Times (4/21, Seper, 90K) reports Myers, who heads ICE, "said the agency will seek to build a 'strong compliance and enforcement system for employers,' adding that the agency will continue to 'find creative ways to partner with employers' who want to avoid hiring illegal aliens."

DHS Looking For Access To Social Security Data. The Wall Street Journal (4/21, Kronholz, 2.11M) reports, "The Department of Homeland Security is asking Congress for access to Social Security data in its effort to crack down on illegal immigration by going after employers who accept counterfeit identity and work documents." Chertoff's plans depend "on gaining authority from Congress to look at lists of 'no-match' Social Security numbers. Those occur when a new hire gives the employer a name or Social Security number that doesn't match names or numbers on file with the agency."

Immigration Reform Said To Be A Huge Challenge For Rove. The White House Bulletin/US News (4/20) reported, "One of Karl Rove's biggest challenges now is how to deal with the deeply divisive immigration issue, which is expected to come up when Congress returns from its spring recess next week. It is a long-standing belief of Rove's that Bush needs, above all, to maintain his popularity with his conservative base as the cornerstone of his political strategy. But the base is strongly in favor of tough border enforcement policies and rejects the kind of guest-worker program that Bush has endorsed." Many conservatives "consider that guest-worker program a form of amnesty that they cannot accept. But Rove and many moderate Republicans are worried that the get-tough border-security approach contained in the House immigration bill will alienate Latino voters and turn them against the GOP for a generation. Many GOP strategists prefer the evolving Senate version, which is considered closer to the President's wishes up to now."

Increased Number Of Border Patrol Officers Hasn't Boosted Arrests. USA Today (4/21, Kiely, 2.31M) reports, "The US Border Patrol is poised to become the federal government's largest law enforcement agency, but it's not clear that more agents have slowed illegal immigration." The Border Patrol "will soon rival the FBI in terms of the number of agents each agency has in the field. By the end of September, the Border Patrol will have 12,100 agents, according to spokesman Salvador Zamora. As of March, the FBI had 12,515. A 2004 law calls for expanding the Border Patrol to 21,000 agents by the end of the decade." However, "a recent analysis by Transactional Records Access Clearinghouse, a Syracuse University-based data research center, found that increasing the size of the Border Patrol has not yielded more arrests." In 1995, "the agency reported apprehending more than 1.3 million illegal immigrants. In 2005, with more than twice the number of agents as in 1995, the Border Patrol apprehended just under 1.2 million illegal immigrants."

State Legislators Seek To Address Costs Of Illegal Immigration. The Washington Times (4/21, Seper, 90K)

DOJ_NMG_0026309

reports, "State lawmakers across the nation are grappling with how to control the rising cost and effect of illegal aliens, with 368 bills pending or being debated in 42 states." The bills, "with more expected, target a number of constituency concerns, including the rising costs of education and medical care for illegal aliens, exploding crime, punishment for employers who exploit illegal aliens and the federal government's inability to secure the US border."

Minutemen To Build Border Fence On Private Land. The Washington Times (4/21, Seper, 90K) reports, "The Minuteman Civil Defense Corps (MCDC), which has placed hundreds of civilian volunteers on the Southwest border to stop illegal aliens from entering the country, announced plans yesterday to build a high-security fence on private land along the US-Mexico border." MCDC President Chris Simcox "said six landowners and two construction companies have partnered with the organization to break ground and begin construction on a state-of-the-art security fence similar to one proposed last year by a Pennsylvania-based advocacy group."

Immigration Officials Arrest 52 Convicted Child Sex Offenders. The CBS Evening News (4/20, story 4, 0:20, Schieffer, 7.66M) reported, "It turns out that immigration laws are also useful tools for getting sexual predators off the streets. Seen in this exclusive CBS News video, Immigration & Customs enforcement agents in New York arrested 52 convicted child sex offenders today from 14 countries. They'll all be deported for immigration violations."

TAX:

Symantec Fights $1 Billion Tax Bill. The Wall St. Journal (4/21, Boessenkool) reports that Symantec intends to fight a $1 billion bill from the IRS. The Journal notes, "Symantec and other companies grant licenses for a fee to foreign subsidiaries, and those licenses generate profits overseas. The Symantec dispute is over whether the company got fair value -- and paid taxes for that value -- on the licenses it granted." The IRS is disputing the value of licenses possessed by two Symantec subsidiaries in Ireland.

Polygamists Fight Property Taxes. The New York Times (4/21, Johnson) reports that a $1.3 million property tax bill faces "8,000 or so adherents of the Fundamentalist Church of Jesus Christ of Latter Day Saints, an offshoot of the Mormon Church that had long paid the property taxes of its members." Their system of tax collection is "in shambles" after the founder fled sex-related charges and after "the church's remaining leaders have told people living in the houses not to pay." Threatened with possible eviction, the members "could disperse to other parts of the West or to Canada, taking a page from the Mormons of old who came to Utah in 1847 to avoid persecution. Others fear violence."

CONGRESS-ADMINISTRATION:

Bush-Hu Summit Said To Have Accomplished Little. President Bush yesterday hosted Chinese President Hu Jintao at the White House for talks on energy, trade, and human rights. Most print reports state the summit produced virtually no tangible results on those issues. The Washington Post (4/21, A1, Baker, Kessler, 744K), for example, headlines its report "Bush, Hu Produce Summit of Symbols," and says Bush "came away with no specific agreements in a summit emphasizing symbolism over breakthroughs." CNN's The Situation Room (4/20, Blitzer) reported there was "a lot of talk but no real breakthroughs." The Wall Street Journal (4/21, King, Solomon, Dean, 2.11M) reports Hu "offered cooperation on issues from trade to nuclear proliferation," but he also "pointedly declined to give…Bush concrete promises on key economic and foreign-policy disputes." Likewise, The New York Times (4/21, Kahn, 1.19M) says the two leaders "broke no new ground," and the meeting "underscored the intractable nature of a long list of grievances."

The New York Times (4/21, Sanger, 1.19M) also runs an analysis piece titled "An Old Presidential Predicament: China Proves Tough To Influence," in which it says "just about every American president since Richard M. Nixon has confronted the fact that his influence over China is far more limited than he once hoped." Bush "is now facing that reality midway through his second term, at a moment when the Chinese clearly sense his weakness." Hu "apparently no longer feels, as past Chinese leaders did, that he must come to the United States bearing gifts." The AP (4/21, Loven) says Bush and Hu "made little measurable headway," and AFP (4/21) reports the leaders "showed little progress in healing rifts dividing the two powers." Likewise, Knight Ridder (4/21, Hutcheson) reports "some analysts expressed frustration that Bush and Hu failed to make significant progress."

A similar Chicago Tribune story (4/21, Silva) reports, "The fact that the two leaders had scant progress to cite after their meeting is emblematic of the strain that permeates US-Chinese relations," and it is "likely to spur new interest among members of Congress already pursuing trade sanctions against China, according to American experts on US-Chinese relations." Along those same lines, the Wall Street Journal (4/21, Harwood, 2.11M) reports in its "Washington Wire" column, "Sens. Grassley and Baucus will gauge outcome of Hu's visit and Treasury's currency report before deciding whether to press China trade legislation."

The Washington Times (4/21, Curl, 90K) also reports "there was little to show for the daylong talks," and adds

DOJ_NMG_0026310

"perhaps the biggest achievement of the day was an assurance by Mr. Hu to work to make the Chinese currency more 'flexible.'" The Times also reports, "The two leaders failed to find common ground on how to deal with Iran's nuclear ambitions." Focusing on the Iran issue, the Los Angeles Times (4/21, Richter, 958K) titles its story "Hu Keeps Cards Close to His Vest," and says it was "clear that Hu left Bush unsatisfied on his request for help to restrain the nuclear ambitions of Iran and North Korea." Hu "said little about China's intentions on the Iranian nuclear issue, except to repeat statements that Beijing intends to work through diplomacy." Meanwhile, the Financial Times (4/21, McGregor, Daniel) reports, "A senior White House official said Mr Bush had made an 'impassioned plea' to Mr Hu to support international efforts to pressure Sudan, a major supplier of oil to China, but without success."

On the network newscasts, the story was the lead on each show, which also ran follow-up reports later in their newscasts for a total of approximately 17 minutes of airtime. The networks offered similar assessments of the apparent lack of progress in key issues, but they focused their attention on two incidents that were described as marring the event. During the leaders' joint appearance on the White House lawn, a Falun Gong protester was able to get press credentials and cause a commotion during Hu's remarks. In a second incident, an announcer mistakenly referred to the People's Republic of China by using the formal name for Taiwan, which China regards as a renegade province. The embarrassing images were censored on Chinese TV reports, as were reports on the censorship itself. ABC World News Tonight (4/20, lead story, 4:10, Raddatz, 8.78M) reported, "The visit was meant to improve ties between the two countries on energy, trade and nuclear proliferation." But "just as the Chinese President was talking about deepening trust with the US," a "lone but very loud voice coming from the press area, shouting 'President Bush, stop him from killing. President Bush, stop him from persecuting Falun Gong.'" President Bush "appears irritated. President Hu, confused. But with the encouragement of President Bush, the Chinese leader continued. It took nearly three minutes before the Secret Service removed the woman." The two Presidents "did meet privately this afternoon, with Mr. Bush spending much of the meeting urging the Chinese leader to use his influence to curb North Korea's nuclear proliferation and to support UN sanctions against Iran for its nuclear program. But there were no agreements announced." The CBS Evening News (4/20, lead story, 2:40, Schieffer, 7.66M) led its report with the two gaffes, saying, "This was not the best day the White House ever had." NBC Nightly News (4/20, lead story, 3:10, Gregory, 9.87M) said the Falon Gong protest was "considered to the President a major embarrassment." The "outburst was a major irritant to the Chinese leader since the White House gave" the Falon Gong dissenter "a day pass to attend the event." A "veteran diplomat who was on hand today said there's no way that the Chinese won't think that this was an intentional move by the Administration."

The Washington Times (4/21, Curl, 90K) runs a story on the Falun Gong incident, the Washington Post (4/21, A2, Milbank, 744K), in its "Washington Sketch" section, also focuses on the "protocol breach," noting "Bush and Hu looked…stunned. It took so long to silence her -- a full three minutes -- that Bush aides began to wonder if the Secret Service's strategy was to let her scream herself hoarse. … 'You're okay,' Bush gently reassured Hu." But "he wasn't okay, not really. The protocol-obsessed Chinese leader suffered a day full of indignities -- some intentional, others just careless."

Chinese Feel "Slighted" By Lack Of State Dinner For Hu. The New York Times (4/21, Sanger, 1.19M) reports "the Chinese, ever sensitive to questions of status, made clear they felt slighted by Mr. Bush's decision not to offer up a full state dinner for the leader of 1.3 billion people." The Washington Post (4/21, A18, Kessler, 744K) says the "subtext" of the summit "was the future -- and how these two countries will share the international stage. At every turn, Hu sought to stress the equality between the two nations, which, as he put it in a luncheon toast, are the 'largest developing country and the largest developed country.'" For his part, "Bush tried to signal that China is not all that equal. The White House would not grant Hu the state dinner he dearly wanted, offering instead a lunch that fell just short of the pomp and circumstance for close allies. Meeting with reporters, Bush simply said, 'It's a very important relationship.'"

USA Today (4/21, Jackson, 2.31M) notes "US and Chinese officials disputed the very description of the meeting. The Chinese called it a 'state visit,' the most formal and prestigious welcome, while the administration referred to it as an 'official visit.'" Hu "did not receive an evening, black-tie state dinner, but was guest of honor at a special luncheon featuring a performance by the Nashville Bluegrass Band." The Washington Post's "Reliable Source" column (4/21, C3, Argetsinger, Roberts) also addresses that issue, reporting "the delicate compromise was a very fancy luncheon in the East Room for more than 150, complete with a receiving line and the requisite number of prominent Chinese Americans and celebrity guests: figure skater Michelle Kwan, who sat next to President Bush , former secretary of state Henry Kissinger , designer Derek Lam , NBC's Tim Russert , Chicago Mayor Richard Daley , actor Ron Silver , concert pianist Lang Lang -- not to mention Dick Cheney , Condoleezza Rice , Don Rumsfeld, first daughter Barbara Bush and a slew of business types including the heads of Ford, Citibank, FedEx, Goldman Sachs, Pepsi, Motorola and Wal-Mart." Guests "dined on corn broth with dumpling,

DOJ_NMG_0026311

halibut and melon, then were entertained by the Nashville Bluegrass Band."

China Said To Have Been Involved In Iran's Nuclear Program For Over A Decade. The Washington Times (4/21, Gertz, Scarborough, 90K) reports in its "Inside the Ring" column that as President Bush seeks help from Chinese President Hu Jintao to resolve the issue of Iran's nuclear program, US officials are "playing down" the fact that China "has been directly involved in Iran's nuclear and missile programs for more than a decade. National security officials tell us the effort to enlist Beijing's support on Iran is like Samuel Johnson's quip about a second marriage: the triumph of hope over experience. Classified U.S. intelligence reports dating from the early 1990s reveal that Beijing has been covertly backing Iranian nuclear efforts, as it did in Pakistan, with training and equipment."

Hadley Says Bush, Hu Agree That Nuclear Iran Isn't In Interest Of Regional Stability. National Security Adviser Stephen Hadley said on CNN's The Situation Room (4/20) that President Bush and President Hu "have the same strategic view that a nuclear Iran is not in the interest of regional stability, not in the interest of the nonproliferation structure. So, there was an agreement on a need to -- a common strategic assessment of the situation, and agreement that we needed to work together towards trying to convince Iran to listen to the clear message of the entire international community and step back from this nuclear program that they are pursuing."

Hadley Says US Will Keep Human Rights Issue At Forefront With China. Hadley was also asked on CNN's The Situation Room (4/20) if President Bush made any progress on the human rights issue with Hu. Hadley said, "We've been raising this issue for a while. The President gave a list of about six people who are in detention in China that he hoped would be released. We've talked about other issues, focusing heavily on freedom of religion, the right of people to worship in their homes, and educate their children, and the like. These are issues that are ongoing with China. We have raised those issues. There are a couple things that the Chinese have indicated they will be trying to do in the next weeks ahead. It's important for us to keep these issues on the forefront."

Pentagon Speaks About Hedging China As Hu Visits White House. The AFP (4/21) reports that even "as Chinese President Hu Jintao was at the White House to meet with President George W. Bush on a range of trade and security issues, and to assure US leaders they have nothing to fear from China's rising might," Pentagon spokesman Bryan Whitman said "the United States is shifting its military might to the Asia-Pacific region and equipping its forces for high-tech warfare as a hedge against China's military buildup," adding that "there is also a lack of transparency and some uncertainty surrounding China's future path."

Demonstrators Protest Hu's Visit. The Washington Times (4/21, Emerling, 90K) reports, "Hundreds of demonstrators from across the country yesterday lined Lafayette Park and areas near the White House to protest the first US visit by Hu Jintao." An "estimated 500 protesters massed outside the iron gates near Lafayette Park and another 500 protesters gathered along the west side of 17th Street in Northwest." Both groups "held signs bearing slogans like 'China Lies People Die' and 'China's New Era Begins When the Communist Party Ends.'" The Wall Street Journal (4/21, Harwood, 2.11M) reports in its "Washington Wire" column, "Yale braces for demonstrations today as President Hu visits New Haven. Security precautions close several city streets and part of the campus near Sprague Hall, where he is to speak."

China Seen As Driving Increase In Oil Prices. The CBS Evening News (4/20, story 2, 2:05, Schieffer, 7.66M) reported, "Fred Bergsten, author of a book on the Chinese economy, says the US remains the largest consumer of crude, 20 million barrels a day. But China is now the second-largest using 6.5 million barrels daily, and the Energy Department predicts China's demand will more than double by 2025." OPEC "can't meet that kind of demand, so prices are surging in the trading pits and at the pumps. According to a new congressional report, China's demand could add between 19 and 33 cents to the cost of a gallon of gas over the next five years."

NBC Nightly News (4/20, story 2, 2:15, Mitchell, 9.87M) reported, "By 2020, its energy needs will increase by 150 percent, so China is buying oil anywhere it can find it." John Kilduff, oil trader: "They are willing to do business with a lot of countries that the US would find repugnant." Mitchell: "Hot spots like Iran, Venezuela, Nigeria, and Sudan." China's "extraordinary growth is one reason oil supplies are now razor-thin. What used to be a worldwide cushion of 6 million barrels a day 4 years ago is now down to 1 million barrels, not enough to withstand a crisis in oil-producing countries. And who's doing more to conserve, China or the US?" Elizabeth Economy, China expert: "They have much more ambitious plans than we here in the United States do. They want to have 15% of all their energy come from renewable energy sources by 2020."

China Exporting More High-End Goods. ABC World News Tonight (4/20, story 6, 2:30, Vargas, 8.78M) reported, "Americans bought $243 billion in Chinese goods last year. We're all familiar with the low-priced clothing and electronics pouring into this country, helping to fuel China's $202 billion trade surplus. But there's been quite an effort by Chinese companies, recently, to conquer the markets for many high-end products, as well." ABC (Litke) added, "Quality is fast becoming the norm with Chinese products, from high fashion to high-tech. And" musical instrument manufacturer Eastman "is no exception. Most of Eastman's workers are peasants

DOJ_NMG_0026312

from the countryside. Yet, they're well-trained and very dedicated."

Roberts Taps Duff To Head US Courts Office. The Washington Post/Bloomberg (4/21, A21, Stohr) reports that Chief Justice John Roberts yesterday selected Washington lawyer James Duff as director of the Administrative Office of the US Courts. Roberts said the appointment "represents a 'fresh start' in the judiciary's sometimes stormy relations with Congress." Duff "will head a 900-person office that provides support for courts around the country and serves as the judiciary's liaison with Congress."

The Legal Times (4/21, Mauro) reports, "Duff, 53, is a popular and familiar face at the sprawling judiciary, having served as administrative assistant to the late Chief Justice William Rehnquist from 1996 to 2000. There, Duff won praise as a low-key team player and a skillful behind-the-scenes negotiator. Duff was a close witness to history when he served as aide-de-camp to Rehnquist while the chief justice presided over the 1999 Senate impeachment trial of President Bill Clinton." The Times adds, "Duff will replace Leonidas Ralph Mecham, who has held the job for 20 years with a sometimes-combative style. Mecham, who is retiring when Duff takes over, was given a standing ovation. … Members of both houses, mostly Republicans, have been critical of the judiciary in recent years for exerting too much power over the elected branches and for operating with little or no accountability. For varying reasons, bills that are unappealing to many in the judiciary have gained support if not passage in recent years, including one that would bar citation of foreign law in cases and another that would hasten camera access into federal court proceedings. Congress also controls the $5 billion-plus budget of the judiciary."

Bolten Raises Possibility Of Replacing Miers As Counsel. The New York Times (4/21, Bumiller, Rutenberg, 1.19M) reports White House Chief of Staff Joshua Bolten "has raised the possibility of moving Harriet E. Miers from her job as President Bush's counsel as part of a continuing shake-up of the West Wing, an influential Republican with close ties to Mr. Bolten said Thursday." The Republicans source said Bolten "had floated the idea among confidants, but that it was unclear whether he would follow through or if the move would be acceptable to Mr. Bush, who has a longtime personal bond with Ms. Miers." Meanwhile, Republicans said that Fox News commentator Tony Snow "was in negotiations for the job of White House press secretary." Snow "had surgery for colon cancer last year and is awaiting an clearance from doctors before making a deal." The White House "has also been interested in a communications job for Dan Senor, the former spokesman for the United States in Iraq who is now a Republican consultant and Fox News analyst. But Republicans said Mr. Senor was cool to the idea and faced complications because of his wife, Campbell Brown, sometimes fills in as anchor of the 'NBC Nightly News' and is the co-host of 'Weekend Today.'"

In Press Secretary, Bolten Looking For More Than A Fresh Face. The White House Bulletin/US News (4/20) reported, "Credibility and a strong intellectual background are the leading drivers in White House Chief of Staff Josh Bolten's search for a new press secretary. Insiders today said that Bolten's apparent decision to look outside the administration was an indication that he felt credibility had suffered in recent months and that a new person from the outside, such as frontrunner Tony Snow of Fox News and Dan Senor, a Fox analyst who used to be the administration's spokesman in Iraq, would revive the standing of the White House in the public's eyes." By "turning to an outsider like Snow, however, Bolten gets more than a fresh face, said those following the job search."

Snow Discusses Possibility Of Replacing McClellan. Tony Snow was asked on Fox News' The O'Reilly Factor (4/20) if he is interested in replacing Scott McClellan as White house spokesman. Snow said, "Look, it's very interesting. I am trying to balance two sets of things. On the one hand, you have a White House press spokesman as a piñata. And the other side of the ledger is family time. My kids need to see more of me. And you have a massive cut in pay. You have a lot of inconvenience. You don't have as much time to yourself. There's a lot of stuff going on, plus there are no guarantees after you get out of the White House whether there is any landing place. We have seen lots of people who went out to glory in the White Houses and came out with tin cups filled with pencils."

Website Taking Bets On Replacement For McClellan. The Washington Post (4/21, C3, Argetsinger, Roberts, 744K) reports in its "Reliable Source" column that the Scott McClellan "replacement odds are posted, for those too wonky for those highbrow 'American Idol' elimination wagers. Since Wednesday afternoon, BetUS.com has taken 186 bets with an average of $70 per bet (maximum is $100): Deputy Press Secretary Dana Perino is tied with presidential counselor Dan Bartlett (6-5), followed by Fox News host Tony Snow (4-1), perpetual presidential adviser David Gergen (8-1) and former Pentagon spokeswoman Torie Clark and former Iraq occupation spokesman Dan Senor (both 12-1). Perino has the lead with almost 60 percent of all bets placed, Bartlett is the runner-up with almost 25 percent, and four delusional guys are hoping to make more than $20,000 with former Clinton buddy George Stephanopoulos (80-1)."

Republicans Looking For More "New Blood" In White House Shuffle. The White House Bulletin/US News (4/20) reported, "'Where's the fresh thinking, the new blood?' asks a senior Republican who advised past GOP presidents." This official "described the changes so far as a 'botox injection' for the West Wing that will change its appearance

DOJ_NMG_0026313

but not alter the underlying reality -- of a president who has adopted unpopular or controversial policies on Iraq, immigration, Social Security, and other issues and so far can't find a way to improve his job-approval ratings." "What President Bush wants is the symbolism of change but not the substance," this prominent Republican tells US News and the Bulletin. Another concern inside the GOP is that Bush has yet to reach outside his tight group of loyalists for a senior adviser.

Leader Of Effort To Create National Health Information Network Resigning. The Financial Times (4/21, Timmins) reports, "Dr David Brailer, the man charged by President Bush with ensuring that half of all Americans have a portable electronic health record within a decade, is to step down two years after taking on the job." Brailer "said on Thursday he was leaving his job as national co-ordinator for health information technology for family reasons and because the programme 'is now mature and moving in the right direction.'" He "has commissioned a string of initiatives aimed at getting hospitals, doctors, health plans and IT vendors working together to deliver an initiative intended to improve the quality of care and potentially lower its cost." The Wall Street Journal (4/21, Harwood, 2.11M) in its "Washington Wire" column briefly notes the move, "Bush's health-technology czar David Brailer resigns, but will keep assisting with national health-information network."

NYTimes Says Bush Choice Of Schwab For USTR Undercuts WTO Negotiations. The New York Times (4/21, 1.19M) says in an editorial that former US Trade Representative Charlene Barshefsky "commanded respect internationally, particularly from China," while Robert Portman "made up for his lack of international clout with political expertise." Susan Schwab, "the woman President Bush has nominated to succeed Mr. Portman, has neither asset. That lack does not bode well for the crucial trade talks that are now under way at the WTO." The "most important byproduct of President Bush's much-discussed White House shake-up may be the torpedoing of any real progress in these critical trade negotiations."

Dionne Says Rove "Demotion" Shows Shift In Administration Goals. In his Washington Post column (4/21, A23), E.J. Dionne says the "real meaning of the White House shake-up and the redefinition of Karl Rove's role in the Bush presidency" is that the Administration's "one and only domestic priority in 2006 is hanging on to control of Congress." Rove is "simply moving to where all the action will, of necessity, be."

Kennedy Says Second Term Staff Changes Are Not Untypical. Sen. Ted Kennedy said on CNN's Larry King Live (4/20), "I think it's not untypical that a president in the second term is going to make these adjustments and I think particularly given the kind of conditions that he's facing in terms of the support that he has here at home and generally around the world that he's going to make some shifts and some changes. I think the real overarching issue does this really mean a change of policy, a change in direction and priorities here at home? And, I think those are real legitimate questions and I doubt whether it will make much of a change in policy with regards to Iraq, which is the overarching issue of our time." Kennedy added, "I don't think we're going to get much of a change of a direction on domestic policies or in foreign policy but we'll have to see."

Rumsfeld Critics Turn His Praise Of Change Against Him. The New York Times (4/21, Gordon, 1.19M) reports Defense Secretary Donald H. Rumsfeld "has described himself as an agent of change and suggested that the complaints come from old thinkers who oppose reforming the military." Convinced that "the generals were locked in a cold-war mindset -- 'legacy thinking,' he dubbed it -- Mr. Rumsfeld promoted the virtues of relying on precision weapons and fast-paced operations instead of huge numbers of troops." But "as a half-dozen retired Army and Marine generals have called for Mr. Rumsfeld's resignation, some criticize him in his own terms. The change-agent defense secretary, they say, is resistant to change." Rumsfeld, "the critics assert, was slow to acknowledge a growing insurgency in Iraq and to counter it. The military is overstretched by the occupations of Iraq and Afghanistan, but Mr. Rumsfeld has also resisted expanding the Army and Marines."

Kennedy Says Rumsfeld Is Not Incompetent. Sen. Ted Kennedy was asked on CNN's Larry Ling Live (4/20) if Rumsfeld is incompetent. Kennedy said, "No, I don't think he's incompetent. I think that there was a rush to war. … There was a thirst to go to war. There was no question about it. And they carefully selected and picked intelligence and off it was. And, I think that that was a catastrophic mistake."

Murtha Says Rumsfeld Should Take Blame For Iraq Mistakes. CNN's The Situation Room (4/20, Blitzer) reported that Rep. John Murtha says Defense Secretary Donald Rumsfeld "should take the blame for mistakes in Iraq."

Schieffer Unsure Rumsfeld Will Remain At Defense For Long. The Daily Record (NJ) (4/21, Jennings) reports that in remarks at a Drew University forum attended by 275 this week, CBS anchor Bob Schieffer "said he wasn't sure that Defense Secretary Donald Rumsfeld, under fire for his handling of the war in Iraq, would endure much longer in his post. He didn't put much stock in President Bush's recent declaration of support for Rumsfeld." Schieffer said, "t was also this president who said, 'Brownie, you're doing a heckuva job,' and that was just before Brownie got canned." Schieffer was "not optimistic about U.S. prospects in Iraq."

Krauthammer Says Uniformed Rumsfeld Critics Have Set "Dangerous Precedent." In his Washington Post column (4/21, A23), Charles Krauthammer comments on the retired generals who have come forth to criticize Secretary

DOJ_NMG_0026314

Rumsfeld, saying, "We've always had discontented officers in every war and in every period of our history. But they rarely coalesce into factions. That happens in places such as Hussein's Iraq, Pinochet's Chile or your run-of-the-mill banana republic. And when it does, outsiders (including the United States) do their best to exploit it, seeking out the dissident factions to either stage a coup or force the government to change policy." It is "precisely this kind of division that our tradition of military deference to democratically elected civilian superiors was meant to prevent. Today it suits the antiwar left to applaud the rupture of that tradition. But it is a disturbing and very dangerous precedent that even the left will one day regret."

Editorial Opinion On Rumsfeld Varied. USA Today (4/21, 2.31M) runs an "Opinionline" sampler of editorial opinion around the country on the retired generals who have called on Secretary Rumsfeld to resign. On one end of the spectrum, the Beaver County (Pa.) Times editorializes, "The American people need to listen to them before it is too late. Our military might is being squandered because of this administration's lethal combination of arrogance and bungling." On the end, the Amarillo (Texas) Globe News says, "What's missing in this discussion, though, has been a keen understanding of the nature of the relationship between senior military officers and their civilian bosses. It is filled with friction. It always has been that way and likely always will be."

Administration Says It Has Exceeded Enrollment Goal For Drug Benefit. The AP (4/21, Abrams) reports, "Another 1.7 million seniors have signed up for the new Medicare prescription drug benefit in the past month, and administration officials said Thursday they have exceeded their goal for the year with 25 days left before the enrollment deadline." The officials "rejected demands from some lawmakers that the May 15 deadline be extended to give people more time to study the plan alternatives, saying that would only lead to fewer enrollees." Health and Human Services Secretary Mike Leavitt said in a telephone news conference that "more than 30 million Medicare beneficiaries are new receiving prescription drug coverage, surpassing projections of 28 million to 30 million enrollees in the first year of the program."

The Wall Street Journal (4/21, Lueck, 2.11M) casts doubt on the government's numbers, "At first glance, information released Thursday by Medicare seems to indicate that 30 million people are getting prescription-drug insurance from the federal health program for the elderly and disabled. Not exactly." While the government claims 30 million seniors are receiving coverage, "a smaller number is actually enrolled in the new program, and some of that group had coverage before. As of April 18, 19.7 million beneficiaries are getting drug insurance from Medicare. Of that group, 5.8 million already had coverage from Medicaid, the state-federal program for the poor. An additional 6.8 million people are getting drug coverage from former employers; the coverage is partially subsidized by Medicare." That "means a total of 26.5 million people now are benefiting from the Medicare drug program." To get to 30 million, government officials also "counted 3.5 million people who have drug coverage from the military's TRICARE program or federal-employee benefits, but aren't signed up for the Medicare benefit."

Beneficiaries Could Pay As Mush As 7% More Next Year. The Los Angeles Times (4/21, Alonso-Zaldivar, 958K) reports, "With the deadline for signing up for the Medicare prescription benefit approaching, the government has announced that seniors and disabled beneficiaries may pay as much as 7% more next year for their benefit."

Large Insurers Seen As Biggest Winners So Far. The Wall Street Journal (4/21, 2.11M) reports that while the deadline is 25 days away, "the massive effort has produced clear winners and losers among businesses and seniors. The early winners include some of the nation's largest health plans, which are peddling the drug coverage. … Also buoyed: drug makers, which are reporting increased demand for some products used by seniors, such as drugs for chronic conditions. Many seniors are also giving the benefit good reviews, despite initial confusion about which plan to choose. … Dozens of smaller health insurers, meanwhile, are seeing only minimal enrollment gains, and independent pharmacists are criticizing the lower payments and suffering cash-flow problems." The Journal adds, "By far, the biggest winner in the race to sign up seniors is UnitedHealth Group Inc."

Congress Returns With Broad Agenda As Public Anger Deepens. The Washington Post (4/21, A5, Weisman, 744K) reports Congress returns "next week to face deep challenges including a budget morass in the House and an immigration quagmire in the Senate, while new polls indicate that voters increasingly view the legislative branch as dysfunctional." Republican leaders' success in navigating "their way through the legislative mess could greatly influence the outcome of the midterm elections in November, suggests a poll released yesterday by the nonpartisan Pew Research Center for the People and the Press." Republican leaders "have laid out an ambitious agenda for the coming months, from health-care legislation to the most sweeping immigration changes in a generation. But they will have just 72 legislative days to achieve it before the scheduled date of adjournment. And they will have to overcome divisions in their own ranks to secure even the basics, such as a budget."

Congress Not Following Through With E-911 Funding. After authorizing $250 million a year to pay for "E-911," enhanced 911 service for cellular telephone

DOJ_NMG_0026315

systems, Congress has failed to appropriate the money, leaving the project stalled. The CBS Evening News (4/20, story 9, 2:55, Brzezinski, 7.66M) reported, "911 centers around the country are driving blind, unable to identify cell phone caller's locations because they haven't upgraded their call tracking technology. Here's how it is supposed to work. When someone dials 911 on a cell phone, satellites pick up and relay the data to the nearest 911 call center, where computers display the caller's location within about a city block for margin of error. But if that call came on an old cell phone or if the 911 center doesn't have the technology upgrade, all bets are off." Sen. Hillary Clinton, New York: "Well, our 911 system is stuck in the 20th century." Brzezinski: "Since the attacks of 9/11, New York Sen. Hillary Clinton has worked to get the entire country's 911 system up to par, but still, more than 40% of country's call centers, known as PSAPS, are poorly equipped. If there were another terrorist attack right now, would we be in the same situation we were in 9/11?" Sen. Clinton: "That would depend upon what cell phone you used, what part of the country you were in, whether the PSAP answering your call had the capacity to locate you." Brzezinski: "A congressional study just out found that at least four states collected the money to fix the problem through phone bill surcharges but instead spent it elsewhere."

Board Strives To "Practice Merit" Under New Federal Pay Systems. The Washington Post (4/21, D4, Barr, 744K) reports in its "Federal Diary" column that the US Merit Systems Protection Board "strives to ensure fair treatment for civil service employees and hears appeals of major disciplinary actions when workers believe they have not received a square deal from their agencies. But the government's workplace rules are in flux. Congress has freed a number of agencies over the years from civil service law and most recently launched the departments of Defense and Homeland Security on efforts to shake up their pay and personnel systems. The changes in pay rules raise the question of 'how to practice merit' when operating outside civil service law, MSPB Chairman Neil A.G. McPhie said yesterday."

Kennedy Book Called "Blistering Critique" Of Bush Administration. Eric Pianin reviews Sen. Edward Kennedy's new book "America Back on Track" in the Washington Post (4/21 ,A21, 744K). Pianin says the book is "Kennedy's blistering critique of the Bush administration and his prescriptions for what ails the country. … Kennedy asserts that President Bush has systematically and ruthlessly chipped away at constitutional protections in the name of national security and the war on terrorism." Pianin adds that the book "plows a lot of familiar ground, and many of Kennedy's proposals seem more like liberal cant than pragmatic programs that might actually bridge the huge partisan and ideological divide in Washington."

OTHER NEWS:

Dow Industrials Close At Six-Year High. ABC World News Tonight (4/20, story 4, :15, Vargas, 8.78M) reported, "Blue chip stocks closed at more than a six-year high today. The Dow Jones Industrial Average gained 64 points to close at 11,342. The last time the Dow was this high was in January of 2000." NBC Nightly News (4/20, story 6, 0:15, Williams, 9.87M) also noted the Dow reached "a 6-year high in fact." The Nasdaq "lost a bit of ground, however, down just over 8 points on the day [to close at 2,362.55]."

The Wall Street Journal (4/21, Karmin, 2.11M) reports the Dow "powered to a six-year high, supported by easing crude-oil prices and upbeat earnings news from several blue-chip stocks including beleaguered General Motors Corp. … Crude-oil prices, falling from recent highs, finished at $71.95 a barrel, down 22 cents." USA Today (4/21, Shell, 2.31M), however, titles its story "Stocks Rise In Spite Of Increasing Price Of Oil,"

Jobless Claims Down Sharply. The Wall Street Journal (4/21, Blackstone, 2.11M) reports, "The number of US workers filing initial claims for unemployment benefits fell more sharply than expected last week, suggesting that underlying job fundamentals remain strong. Initial jobless claims declined by 10,000 to a seasonally adjusted 303,000 in the week ended April 15, the Labor Department said Thursday." Last week's "decline in unemployment claims was more pronounced than Wall Street expectations. The median estimate of 13 economists surveyed by Dow Jones Newswires and CNBC projected jobless claims would fall by just 5,000 in the April 15 week to 308,000."

Economy Seen As Likely To Hurt GOP In Fall. Under the headline "Why A Strong Economy Is No GOP Asset," the Christian Science Monitor (4/21, Feldmann, 61K) reports, "Of all the problems Republicans face heading into the fall political season, one of the most exasperating is the economy. In many ways, they say, these are the best of times: Unemployment is at 4.7 percent, lower than the averages of the 1970s, '80s, and '90s. The economy is showing strong, consistent growth, without significant inflation. And the stock market is roaring along." Yet "many Americans just aren't impressed. A majority tell pollsters they trust the Democrats more than the GOP to handle the economy. … Independent pollster John Zogby sees the public's skepticism over the economy as part of a larger picture of overall concern over the direction of the nation and a president struggling to recapture Americans' confidence."

DOJ_NMG_0026316

Mortgage Rates Reach Four-Year High. ABC World News Tonight (4/20, story 3, 1:25, Vargas, 8.78M) reported, "Mortgage rates have risen to a nearly four-year high. The average rate for a 30-year fixed rate mortgage is above 6.5%." ABC (B. Stark) added, "There are now 30% more homes for sale this month than last. That means that buyers should have more bargaining power in some markets." The higher rates mean "for sure a slower economy in the second half of the year."

Foreign Firms Reducing Spending In US. The Wall Street Journal (4/21, Conkey, 2.11M) reports, "Amid political controversy over foreign investment in the US, new data suggest that foreign companies steadily reduced their work forces and capital spending in the U.S. from 2001 to 2004 despite rising sales here." In an annual report on its survey of multinational corporations, the US Commerce Department "said foreign firms other than banks doing business in the U.S. employed nearly 5.1 million employees in 2004 -- slightly less than one of every 20 workers in the private sector." That was "down 10% from 5.6 million in 2001."

Democrats Using Rising Gasoline Prices As Political Issue Against GOP Opponents. The New York Times (4/21, Janofsky, 1.19M) reports, "Democrats running for Congress are moving quickly to use the most recent surge in oil and gasoline prices to bash Republicans over energy policy, and more broadly, the direction of the country. … To varying degrees, Democrats around the country are following a similar script that touches on economic anxiety and populist resentment against oil companies." Sen. Charles E. Schumer of New York, chairman of the Democratic Senatorial Campaign Committee, said, "It's a metaphor for an economy that keeps biting people despite overall good numbers." Schumer also "said Democratic candidates in 10 of the 34 Senate races this year had scheduled campaign events this week focusing on gasoline prices."

The Washington Post (4/21, A1, Mufson, 744K) says that "in the absence of a clear explanation" for the rising prices, "members of Congress have jumped into the fray. 'These major oil companies have hooked their hose up to the pocketbooks of American citizens and are sucking money from ordinary Americans into the treasury of the giant oil companies,' said Sen. Byron L. Dorgan (D-N.D.), a member of both the Senate Commerce and Energy committees." Schumer on Tuesday "called on the Federal Trade Commission to make sure the major oil companies weren't intentionally keeping refinery capacity offline to jack up prices. He cited a 5-percentage-point decline in refinery utilization rates."

Price Tops $3 A Gallon In California. The Los Angeles Times (4/21, Sanchez, 958K) reports, "The average price of a gallon of gasoline in California topped $3 for the first time this year, and motorists are not expected to see any relief from spiking prices until after Memorial Day, according to industry observers." California pump prices "are rapidly closing in on the record high reached in September, when a gallon of regular unleaded peaked at $3.054, according to AAA." USA Today (4/21, Hagenbaugh, 2.31M) says California "became the first state in the continental USA to see average gasoline prices go above $3 a gallon in 2006, while the price at the pump in Los Angeles hit an all-time high." The average price for a gallon of regular gas in California "hit $3.015 Thursday, up 3 cents from the day before and up 34 cents from a month ago."

Democratic Ad Targets GOP On Homeland Security. The AP (4/21, Sidoti) reports Democrats "believe they can turn a Republican political strength — homeland security — into a vulnerability. They are testing that theory with a television ad that accuses the Bush administration and the president's GOP supporters of disregarding port security." Americans United, a group "with close ties to congressional Democrats, is spending at least $500,000 to run the ad, starting Thursday, on cable news channels and during NBC's 'Meet the Press,' which airs Sundays." The 30-second ad "shows a longshoreman involved in port security in Long Beach, Calif., talking about the thousands of containers that move through U.S. ports each day."

Democrats Said To Lack Consensus On Message. The AP (4/20, Sidoti) reports that if you ask Democratic leaders "to identify their party's election-year message," you "get everything but consensus. Ahead in polls, Democrats are divided over whether they already have – or even need – a national theme that tells voters exactly where the party stands." In "more than a dozen interviews, Democrats who gathered here for the DNC's spring meeting rattled off lists of what they believe to be their party's message in 2006. Each had a different take." Some said "their party stands for affordable health care, lobbying reform, lower federal deficits. Others mentioned human rights, the well-being of families and the search for new energy sources. Still others cited education money, Medicare that works, a reliable Social Security program and world peace. Lots of issues. No single message."

Eleven States, DC, Competing For Early Primary Slots At DNC Meeting. The Washington Post (4/21, A4, Balz, 744K) reports Democratic state delegations are arriving in New Orleans to "compete for the chance to help start the presidential nominating process in 2008." Nevada Democrats "distributed a costly and colorful brochure, and aired the slickest video of the day to promote their state's rapidly changing electorate as an ideal testing ground for

DOJ_NMG_0026317

candidates." Arkansas Democrats "touted their many venues for retail politicking, including VIP toad races at the annual Toad Suck Daze festival. Hawaii offered perfect weather for winter campaigning." The states were "scrambling to take advantage of coming changes to the Democratic primary and caucus calendar in 2008, which will alter a system that long has given top early billing to Iowa's caucuses and New Hampshire's primary." In 2008, Iowa "will still have the first caucus and New Hampshire the first primary. But as many as four other states will be added to early weeks of the season -- one or two between Iowa and New Hampshire, and one or two immediately after. On Thursday, Democratic leaders from 11 states and the District began bidding for the available slots."

The AP (4/21, Sidoti) reports the DNC's "rules and bylaws panel heard pitches from the District of Columbia and 10 states that have applied to move up their contests to select the presidential nominee. Nebraska also applied but did not make a presentation." The states that "applied for early status" are "Alabama, Arizona, Arkansas, Colorado, Washington, D.C., Michigan, Mississippi, Nebraska, Nevada, South Carolina, West Virginia and Hawaii."

Senate Democrats Outraise Republicans, Have 2-1 Cash-On-Hand Advantage. The Washington Post (4/21, A4, Edsall, 744K) reports FEC data show the Democratic Senatorial Campaign Committee "continued to outpace the National Republican Senatorial Committee in fundraising, bringing in more contributions and finishing the quarter with twice as much money in the bank." There have been "growing complaints in Republican circles about the chairmanship of Sen. Elizabeth Dole (N.C.), who was elected to the post in part because of her reputation as a fundraiser." The DSCC reported raising $6.9 million in March for a total of $56.4 million in the 2005-06 cycle, and $32.1 million cash on hand. The NRSC "reported raising $5 million in March, bringing its total to $50.4 million for the cycle, with $16.5 million in the bank." In an "equally significant development, the Democratic Congressional Campaign Committee reported having $23 million in the bank, almost equaling -- for the first time in memory -- the cash balance of the National Republican Congressional Committee, which was $24.4 million."

CNN's The Situation Room (4/20, Blitzer) reported, "New financial reports in this midterm election year show that Senate Democrats still hold a 2-1 advantage over their Republican counterparts. The Democrats have about $32 million in the bank. The Republicans have about $16 million. But the Republican Party still holds a huge fund-raising edge over the Democratic Party. The RNC has about $43 million in the bank. The DNC has about $10 million on hand."

Democrats' Advantage On Generic Ballot Said To Be Overstated. The Washington Times (4/21, Lambro, 90K) reports pollsters are "churning out a stream of voter surveys that show Republicans trailing by 10 percent or more in congressional elections, although they acknowledge these 'generic' polls overstate the Democratic vote." The latest USA Today/Gallup poll, "conducted from April 7 to April 9, found that the Democrats lead Republicans by 52 percent to 42 percent among all registered voters surveyed." But Gallup "and other election pollsters who conduct generic polls acknowledge that the turnout rate for registered voters is much less than it is for Americans who say they are 'regular voters.' When Gallup polled a subgroup of people who say they vote on a regular basis, the Democratic lead fell to seven points, 51 percent to 44 percent." Republican pollsters "often complain that the results of generic surveys are tilted in favor of the Democrats and do not accurately reflect the partisan division among people who actually vote in their states and districts. It is a complaint that the Gallup Poll itself acknowledges in an analysis of its latest polling results."

Pew Poll Finds Anti-Incumbent Mood Strongest Since 1994. The AP (4/21, Sidoti) reports the "anti-incumbent mood of the public is as high as it has been since the midterm elections of 1994. A majority of people in this country say they do not want to see most members of Congress re-elected this November, and almost three in 10 say that about their own representative to Congress, according to a poll by the Pew Research Center for the People & the Press." Fifty-three percent "said they do not want most members of Congress re-elected, the poll found. In October 1994, 56 percent felt that way. Also, 28 percent said they want to see their own representative defeated in the midterm elections, compared with 29 percent in October 1994."

"Dysfunctional" Democrats Seen As Unlikely To Exploit GOP's Weakness. In an editorial, The Economist (4/20) says in a leader that the Democrats "hope to win this year's congressional elections in November and, on the back of those, to capture the White House in 2008. They need a net gain of 15 seats to take over the House and six seats to take over the Senate." With "two-thirds of Americans convinced that their country is heading in the wrong direction, this might appear to be easy. It isn't. First, various technical factors -- from the power of incumbency to gerrymandering -- will help the Republicans in November. More important, if the Republicans reek of decay, the Democrats ooze dysfunctionality: Divided, beholden to interest-groups and without a coherent policy on anything that matters to America and the world." Since 2004, the "Republican incompetence has exceeded even our worst fears. How depressing to report that Democratic incoherence has soared too. America deserves better."

DOJ_NMG_0026318

Ehrlich, BGE Reach Deal On Rate Hike. Maryland Gov. Robert Ehrlich and Baltimore Gas and Electric Co. have reached a deal to phase in a 72 percent electricity rate increase over 18 months, Ehrlich announced Thursday. The Washington Times (4/21, Miller, 90K) reports, "By making the deal with BGE officials, Mr. Ehrlich avoided having to call a special session of the Democrat-controlled General Assembly, which ended its regular session last week without reaching an agreement on the electricity-rate issue."

The Washington Post (4/21, B1, Mosk, Wagner, 744K) reports, "The deal described yesterday is similar to one Pepco announced two days earlier. Under the terms, which state regulators must approve, 1 million Baltimore Gas and Electric customers will be given an option of shouldering the entire 72 percent increase starting in July or phasing it in over 18 months. Those who choose to phase in the increase will have to pay additional charges of about $15 a month extra for the average customer over two years. An additional $600 million in relief -- about $4 a month for the average customer -- would hinge on whether BGE's parent company, Constellation Energy Group, gets approval for a merger with a Florida power company. If not, customers who deferred rate increases would have to pay more interest."

Betty Ford Hospitalized. NBC Nightly News (4/20, story 5, 0:15, Williams, 9.87M) reported, "In other news tonight, we got word this morning that former First Lady Betty Ford was hospitalized for tests today. A family spokesperson said the visit to Eisenhower Medical Center in Rancho Mirage, California was routine and that the 88-year-old is in good health."

Krugman Says Conservative Tide Is Receding. Paul Krugman writes in the New York Times (4/21, 1.19M) that President Bush's "temporarily sky-high approval ratings were the aberration; the public never supported his real policy agenda." Krugman adds that Democrats "will almost surely make gains" this fall. Krugman concludes that the 2004 election 'looks like the high-water mark of a conservative tide that is now receding."

WSJournal Opposes Restoring Dues-Checkoff Privilege For NYC Transit Union. An editorial in the Wall Street Journal (4/21, 2.11M) says New York City may be bucking the trend of unions representing government employees getting "whatever they want, and with little accountability." The Journal notes that last December, the city's Transit Worker's Union "struck for three days in violation of the law." As penalty for the illegal strike, a judge rules that the union's right "to the automatic deduction of dues from workers' paychecks should be suspended for 90 days, and possibly longer." The Journal adds, "We wonder why the TWU should have its dues-checkoff privileges restored at all. Let it raise its money the old-fashioned way -- by providing a service that its members are willing to pay for."

Hamas Appoints Militant As Head Of New Security Force. The AP (4/21, Barzak) reports, "The Hamas government on Thursday named a Palestinian whose group has attacked Israel and was blamed for bombing a U.S. convoy to head a new security force made up of Islamic militants." The move "is a direct challenge to the authority of President Mahmoud Abbas, and was quickly denounced by Israel and the United States." Hamas Interior Minister Said Siyam "issued a decree appointing Jamal Abu Samhadana, the head of the Popular Resistance Committees, as director general of his ministry." His group "is responsible for many of the homemade rockets launched at Israel in recent weeks." It also is "suspected by some of involvement in the attack on a US Embassy convoy in Gaza that killed three Marine security guards in October 2003." The Washington Post (4/21, A16, 744K) runs a similar AP story on the appointment, while Knight Ridder (4/21, Nissenbaum) reports Samhadana is "one of Israel's most wanted militants," and notes he "an Israeli assassination attempt ."

The New York Times (4/21, Myre, 1.19M) says the move is "likely to increase friction between the Hamas-led Palestinian government and…Abbas." The Washington Times (4/21, Mitnick, 90K) also refers to the "tug of war between Hamas and…Abbas for control of the Palestinian security services." In recent weeks Abbas "has made several appointments aimed at consolidating his authority over multiple paramilitary police forces that he controls." The Los Angeles Times (4/21, King, 958K) runs a similar report.

US Diplomats' Union Says "Risk-Averse Culture" Stymies Award Nominations. The Washington Times (4/21, Kralev, 90K) reports the American Foreign Service Association, "the union representing American diplomats," said yesterday "it has had a difficult time soliciting nominations for its annual awards for 'constructive dissent'in the Foreign Service because its members are reluctant to be perceived as mavericks." Barbara Berger, coordinator for the awards, "said the Foreign Service is a risk-averse culture and its members are preoccupied with important daily responsibilities around the world." The Times adds, "None of the nominations this year is related to a controversial foreign policy issue such as Iraq, Iran, North Korea or the Israeli-Palestinian conflict."

White House Backs Lebanon On Territorial Dispute With Syria. The AP (4/21, Schweid) reports, "The Bush administration urged Syria on Thursday to negotiate with Lebanon on the future of a strip of disputed territory occupied by Israel." Israel seized Chebaa Farms in

DOJ_NMG_0026319

the Six-Day War. However, "The United Nations has determined the area is Syrian and has called for Syria and Israel to determine its fate in negotiations. But Syria says the area is Lebanese, and Lebanon has claimed Chebaa Farms." The US is calling for a "negotiated solution" and "normal diplomatic relations" between Syria and Lebanon.

Iranian Official Who Entered US Is Permanent Resident. The Washington Times (4/21, Kralev, 90K) reports, ""Mohammad Nahavandian, an economics and technology aide to Iran's top nuclear negotiator, Ali Larijani" who entered the US last month, is a "legal permanent US resident." However, DHS is now investigating him for "suspected violations that could result in revoking his green card." Nahavandian reportedly flew into Philadelphia on March 25. One official said "there were no records" that Nahavandian had left the US, "although he noted that such records would exist only if he departed by air."

Young Iranians Are Frustrated. The Washington Post (4/21, A1, Vick, 744K) reports, "While the world focuses on Iran's nuclear ambitions, Iranians focus on the unmet aspirations of the two-thirds of the population that is younger than 30." Iranians have "seen average income shrink under a religious government that has cultivated an elite of its own atop a profoundly dysfunctional economy"; problems include 15% inflation and 80% of the population working in the private sector, which is only 20% of the economy.

WSJournal Urges Bush To Prepare For Tough Iranian Situation. An editorial in the Wall Street Journal (4/21, 2.11M) tells President Bush to "begin to educate the American public about what is at stake in Iran and what the U.S. might be prepared to do about it." The editorial argues that "the chances of the international community imposing sanctions -- and sticking to them -- are vanishingly small" and that the president faces "a revolutionary regime seeking to spread its ideology and power by force and intimidation." It warns that offering concessions to Iran will likely fail, as they did with North Korea.

IADE Study To Suggest Greater Global Use Of Nuclear Power. The Financial Times (4/21, Hoyos) reports, "The International Energy Agency, which represents 26 developed countries, is to support a study highly likely to make the case for greater reliance on nuclear power." The study by the West's "energy watchdog" comes "amid growing fears about the reliability of natural gas supplies, particularly out of Iran and Russia." Greater use of nuclear power would end "the decades of moratoriums and stalled reactor programmes that followed the Chernobyl accident 20 years ago."

Uzbek Nuclear Waste Returned To Russia. The Washington Post (4/21, A15, Kole, 744K) reports, "Spent nuclear fuel containing enough weapons-grade uranium to produce at least two bombs was safely returned to Russia from Uzbekistan this week in a high-security and classified operation." The guarded shipments were "part of the Global Threat Reduction Initiative, an effort to ensure that high-risk nuclear and radiological materials do not fall into the wrong hands."

DOJ Investigates Russian Gas Supplier. The Wall Street Journal (4/21, 2.11M) reports, "The Justice Department is investigating Rosukrenergo AG, the company that supplies billions of dollars in Russian and Central Asian natural gas to Ukraine." Ruskrenergo's "cloudy workings and ownership structure have been attacked as a threat to Europe's energy security and Ukraine's political stability." The secretive company "is now reconsidering plans for a public share offering that would have required disclosure of the company's true owners."

Kurdish Satellite TV From Denmark Angers Turkey. The Christian Science Monitor (4/21, Schleifer, 61K) reports, "The Turkish government is lobbying Denmark to rein in Roj, accusing the two-year-old station of being nothing more than a mouthpiece for Kurdish terrorists." Based in Denmark, Roj "frequently airs footage provided by the [PKK] of its guerrillas in action against Turkish security forces." Turkey accuses Roj of being "part of the PKK," while Denmark calls the controversy "a matter for the courts." Kurdish viewers in southeastern Turkey have "added to the list of grievances" the Turkish government's efforts to shut down Roj.

US Troop Presence Creating Angst In Dominican Republic. The Los Angeles Times (4/21, Williams, 958K) reports anyone "casting a glance across the acres of armored vehicles, aircraft and olive-drab shelters arrayed around an abandoned airstrip" in the Dominican Republic "might be forgiven for assuming the U.S. armed forces have come to stay." The seaside territory "is abuzz with Black Hawk helicopter sorties and successive waves of arriving soldiers, all part of a four-month humanitarian and training mission under a Pentagon program known as Operation New Horizons." The US military "aims to build four prefabricated medical clinics and train 3,500 troops, mostly reservists, shuttling into this remote western port in two-week rotations." But the "scale of the operation and a U.S. aircraft carrier group's deployment to the Caribbean for two months of maneuvers have raised eyebrows and protests among those who see the American military presence as a threat to their sovereignty, or a show of force against leftist Latin American leaders."

DOJ_NMG_0026320

Berlusconi Refuses To Leave Scene. The New York Times (4/21, Fisher, 1.19M) reports that defeated Prime Minister Silvio Berlusconi is not likely to plan a "quiet retirement." The Times reports, "Staying in politics brings an unquestionable bounty of advantages for a man like Mr. Berlusconi." He can protect his business empire and use parliamentary immunity to ward off "allegations of bribes and corruption over many years." Berlusconi has already vowed "to work to bring down the government as quickly as possible."

Nepalese Police Shoot Three Demonstrators. The Washington Post (4/21, A14, Lancaster, 744K) reports, "Police opened fire on pro-democracy demonstrators in the capital Thursday, killing three and wounding scores of others. The Post reports that the most recent protests in Kathmandu are the largest "since the parties launched their campaign" to bring back democratic rule. Diplomatic efforts by India, the US, and others are characterized as "intensive but apparently inconclusive." ABC World News Tonight (4/20, story 7, :25, Vargas, 8.78M) reported that in Nepal, "100,000 pro-democracy demonstrators defied a curfew to demand an end to the king and his dictatorship … Diplomats said there are signs the king may make concessions, possibly appointing a prime minister or reinstating parliament."

Chadian President Fights To Stay In Power. The New York Times (4/21, Lacey, 1.19M) reports that Chadian President Idriss Déby is beset by relatives and outsiders seeking his ouster: "Two of Mr. Déby's uncles, for example, defected from their positions as top military commanders in February to become rebels, and two of his nephews, once top presidential aides, broke ranks a few months … Some speak against Mr. Déby from opposition parties while others pick up arms against him. The government of Sudan has taken advantage of this popular disaffection, analysts say, by aiding some of the roughly 12 Chadian groups trying to unseat Mr. Déby." Diplomats worry that if Déby goes, a new government could favor Sudan's Darfur-tainted government or could sell oil to China.

US Tourists Can Visit North Korea This Summer. USA Today (4/21, Clark, 2.31M) reports, "Tours of North Korea being offered late this summer are, as one tour operator puts it, 'selling like hotcakes.'" USA Today writes, "The so-called Hermit Kingdom will grant visas to Americans during its annual Grand Mass Gymnastic and Artistic Performance, or Arirang festival, for select dates from August to October." The rare opportunity for Americans comes with restrictions: "Two North Korean guides [are] assigned to foreign travel groups. …Travel is arranged through a government agency (akin to the former Soviet Intourist), and Americans are charged more than other foreigners."

Snow Says Addressing Global Imbalances A Shared Responsibility. Treasury Secretary John Snow writes in the Washington Post (4/21, A23, 744K), "Today the International Monetary Fund is hosting a conference on global imbalances, the popular catchphrase for the capital and trade flows that have resulted from uneven regional growth, inflexible exchange rates and some regions' overdependence on exports -- especially to the United States -- to fuel their growth. … Too many discussions of this topic have labeled the United States the sole cause of, and solution to, the challenge." Snow adds, "Addressing global imbalances is a shared responsibility. The United States is doing its part -- we have adopted policies to reduce our fiscal deficit and increase national savings -- but the other major economies must do their parts as well. … Today's conference provides an opportunity for my colleagues and me to begin an intellectually honest debate on the responsibility we all share."

Bush Urged To Be Tough With Aliyev. In the Financial Times (4/21), columnist Philip Stephens urges President Bush to advocate human rights and democratization with Azeri leader Ilham Aliyev: "If Mr Bush's words are to mean anything at all, they must be shown to have substance precisely in places like this." Stephens argues that Aliyev is "susceptible" to pressure because his country needs "the west's approval and investment." However, Stephens pessimistically expects Washington to do no more than "a few gentle admonitions about trying to make the country's next elections a little bit fairer than the last."

O'Grady Criticizes "Rerun" of Venezuela In Bolivia. In the Wall Street Journal (4/21, 2.11M), columnist Mary O'Grady writes, "Military ambition is not the only threat that [Hugo] Chávez presents to hemispheric security. There is also his obsession with ending pluralistic democracy around the region." O'Grady argues that "Bolivia is his most advanced project," where President Evo Morales has taken Chavez-like steps such as purging "the top generals in the Bolivian military and [promising] to nationalize the country's natural resources." Morales has another policy meant to eliminate potential opposition: "a draconian salary cut for legislators, judges and commissioners."

WPost Hails Opening Of Nazi Archive. An editorial in the Washington Post (4/21, A22, 744K) hails the German decision to open "the archives of the International Tracing Service, a vast collection of documents thought to contain information on more than 17 million victims of the Holocaust, Nazi slave labor camps and postwar camps for displaced

DOJ_NMG_0026321

persons." The editorial takes a cautious tone, saying, "The test, now, is whether and how fast the Germans will make good on their promise." It urges rapid digitization and reproduction to benefit "survivors and historians, some of whom have been waiting more than 60 years."

WASHINGTON'S SCHEDULE:

Today's Events In Washington.

White House:

PRESIDENT BUSH — Participates in a panel discussion on the American Competitiveness Initiative. Cisco Systems, Inc., San Jose, Calif.; the president will overnight in St. Helena, Calif.

VICE PRESIDENT CHENEY — Arrives at Indianapolis International Airport; departs Indianapolis International Airport; arrives at airport from local events, Morgantown, W.Va.

DOJ_NMG_0026322

US Senate: No Scheduled Events.

US House: No Scheduled Events.

Other: CHINESE PRESIDENT HU JINTAO _ Highlights: Morning. Departs Washington.

CANADIAN FINANCE MINISTER JAMES FLAHERTY _ Highlights: 11 a.m. Meeting with World Bank President Paul Wolfowitz; 11:45 a.m. Meeting with U.S. Treasury Secretary John W. Snow.

COUNTERTERRORISM _ The Fifth Annual International Counterrrorism Conference, focusing on private and public partnerships, is held. Highlights: 9 a.m. Session on critical infrastructure, Patricia Hassard of the Canadian Public Safety and Emergency Preparedness Agency, Morgan Wright of Cisco Systems, others. 11 a.m. Keynote address on bioterrorism, with James Young, advisor, Public Safety and Emergency Preparedness Canada. 11:30 a.m. Assistant DHS Secretary Stewart Baker. 1:15 p.m. Session on port security, Gerry Frappier of Transport Canada, Shawn James of Lockheed Martin, others. 4 p.m. Keynote address - former DHS Secretary Tom Ridge. Location: Ritz-Carlton Hotel, 1150 22nd St. NW.

SCIENCE-TECHNOLOGY _ The American Association for the Advancement of Science holds its 31st annual Forum on Science and Technology Policy. Highlights: 7:45 a.m. Breakfast address by John Hamre, President, Center for Strategic and International Studies. 9 a.m. Shirley Ann Jackson, President of Rensselaer Polytechnic Institute, moderates plenary session on the global innovation challenge. 12 p.m. Luncheon address by Energy Secretary Bodman. Location: Washington Court Hotel, 525 New Jersey Ave. NW, unless otherwise noted.

BIOETHICS _ 9 a.m. Meeting of the President's Council on Bioethics, Agenda includes children and clinical research and organ procurement and transplants. Location: Madison Hotel, 1175 15th St. NW.

G-7 MEETING _ Annual G-7 meeting. Highlights: 7:30 p.m. Treasury Secretary Snow holds the G-7 news conference. Location: St. Regis Hotel, 16th and K Sts. NW.

NATIONAL SECURITY LAW _ 9:30 a.m. American University's Washington College of Law holds first annual Conference on Professional Issues in National Security. Participants include attorney Mark Zaid, Krieger and Zaid; Bruce Fein, The Lichfield Group; Tony Lord, British Embassy; former CIA officer Burton Gerber; and former 9/11 Commission counsel Daniel Marcus. Location: Room 401, 4801 Massachusetts Ave. NW.

PENTAGON-IRAQ _ 9 a.m. Army Colonel David R. Gray, commander of the 1st Brigade, 101st Airborne Division, will brief live from Iraq to provide an update on ongoing security operations in Iraq. Location: DOD Briefing Studio, Pentagon 2E579.

IRAQ STRATEGY _ 9:30 a.m. The Middle East Policy Council holds a forum on a responsible exit strategy from Iraq, with Lawrence Korb of the Center for American Progress, Barry Posen of MIT, others. Location: Room HC-5, Capitol.

ECONOMIC GROWTH-PROSPERITY _ 10:30 a.m. The Heritage Foundation holds a discussion on promoting economic growth and prosperity, with Lawrence Lindsey, former OMB Director James Miller, others. Location: Lehrman Auditorium, Heritage Foundation, 214 Massachusetts Ave. NE.

NATIONAL SECURITY-INVESTMENT _ 10:30 a.m. The American Enterprise Institute holds a forum on reform of the Committee on Foreign Investment in the U.S. and the Exon-Florio provisions of the Defense Production Act, with Clark Ervin of the Aspen Institute, Kristin Forbes of MIT, others. Location: 12th floor, AEI, 1150 17th St. NW.

MOUSSAOUI _ 11 a.m. The case United States v. Zacarias Moussaoui resumes. Location: Albert V. Bryan U.S. Courthouse, 401 Courthouse Square, Alexandria, Va.

CHINA _ 12:30 p.m. The School of Advanced International Studies holds a discussion with Peng Zhongying of the China Reform Forum on China's Role in Asia and beyond. Location: Room 812, 1619 Massachusetts Ave. NW.

DOHA ROUND _ 12:30 p.m. The School of Advanced International Studies holds a discussion with Sandra Polaski of the Carnegie Endowment for International Peace on the winners and losers in the Doha Round of trade talks. Location: Room 200, 1619 Massachusetts Ave. NW.

CLIMATE CHANGE _ 1 p.m. The Earth Day Network holds a discussion on climate change, with Vicki Arroyo of the Pew Center on Global Climate Change, David Battisti of the University of Washington, John Harte of UC Berkeley; John Reilly of MIT, and Daniel Schrag of Harvard. Location: AARP Broadcast Center, 601 E St. NW.

CRIME VICTIMS _ 2:30 p.m. National Crime Victims' Rights Week Awards ceremony, with Attorney General Gonzales, others. Location: Mellon Auditorium, 13th St. and Constitution Ave. NW.

EUROPE-HUMAN RIGHTS _ 5:30 p.m. Judge Luzius Wildhaber, president of the European Court of Human Rights, speaks at American University on the present and the future of the European Court of Human Rights. Introduction by Supreme Court Justice Stephen Breyer. Location: Room 603, Washington College of Law, 4801 Massachusetts Ave. NW.

Subject: Omar: Petitioners' Latest Motion

All: Attached, please find petitioners' Emergency Renewed Request for Access and Motion for Records filed today in Omar v. Harvey. Petitioners' counsel allege that Omar was beaten, subjected to electric shocks, and photographed afterwards. Counsel renew their request for in-person access to Omar and also want the court to order the production of Omar's medical records and all photographs taken of Omar's body. The attached document includes exhibits attached to petitioners' motion. Our opposition is due May 5, 2006. Please let me know if you have any questions.

IN THE UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF COLUMBIA

SANDRA K. OMAR, *et. al.*, **Petitioners,** **v.** **FRANCIS J. HARVEY, *et. al.*,** **Respondents.**	))))))))))	**CIVIL ACTION NO. 05-2374 (RMU)**

EMERGENCY RENEWED REQUEST FOR ACCESS AND
MOTION FOR RECORDS

Undersigned counsel recently learned that Shawqi Omar was beaten and subjected to electric shocks during his confinement. Mr. Omar's body was photographed shortly after being subjected to this abuse. Counsel therefore renew on an emergency basis their request for immediate, in-person access to Mr. Omar. Counsel further move the Court to order Respondents to produce Mr. Omar's medical records and all photographs of Mr. Omar's body. Such an order is squarely permitted by 28 U.S.C. §§2241, 2243, 2246, the Fifth and Eighth Amendments to the United States Constitution, and Rules 6(a) of the Rules Governing §2254 Cases.

INTRODUCTION

The United States government is holding Shawqi Omar, an American citizen, in a U.S. prison facility in Iraq. Since his arrest October 29, 2004, he has been held without charge and without access to counsel. The government maintains that this condition may continue indefinitely, and that it may ignore Mr. Omar's constitutional rights, including his right to

counsel, with impunity. *See, e.g., Respondent's Opposition to Petitioners' Memorandum and Proposed Order Concerning Conference and Discovery Order at 2-4.*

On April 13, 2006, one of the counsel for Petitioners, Susan L. Burke, received an unexpected telephone call from Mr. Omar. *See Exhibit A, Declaration of Susan L. Burke, at ¶ 3*. The telephone call was limited to fifteen minutes and was constantly monitored by Staff Sgt. Obiaooro. *Id.* at ¶ 4.

During the call, Mr. Omar reported that Americans claiming to be agents with the Federal Bureau of Investigation beat him severely and applied electric shocks to his body.[1] *Id.* at ¶ 6.[2] Mr. Omar protested that he was an American citizen, and asked for a lawyer. *Id.* In response, the American agents told Mr. Omar they believed his passport was fake and that they could kill him if they wanted. *Id.* The American agents also threatened to rape Mr. Omar's son. *Id.* A translator whom Mr. Omar believed was Moroccan threatened to rape Mr. Omar's wife, who was in U.S. custody at the time.[3] *Id.*

---

[1] In August 2003, army intelligence officials developed a "wish list" of interrogation techniques to be used in Iraq, which included the use of "low voltage electrocution." *See* Alternative Interrogation Techniques (Wish List), 4th Infantry Division, ICE, Bates Nos. DOD002854-DOD002856, attached as Exhibit B (available at http://www.aclu.org/torturefoia/released/041905/6570_6668.pdf); *see also* Sworn Statements from CID interviews, produced for ACLU FOIA litigation, attached as Exhibit C, Bates DOD000860 ("One reported being electrocuted by an Egyptian interpreter who was working for a civilian agency."); Bates DODDOACID-005096 ("During the interrogation, Mr. [redacted] was beaten with wooden sticks, punched, electrocuted, forcibly sodomized, and made to drink urine."); Bates DODDOACID-004951 (reporting detainee "describing being slapped in the right cheek and shocked with a 'tazer' on his right arm"); Bates DODDOACID-004954-004956 (detainee statement saying that an American soldier "hit me with the electric gun twice in my arm with two wire needles, and they took me to the doctor who picked up the two wire needles from my arm" and agent report determining that photograph of injuries were consistent with tazer burns).

[2] It is of course possible these were military interrogators posing as FBI agents, as was true at the Guantánamo Bay Navel Base prison facility. *See, e.g.,* E-mail from [redacted] to Gary Bald, et al. Re: Fwd: Impersonating FBI at GTMO (Dec. 5, 2003 9:53 a.m.), attached as Exhibit D (also available at http://www.aclu.org/torturefoia/released/122004.html). The American agents showed Mr. Omar their badges. He could not read them, however, because his eyes were swollen from the beatings. *See Burke Decl.* at ¶ 7. One agent was a blonde man. The other was approximately six feet tall with a small beard and claimed to have sixteen years experience. *Id.*

[3] Threats to family members are well-documented at a number of U.S.-run detention facilities. *See, e.g.,* Army Regulation 15-6, Final Report: Investigation into FBI Allegations of Detainee Abuse at Guantánamo Bay,

DOJ_NMG_0026330

Three military officials, known to Mr. Omar only as Corporal Cohen, Sgt. Major Adams and Sgt. First Class Stewart, photographed Mr. Omar's body shortly after he had been beaten and subjected to electrical shocks. *Id.* at ¶ 8. Mr. Omar heard these men discussing whether the photographs should be stored on a floppy disk or computer. *Id.* Later, Mr. Omar was examined by a military physician with the rank of lieutenant colonel, whose name is unknown to Mr. Omar. This officer informed him that burn marks on his body were the result of being subjected to electric shocks. *Id.* ¶ 9.

ARGUMENT

Undersigned counsel are justifiably concerned about Mr. Omar's physical and mental well-being. He has been held without charge and without access to counsel for more than eighteen months. Relatives report that Mr. Omar has hypertension and high blood pressure, suffers knee pain, and has lost a significant amount of weight while in prison. *See Decl. of Sandra K. Omar, ex. 1 to Petition for Writ of Habeas Corpus, at ¶ 29*. Now, however, we learn in addition that Mr. Omar has been beaten and subjected to electric shocks.

I. RESPONDENT SHOULD BE ORDERED TO PROVIDE COUNSEL WITH IMMEDIATE IN-PERSON ACCESS TO THEIR CLIENT.

Mr. Omar has provided compelling evidence of mistreatment during his confinement in U.S. custody. Mr. Omar has begged his captors to allow him to meet with a lawyer almost from the moment of his arrest eighteen months ago. Without immediate and in-person access to counsel, Mr. Omar's access to this Court is meaningless. The Supreme Court has held that prisoner access to the courts must be "adequate, effective, and meaningful." *Bounds v. Smith*,

---

Cuba Detention Facility (Apr. 1, 2005, amended June 9, 2005) ("Schmidt Report") at 24-26 (finding that a military interrogator threatened the detainee and his family), attached as Exhibit E (also available at http://www.defenselink.mil/news/Jul2005/d20050714report.pdf); Sworn Statement from CID interview, produced for ACLU FOIA litigation, attached as Exhibit F, Bates DOD-DOACID001257 ("At the end they threatened me that they would bring my wife and my mother and that they would rape them if I did not confess.").

DOJ_NMG_0026331

430 U.S. 817, 821-22 (1977); *see also Al-Joudi v. Bush,* 406 F. Supp. 2d 13, 22 (D.D.C. 2005) (J. Kessler) (citing *Bounds* for these underlying principles in the context of a habeas action of a non-citizen detainee held at Guantánamo Bay to allow in-person access to counsel). Access to counsel is essential to secure Mr. Omar's right to "present the facts surrounding [his] confinement to the Court." *Al Odah v. United* States, 346 F. Supp. 2d 1, 6 (D.D.C. 2004). The government has leveled serious accusations against Mr. Omar. Without access to counsel, it is simply impossible for Mr. Omar to defend himself against these allegations.

Respondents have no valid reason to continue denying Mr. Omar access to counsel. Federal courts routinely order attorney access to non-American-citizen clients who are being held at Guantánamo Bay, Cuba. *See, e.g., Adem v. Bush,* ___F. Supp. 2d ____, 2006 WL 751309, at *7 (D.D.C. 2006) (M.J. Kay) (noting that the protective order and procedures for counsel visits to Guantánamo first ordered by Senior Judge Joyce Hens Green in November 2004 in *In re Guantanamo Detainee Cases,* 344 F.Supp.2d 174 (D.D.C. 2004), "have since been entered in the vast majority of Guantánamo *habeas* cases currently pending in the District Court."); *see also Al-Joudi*, 406 F. Supp. 2d at 22 ("In these circumstances in particular, access to the Court means nothing without access to counsel."); *Al-Shabany v. Bush*, No. 05-CV-2029, 2005 WL 3211407 (D.D.C. Nov. 17 2005) (J. Bates) (entering the protective order providing for in-person and unmonitored access to counsel); *Al-Joudi v. Bush*, No. 05-CV-301 (Sept. 16, 2005) (J. Robertson) (same); *Batarfi v. Bush*, No. 05-CV-409 (May 19, 2005) (J. Sullivan) (same); *Al-Anazi v. Bush*, No. 05-CV-345 (Apr. 21, 2005) (J. Bates) (same); *Al-Wazan v. Bush*, No. 05-CV-329 (March 23, 2005) (J. Friedman) (same).

Respondents, moreover, can honor Mr. Omar's right to immediate in-person access to counsel in myriad ways. Respondents could permit counsel to meet with Mr. Omar at Camp

DOJ_NMG_0026332

Bucca, near Kuwait. Respondents could also make Mr. Omar available at any United States military installation, either in the United States, the Middle East, or Europe. In short, there is no reason why Respondents should continue to refuse to grant undersigned counsel access to their American client. And, it is "clear that the Court is authorized to craft the procedures necessary to make this possible, in order that [it] might fully consider [Mr. Omar's] challenge to [his] detention." *Al Odah*, 346 F. Supp. 2d at 6.

II. RESPONDENTS SHOULD BE ORDERED TO PRODUCE MR. OMAR'S MEDICAL RECORDS AND THE PHOTOGRAPHS OF HIS CONDITION TAKEN AFTER THE BEATINGS AND ELECTRIC SHOCKS.

Respondents should be ordered to release immediately to counsel Mr. Omar's medical records and the photographs taken of him after the beatings and electric shocks.

This Court unquestionably has the power to order such productions in the context of a habeas proceeding. "Where specific allegations before the court show reason to believe that the petitioner may, if the facts are fully developed, be able to demonstrate that he is . . . entitled to relief, it is the duty of the court to provide the necessary facilities and procedures for an adequate inquiry." *Bracy v. Gramley*, 520 U.S. 899, 908-09 (1997) (ellipsis in original; *quoting Harris v. Nelson*, 394 U.S. 286, 300 (1969)); *see also Harris,* 394 U.S. at 289 (discovery appropriate to demonstrate that convicted prisoner's search and arrest had been based on an unreliable informant); *Banks v. Dretke*, 540 U.S. 668, 684-85 (2004) (discovery ordered by district courton habeas yielded exculpatory evidence). Once the petitioner establishes good cause, the Court should grant the necessary discovery "to fully develop the facts of a claim." *Teague v. Scott*, 60 F.3d 1167, 1172 (5th Cir. 1995); *East v. Scott*, 55 F.3d 996, 1001-02 (5th Cir. 1995) (when facial allegations are "facially sufficient to establish a due process claim," petitioner is entitled to discovery "to fully develop the facts."). Indeed, a blanket denial of discovery is an abuse of

DOJ_NMG_0026333

discretion whenever discovery is "indispensable to a fair, rounded, development of the material facts." *Toney v. Gammon*, 79 F.3d 693, 700 (8th Cir. 1996); *East v. Scott*, 55 F.3d 996, 1001-02 (5th Cir. 1995) (same).

Courts routinely order Respondents to produce information in their custody or control. *See, e.g., Rice v. Clark*, 923 F.2d 117, 118-19 (8th Cir. 1991) (noting district court order granting discovery of FBI records); *McKenzie v. Risley*, 915 F.2d 1396, 1398 (9th Cir. 1990) (remand for discovery of *ex parte* communications between prosecutor and judge); *Payne v. Bell*, 89 F. Supp. 2d 967, 970, 971-76 (W.D. Tenn. 2000) (granting request for discovery of documents in state's possession and to depose assistant district attorney); *United States ex rel. Pecoraro v. Page*, No. 97 C 5361, 1998 U.S. Dist. LEXIS 15746 at *21 (N.D. Ill. Sept. 30, 1998) (granting request to depose trial counsel, two prosecutors, and two detectives); *United States ex rel. Brisbon v. Gilmore*, No. 95 C 5033, 1997 U.S. Dist. LEXIS 8314 at *8 -*9 (N.D. Ill. June 10, 1997) (granting request for discovery of inmate prison and parole records). If discovery is appropriate in post-conviction proceedings, it is certainly appropriate – indeed, required – here, where Mr. Omar has been detained by the Executive for eighteen months without any judicial process whatsoever.

Not surprisingly, courts often order Respondents to produce a habeas petitioner's medical records pertaining to a petitioner. *See, e.g., Sherman v. McDaniel*, 333 F. Supp. 2d 960, 970-71 (D. Nev. 2004) (ordering discovery of petitioner's medical records in custody of state and municipal health providers); *Cowans v. Bagley*, No. C-1-00-618, 2002 U.S. Dist. LEXIS 21884 at *41–*46 (S.D. Ohio Sep 30, 2002) (ordering disclosure of "[a]ny and all psychological or medical records related to petitioner, in the possession of the state, the Ohio Department of Rehabilitation and Correction and/or the Ohio Adult Parole Authority, including mental health

DOJ_NMG_0026334

records"); *see also United States ex rel. Kennedy v. Page*, No. 99 C 6067,1999 U.S. Dist. LEXIS 17905 at *7-*8 (N.D. Ill. Nov 16, 1999) (in lieu of ordering formal discovery, court directs Respondent and Illinois Department of Corrections to provide petitioner with his medical records to facilitate development of claim); *United States ex rel. Madej v. Gilmore*, No. 98 C 1866,1999 U.S. Dist. LEXIS 4086 at *9 (N.D. Ill. March 24, 1999) (though granting habeas petitioner other discovery, court declines to grant discovery to obtain medical records because "the petitioner's own medical records are already available to the petitioner."). Indeed, courts in this District grant similar requests for non-citizen detainees held at the U.S. Naval Base at Guantanamo Bay, Cuba. For example, Judge Kessler recently ordered the United States government to produce the medical records of prisoners at Guantánamo who were being force-fed by military personnel. *See Al-Joudi*, 406 F. Supp. 2d at 13.

Mr. Omar's medical records, as well as photographs of his condition immediately after the beatings and electric shocks, are undoubtedly relevant to the lawfulness of his continued detention. For instance, if the Government relies on statements purportedly made by Mr. Omar—a fact which cannot be ascertained with precision because the Government has so far refused to disclose the basis for its inflammatory allegations—the Court and counsel need to know whether and to what extent these statements were literally burned from Mr. Omar against his will. This Court should, accordingly, order Respondents to produce these records without delay.[4]

---

[4] On April 14, 2006, the Respondents appealed the preliminary injunction entered by this Court sixty days earlier preventing the Government from removing Mr. Omar to Iraqi custody. It is axiomatic that the appeal of a preliminary injunction does not diminish this Court's power to proceed with the litigation. *See*, e.g., Act of March 3, 1891, 26 Stat. 826 § 7 (declaring that "proceedings in other respects in the court below shall not be stayed unless otherwise ordered by that court during the pendency of the appeal"); *Soc'y for Animal Rights, Inc. v. Schlesinger*, 512 F.2d 915, 918 (D.C. Cir. 1975); *see also Webb v. GAF Corp.*, 78 F.3d 53, 55 (2d Cir. 1996) ("Although the filing of a notice of appeal ordinarily divests the district court of jurisdiction over issues decided in the order being appealed, jurisdiction is retained where, as here, the appeal is from an order granting or denying a preliminary injunction."); *Railway Labor Executives' Ass'n v. Galveston*, 898 F.2d 481, 481 (5th Cir. 1990); *West Pub. Co. v.*

DOJ_NMG_0026335

CONCLUSION

Respondents should be ordered to grant undersigned counsel immediate in-person access to their client. Such access is required by law and necessary to make access to this Court meaningful. Respondents should also be ordered to produce Mr. Omar's medical records and the photographs of his condition after the beatings and electric shocks. Such records bear directly on the lawfulness of his detention.

[PROPOSED] ORDER

It is, this __ day of April, 2006,

ORDERED that Respondents shall forthwith, but in no more than seven (7) calendar days, grant Shawqi Omar access to counsel.

FURTHER ORDERED that Respondents shall produce to Petitioners' counsel all medical records of Shawqi Omar, detainee number 200165, kept since Mr. Omar's arrest in October 2004. Provision of medical records shall continue on at least a monthly basis until further order of the Court.

FURTHER ORDERED that Respondents shall produce to Petitioners' counsel all photographs taken of Mr. Omar since his arrest in October 2004.

v.	)	
FRANCIS J. HARVEY, *et. al.*, **Respondents.**	)	

DECLARATION OF SUSAN L. BURKE

I declare under penalty of perjury that the following is true and correct:

1. My name is Susan L. Burke. I have been a member of the bar of the District of Columbia since 1987. I practiced with Covington & Burling for fourteen years. I also served as a Trial Attorney in Civil Frauds, Department of Justice. I now have my own firm, Burke Pyle LLC, which, along with the McArthur Justice Center at the University of Chicago Law School and the Brennan Center for Justice at the New York University School of Law, serves as attorney of record for Shawqi Omar and next friends Sandra K. Omar and Ahmed S. Omar.

2. The United States government has held Shawqi Omar, an American citizen, in prison for more than eighteen months. The United States government has taken the position that it is free to violate Mr. Omar's constitutional rights, including his right to counsel. *See, e.g., Respondent's Opposition to Petitioners' Memorandum and Proposed Order Concerning Conference and Discovery Order at 2-4* .

3. During the afternoon of April 13, 2006, I received – without any advance notice – a telephone call from our client Shawqi Omar.

4. Mr. Omar's call to me was limited to fifteen minutes and was constantly monitored by Staff Sgt. Obiaooro, who audibly provided the spelling of his name upon my request.

5. The following sets forth the information I believe was provided by Mr. Omar during the telephone call based on my contemporaneous notes. Although I have striven to be as accurate as possible, Mr. Omar spoke quite rapidly during the call, and I may have misunderstood certain remarks. Given that the call was monitored and likely recorded, there should be a tape recording available to the United States that may be used to confirm the accuracy of my records.

6. Mr. Omar reported that, upon his arrest on October 29, 2004, Americans claiming to be Federal Bureau of Investigation agents beat him severely and applied electric shocks to his body. Mr. Omar told the agents he was an American citizen, and asked for a lawyer. In response, the American agents stated his passport was fake. The American agents claimed that they could kill him if they wanted to do so. The American agents threatened to rape his son if Mr. Omar failed to provide information. A translator believed by Mr. Omar to be Moroccan threatened to rape Mr. Omar's wife, who was also in United States military custody at that time.

7. Mr. Omar reported that the American agents showed him badges but he could not read the names on the badges because his eyes were swollen from the beatings. One agent was blonde man. The other agent was approximately six feet tall with a small beard. That agent claimed he had sixteen years experience.

DOJ_NMG_0026342

8. Mr. Omar reported that Corporal Cohen, Sgt. Major Adams and Sgt. First Class Stewart photographed his body shortly after he had been beaten and subjected to electrical shocks. Mr. Omar heard – immediately before he fainted from the beatings and shocks – the aforementioned military personnel discussing whether the photographs that they had just taken of him should be stored on a floppy disk or computer.

9. Mr. Omar reported that a military physician with the rank of lieutenant colonel examined him and informed him that the burn marks on his body were the result of being subjected to electric shocks. Mr. Omar does not know the name of that physician.

10. On or about August 4, 2005, ten months after his arrest, Mr. Omar was interviewed for approximately five hours by agents from the Army Criminal Investigative Division. Although Mr. Omar asked for the names of the agents, they refused to provide their names.

11. On a separate occasion, in response to Mr. Omar's repeated entreaties for counsel and for release, a person thought by Mr. Omar to be a Defense Department investigator named "Adam" told Mr. Omar that he could not be released because his imprisonment was being "hidden."

12. Mr. Omar has had conversations with another prisoner who informed him that he too was a United States citizen who had been imprisoned without charge and without access to counsel . This prisoner's number is 20019. I gave Mr. Omar permission to give my name and telephone number to this prisoner.

Alternative Interrogation Techniques (Wish List)
4Th Infantry Division, ICE

Open Hand Strikes (face and midsection) (no distance greater than 24 inches)

Fairly self-explanatory.

Pressure Point Manipulation

Manipulation of specific points on the human body can cause acute temporary pain but cause no long term effects or damage.

Close Quarter Confinement

Confinement of subject in extremely close quarters. Discomfort induces compliance and cooperation.

White Noise Exposure

Overexposure of subject to noise found to be meaningless and many times monotonous to subject. Often used in conjunction with Sleep Deprivation.

Sleep Deprivation

An initial period of total deprivation (usually 12 to 24 hours) followed by regular and irregular sleep patterns over several days.

Stimulus Deprivation

The human mind requires stimulation, however small, to maintain resistance to suggestion, mental and emotional manipulation and self will. Subject is deprived of this stimulation for 12 to 24 hours during initial stages. Effects on subject's resistance are monitored with short intense interrogations (15-60 minutes at most). Subject's resistance will usually rapidly decay after 36 to 48 hours. This technique requires no physical pressure to be applied. However, subject must be carefully monitored.

***There are a number of "coercive" techniques that may be employed that cause no permanent harm to the subject. These techniques, however, often call for medical personnel to be on call for unforeseen complications. They include but are not limited to the following:**

Phone Book Strikes
Low Voltage Electrocution
Closed-Fist Strikes
Muscle Fatigue Inducement

Subject: RE: Taskers

Alternative Interrogation Tech...

The attached document is the 4th Infantry Division's ICE suggestions if alternative interrogation techniques are authorized. All techniques not listed as "coercive" cause no lasting effects on the subject.

I apologize for tardiness, but my SIPRNET has been down for the last few hours.

ALCON

Just wanted to make sure we are all clear on the taskers at hand

1- A list identifying individuals who we have in detention that fall under
the category of "unlawful combatants" I've included a definition form the
SJA folks:

In order to properly address your request for a legal definition of the term "unlawful combatant," I must first provide you with a framework
of definitions with which to work. According to the Law of Land Warfare,
the term "combatant" is defined as anyone engaging in hostilities in an armed conflict on behalf of a party to the conflict. Combatants are

EXHIBIT E

6629

lawful targets, unless out of combat. With that said, "lawful combatants" receive protections of the Geneva Conventions and gain combat immunity for their warlike acts, as well as become prisoners of war if captured. In comparison, "unprivileged belligerents," commonly referred to as "unlawful combatants," may be treated as criminals under the domestic law of the captor. Unprivileged belligerents may include spies, saboteurs, or civilians who are participating in the hostilities. The term "unlawful combatant" is not referenced, nor is it defined. The term that properly described these type of individuals is "unprivileged belligerents," and as stated before they may be treated as criminals under domestic law.

As far as an ROE that addresses the treatment of enemy combatants, specifically, unprivileged belligerents, we are unaware of any but we will continue to research the issue for you. I hope this information has been helpful.

2- An additional list identifying who we have detained who are "Islamic extremist"

3- Immediately seek input from interrogation elements (Division/Corps) concerning what their special interrogation knowledge base is and more importantly, what techniques would they feel would be effective techniques that SJA could review (basically provide a list).

Provide interrogation techniques "wish list" by 17 AUG 03.

The gloves are coming off gentleman regarding these detainees, [redacted] has made it clear that we want these individuals broken. Casualties are mounting and we need to start gathering info to help protect our fellow soldiers from any further attacks. I thank you for your hard work and your dedication.

8. ORGANIZATION OR ADDRESS
B/CO 470TH MILITARY INTELLIGENCE GROUP, CAMP BULLIS, TX 78254

9. [redacted], WANT TO MAKE THE FOLLOWING STATEMENT UNDER OATH:

I arrived at Abu Ghraib as an Individual Augmentee from the 470th MI Group on or about 16 October 2003. I was assigned to the Detainee Assessment Board (DAB). My DAB Supervisor was [redacted] When I first arrived, we didn't receive any training for working in the DAB. We received the IROEs and I believe I signed them. The IROEs I would say were only vaguely understood due to the speed at which operations had to be conducted. Since the focus of the initial groups was on maintaining a steady stream of intelligence reports answering PIR's, methodology took second stage to volume of output. The IROE's were clarified three months later when we received updated IROEs which we signed again. We were shown the Geneva Conventions and told to adhere to them. They were on the wall along with the IROEs and other memorandums from various commanders within theater for the perusal of anyone who wished to review them. There was some controversy in relation to what the school taught and the environment we were in. The school is an environment where you have some overwatch and where the ambience wherein interrogations are being conducted in a safe place with no additional stresses involved, but at Abu Ghraib, we were so busy there was no oversight on most of the interrogations being conducted as everyone was busy trying to hold up their part of the process. Most individuals arrived one day and were conducting operations the following day. Additionally, because of the additional stresses and due to the detainee's cultural and religious upbringing, many of the things taught at the school house were nearly useless or even irrelevant, which is why experienced or flexible interrogators were so absolutely necessary. Many of the interrogators should not have been conducting interrogations on their own. Most were young, inexperienced, and reservists who did not have the sufficient training nor the experience needed to achieve the necessary mindset of an interrogator in a combat zone. They did not know what to do so they reverted to screaming and throwing things, in other words, harsh approaches. After they didn't get what they wanted, they could send the detainee to isolation for thirty days or more as long as they wrote the right memo. The focus was on intelligence, and the fast tempo dictated that oftentimes the individual interrogator or direct line supervisor had to be trusted to make the right judgment, but unfortunately not everyone was equipped to make the right decisions. The memos were being approved by COL PAPPAS or whatever individual had the authority at the time. No one was checking to ensure the recommendations were sound with any sort of regularity. At the beginning even a memo was not required as far as I knew but as I was not there during the first few weeks of the reorganization of Abu Ghuraib into an interrogation facility, I cannot speak with any certainty. We were standing up the JIDC, being mortared daily, and the gate guards were being attacked. The DAB was not part of the Interrogation Control Element (ICE) and there was no SOP in place on how to run one. We began developing one based on the GTMO concept, but the environment was different than GTMO. We were in a combat environment and the numbers of detainees requiring processing was higher so we had to make a lot of changes to the SOP. We were responsible for debriefing all detainees interrogated by the ICE. When a detainee arrived, he was screened and was either identified as being of intelligence value or not. Those with intelligence value were placed in CAMP VIGILANT. Eventually, CAMP VIGILANT became overcrowded some detainees having intelligence value were sent to one of the GANCI camps. A lot would go into isolation to prevent them from corruption of intelligence. I would say that the DAB identified about 85% to 90% of detainees were of either no intelligence value or were of value but innocent and therefore should be not have remained in captivity. We debriefed all the detainees considered to having some intelligence value to ensure intelligence was not getting lost and determined if detainees required to be held longer or recommend release of detainee. At the beginning, the initial group at Abu Ghraib became overwhelmed with the number of detainee being delivered by lower echelon units. The prison went from 200 one day to thousands during the following days. We did not have enough personnel to conduct the screenings and interrogations and determine the value of each detainee on a timely manner. When a detainee was able to answer a Priority Intelligence Requirement (PIR), he would get interrogated numerous times and therefore, others would go without being interrogated for months. The DAB would identify those who had not been interrogated and question the JIDC why it hadn't been done. An interrogation would then be conducted but this didn't always occur because of the shortage of interrogators and due to their focus on detainees of intelligence value. This of course changed for the better after the JIDC was more established and more direct oversight began to be conducted by higher echelon commanders. We would then get the detainee once the interrogator finished with the detainee. We would conduct a thorough debriefing of the detainee. The

STATEMENT OF [redacted] TAKEN AT Army G2, Pentagon DATED 2005/05/18

9. STATEMENT *(Continued)*

In November, we also began to ask all detainees we debriefed if they had ever been mistreated while in the custody of the U.S. Several individuals stated they had. One general stated that while at Abu Ghraib, some drunk MPs had gathered the him and five other generals from the General Population and taken them in to the Hard Site. They were tied up, blind folded and placed in a circle and were punched by the MPs. After the MPs were finished beating them, they were placed back into the general population. I wrote this on my DAB report and reported it to my [redacted] 66th MI. She told [redacted] and it was reported to a warrant officer (do not know his name. He is part of the unit who is there now). He received a copy of the report and thanked us for reporting it. Another detainee stated he was stripped naked, made to stand on a box with his arms spread out and bag over his head while he was hit on his legs by the MPs. There were also two other instances where detainees reported being abused before they arrived to Abu Ghraib. One reported being electrocuted by an Egyptian interpreter who was working for a civilian agency. This had occurred four to five months prior to us speaking to him. Another detainee stated the capturing MPs threw him to the ground and pour dirt all over him. He said he was diabetic and was trying to tell the MPs and he went into diabetic shock. More prevalent than any abuse while in U.S. Custody were the reports that the detainee's had been abused by the Iraqi police and the BADR Corp. I never witnessed any detainee abuse except when I saw a naked detainee walking in the Hard Site. But that is all I saw. I was pretty far away and could not tell who it was and do not know the circumstances. I do know that when criminals were placed in isolation they were often stripped. I was in the hard site at that time picking up a detainee to debrief. IN reference to humiliation, I know that some interrogators would insult the detainee's religion and family. They did not physically abuse them, but humiliated them with words. The use of words was kind of questionable. We didn't know how far they could go with words. In reference to dogs, One of my friends, I do not remember who, said someone used the dog for an interrogation. That is all I know about dogs. We did not know what the MPs could do with the dogs or maybe the MPs did not know what we could do with the dogs, some things appeared to be in gray areas and often the individual interrogator or MP may have thought they had to make the decision themselves. In reference to OGA detainees, all I know was that some were not processed and we could not talk to them. They (OGA) came and went as they pleased for the most part though some coordination was required. The operations section of the JIDC would know more as they were the POC for these agencies. I never saw or knew of any photos or videos of detainees until after the CID investigation began. [redacted] a fellow DAB member, stated that [redacted] CACI employee pushed a detainee against the wall once. This was reported in the written report and reported up the chain. [redacted] spoke to [redacted] and told him that was not acceptable. We told [redacted] spoke to [redacted] then became my partner. I was not pleased with his work. He made comments which were unnecessary. I did not allow the interpreter to translate the comments. He would insult their religion and would state that this was the time for them to show their loyalty to the U.S. I reported to my supervisor that I did not want to work with [redacted] He left a few days later to go work as an escort. I wrote about the incidents on a memorandum that I believe was submitted by my supervisors to [redacted] I believe [redacted] the CACI supervisor on the ground in Abu Ghraib, was very leery about doing anything to his guys. Another incident I was made aware of (I believe it may have been [redacted] who told me but cannot say with any degree of certainty) was of a female linguist or interrogator (If linguist I believe it to be the female on the photo shown in photo #11 on file named [redacted] who was asked to humiliate male detainees by making comments as to their manhood by talking about the size of their genitals. My personal opinion is that of all the female linguists, she was the only one that would have agreed to something of that nature. I believe I heard this right before the CID investigation, but cannot say for sure. She was a bit more open than the other female linguists. I personally know of one female linguist and a male linguist that quit because they did not agree with the way interrogators spoke to detainees. My assumption on the CACI personnel is that a lot of them were being hired on the basis of their experience in law enforcement and other such areas but that no true determination of their abilities as interrogators/screeners, etc. was done by the civilian company that hired them. Most of them were not properly trained on questioning and interrogation methodology but due to the fact that a lot of them were as much as twice as old as the interrogators leading Tiger Teams, they were not willing to listen. The focus on numbers (i.e. output) was so great that non-qualified individuals, both military and civilian, were allowed to have positions that gave them what seemed at times full powers over another persons life, namely detainees. Because these individuals (U.S. Personnel) were not screened or trained properly and not properly supervised, detainee's suffered incarceration and varied other discomforts, from mild to major, which were completely unnecessary in my estimation. Various reports were made of interrogators, linguists, and civilians treading the gray line between harsh interrogation and violation of the Geneva Conventions/IROE, but as far as was apparent no particular importance was placed upon them until the advent of the CID investigation. Some of the civilians thought that they were exempted from the rules of conduct which governed the soldiers and some of the interrogators seemed to feel the same. This, I believe, led to some of the misconduct that occurred, since the civilians didn't fear negative action and the soldiers could honestly say they were not personally involved in the actual misconduct. These statements are conjecture based upon my personal observations and conversations with other individuals and do not reflect any but my own opinions. I also think that U.S. personnel, especially civilian contractors, allowed their personal biases to color their reports, leading to detainee's being placed in isolation and being incarcerated for a longer period of time though no proof of wrongdoing was apparent. Often enough, the conclusion at the end of a report which the determined a detainee's future disposition (release/further incarceration), was more a matter of personal opinion than actual analysis of information given. People were afraid to take personal responsibility of recommending release of detainee's, even when obviously innocent, and often this would lead to condemning statements such as "the detainee told the same story seven times but is lying because he should know such and such information and was therefore uncooperative. Recommend detainee be held in U.S. custody for the duration of the conflict." [redacted]

INITIALS OF PERSON MAKING STATEMENT [redacted]

Statements such as these were insufficient of themselves to commit detainee's to longer incarceration but couple that with supervisors fear of releasing anybody, and what came out was detainee's being held for months on nothing but an interrogators personal opinion for which no substantiate information was given. The biggest issues that lead to the inefficiency in the collection process, I believe arose from the actions of lower echelon interrogation facilities and the capturing units themselves. The capturing units themselves were often not accompanied by appropriately trained individuals, namely members of THT or interrogators, able to make quick determinations of the value of a detainee and the appropriateness of detaining an innocent individual even if he did have information of intelligence value. Since the detainees were not properly screened on the spot and the capturing units were often not even qualified to conduct those types of operations, anyone who was in the area or looked out of place was detained regardless of culpability. When these individuals were taken to a brigade or division level facility, they were screened by civilians or military personnel who were not sufficiently or properly trained, or even sufficiently staffed, to render intelligent judgments as to the detainee's suitability to the information exploitation process. This resulted in the glutting of Abu Ghraib, a facility, which should have been housing only individuals necessary to the interrogation process, and not innocent individuals who should have never been taken from their homes, much less gone through two or three different interrogations facilities. Reports from lower echelon facilities were often not available and even when available, spotty at best. This led to a lot of duplication of effort at Abu Ghraib, which in turn meant an unnecessary delay in the detainee exploitation process. This was also true however of interrogators in Abu Ghraib, as stated above, who were also often not qualified or experienced enough for the job they were doing. The failure to ID those that could help us out in the communities instead of holding them in detention is a major cause, as far as I'm concerned, for the political instability/anti-U.S. sentiment existent in Iraq at the moment. I personal interviewed several individuals who were influential in their communities, military, religions, etc. but who had done nothing wrong or had previously voluntarily cooperated with U.S. agencies but were detained anyways. Some had letters from U.S. officials detailing the extent of [redacted]

[redacted] [redacted]

Initials of Person making Statement

[redacted]

506

9. STATEMENT *(Continued)*

their participation and a request to not arrest these particular individuals. These papers were ignored and the detainee's held for months without any particular care paid to these documents. These detainees's, who had the potential to be great friends to the U.S./Coalition efforts in Iraq, would have very little reason to stay their hand, and every reason to become implacable enemies of the U.S. once released. The detainee assessment branch functioned as a checks and balances for the JIDC interrogators who were constantly being pressured to produce and thus had no real opportunity to check their work or pay attention to the detainee's themselves. Individuals within the ICE attempted to do away with the DAB, stating that the interrogators themselves were qualified to make final decisions as to a detainee's final disposition, but as evinced in the statements I made above and in the actual reports present in Abu Ghraib, oversight from a section not directly involved in the Interrogation Collection Element was necessary to avoid not only missing information of possible intelligence value, but also to prevent the needless incarceration of innocent people who may have never even talked to an interrogator before their fate was decided upon. A comprehensive report was necessary to ensure that the proper disposition of detainee's was being enacted and that interrogators did not recommend further incarceration of detainee's who had done no wrong but had been unlucky enough to be present at the scene of a raid. Beyond that, I believe a system of checks and balances was sadly lacking at the lower echelon interrogation facilities, and someone should have been given the task of spot-checking every facility occasionally to ensure the proper implementation of the IROES as well as adherence to the Geneva Conventions. We received a training class by a linguist who taught us what type of words to use to humiliate the detainees. His name was [redacted] was also requested by those interrogators who used more aggressive techniques. Although this does not necessarily entail any wrongdoing on his part or on the part of those interrogators who used him, the fact that the class occurred at all was indicative I believe of the notion that it was OK to humiliate detainees, to curse their mothers and daughters, to deride their religious practices, all unnecessary to a truly professional interrogator. I was shown some photos and was able to identify some of the military intelligence personnel. Photo #6 and #7 in file named Mark 5 show [redacted] observing some detainees on the floor. Photo #23 show an analyst in PT uniform and [redacted] is leaning against the wall to the left. Photo #11 in file named [redacted] shows a female interpreter (name unknown) and a CACI interrogator who I believe was a member of a special interrogation team. Though this is probably of little relevancy, I would also like to comment that I was personally present at the general population camps in Abu Ghuraib at one of the riots that occurred in November and which resulted in the deaths of some detainee's(number unknown) and the injury of several. The riots were a constant threat to the MP's during that time period due to the Muslim religious holiday of Ramadan. Many of the detainee's, especially the innocent ones with families, and who had been there a long time, felt like it was extremely unfair to them and were easy prey to the leaders amongst them who called for riots and such forms of violent expression.

Q. Do you have anything else to add to this statement? [redacted]

AGENT'S INVESTIGATIVE REPORT

CID Regulation 195-1

ROI NUMBER 0085-04-CID519-

DETAILS

BASIS FOR INVESTIGATION: About 1000, 19 Jun 04, this office was notified by CPT [redacted] 7C3 b63 Magistrate/Command Advocate, 160th MP Battalion, Camp Bucca, Iraq, of an Aggravated Assault, Forcible Sodomy and Cruelty and Maltreatment of a detainee.

Agent's Comment: Review of emails and statements this office received revealed the following: two unknown individuals detained Mr. [redacted] 7F 7C b64, Internment Facility (IF), Camp Bucca, Iraq, and began to interrogate him about his involvement with attacks on Coalition Forces in Iraq. During the interrogation Mr. [redacted] was beaten with wooden sticks, punched, electrocuted, forcibly sodomized, and made to drink urine.

About 1000, 19 Jun 04, SA [redacted] 7C1 b61 this office interviewed COL [redacted] 7F 7C b64 7C3 b63 Physician [redacted], 160th MP Battalion, Camp Bucca, Iraq, who related that during his examation of Mr. [redacted] he observed the following; Mr. [redacted] did have a scar on his right wrist which was indicative of him being pulled by his handcuffs or being hung by handcuffs. Further COL [redacted] 7C3 b63 stated that Mr. [redacted] was bleeding from his anus and this injury could of occurred when Mr. [redacted] was forcibly sodomized. (See Sworn Statement for details) 7F 7C b64

Agent' Comment: COL [redacted] 7C3 b63 7F 7C b64 stated that they were unable to conduct any x-rays of Mr. [redacted] 7F 7C b64 person due to the equipment and personnel located at Camp Bucca, Iraq. COL [redacted] 7C3 b63 further stated the exam showed no signs that Mr. [redacted] 7F 7C b64 had any broken bones at the time or the exam.

About 1410, 19 Jun 04, SA [redacted] 7C1 b61 interviewed SSG [redacted] 7C3 b63 160th MP Battalion, Camp Bucca, Iraq, who stated he interviewed Mr. [redacted] on 16 Jun 04, and prepared an investigator's statement to document the interview and the facts which Mr. [redacted] stated occurred after he was captured in Baghdad, Iraq. (See Investigator's Statement for details) 7F 7C b64

About 1505, 19 Jun 04, SA [redacted] 7C1 b61 interviewed Mr. [redacted] 7F 7C b64 who stated that he was captured on 05 May 04, by two males wearing green t-shirts, cargo pants and tan vest, who stated they worked for the "Criminal Investigations". The two males then placed a hood over his head and transported him to their headquarters in Baghdad, Iraq, where he was interrogated. During interrogation Mr. [redacted] 7F 7C b64 stated he was punched numerous times and struck with large wooden sticks all over his body, forcibly sodomized and made to drink urine. Mr. [redacted] stated this abuse occurred over a period of 4 days and he was transported to Abu Grihab, Iraq. Mr. [redacted] stated a week later he was transported to Camp Bucca, Iraq where he is currently located. (See Sworn Statement for details) 7F 7C b64 7F 7C b64

Agent's Comment: During the interview of Mr. [redacted] he stated that he was beaten badly and when SA [redacted] 7C1 b61 introduced himself Mr. to [redacted] was very stiff and moved like he was in pain.

TRANSLATION OF STATEMENT PROVIDED BY DETAINEE [redacted] b7c-4, b6-4
#[redacted] 07Jul 04/0938

We were 18 persons in Camp Bucca, and there was a fight between the members of the group, and the Americans hit them with tear gases in order to disengage them, and they ordered us to sit down, and I sat down, and there was a person who was talking to me but I did not talk to him, then an American soldier who had an electric gun in his hand, came and slapped me on my face, and I said to him, "why do you hit me?". Then he hit me with the electric gun twice in my arm with two wire needles , and they took me to the doctor who picked up the two wire needles from my arm.

Q: Did they hit you with open hand or with the fist?
A: Open hand.
Q: How was the shape of the gun they hit you with?
A: Black and has a yellow head and it was almost seven inches.
Q: Can you describe to us the American soldier who slapped you and hit you with the electric gun?
A: He was tan and tall, and has a short hair and black eyes, and he was almost 25 years old.
Q: Do you think that the soldier who hit you has his reasons to do that?
A: He has no reasons to hit me.
Q: Why did you tell the interrogators in CID that you have not been assaulted?
A: I told them the same story I told you.
Q: Was there any witness saw what happened? b7c-3, b6-3 b7c-3, b6-3
A: Yes, there was a person called [redacted] from [redacted]
Q: Are you sure that the fight between the detainees was over when the American came and slapped you?
A: The fight was over since three to four minutes.
Q: What was the name of the American soldier who slapped you?
A: His name seems to be [redacted] b7c-3, b6-3
Q: Do you wish to add anything to this statement?
A: No. ///End of Statement///

AGENT'S INVESTIGATION REPORT

CID Regulation 195-1

ROI NUMBER 0099-04-CID789

DETAILS

BASIS FOR INVESTIGATION: On 11 Jul 04, this office received a supplemental Request for Assistance (RFA) from the 78th Military Police (MP) Det. (BN), Camp Arifjan, Iraq, to re-interview Detainee [redacted], National Detainee Reporting System (NDRS) #[redacted], in reference to the incident in which SFC [redacted], 160th MP BN, Camp Bucca, Iraq, was accused of slapping [redacted] in the head, while detained at Camp Bucca, Iraq. b7c-4,b6-4

AGENT'S COMMENT: This office received this request after being provided additional documentation.

About 0820, 12 Jul 04, SA [redacted] b7c-1,b6-1, with the assistance of Linguist [redacted] b7c-8,b6-8, this office, re-interviewed [redacted] stated that on the day of the alleged incident, a black, male soldier, called "[redacted]" slapped him in the face and tazzed him in the right arm, as stated in his previous statement. [redacted] clarified that a fight between several detainees had just occurred. After the fight, [redacted] was squatting on the ground with his elbows on his knees with his back to another detainee, who was sitting on the ground with his hands tied behind his back. He explained that he and the other detainee were talking, when [redacted] walked up from behind him and slapped him in the right cheek with the back of [redacted] hand, but not hard. [redacted] then started to get up because it made him angry. When he started to stand up, [redacted] jumped back and shot him with the tazer from about eight feet. When asked if he thought the slapped in the face was abuse or to get him to quit talking, he stated that it was not abuse, but it was to stop him from talking. [redacted] stated that no one yelled, "What are you looking at?" at him. [redacted] stated he did not see any other detainee get slapped by a white, male soldier. b7c-4,b6-4

AGENT'S COMMENT: [redacted] b7c-4,b6-4 could not read or write Arabic. [redacted] b7c-4,b6-4 demonstrated on this Agent how the incident occurred, to include slapping this Agent with same amount of force. The amount of force was consistent with that of getting someone's attention by slapping him or her on the shoulder.

AGENT'S COMMENT: [redacted] b7c-4,b6-4 is very temperamental. During this interview, he became very belligerent at this Agent and Mr. [redacted] b7c-8,b6-8

About 0855, 12 Jul 04, SA [redacted] b7c-4,b6-4 exposed Photographs of [redacted] b7c-4,b6-4 alleged tazer marks using a Vivitar Digital Camera. (See Photographs)

AGENT'S COMMENT: This Agent has been tazzed before as part of Police Training and determined the marks depicted in the photographs were consistent with a tazer.

About 0910, 12 Jul 04, SA [redacted] b7c-1,b6-1 coordinated with SGT [redacted] b7c-3,b6-3, 391st Military Police (MP) Battalion (BN), Detainee Aid Station (DAS), BCCF, AGI, who estimated the scar above [redacted] b7c-4,b6-4 right elbow was approximately four weeks old.

DETAILS

AGENT'S COMMENT: No medical doctor was available. SGT [redacted] b7c-3, b6-3 evaluates detainees on a daily basis as part of her duty.

About 1300, 12 Jul 04, SA [redacted] b7c-1, b6-1 coordinated with SGT [redacted] b7c-3, b6-3 [redacted], 301st MP Co, BCCF, AGI, Certified Tazer Instructor, who stated the marks in the photographs could be consistent with a tazer, but was not sure. He further stated that to employ a tazer, it must be used from a distance of 7-15 feet.

Status: Your RFA has been completed in the attached enclosures. No further investigative activity was anticipated by this office.

DETAILS

BASIS FOR INVESTIGATION: On 13 Jul 04, this office received a supplemental Request for Assistance (RFA) from the 78th Military Police (MP) Det. (BN), Camp Arifjan, Iraq, to re-interview MSG [redacted], 418th MP Det, 391st MP BN, Baghdad Central Confinement Facility (BCCF), AGI, in reference to the incident in which SFC [redacted], 160th MP BN, Camp Bucca, Iraq, was accused of slapping [redacted] in the head, while detained at Camp Bucca, Iraq. b7c-4, b6-4

AGENT'S COMMENT: This office received this request after determining that MSG [redacted] had been transferred to BCCF. b7c-4, b6-4

About 1440, 14 Jul 04, SA [redacted] re-interviewed MSG [redacted] who confirmed the facts given in his previous statement. He also provided a sketch of the area where the incident was alleged to have happened. In addition, he viewed a photograph of [redacted] could not positively identify [redacted] as the detainee he saw get slapped, although he was fairly sure. (See Sworn Statement, Sketch, and Agent Created Sketch) b7c-1, b6-1 b7c-4, b6-4

AGENT'S COMMENT: This Agent created the additional sketch to clarify details in the sketch drawn by MSG [redacted] b7c-4, b6-4

Status: Your RFA has been completed in the attached enclosures. No further investigative activity was anticipated by this office.

Frank

I am forwarding this EC up the CTD chain of command. MLDU requested this information be documented to protect the FBI. MLDU has had a long standing and documented position against use of some of DOD's interrogation practices, however, we were not aware of these latest techniques until recently.

b2 -3
b6 -4
b7C -4
b7E -1
b7F -1

Of concern, DOD interrogators impersonating Supervisory Special Agents of the FBI told a detainee that These same interrogation teams then The detainee was also told by this interrogation team

These tactics have produced no intelligence of a threat neutralization nature to date and CITF believes that techniques have destroyed any chance of prosecuting this detainee.

If this detainee is ever released or his story made public in any way, DOD interrogators will not be held accountable because these torture techniques were done the "FBI" interrogators. The FBI will left holding the bag before the public.

Army Regulation 15-6: Final Report

Investigation into FBI Allegations of Detainee Abuse at Guantanamo Bay, Cuba Detention Facility

EXECUTIVE SUMMARY

Detention and interrogation operations at Joint Task Force Guantanamo (JTF-GTMO) cover a three-year period and over 24,000 interrogations. This AR 15-6 investigation found only three interrogation acts in violation of interrogation techniques authorized by Army Field Manual 34-52 and DoD guidance. The AR 15-6 also found that the Commander of JTF-GTMO failed to monitor the interrogation of one high value detainee in late 2002. The AR 15-6 found that the interrogation of this same high value detainee resulted in degrading and abusive treatment but did not rise to the level of being inhumane treatment. Finally, the AR 15-6 found that the communication of a threat to another high value detainee was in violation of SECDEF guidance and the UCMJ. The AR 15-6 found no evidence of torture or inhumane treatment at JTF-GTMO.

INTRODUCTION

In June 2004, the Federal Bureau of Investigation (FBI) began an internal investigation to determine if any of its personnel had observed mistreatment or aggressive behavior towards detainees at Guantanamo Bay, Cuba (GTMO). On 9 Jul 04, the FBI – Inspection Division (INSD), sent an e-mail message to all FBI personnel who had served in any capacity at GTMO. The e-mail stated in relevant part:

"You have been identified as having conducted an assignment at GTMO, Cuba since 9/11/2001. The Inspection Division has been tasked with contacting those employees who have served in any capacity at GTMO and obtain information regarding the treatment of detainees. Employees should immediately respond to the following:

1) Employees who observed aggressive treatment, which was not consistent with Bureau interview policy guidelines, should respond via e-mail for purposes of a follow-up interview.

2) Employees who worked at GTMO and observed no aggressive treatment of detainees should respond via an EC documenting a negative response…"

The above e-mail message was sent by INSD to 493 FBI personnel who had served in GTMO between 9 Sep 01 and 9 Jul 04. INSD received 434 total

DOJ_NMG_0026362

responses, and 26 agents stated that they had observed aggressive treatment of detainees at GTMO.

In response to FBI agent allegations of aggressive interrogation techniques at Joint Task Force Guantanamo Bay (JTF-GTMO) Cuba, that were disclosed in Dec 04 as a result of FOIA releases, General (GEN) Bantz J. Craddock, Commander United States Southern Command (USSOUTHCOM), ordered an AR 15-6 investigation and appointed Brigadier General (BG) John T. Furlow, United States Army South Deputy Commander for Support, as the investigating officer. BG Furlow was directed to address the following allegations:

a. That military interrogators improperly used military working dogs during interrogation sessions to threaten detainees, or for some other purpose;

b. That military interrogators improperly used duct tape to cover a detainee's mouth and head;

c. That DoD interrogators improperly impersonated FBI agents and Department of State officers during the interrogation of detainees;

d. That, on several occasions, DoD interrogators improperly played loud music and yelled loudly at detainees;

e. That military personnel improperly interfered with FBI interrogators in the performance of their FBI duties;

f. That military interrogators improperly used sleep deprivation against detainees;

g. That military interrogators improperly chained detainees and placed them in a fetal position on the floor, and denied them food and water for long periods of time;

h. That military interrogators improperly used extremes of heat and cold during their interrogation of detainees.

Subsequent to the initial appointment, GEN Craddock directed BG Furlow to investigate two additional allegations concerning a female military interrogator performing a "lap dance" on a detainee and the use of faux "menstrual blood" during an interrogation. Finally, the appointment letter directed BG Furlow to not limit himself to the listed allegations.

On 28 Feb 05, after two months of investigation, BG Furlow advised GEN Craddock that he needed to interview officers senior in grade to himself. On 28 Feb 05 GEN Craddock appointed Lieutenant General (Lt Gen) Randall M. Schmidt, United States Southern Command Air Forces Commander, Davis-

DOJ_NMG_0026363

Monthan AFB, AZ, as the senior investigating officer. This report reflects the combined findings and conclusions of the initial investigative efforts and the combined investigative efforts of both BG Furlow and Lt Gen Schmidt.

After submission of the AR15-6 Report of Investigation on 1 Apr 05, CDR USSOUTHCOM directed on 5 May 2005 that the investigation be reopened to consider memos dated 11 Dec 04 and 24 Dec 04, that had recently been discovered, regarding the subject of the second Special Interrogation Plan. Prior to completion of the follow-up, CDR USSOUTHCOM directed on 2 Jun 05 that the investigation should also address new allegations made by the subject of the first Special Interrogation Plan.

SCOPE OF REVIEW

This investigation was directed and accomplished under the "informal procedures" provisions of Army Regulation 15-6, Procedures for Investigating Officers and Boards of Officers, dated 30 Sep 96, (AR 15-6). This AR 15-6 investigation centered on alleged abuses occurring during interrogation operations. This AR 15-6 found incidents of abuse during detention operations; all of which were appropriately addressed by the command. The investigation team conducted a comprehensive review of thousands of documents and statements pertaining to any allegations of abuse occurring at GTMO, to include the complete medical records of the subjects of the first and second Special Interrogation Plan. The team interviewed 30 FBI agents, conducted interviews of over 100 personnel from 6 Jan 05 to 24 Mar 05 and had access to hundreds of interviews conducted by several recent investigations. These interviews included personnel assigned to GTMO, USSOUTHCOM, and OSD during the tenure of JTFs 160, 170, and GTMO. It included nine DIA personnel, including every Joint Intelligence Group Chief and every Intelligence Control Element Chief. It included 76 DoD personnel, to include every General Officer who commanded Joint Task Force 160, Joint Task Force 170 and Joint Task Force GTMO. DoD personnel interviewed also included personnel who served as interrogators at GTMO and instructors at the US Army Intelligence School and Center. During the course of the investigation, the team visited Birmingham, AL; Chicago, IL; Ft Bragg, NC; Ft Devens, MA; Ft Huachuca, AZ; GTMO (twice); Los Angeles, CA; Miami, FL; and Washington D.C. (five times).

The investigation team attempted to determine if the allegations alleged by the FBI, in fact, occurred. During the course of the follow up investigation the AR15-6 also considered allegations raised specifically by detainees the subject of the first and second Special Interrogation Plans. The investigating team applied a preponderance standard of proof consistent with the guidance contained in AR15-6. The team also applied guidance contained in FM 34-52, CDR USSOUTHCOM, and SECDEF memorandums authorizing special interrogation techniques in deciding if a particular interrogation approach fell properly within an authorized technique. In those cases in which the team concluded that the

DOJ_NMG_0026364

allegation had in fact occurred, the team then considered whether the incident was in compliance with interrogation techniques that were approved either at the time of the incident or subsequent to the incident. In those cases where it was determined the allegation occurred and to have not been an authorized technique, the team then reviewed whether disciplinary action had already been taken and the propriety of that action. On 28 Mar 05, GEN Craddock, as the investigation appointing authority, asked Lt Gen Schmidt to determine accountability for those substantiated violations that had no command action taken.

The team did not review the legal validity of the various interrogation techniques outlined in Army Field Manual 34-52, or those approved by the Secretary of Defense.

BACKGROUND

On 7 Mar 05 Vice Admiral A.T. Church, III submitted his final report of detention operations and detainee interrogation techniques in the Global War on Terror to the Secretary of Defense. (hereinafter "Church Report") That report included a thorough background discussion of detainee operations at GTMO. Our investigation independently researched the genesis and adjustments to policy and interrogation techniques from the origination of GTMO to the present. Our independently derived findings regarding the development and adjustments to policy and interrogation techniques are identical to the Church report. Therefore, I have adopted relevant portions of the Church report to show the development of permissible interrogation techniques.

Interrogation operations at GTMO began in January 2002. Initially interrogators relied upon the interrogation techniques contained in FM 34-52. These techniques were ineffective against detainees who had received interrogation resistance training. On 11 Oct 2002, Major General Michael E. Dunlavey, the Commander of Joint Task Force (JTF) 170, the intelligence task force at GTMO, requested that the CDR USSOUTHCOM, GEN James T. Hill, approve 19 counter resistance techniques that were not specifically listed in FM 34-52. The techniques were broken down into Categories I, II, and III, with the third category containing the most aggressive techniques. On 25 Oct 02 CDR USSOUTHCOM forwarded the request to the Chairman of the Joint Chiefs of Staff, General Richard B. Myers. On 2 Dec 02, the Secretary of Defense approved the use of all Category I and II techniques, but only one of the Category III techniques (which authorized mild, non-injurious physical contact such as grabbing, poking in the chest with a finger, and light pushing). In the approval memorandum, the SECDEF approved the techniques for use by CDR USSOUTHCOM, who subsequently verbally delegated the authority to approve and apply these techniques to CDR JTF-GTMO.

DOJ_NMG_0026365

On 15 Jan 03, SECDEF rescinded his approval of all Category II techniques and the one Category III technique leaving only Category I techniques in effect. The SECDEF memo permitted use of Category II and III techniques only with SECDEF approval. No approval was requested or granted.

On 16 Apr 03, the Secretary of Defense issued a new policy accepting 24 techniques, most of which were taken directly from or closely resembled those in FM 34-52. The Secretary's guidance remains in effect today. This policy memorandum placed several requirements on CDR USSOUTHCOM. First, it required all detainees to continue to be treated humanely. Second, it required SECDEF notification prior to the implementation of any of the following aggressive Interrogation techniques: Incentive/Removal of Incentive; Pride and Ego Down; Mutt and Jeff; and Isolation. Third, it specifically limited the use of these aggressive techniques to circumstances required by "military necessity." The memorandum did not attempt to define the parameters of "humane treatment" or "military necessity."

The CDR USSOUTHCOM issued a memorandum on 2 Jun 03 providing further guidance on the implementation of the 16 Apr 03 SECDEF approved techniques. This guidance provided that prior to the use of any of the specified aggressive techniques, the JTF Commander would submit the request in writing to CDR USSOUTHCOM for submission to SECDEF. The guidance also stated that "specific implementation guidance with respect to techniques A-Q is provided in Army Field Manual 34-52. Further implementation guidance with respect to techniques R-X will need to be developed by the appropriate authority." GTMO standard operating procedure on interrogations provides guidance for interrogations.

In addition, the CDR USSOUTHCOM guidance provided the following clarification to the SECDEF's 16 Apr 03 memorandum: **(quoting)**

(a) Reference Technique B, the Working Group was most concerned about removal of the Koran from a detainee—something we no longer do. Because providing incentives (e.g., McDonald's Fish Sandwiches or cigarettes) is an integral part of interrogations, you will notify me in writing when the provided incentive would exceed that contemplated by interrogation doctrine contained in Army FM 34-52, or when the interrogators intend to remove an incentive from a detainee;

(b) Reference Techniques I and O, you will notify me in writing when use of these standard interrogation techniques goes beyond the doctrinal application described in Army FM 34-52. When use of the technique is consistent with FM 34-52, you do not need to notify me;

(c) I define "sleep deprivation", referenced in Technique V, as keeping a detainee awake for more that 16 hrs, or allowing a detainee to rest

DOJ_NMG_0026366

briefly and then repeatedly awakening him, not to exceed four days in succession;

(d) Reference Technique X, I do not consider the use of maximum-security units as isolation. A detainee placed in a maximum-security unit is segregated, but not truly isolated;

(e) I define the "least intrusive method" as the technique that has the least impact on a detainee's standard of treatment, while evoking the desired response from the detainee during interrogations;

(f) Except in the case of Techniques B, I, O, and X, I have determined that the first 0-6/GG-15 in the chain of command or supervision, is the "appropriate specified senior approval authority," unless approval authority is withheld from that individual by higher authority.

Lastly, I have told the Secretary of Defense his 16 April guidance applies to all interagency elements assigned or attached to JTF GTMO. **(end quote)**

There have been over 24,000 interrogation sessions at GTMO since the beginning of interrogation operations.

FINDINGS

GENERAL DETAINEE POPULATION

Allegation: That DoD interrogators improperly impersonated FBI agents or Department of State officers during the interrogation of detainees.

Finding #1: On several occasions in 2003 various DoD interrogators impersonated agents of the FBI and the Department of State.

Technique: Authorized: FM 34-52 (p. 3-13); Category I technique approved by SECDEF – Deceiving interrogator identity

Discussion: The Chief of the Special Interrogation Team directed two interrogators to pose as US State Department representatives during an interrogation. In addition another interrogator posed as an FBI agent on one occasion. This impersonation came to the attention of the Senior Supervisory Agent (SSA) of the FBI at Guantanamo Bay when several other agents advised him that detainees were complaining during interviews that the FBI had already asked them the same questions. The SSA approached the Joint Interrogation Group (JIG) Chief, with his agents' concerns. According to the SSA, the JIG Chief did not contest the FBI agents' accusations. In fact, the JIG Chief knew of at least one military interrogator who had impersonated an FBI agent. After the

DOJ_NMG_0026367

meeting, the JIG Chief agreed to stop the practice of DoD interrogators impersonating FBI agents without prior FBI approval. The SSA made it clear to the investigation team that he did not believe the impersonation interfered with FBI operations and was pleased with the JIG Chief's rapid and thorough response to the situation.

Organizational response: Immediately stopped the practice.

Recommendation #1: The allegation should be closed. The technique, while authorized, was undermining the inter-agency working relationship. No additional corrective action is necessary or appropriate.

Allegation: That a female military interrogator performed a "lap dance" on a detainee during an interrogation. I have expanded this allegation to "That female military interrogators performed acts designed to take advantage of their gender in relation to Muslim males."

Finding #2a: On one occasion between October 2002 and January 2003, a female interrogator put perfume on a detainee by touching the detainee on his arm with her hand;

Technique: Authorized: FM 34-52 (p. 3-11); Category III technique approved by SECDEF – Mild, non-injurious physical touching

Discussion: a. On at least one occasion in late 2002, a female interrogator rubbed perfume on a detainee. The Interrogation Control Element (ICE) Chief stated that he specifically directed the interrogator to go to the PX and purchase rose oil with the intent of rubbing a portion of the perfume on the detainee's arm to distract the detainee. The interrogator admitted to using this approach with a detainee. At the time of the event the detainee responded by attempting to bite the interrogator and lost his balance, fell out of his chair, and chipped his tooth. He received immediate and appropriate medical attention and did not suffer permanent injury.

Organizational response: a. The interrogator was not disciplined for rubbing perfume on a detainee since this was an authorized technique.

Finding #2b: During the month of March 2003, a female interrogator approached a detainee from behind, rubbed against his back, leaned over the detainee touching him on his knee and shoulder and whispered in his ear that his situation was futile, and ran her fingers through his hair.

Technique: Authorized: FM 34-52 technique – Futility – Act used to highlight futility of the detainee's situation.

DOJ_NMG_0026368

Discussion: b. On 17 Apr 03, An interrogation supervisor supervised a female interrogator as she interrogated a detainee with her BDU top off[1], and subsequently the interrogator ran her fingers through the detainee's hair. The interrogator also approached the detainee from behind, touched him on his knee and shoulder, leaned over him, and placed her face near the side of his in an effort to create stress and break his concentration during interrogation.

Organizational response: b. The interrogation supervisor was given a written letter of admonishment for failure to document the techniques to be implemented by the interrogator prior to the interrogation. There is no evidence that either activity ever occurred again.

Recommendation #2: Command action was effective and sufficient with respect to the individual interrogators. AR 15-6 recommends that the approval authority for the use of gender coercion as futility technique be withheld to the JTF GTMO-CG.

<u>Allegation</u>: That a female military interrogator wiped "menstrual blood" on a detainee during an interrogation.

Finding #3: In March 2003, a female interrogator told a detainee that red ink on her hand was menstrual blood and then wiped her hand on the detainee's arm.

Technique: Authorized: FM 34-52 technique – Futility – act used to highlight futility of the detainee's situation

Discussion: The female interrogator is no longer in military service and has declined to be interviewed. According to a former ICE Deputy the incident occurred when a detainee spat in the interrogator's face. According to the former ICE Deputy, the interrogator left the interrogation room and was crying outside the booth. She developed a plan to psychologically get back at him. She touched the detainee on his shoulder, showed him the red ink on her hand and said; by the way, I am menstruating. The detainee threw himself on the floor and started banging his head. This technique was not in an approved interrogation plan.

Organizational response: The ICE Deputy verbally reprimanded the interrogator for this incident. No formal disciplinary action was taken. There is no evidence that this happened again.

Recommendation #3: Command action was inadequate with respect to the individual interrogator. The interrogator should have been formally admonished or reprimanded for using a technique that was not approved in advance. Advance approval ensures that retaliatory techniques are not

[1] It was common practice at GTMO to conduct interrogations in a t-shirt with the BDU top removed because of the heat and humidity.

DOJ_NMG_0026369

employed on impulse. Considering the lapse in time, recommend this allegation be closed.

<u>Allegation</u>: That DoD interrogators improperly played loud music and yelled loudly at detainees.

Finding #4: On numerous occasions between July 2002 and October 2004, detainees were yelled at or subjected to loud music during interrogation.

Technique: Authorized: FM 34-52 technique – Incentive and Futility – acts used as reward for cooperating or to create futility if not cooperating.

Discussion: Almost every interviewee stated that yelling and the use of loud music were used for interrogations at GTMO. On a few occasions, detainees were left alone in the interrogation booth for an indefinite period of time while loud music played and strobe lights flashed. The vast majority of yelling and music was accomplished with interrogators in the room. The volume of the music was never loud enough to cause any physical injury. Interrogators stated that cultural music would be played as an incentive. Futility technique included the playing of Metallica, Britney Spears, and Rap music.

Organizational response: None.

Recommendation #4: The allegation should be closed. Recommend JTF-GTMO develop specific guidance on the length of time that a detainee may be subjected to futility music. Placement of a detainee in the interrogation booth and subjecting him to loud music and strobe lights should be limited and conducted within clearly prescribed limits.

<u>Allegation</u>: That military interrogators improperly used extremes of heat and cold during their interrogation of detainees.

Finding #5: On several occasions during 2002 and 2003, interrogators would adjust the air conditioner to make the detainee uncomfortable.

Technique: Unauthorized prior to 16 Apr 03: SECDEF did not approve exposure to cold in his 2 Dec 02 list of approved techniques

Technique: Authorized after 16 Apr 03: SECDEF approved technique. This technique was officially permitted under 16 Apr 03 SECDEF Memorandum – Environmental Manipulation

Discussion: Two FBI agents indicated that they were aware of DoD interrogators using temperature adjustment as an interrogation technique. Many interviewees, FBI agents and military interrogators, believed the hot climate at GTMO and the detainee's comfort in a hot climate caused a differing in opinions

DOJ_NMG_0026370

regarding the use of the air conditioning units in the interrogation booths. There were several individuals who were interviewed who acknowledged that certain military interrogators would adjust the air conditioning down (cool) in an attempt to make the detainee uncomfortable for the interrogation. Several witnesses indicated that the practice of adjusting the temperature ceased when CDR JTF-GTMO directed that the practice no longer be employed. The current GTMO SOP still permits interrogators to adjust the temperature. In addition, one interrogator supervisor stated that detainees were interrogated at Camp X-Ray, where the "booths" were not air-conditioned, to make the detainees uncomfortable.

Organizational response: No disciplinary action required.

Recommendation #5: The allegation should be closed.

Allegation: That military interrogators improperly used sleep deprivation against detainees.

Finding #6: During 2003 and 2004 some detainees were subjected to cell moves every few hours to disrupt sleep patterns and lower the ability to resist interrogation. Each case differed as to length and frequency of the cell moves.

Technique: Unauthorized prior to 2 Dec 02 and between 15 Jan 03 and 16 Apr 03: Neither sleep disruption or deprivation is an authorized FM 34-52 technique

Technique: Authorized between 2 Dec 02 and 15 Jan 03 and after 16 Apr 03: The exact parameters of this technique remained undefined until 2 Jun 03 when CDR USSOUTHCOM established clear guidance on the use of sleep adjustment. His guidance prohibited the practice of keeping a detainee awake for "more than 16 hours or allowing a detainee to rest briefly and then repeatedly awakening him, not to exceed four days in succession."

Discussion: Only one FBI agent alleged sleep deprivation; his complaint was that an individual was subjected to 16 hours of interrogation followed by four-hour breaks. He says he was told about these sessions by DoD interrogators and they implied that these 16 hour interrogations were repeated on a 20 hour cycle, but he did not know for certain what in fact occurred. The FBI agent was at GTMO from 2 Jun 03 to 17 Jul 03. Under CDR USSOUTHCOM's 2 Jun 03 guidance, 16 hour interrogations were permitted and do not constitute sleep deprivation if done on a 24 hour cycle. During the course of the investigation of the FBI allegation, the AR 15-6 did conduct a review of the interrogation records to see if there was any evidence that corroborated this allegation. While not directly supporting the FBI's allegation, records indicated that some interrogators recommended detainees for the "frequent flyer program." A current GTMO interrogation analyst indicated that this was a program in effect throughout 2003

DOJ_NMG_0026371

and until March 2004 to move detainees every few hours from one cell to another to disrupt their sleep. Documentation on one detainee indicated that he was subjected to this practice as recently as March 2004.

Organizational response: None. Current JTF-GTMO Commander terminated the frequent flyer cell movement program upon his arrival in March 04.

Recommendation #6: The allegation should be closed. Recommend USSOUTHCOM clarify policy on sleep deprivation.

Allegation: That military interrogators improperly used duct tape to cover a detainee's mouth and head.

Finding #7: Sometime in October 2002 duct tape was used to "quiet" a detainee.

Technique: Unauthorized

Discussion: In his testimony, the ICE Chief testified that he had a situation in which a detainee was screaming resistance messages and potentially provoking a riot. At the time of the incident there were 10 detainees in the interrogation section and the ICE Chief was concerned about losing control of the situation. He directed the MPs to quiet the detainee down. The MP mentioned that he had duct tape. The ICE Chief says he ultimately approved the use of duct tape to quiet the detainee. The MP then placed a single strand of duct tape around the detainee's mouth. The single strand proved ineffective because the detainee was soon yelling again. This time the MPs wrapped a single strand of duct tape around the mouth and head of the detainee. The detainee removed the duct tape again. Fed up and concerned that the detainee's yelling might cause a riot in the interrogation trailer, The ICE Chief ordered the MPs to wrap the duct tape twice around the head and mouth and three times under the chin and around the top of the detainee's head. According to an FBI agent, he and another FBI agent were approached by the ICE Chief who was laughing and told the agents that they needed to see something. When the first agent went to the interrogation room he saw that the detainee's head had been wrapped in duct tape over his beard and his hair. An interrogator testified that another interrogator admitted to him that he had duct taped the head of a detainee. According to the first agent, the ICE Chief said the interrogator wrapped the detainee's head with duct tape because the detainee refused to stop "chanting" passages from the Koran.

Organizational response: The JTF-170 JAG testified that she became aware of the incident and personally counseled the ICE Chief. The counseling session consisted of a verbal admonishment.[2] The ICE Chief did not receive any formal

[2] While the ICE Chief testified that he was counseled by the JTF-GTMO Commander this is not possible. The Commander in question did not arrive until the month following the event. The previous Commander has no recollection of the event.

DOJ_NMG_0026372

discipline action. We have no evidence that duct tape was ever used again on a detainee.

Recommendation #7: Command action was inadequate with respect to the ICE Chief. He should be formally admonished or reprimanded for directing an inappropriate restraint to be used on a detainee.

Allegation: That military interrogators improperly chained detainees and placed them in a fetal position on the floor

Finding #8: On at least two occasions between February 2002 and February 2003, two detainees were "short shackled" to the eye-bolt on the floor in the interrogation room.

Technique: Unauthorized.

Discussion: Two FBI agents each stated that they witnessed a detainee in an interrogation room that had been "short shackled" to the floor. Short shackling is the process by which the detainee's hand restraints are connected directly to an eyebolt in the floor requiring the detainee to either crouch very low or lay in a fetal position on the floor. The FBI agents indicated that each of the detainees was clothed. Another FBI agent stated she witnessed a detainee short shackled and lying in his own excrement. The AR 15-6 was unable to find any documentation, testimony, or other evidence corroborating the third agent's recollection, to this allegation or her email allegation that one of the detainees had pulled his hair out while short shackled. We also found that 'short shackling' was initially authorized as a force protection measure during the in processing of detainees.[3]

Organizational response: None. JTF-GTMO has implemented SOPs that prohibit short shackling.

Recommendation #8: The allegation should be closed. The AR 15-6 was not able to find any evidence to adequately assign responsibility for these actions. This practice is now specifically prohibited by current GTMO interrogation policy.

Allegation: That military personnel improperly interfered with FBI interrogators in the performance of their FBI duties.

Finding #9: We discovered no evidence to support this allegation.

[3] During the course of a site visit to GTMO several detention operations personnel indicated that they understood that short shackling was permitted in the early days of GTMO as a force protection measure. They all stated that it was no longer authorized as either a detention measure or during interrogations.

DOJ_NMG_0026373

Discussion: This allegation stems from an FBI agent objections to a proposed Special Interrogation Plan. The dispute resulted in a DoD official being rude to the FBI agent. The team did not find any evidence of "interference" with FBI interrogations that extended beyond the dispute over which techniques worked best in interrogation. During the infancy of interrogation operations at GTMO, it was obvious that the different investigative agencies had different interrogation objectives. Law enforcement agencies were primarily interested in interviews that would produce voluntary confessions that would be admissible in U.S. Federal District Courts. Conversely, DoD interrogators were interested in actionable intelligence and thus had greater latitude on the techniques used during the interrogations. These different goals created friction.

Recommendation #9: The allegation should be closed.

Allegation: That military interrogators denied detainees food and water for long periods of time.

Finding #10: We discovered no evidence to support the allegation that the detainees were denied food and water.

Discussion: This allegation stems from the statement of an FBI Agent. She reports two incidents of observing two detainees in "the fetal position and lying on the floor of interview rooms." And that there were was no "evidence of any food or water." The Agent admits in her statement that she made an assumption that the detainees were denied food and water based solely upon their appearance. The Agent was unable to provide any specific information as to the day she made these observations to permit additional proof or assignment of responsibility.

Recommendation #10: The allegation should be closed.

SPECIAL INTERROGATION PLANS

During the course of interrogations certain detainees exhibited refined resistance techniques to interrogations. These detainees were suspected to possess significant current intelligence regarding planned future terrorist attacks against the United States. For these reasons Special Interrogation Plans were proposed and approved for the detainees. A total of two Special Interrogation Plans were carried out. They are referred to herein as the "First Special Interrogation Plan" and the "Second Special Interrogation Plan".

THE FIRST SPECIAL INTERROGATION PLAN

On 23 Nov 02 interrogators initiated the first Special Interrogation Plan. The interrogation plan was designed to counter resistance techniques of the subject

DOJ_NMG_0026374

of the first Special Interrogation Plan. The memo authorizing the techniques for this interrogation was signed by SECDEF on 2 Dec 02. These techniques supplemented techniques already permitted under the provisions of FM 34-52.

Allegation: That military interrogators improperly used military working dogs (MWD) during interrogation sessions to threaten detainees, or for some other purpose.

Finding #11a: On one occasion in October 2002 a military working dog was brought into the interrogation room and directed to growl, bark, and show his teeth at the subject of the first Special Interrogation Plan.

Technique: Unauthorized prior to 12 Nov 02.

Discussion: a. October 2002 incident: GTMO records indicate that on 01 Oct 02, the Commander of JTF-170 requested Joint Detention Operations Group (JDOG) support for interrogation operations to interrogate the subject of the first Special Interrogation Plan. The dog was requested to assist in the movement of the subject of the first Special Interrogation Plan between Camp X-ray and the GTMO Naval Brig to "discourage the detainee from attempting to escape." The interrogation plan (IP) indicates that the interrogation would begin on the 2nd or 3rd of October 2002. One FBI agent in his statement recalls the MWD being used on or about 05 Oct 02. He indicated that the events were notable for several reasons. He had recently purchased a German Shepard and wanted to get some "tips" from the dog handlers. The FBI agent noticed that there were two working dog teams (one Navy and one Army) present for the interrogation of the subject of the first Special Interrogation Plan. Finally, the FBI agent recalled that he and his partner left the observation room when the MWD was introduced into the interrogation room. The FBI agent's partner corroborates this statement.

In addition an interrogator indicated that she recalled a MWD being brought into the interrogation room during interrogation of the subject of the first Special Interrogation Plan at Camp X-ray, between 02-10 Oct 02. She stated that the dogs were used only "briefly." She stated that the use of the dog was documented on the IP and approved by the ICE Chief and CDR, JTF-GTMO

Finding #11b: In November 2002 a military working dog was brought into the interrogation room and directed to growl, bark, and show his teeth at the subject of the first Special Interrogation Plan.

Technique: Authorized: SECDEF approved the use of Category I and II techniques for the subject of the first Special Interrogation Plan. Category II technique permits the use of dogs to exploit "individual phobias" during interrogations.

DOJ_NMG_0026375

Discussion: b. An interrogator testified that the MWD was in the booth on one occasion for the subject of the first Special Interrogation Plan. He testified that he was approached by another interrogator and discussed the use of a MWD in an interrogation session. Specifically, the first interrogator stated that the second interrogator told him that a MWD was brought into the doorway of the interrogation room and ordered by the dog handler to growl, show teeth and bark at the detainee. In addition a psychologist assigned to the Behavioral Science Consultation Team (BSCT) for JTF-170/JTF-GTMO witnessed the use of a MWD named "Zeus" during a military interrogation of the subject of the first Special Interrogation Plan during the November 2002 time period. In his interview, the ICE Chief acknowledged that an MWD had entered the interrogation room of the subject of the first Special Interrogation Plan under the authority of a "special IP" for the subject of the first Special Interrogation Plan. The unsigned but approved interrogation plan for the subject of the first Special Interrogation Plan is from 12 Nov 02. (Church p. 115) It indicates dogs will only be used in interrogation if approved in writing, in advance. Both JTF-GTMO Commanders who were in charge during the execution of the special interrogation plan deny that they authorized the use of MWDs in the interrogation room.

Organizational response: a. and b. None. Current SOPs expressly prohibit the use of MWDs in the interrogation room. There is no evidence that this has ever happened again.

Recommendation #11: The allegation should be closed. While the ICE Chief was aware of and condoned the first use of the MWD, additional corrective action is not necessary. The event occurred on two occasions and was expressly approved after the first occasion for this detainee. This practice is now specifically prohibited by current GTMO interrogation policy.

<u>Allegation</u>: That a female military interrogator performed a "lap dance" on a detainee during an interrogation. I have expanded this allegation to "That female military interrogators performed acts designed to take advantage of their gender in relation to Muslim males."

Finding #12a: On 21 and 23 Dec 02, MPs held down a detainee while a female interrogator straddled the detainee without placing weight on the detainee;

Technique: Authorized: FM 34-52 technique – Futility – Act used to highlight futility of the detainee's situation.

Finding #12b: On 04 Dec 02, a female interrogator massaged the detainee's back and neck over his clothing;

Technique: Authorized: FM 34-52 technique – Futility – Act used to highlight futility of the detainee's situation.

DOJ_NMG_0026376

Finding #12c: On various occasions between October 2002 and January 2003, a female interrogator invaded the private space of a detainee to disrupt his concentration during interrogation;

Technique: Authorized: FM 34-52 technique – Futility – act used to highlight futility of the detainee's situation.

Discussion: Interrogation logs and MFRs for the subject of the first Special Interrogation Plan document that on both 21 and 23 Dec 02, a female interrogator straddled, without putting any weight on the detainee, the subject of the first Special Interrogation Plan while he was being held down by MPs. During these incidents a female interrogator would tell the detainee about the deaths of fellow Al-Qaeda members. During the straddling, the detainee would attempt to raise and bend his legs to prevent the interrogator from straddling him and prayed loudly. Interrogation MFRs also indicate that on 04 Dec 02, a female interrogator began to enter the personal space of the subject of the first Special Interrogation Plan, touch him, and ultimately massage his back while whispering or speaking near his ear. Throughout this event, the subject of the first Special Interrogation Plan prayed, swore at the interrogator that she was going to Hell, and attempted to get away from her. The female interrogator admitted in her interview that she personally prepared portions of the MFRs of the the subject of the first Special Interrogation Plan interrogations. She asserts that she had permission to employ all these techniques. We have found no evidence of a lap dance ever occurring.

Organizational response: No disciplinary action taken. The ICE Chief approved these techniques at the time.

Recommendation #12: The allegation should be closed. No command action is necessary with respect to the individual interrogators. Their supervisor acknowledged that he approved the approaches at the time of the interrogation. AR 15-6 recommends that the approval authority for the use of gender coercion as futility technique be withheld to the JTF GTMO-CG.

<u>Allegation</u>: That DoD interrogators improperly played loud music and yelled loudly at detainees.

Finding #13: On numerous occasions between November 2002 and 15 Jan 03, the subject of the first Special Interrogation Plan was yelled at or subjected to loud music during interrogation.

Technique: Authorized: FM 34-52 technique – Incentive and Futility – acts used as reward for cooperating or to create futility in not cooperating.

DOJ_NMG_0026377

Discussion: See above discussion for Finding #4.

Organizational response: No disciplinary action required; technique authorized.

Recommendation #13: The allegation should be closed. Recommend JTF-GTMO develop specific guidance on the length of time that a detainee may be subjected to futility music. Placement of a detainee in the interrogation booth and subjecting him to loud music and strobe lights should be limited and conducted within clearly prescribed limits.

Allegation: That military interrogators improperly used extremes of heat and cold during their interrogation of detainees.

Finding #14: On several occasions between November 2002 and January 2003 interrogators would adjust the air conditioner to make the subject of the first Special Interrogation Plan uncomfortable.

Technique: Unauthorized prior to 16 Apr 03: SECDEF did not approve exposure to cold in his 2 Dec 02 list of approved techniques

Discussion. There are no medical entries indicating the subject of the first Special Interrogation Plan ever experienced medical problems related to low body temperature. The subject of the first Special Interrogation Plan's medical records do indicate that he did have a body temperature between 95 and 97 degrees twice. The subject of the first Special Interrogation Plan's medical records do indicate that from 7-9 Dec 02 he was hospitalized for observation after an episode of bradycardia. He was released within forty-eight hours, after the bradycardia resolved without intervention and he maintained stable hemodynamics.[4] He experienced a second episode of bradycardia in Feb 03.

Organizational response: None

Recommendation #14: The allegation should be closed.

Allegation: That military interrogators improperly used sleep deprivation against detainees.

Finding #15: From 23 Nov 02 to 16 Jan 03, the subject of the first Special Interrogation Plan was interrogated for 18-20 hours per day for 48 of the 54 days, with the opportunity for a minimum of four hours rest per day.

Technique: Authorized: SECDEF approved technique. This technique was officially permitted under 2 Dec 02 SECDEF Memorandum – The use of 20-hour interrogations

[4] Bradycardia is a relatively slow heart; hemo dynamics are mechanics of blood circulation.

DOJ_NMG_0026378

Discussion: SECDEF approved 20 hour interrogations for every 24-hour cycle for the subject of the first Special Interrogation Plan on 12 Nov 02. Later, CDR USSOUTHCOM formalized the definition of sleep deprivation in his 02 Jun 03 memorandum "promulgating" SECDEF's interrogation techniques of 16 Apr 03. He defined sleep deprivation as keeping a detainee awake for more than 16 hours, or allowing a detainee to rest briefly and then repeatedly awakening him, not to exceed four days in succession.

Organizational response: None. This was an authorized interrogation technique approved by SECDEF.

Recommendation #15: The allegation should be closed. Recommend USSOUTHCOM clarify policy on sleep deprivation.

Additional Allegations, Re: The subject of the first Special Interrogation Plan: In addition to the FBI allegations addressed above, the following additional interrogation techniques (not all inclusive) were used in the interrogation of the subject of the first Special Interrogation Plan. Each act is documented in the interrogation MFRs maintained on the subject of the first Special Interrogation Plan.

Finding #16a: That the subject of the first Special Interrogation Plan was separated from the general population from 8 Aug 02 to 15 Jan 03.

Technique: Unauthorized prior to 12 Nov 02: SECDEF did not approve movement of detainee to an "isolation facility" for interrogation purposes prior to approval of Category II techniques for the subject of the first Special Interrogation Plan on 12 Nov 02.

Technique: Authorized after 12 Nov 02:

Discussion: The subject of the first Special Interrogation Plan was never isolated from human contact. The subject of the first Special Interrogation Plan was however placed in an "isolation facility" where he was separated from the general detainee population from 8 Aug 02 to 15 Jan 03. The subject of the first Special Interrogation Plan routinely had contact with interrogators and MPs while in the "isolation facility." The SECDEF did not define "isolation facility" when he approved the use of an "isolation facility" for up to 30 days with additional isolation beyond 30 days requiring CDR JTF-GTMO approval on 12 Nov 02. Prior to the SECDEF's approval, placement in an "isolation facility" was not an authorized interrogation technique.

Organizational response to Additional Allegations, Re: The subject of the first Special Interrogation Plan: None taken.

DOJ_NMG_0026379

Eight Techniques Below: Authorized: FM 34-52 technique – Ego down and Futility.

Finding #16b: On 06 Dec 02, the subject of the first Special Interrogation Plan was forced to wear a woman's bra and had a thong placed on his head during the course of the interrogation.

Finding #16c: On 17 Dec 02, the subject of the first Special Interrogation Plan was told that his mother and sister were whores.

Finding #16d: On 17 Dec 02, the subject of the first Special Interrogation Plan was told that he was a homosexual, had homosexual tendencies, and that other detainees had found out about these tendencies

Finding #16e: On 20 Dec 02, an interrogator tied a leash to the subject of the first Special Interrogation Plan's chains, led him around the room, and forced him to perform a series of dog tricks.

Finding #16f: On 20 Dec 02, an interrogator forced the subject of the first Special Interrogation Plan to dance with a male interrogator.

Finding #16g: On several occasions in Dec 02, the subject of the first Special Interrogation Plan was subject to strip searches.[5] These searches, conducted by the prison guards during interrogation, were done as a control measure on direction of the interrogators.

Finding #16h: On one occasion in Dec 02, the subject of the first Special Interrogation Plan was forced to stand naked for five minutes with females present. This incident occurred during the course of a strip search.

Finding #16i: On three occasions in Nov 02 and Dec 02, the subject of the first Special Interrogation Plan was prevented from praying during interrogation

Finding #16j: Once in Nov 02, the subject of the first Special Interrogation Plan became upset when two Korans were put on a TV, as a control measure during interrogation, and in Dec 02 when an interrogator got up on the desk in front of the subject of the first Special Interrogation Plan and squatted down in front of the subject of the first Special Interrogation Plan in an aggressive manner and unintentionally squatted over the detainee's Koran.

Finding #16k: On seventeen occasions, between 13 Dec 02 and 14 Jan 03, interrogators, during interrogations, poured water over the subject of the first Special Interrogation Plan head.

---

[5] The subject of the first Special Interrogation Plan alleges that he was subject to "cavity searches." During the course of interrogation, the subject of the first Special Interrogation Plan was strip searched. The AR 15-6 was unable to determine the scope of these strip searches.

DOJ_NMG_0026380

Discussion: the subject of the first Special Interrogation Plan was a high value detainee that ultimately provided extremely valuable intelligence. His ability to resist months of standard interrogation in the summer of 2002 was the genesis for the request to have authority to employ additional counter resistance interrogation techniques. The techniques used against the subject of the first Special Interrogation Plan were done in an effort to establish complete control and create the perception of futility and reduce his resistance to interrogation. For example, this included the use of strip searches, the control of prayer, the forced wearing of a woman's bra, and other techniques noted above. It is clear based upon the completeness of the interrogation logs that the interrogation team believed that they were acting within existing guidance. Despite the fact that the AR 15-6 concluded that every technique employed against the subject of the first Special Interrogation Plan was legally permissible under the existing guidance, the AR 15-6 finds that the creative, aggressive, and persistent interrogation of the subject of the first Special Interrogation Plan resulted in the cumulative effect being degrading and abusive treatment. Particularly troubling is the combined impact of the 160 days of segregation from other detainees, 48 of 54 consecutive days of 18 to 20-hour interrogations, and the creative application of authorized interrogation techniques. Requiring the subject of the first Special Interrogation Plan to be led around by a leash tied to his chains, placing a thong on his head, wearing a bra, insulting his mother and sister, being forced to stand naked in front of a female interrogator for five minutes, and using strip searches as an interrogation technique the AR 15-6 found to be abusive and degrading, particularly when done in the context of the 48 days of intense and long interrogations.[6] While this treatment did not rise to the level of prohibited inhumane treatment the JTF-GTMO CDR was responsible for the interrogation of the subject of the first Special Interrogation Plan and had a responsibility to provide strategic guidance to the interrogation team. He failed to monitor the interrogation and exercise commander discretion by placing limits on the application of otherwise authorized techniques and approaches used in that interrogation. The Commander stated he was unaware of the specific details or impacts of the techniques on the detainee for this important interrogation. His failure to supervise the interrogation of the subject of the first Special Interrogation Plan allowed subordinates to make creative decisions in an environment requiring extremely tight controls[7].

Recommendation #16: The Commander JTF-GTMO should be held accountable for failing to supervise the interrogation of the subject of the first Special Interrogation Plan and should be admonished for that failure.

---

[6] The AR 15-6 found no evidence that the subject of the first Special Interrogation Plan was ever physically assaulted. His medical records show no evidence of any physical assaults. A medical examination completed on the subject of the first Special Interrogation Plan on 16 Jan 03 found no medical conditions of note.

[7] The JTF-GTMO Commander's testimony that he was unaware of the creative approaches taken in the interrogation is inconsistent with his 21 Jan 03 letter to CDR USSOUTHCOM in which he asserts that the CJTF approved the interrogation plan in place and it was followed "relentlessly by the command."

DOJ_NMG_0026381

Allegation: In addition to the allegations above, the AR 15-6 also considered additional allegations raised specifically by the subject of the first Special Interrogation Plan.

Finding #17: The AR 15-6 was unable to corroborate the subject of the first Special Interrogation Plan's allegations to the point of concluding that they had occurred by a preponderance of the evidence. Specific findings include:

The AR 15-6 did find that the subject of the first Special Interrogation Plan was required to stand for periods of time which he may have interpreted as forced positions.

There is evidence that the subject of the first Special Interrogation Plan regularly had water poured on his head. The interrogation logs indicate that this was done as a control measure only.

There is no evidence that the subject of the first Special Interrogation Plan was subjected to humiliation intentionally directed at his religion. It is however possible that the subject of the first Special Interrogation Plan interpreted many of the interrogation techniques employed to be religious humiliation.

The AR 15-6 found no evidence that the subject of the first Special Interrogation Plan was threatened with homosexual rape. He was told on 17 Dec 02 that he was a homosexual but not threatened in any manner.

There is no evidence, to include entries in his medical records, that either occurred regarding the subject of the first Special Interrogation Plan or any other detainee.

Discussion: In reaching conclusions on the treatment of the subject of the first Special Interrogation Plan the AR 15-6 relied heavily on the interrogations logs. The level of specificity of the logs strongly supports their credibility regarding the interrogation of the subject of the first Special Interrogation Plan and thus they carried considerable weight on the findings.

Recommendation #17: The allegation should be closed

THE SECOND SPECIAL INTERROGATION PLAN

In July 03 interrogators initiated a request for approval of a Special Interrogation Plan for a detainee. This plan was approved by SECDEF on 13 Aug 03. Interrogation logs indicate that the techniques were never implemented because the subject of the second special interrogation plan began to cooperate prior to the approval.

DOJ_NMG_0026382

In addition to the interrogation logs, the AR 15-6 also considered allegations of abuse raised by the subject of the second special interrogation, himself. Specifically, after months of cooperation with interrogators, on 11 Dec 04, the subject of the second special interrogation notified his interrogator that he had been "subject to torture" by past interrogators during the months of July to October 2003.[8]

Allegation: That military interrogators improperly used extremes of heat and cold during their interrogation of detainees.

Finding #18: During the summer of 2003, interrogators would adjust the air conditioner to make the subject of the second special interrogation uncomfortable.

Technique: Authorized: SECDEF approved technique. This technique was officially permitted under 16 Apr 03 SECDEF Memorandum – Environmental Manipulation.

Discussion: The interrogation logs of the subject of the second Special Interrogation Plan indicate that on at least two occasions on 10 and 11 Jul 03 the air conditioner was turned off to heat up the room. In addition the subject of the second special interrogation alleges that on repeated occasions from Jul 03 to Oct 03, he was subjected to placement in a room referred to as the "freezer."

Organizational response: No disciplinary action required. Environmental manipulation was expressly permitted in the 16 Apr 03 SECDEF Memorandum. There is no evidence in the medical records of the subject of the second special interrogation being treated for hypothermia or any other condition related to extreme exposure.

Recommendation #18: The allegation should be closed.

Allegation: The subject of the second special interrogation alleges that female military interrogators removed their BDU tops and rubbed themselves against the detainee, fondled his genitalia, and made lewd sexual comments, noises, and gestures.

---

[8] He reported these allegations to an interrogator. The interrogator was a member of the interrogation team at the time of the report. The interrogator reported the allegations to her supervisor. Shortly after being advised of the alleged abuse, the supervisor interviewed the subject of the second special interrogation, with the interrogator present, regarding the allegations. Based upon this interview, and notes taken by the interrogator, the supervisor prepared an 11 Dec 04 MFR addressed to JTF – GTMO JIG & ICE. The supervisor forwarded his MFR to the JTF – GTMO JIG. The JIG then forwarded the complaint to the JAG for processing IAW normal GTMO procedures for investigating allegations of abuse. The JAG by email on 22 Dec 04 tasked the JDOG, the JIG, and the JMG with a review of the complaint summarized in the 11 Dec 04 MFR and directed them to provide any relevant information. The internal GTMO investigation was never completed.

DOJ_NMG_0026383

Finding #19: The AR 15-6 was unable to corroborate the allegations to the point of concluding that they had occurred by a preponderance of the evidence.

Discussion: The interrogation logs for the subject of the second special interrogation indicate that on a number of occasions female interrogators used their status as females to distract the subject of the second special interrogation during the interrogation but there is nothing to corroborate the allegation of the subject of the second special interrogation.

Organizational response: No disciplinary action taken.

Recommendation #19: The allegation should be closed.

Allegation: The subject of the second Special Interrogation Plan alleges that in late summer of 2003 he was hit by guards and an interrogator "very hard" and "with all their strength" he was hit "all over."

Finding #20: The AR 15-6 was unable to corroborate the allegations to the point of concluding that they had occurred by a preponderance of the evidence.

Discussion: The interrogation logs contain no reference to any physical violence against the subject of the second Special Interrogation Plan. His medical records indicate that in August 2003 the subject of the second special interrogation reported "rib contusions" from an altercation with MPs when moved between camps. During this examination the physician also noted an "edema of the lower lip" and a "small laceration" on his head. There are no other medical entries of any other physical injuries. There are no indications of swelling or contusions to support a conclusion that the subject of the second special interrogation was hit "very hard all over."

Organizational response: No disciplinary action taken. The allegation was not substantiated.

Recommendation #20: The allegation should be closed. There is no evidence to support the subject of the second special interrogation's allegation of physical abuse.

Allegation: A DoD interrogator improperly impersonated a Navy Captain assigned to the White House.

Finding #21: The Special Team Chief impersonated a USN Captain assigned to the White House during interrogation of the subject of the second special interrogation.

Technique: Authorized: This technique is permitted under FM 34-52 – Deception.

DOJ_NMG_0026384

Discussion: On 2 Aug 03 the Special Team Chief presented himself to the subject of the second special interrogation dressed as a Captain in the USN and indicated he was from the White House in an effort to convince the subject of the second special interrogation that he needed to cooperate with his interrogators. The Special Team Chief presented a letter to the subject of the second special interrogation, which indicated that because of the subject of the second special interrogation's lack of cooperation, U.S. authorities in conjunction with authorities from the country of origin of the subject of the second Special Interrogation Plan would interrogate the mother of the subject of the second Special Interrogation Plan. The letter further indicated that if his mother was uncooperative she would be detained and transferred to U.S. custody at GTMO for long term detention. While the JTF-GTMO Commander acknowledges that he was aware of the intent by the interrogator to wear Captain's rank and purport to be from the White House, he stated that he was not aware of the intention to convey a threat or the plan to use a fictitious letter.

Organizational response: None taken.

Recommendation #21: The allegation should be closed. No further action necessary.

<u>Allegation</u>: That Military interrogators threatened the subject of the second special interrogation and his family.

Finding #22: The Special Team Chief threatened the subject of the second special interrogation and his family in July, August and September 2003.

Technique: Unauthorized: This technique was rejected by SECDEF on 2 Dec 2002

Discussion: During the interrogation of the subject of the second special interrogation, a masked interrogator was used to interrogate the subject of the second special interrogation [9]. On 17 Jul 03 the masked interrogator told that he had a dream about the subject of the second special interrogation dying. Specifically he told the subject of the second special interrogation that in the dream he "saw four detainees that were chained together at the feet. They dug a hole that was six-feet long, six-feet deep, and four-feet wide. Then he observed the detainees throw a plain, pine casket with the detainee's identification number painted in orange lowered into the ground." The masked interrogator told the detainee that his dream meant that he was never going to leave GTMO unless he started to talk, that he would indeed die here from old age and be buried on "Christian… sovereign American soil." On 20 Jul 03 the masked interrogator, "Mr.

[9] The interrogator was a DoD interrogator who was masked so as to preserve the identity of the interrogator. This was done in case the interrogation team wanted to use that interrogator later in another role.

DOJ_NMG_0026385

X", told the subject of the second Special Interrogation Plan that his family was "incarcerated." On 2 Aug 03, the Special Team Chief, while impersonating a USN Captain from the White House, told the subject of the second special interrogation that he had a letter indicating that the subject of the second special interrogation's family had been captured by the United States and that they were in danger.[10] He went on to tell the subject of the second special interrogation that if he wanted to help his family he should tell them everything they wanted to know. The MFR dated 02 Aug 03 indicates that the subject of the second special interrogation had a messenger that day there to "deliver a message to him". The MFR goes on to state:

> "That message was simple: Interrogator's colleagues are sick of hearing the same lies over and over and are seriously considering washing their hands of him. Once they do so, he will disappear and never be heard from again. Interrogator assured detainee again to use his imagination to think of the worst possible scenario he could end up in. He told Detainee that beatings and physical pain are not the worst thing in the world. After all, after being beaten for a while, humans tend to disconnect the mind from the body and make it through. However, there are worse things than physical pain. Interrogator assured Detainee that, eventually, he will talk, because everyone does. But until then, he will very soon disappear down a very dark hole. His very existence will become erased. His electronic files will be deleted from the computer, his paper files will be packed up and filed away, and his existence will be forgotten by all. No one will know what happened to him and, eventually, no one will care."

Finally, interrogator MFRs dated 08 Sep 03 indicate that the subject of the second special interrogation wanted to see "Captain Collins" and that they "understood that detainee had made an important decision and that the interrogator was anxious to hear what Detainee had to say. Detainee stated he understood and will wait for interrogator's [Captain Collins] return and that the subject of the second Special Interrogation Plan "…was not willing to continue to protect others to the detriment of himself and his family."

In investigating the actions above, the AR 15-6 focused on the threat made by the Special Team Chief.[11] When questioned about the threats to the subject of the second special interrogation, the Special Team Chief indicated that prior to the "threat" to detainee the subject of the second special interrogation he cleared the proposal and the letter with the senior judge advocate who approved the technique as a "deception." As written the letter does contain a threat to detain the subject of the second special interrogation's mother but does not contain any threat on her life or that of her family. The SJA indicated in his initial interview

---

[10] The actual content of the letter simply indicates that his mother will be taken into custody and questioned.

[11] Mr. X's dream story does not rise to the level of a threat. It appears to be a staged prelude to the direct threat made by the Special Team Chief.

DOJ_NMG_0026386

that he did not recall the letter. He subsequently elected to exercise his Article 31 rights and declined to answer direct questions about the letter and the threats. The Special Team Chief also indicated that both JIG Chiefs in charge during the promulgation of the Special Interrogation Plan[12] were also aware of the threat letter. The first JIG Chief has retired and was unwilling to cooperate with this investigation. The second JIG Chief indicated under oath that he was unaware of the interrogation events discussed above. He recognizes, that read in conjunction with each other, they indicate a threat. He believes that the Commander of JTF-GTMO was not aware of the threat since the second JIG Chief was not aware of the threat. The second JIG Chief stated that they had weekly meetings with the Commander to discuss interrogations but they would not have covered this level of detail in that meeting. Neither he nor the Commander read interrogation MFRs on a regular basis. Finally, the Commander denies any knowledge of the existence of the threat or the letter. He does not recall ever discussing the issue of threats with the interrogators. He is aware that this is a prohibited practice and would not have permitted it if he had been aware of the plan.

Taken as a whole, it appears that the decision to threaten the subject of the second Special Interrogation Plan was made by the Special Team Chief. He claims that he cleared the plan with the senior judge advocate but not with his supervisors. Considering the actual content of the letter, it is reasonable to conclude that the JAG advised that the letter was a proper deception and therefore additional approval was not required. The Special Team Chief knew that under FM 34-52 deception did not require additional approval.

Despite the fact that the letter may be a proper deception technique under FM 34-52, the interrogation logs clearly indicate that the interrogation went well beyond the "threat to detain" made in the letter, and in fact was a threat to the subject of the second special interrogation and his family that violated the UCMJ, Article 134 Communicating a threat.

Organizational Response: None taken.

Recommendation #22: While the threats do not rise to the level of torture as defined under U.S. law, the facts support a conclusion that the Special Team Chief violated the UCMJ, Article 134, by communicating a threat. Recommend his current commander discipline the Special Team Chief.

[12] The first JIG Chief was in charge during the approval process for the second Special Interrogation Plan and then rotated out of JTF-GTMO. The second JIG Chief was in charge during the execution of the second Special Interrogation Plan

DOJ_NMG_0026387

SUMMARY OF FINDINGS

The findings above fall into three categories: Techniques that were authorized throughout the interrogation periods; techniques that were never authorized and finally, techniques that were originally unauthorized, and then subsequently authorized. The summary below only outlines the latter two categories of techniques to address whether the findings violated the UCMJ, international law, U.S. Law, regulations or directives.

Techniques that were never authorized: AR 15-6 determined the following acts were NEVER authorized under any interrogation guidance:

a) On at least two occasions between February 2002 and February 2003, two detainees were "short shackled" to the eye-bolt on the floor in the interrogation room;

b) Sometime in October 2002 duct tape was used to "quiet" a detainee.

c) Military interrogators threatened the subject of the second special interrogation and his family;

Techniques that became authorized after the fact: AR 15-6 determined the following acts were initially not authorized under existing interrogation guidance but later authorized as an approved technique.

a) On several occasions during 2002 and 2003, interrogators would adjust the air conditioner to make the detainees, to include the subject of the first Special Interrogation Plan, uncomfortable. This technique is now permitted under the SECDEF 16 Apr 03 guidance.

b) On several occasions prior to 2 Dec 02 and between 15 Jan 03 and 16 Apr 03 interrogators had detainees moved from one cell to another every few hours to disrupt sleep patterns and lower the ability to resist interrogation. This technique is now permitted under the SECDEF 16 Apr 03 guidance.

c) In October 2002 a Military Working Dog was brought into the interrogation room during the course of interrogation of the subject of the first Special Interrogation Plan and directed to growl, bark, and show his teeth at the detainee. This technique is subsequently approved for the interrogation of the subject of the first Special Interrogation Plan by SECDEF on 12 Nov 02.

d) The subject of the first Special Interrogation Plan was separated from other detainees in an isolation facility away from the general population from 8 Aug 02 to 12 Nov 02. This technique was subsequently approved

DOJ_NMG_0026388

for the interrogation of the subject of the first Special Interrogation Plan by SECDEF on 12 Nov 02.

In each of the incidents above the violations can best be characterized as violations of policy. The SECDEF's subsequent approval of each of the techniques clearly establishes the ultimate legitimacy of that technique and thus additional corrective action is not necessary.

Additional Matters: In addition to findings outlined above it is important to document some additional findings:

a) The team found no evidence that any detainee at GTMO was improperly documented or unaccounted for at any time. Every agency interviewee clearly indicated that they never knew of any "ghost detainees" at GTMO;

b) Several past interrogators at GTMO declined to be interviewed. In the case of personnel who are currently in a civilian status we had extremely limited authority to compel the individuals to cooperate with this investigation; of particular note was former SGT Erik Saar who has written a book into "activities" at GTMO. Despite repeated requests he declined to be interviewed;

c) During the course of this investigation, JTF-GTMO CG investigated and took action for personal misconduct of senior DoD personnel on GTMO. These allegations were reviewed and it was determined that they were not relevant to this investigation, and did not rise to a level to suggest a leadership environment with any impact on interrogation or detainee operations.

ADDITIONAL RECOMMENDATIONS

This AR15-6 recommends consideration of the following:

a) ***Recommendation #23*** Recommend a policy-level review and determination of the status and treatment of all detainees, when not classified as EPWs. This review needs to particularly focus on the definitions of humane treatment, military necessity, and proper employment of interrogation techniques. (e.g. boundaries or extremes);

b) ***Recommendation #24*** Recommend study of the DoD authorized interrogation techniques to establish a framework for evaluating their cumulative impact in relation to the obligation to treat detainees humanely;

DOJ_NMG_0026389

c) ***Recommendation #25*** Recommend a reevaluation of the DoD and Inter-agency interrogation training consistent with the new realities of the requirements of the global war on terror;

d) ***Recommendation #26*** Recommend a policy-level determination on role of Military Police in "setting the conditions" for intelligence gathering and interrogation of detainees at both the tactical level and strategic level facilities;

e) ***Recommendation #27*** Recommend an Inter-Agency policy review to establish "standards" for interrogations when multiple agencies and interrogation objectives are involved. Particular emphasis should be placed on setting policy for who has priority as the lead agency, the specific boundaries for the authorized techniques in cases with multiple agencies involved, a central "data-base" for all intelligence gathered at a detention facility, and procedures for record keeping to include historical, litigation support, lessons learned, and successful/unsuccessful intelligence gathering techniques.

DOJ_NMG_0026390

TRANSLATION OF STATEMENT PROVIDED BY DETAINEE [redacted] b7e-4, b6-4
NDRS [redacted] 19 Jun 04/1040

On Nov.11, 2004, I was captured while I was doing my daily work in my private office, which is specialized in agriculture services, and that was at 11:00 AM, and at that time I was selling agriculture pump to another person, while almost four Bajero cars stopped, and American civilian persons mounted from the cars. They were armed white persons and some of them had a goatee. One of them ordered me to lay on the ground and he put a plastic piece in my mouth and hooded me and tied my hands to my back, and took me to the car, and when the car started moving, and after a little period of time, one of them tried to break my right thumb, and when he heard the sound of my finger twisting, he started laughing loudly. One of them asked me, "Are you [redacted] I said, "Yes." After b7e-4, b6-4 a little time I heard a call in the radio telling them that there a suspicious orange and white taxi, and they might be attacked, and after a little time they had another call which told them that the danger was vanished, then one of them hit me six times on my neck back with the lower part of his weapon, and the other person who was sitting with me in the rear of the car and keeping my head down, kicked me on my back with his neck. When we arrived at the detaining camp, they stripped me and put water on my body, and that continued for seven days night and day. One of the persons, I think he was Iraqi, hit me several time on my head with his hand, and they turned on a very loud recorder near my head, and that continued for all the detaining period. That way continued for continuous seven days, where I had no sleep except for two limited periods, and that was done by the recorder and cold water, and there was no place assigned for sleep as well, and the weather was too cold, and I was completely naked, as well as I got only eight pieces of biscuits along with the first seven days, which resulted in quick prostration of my body. There was an Iraqi translator, who was the only person who practiced hitting me using his hands, and once he used his legs, but the Americans were practicing other ways of torturing, as two persons were pressing my joints in a way resulted in paralyzing its functions, which caused severe pains and incredible exhaustion starting with my feet up to my neck. When my health situation collapsed, specially my feet which were swelling too much, and I found difficulty in walking and keeping my balance, and that because once one of them was pulling my hood back and pushing my back with his foot and my feet were dragging back, he pulled the hood which resulted in that American's fall back, while my head was hit to the cemented wall, and the blood started bleeding from my nose and mouth, and since that accident I couldn't keep my balance while I am standing. After that I was transferred to the camp of detainees in Al Mosel air port, as a result of my health collapse, and when I entered the camp, they transferred me immediately to the hospital where I was medically treated for almost five to six days, and then I was returned back to the camp of detainees, and after two days I was taken by the same persons for six hours and I had the same ways of previous torturing, as well as pouring hot liquid on my back, and sitting me close to fire, which resulted in burning a part of my right leg, and they put a very hot lamp on my thigh for a very short time. At the end they threatened me that they would bring my wife and my mother and that they would rape them if I did not confess. When I asked them to bring a paper and write whatever they want, I would sign it without any objection. At the end they apologized and said that there is no personal thing and we only doing our job, and they returned me back to the camp of detainees for

Dedication

The 2005 Annual Report is dedicated to the memory of Michele Tomsho, who served as Administrative Officer for this office from 1994 to May 2005, and served the Department of Justice for 25 years. Michele twice received the Department's prestigious Director's Award, personally presented by the U.S. Attorney General, during her career. She received a third Director's Award, posthumously, on October 28, 2005.

Letter from the U.S. Attorney

To All Those Interested in the Work of the Offi ce:

Greetings. I am pleased to present this 2005 Annual Report on the progress and activities of the Offi ce of United States Attorney for the Eastern District of Michigan over the past year. Many varying accomplishments are described in these pages, and the consummation of that effort is a tribute to the hard work, professionalism, and dedication of the attorneys and supporting personnel who make our offi ce the excellent one it is.

Since I became United States Attorney in March 2005, I have had the privilege of observing, participating in, and supervising some truly remarkable prosecution efforts and some highly signifi cant civil cases. In a wide variety of areas, from dismantling large-scale drug-traffi cking organizations, to prosecuting material support for terrorism cases; from human traffi cking and trade secret theft to violence and corruption, this offi ce has pursued, and is continuing to pursue, signifi cant investigations, prosecutions and other matters. I am proud that we have also successfully brought several cases that ensure security for the disabled and others who need and have the protections of federal civil rights laws.

In addition to these signifi cant cases, we had some exciting developments in other important areas as well. We continue to work hard to be present and, in fact, a positive presence, in all facets of our large and diverse community. In the areas of personnel and training, some new managers were welcomed onboard in April, and three new Assistant U.S. Attorneys were hired at the end of the year. Formal training and continuing legal education efforts aimed at furthering the development of all AUSAs is in the works.

We've also developed a written media relations manual for our AUSAs to rely upon and we hosted a management training retreat for our leaders. I believe we should see ourselves not only as attorneys and prosecutors in the district, but as effective leaders, both in our offi ce and in our community at large. A number of men and women have gone above and beyond the call of duty to truly lead this offi ce, and I think you will see that leadership on full display in the accomplishments described in this report.

In 2006, we will continue to pursue our number one priority, fi ghting domestic and international terrorism, both to protect our community and to prevent future attacks. We will also work hard on our other priority areas, including pursuing public corruption, drug traffi cking, violent and repeat fi rearms offenders, corporate and health care fraud, and continued community outreach. I look forward to working with you to meet these daily challenges.

Sincerely,

Stephen J. Murphy
United States Attorney

Map of Counties in the Eastern District of Michigan

US Attorney's Biography - Stephen J. Murphy, III

Stephen J. Murphy, III, was nominated by President George W. Bush for the position of United States Attorney for the Eastern District of Michigan on February 17, 2005, and confirmed by unanimous consent of the U.S. Senate on June 8, 2005.

As U.S. Attorney, Mr. Murphy oversees offices in Detroit, Flint and Bay City, which comprise approximately 100 Assistant U.S. Attorneys and a similar number of support staff. He has identified office prosecutorial priorities in the areas of counter-terrorism, public corruption, illegal narcotics enforcement, and violent crime. The U.S. Attorney has also developed strategies for partnering with citizens in educational efforts to reduce crime and to develop highly effective firearms and violent crime initiatives under the President's Project Safe Neighborhood program.

Prior to his service as United States Attorney, Mr. Murphy was an attorney with the General Motors Legal Staff in Detroit, where he specialized in litigation, internal investigations, counseling on various business law issues and other "white collar" matters. Mr. Murphy was previously with the U.S. Department of Justice for more than twelve years: first as a trial attorney with the Civil and Tax Divisions in Washington, D.C. (hired by Attorney General Meese under the prestigious Honors Program), and then as a federal prosecutor in Detroit from 1992-2000. During his tenure as an Assistant U.S. Attorney, Mr. Murphy prosecuted and tried various violent, narcotics and white-collar criminal cases in Detroit. He has served as a public arbitrator for the National Association of Securities Dealers.

A 1987 graduate of the St. Louis University School of Law (where he helped edit the Law Review), Mr. Murphy is also active in legal and community affairs: he served as a member of the Michigan State Bar Board of Commissioners and sat on a committee appointed by the Michigan Supreme Court to revise the Michigan Rules of Criminal Procedure.

DOJ_NMG_0026402

Mission Statement

United States Attorney's Office
Eastern District of Michigan

Our mission is to serve justice by prosecuting federal crimes and representing the United States of America in federal court with diligence, fairness, and integrity. For us, doing right and upholding the letter and spirit of the Constitution and laws of the land are not only more important than prevailing in any single case, they are the standards by which we measure the success of every case.

DOJ_NMG_0026403

Office of the United States Attorney

Executive Office

The United States Attorneys serve as the nation's principal litigators under the direction of the Attorney General. There are 93 United States Attorneys stationed throughout the United States, Puerto Rico, the Virgin Islands, Guam, and the Northern Mariana Islands. United States Attorneys are appointed by, and serve at the discretion of, the President of the United States, with advice and consent of the United States Senate. One United States Attorney is assigned to each of the judicial districts, with the exception of Guam and the Northern Mariana Islands, where a single United States Attorney serves in both districts. The United States Attorney is the chief federal law enforcement officer of the United States within his or her particular jurisdiction.

United States Attorneys conduct most of the trial work in which the United States is a party. The United States Attorneys have three statutory responsibilities under Title 28, Section 507 of the United States Code:

- the prosecution of criminal cases brought by the federal government;
- the prosecution and defense of civil cases in which the United States is a party; and
- the collection of debts owed the federal government which are administratively uncollectible.

Although the distribution of caseloads varies between districts, each has every category of cases and handles a mixture of simple and complex litigation. Each United States Attorney exercises wide discretion in the use of his/her resources to further the priorities of the local jurisdictions and the needs of their communities. United States Attorneys have been delegated authority and control in the areas of personnel management, financial management, and procurement for their offices.

~ ~ ~

A Retrospective View: History of the United States Attorney's Office, Eastern District of Michigan

Like everything else on the Michigan frontier, the United States Attorney's Office was born of humble beginnings. In 1815 the Office consisted of one man, Solomon Sibley, and a small room where he prepared his legal pleadings and interminable correspondence with a quill pen. Being a pioneer lawyer in the Michigan territory could be a physically challenging and dangerous profession. Most of the time, Sibley and his successor "District Attorneys," as they were then known, appeared in court at the modest Second Council House, at the southwest corner of Jefferson and Randolph in Detroit. But they also were required to appear at other territorial courts in Cincinnati, Marietta or Chillicothe, Ohio. Since there were no roads and few lodging places, this meant braving the weather in a horseback trip on Indian trails through the wilderness, with legal papers in saddlebags and a long cloak as protection from snow and rain.

For most of the first century of the nation's history, the District Attorneys, particularly those in the territories, received very limited guidance or supervision from Washington, D.C. There was no Justice Department until 1870, and the Attorney General had no responsibility for monitoring

DOJ_NMG_0026404

the District Attorneys or their cases in the lower courts. The District Attorneys were relatively independent, especially in criminal matters. Along with the United States Marshal Service and local law enforcement, they were responsible for maintaining law and order for a developing nation. There were no criminal investigators until late in the century. The District Attorneys had to glean the evidence themselves to present to grand juries and at trial, sometimes with the help of private parties. Given the limitations on transportation and communication, prosecuting an undeveloped case on the frontier was a challenging task.

Throughout the 1800s the District Attorneys filled in the legal and procedural interstices in their federal litigation, either by ingenuity or by advice from others. They prosecuted criminal cases involving assaults and murders, timber depredation and gambling. Most of the civil cases involved either the collection of debts owed to the United States or matters stemming from the sale of land to the torrential migration of pioneers into the territory and, after 1837, the State of Michigan.

Solomon Sibley

During the Civil War, it was the United States Attorney's responsibility to enforce the nation's first draft law, which was quite unpopular, as well as to support the Union's war effort. After the war, the crime wave which swept across the country and the explosive growth of commercial activity resulted in a severe case backlog in the federal courts. The federal district in Michigan was split into the Eastern and Western Districts. These factors led to the acceptance by Congress that consolidation of the nation's legal business was needed. In 1870 the Attorney General was made chief legal officer and advisor, and the Justice Department was created to supervise the nation's law officers.

During the next few decades the Justice Department fostered three important developments: the creation of a permanent force of federal criminal investigators, the construction of a federal prison system, and the codification of the federal civil and criminal law. The Department also struggled among the competing legal departments of a growing number of federal agencies to define its authority and assume chief responsibility for the nation's legal affairs.

At the beginning of the twentieth century, the budget for the entire United States Attorney's Office here in Detroit was about $5,000. The United States Attorney had one Assistant United States Attorney and one Clerk. There were annually about 65 federal criminal cases, involving customs, tax and postal offenses and 41 civil cases, mostly customs cases. Judgments entered in favor of the United States totaled $944.46 and, of this amount, $197.24 was actually realized. World War I greatly increased the Office's legal responsibilities, which included draft registration enforcement, espionage prosecutions and litigation in support of the war effort.

The ramifications of the 18th Amendment prohibiting liquor indelibly changed the Office and, indeed, all of federal law enforcement. Treasury agents from Washington, D.C. focused on the Eastern District of Michigan, where gangs of booze-running mobsters competed in sometimes deadly fashion to smuggle the alcohol across the Detroit River from Canada to gang members waiting in warehouses on the Detroit side. The liquor was then loaded in trucks which distributed it throughout the Midwest. In Michigan, Prohibition was not only a failed social experiment but one which fostered the creation of organized, and often violent, groups of criminals and led to the

DOJ_NMG_0026405

corruption of public offi cials, massive congestion in federal courts, and, worst of all, a pervasive disrespect for the law.

In 1932 Prohibition ended, but the increased function of the federal government and the United States Attorney's Offi ce in public life continued. In virtually every signifi cant development in the history of Eastern Michigan, the United States Attorney's Offi ce has had a role in the form of representing the United States in court and enforcing the nation's laws. When President Roosevelt created a host of new, federal programs to respond to the country's economic crisis, the United States Attorney's Offi ce was responsible for supporting these efforts in litigation and providing advice to the local offi ces of the administrative departments. During World War II, the Offi ce's ten attorneys and twelve support staff worked twelve-hour days handling cases involving selective service, alien registration, and land condemnation for military purposes, as well as criminal prosecutions for harboring the enemy and other, more routine, criminal offenses.

First Federal Building in Detroit

A nineteenth century United States Attorney would be shocked at the increase in the size and complexity of the Offi ce during the last half of the twentieth century. The enforcement of federal law and the assertion and defense of federal interests in civil litigation takes a wide variety of forms and has required increased specialization and improved technology. The increased sophistication of the Offi ce's cases required the division of the Offi ce into Civil, Appellate, and Criminal Divisions. The Civil Division was subdivided into Defensive and Affi rmative Litigation Units. The Criminal Division was composed of the General Crimes, Economic Crime, Controlled Substance, Special Prosecutions, and Organized Crime Strike Force units. More recently, the Organized Crime Strike Force has merged with the Special Prosecutions Unit, and, in response to the attacks of September 11, 2001, a Counter-Terrorism Unit has been established.

During the 185 years of the Offi ce's existence in this District, the 53 United States Attorneys and hundreds of Assistant United States Attorneys and staff members have promoted a tradition of uniform treatment for all those whose interests have been affected in criminal and civil cases. They have sought to protect every person's right to fair procedures and a meaningful day in court and to a result which is reasoned and based on the rule of law of this nation. As the Offi ce moves into the new century, this tradition of integrity and dedication will sustain the next generation of attorneys and staff members who are privileged to represent, and to be accountable to, the citizens of the District.

Excerpted from *The History of the United States Attorney's Offi ce*,

OFFICE STRUCTURE

Criminal Division

Assistant U.S. Attorneys in the Criminal Division are assigned to one of five units, each responsible for prosecuting certain categories of federal crimes.

The largest single unit is the Controlled Substance Unit which prosecutes major narcotics traffickers with an emphasis on conspiracies responsible for importation and distribution of substantial quantities of illegal drugs. The majority of attorneys in this unit are members of the Great Lakes Region of the Organized Crime and Drug Enforcement Task Force. The task force conducts investigations of selected conspiracies with the emphasis on detecting and seizing the financial assets of major drug traffickers.

The Economic Crimes Unit conducts investigations and prosecutions of a wide variety of white collar crimes, including large-scale fraud upon businesses and individuals, large-scale fraud involving identity theft, fraud upon government programs, health care fraud, corporate fraud, computer crime, and criminal intellectual property violations. The cases handled by this unit frequently involve lengthy investigations, complex financial analysis, and voluminous document examination.

The General Crimes Unit is responsible for a wide variety of offense categories, including firearms, immigration, bank robbery, embezzlement, counterfeiting, smuggling, food and drug, and Postal Violations. It is a higher volume unit, and many of the newer prosecutors are assigned to this component.

The Special Prosecutions Unit prosecutes corruption by public officials, offenses committed by traditional organized crime networks and emerging organized groups involved in criminal activity, environmental offenses, criminal violations of civil rights laws, and non-drug money laundering.

The Counter-Terrorism Unit investigates and prosecutes matters involving national security including individuals and organizations that engage in foreign counter-intelligence, espionage, and those who plan, financially support, or carry out international and domestic terrorist activities. The unit also has primary responsibility for coordinating the investigation and prosecution of certain transnational organized crime groups involved in alien smuggling, cash smuggling and the operation of illegal unlicensed money transmitting businesses.

DOJ_NMG_0026407

Civil Division

The Civil Division handles an extensive civil case load consisting of the largest number of actively pending federal litigation fi les to be found among the major law fi rms in the metropolitan area. The Civil Division is divided into two components.

The Affi rmative Litigation Section is responsible for all civil cases in which the United States is seeking some type of monetary recovery and/or compliance with federal program requirements. This component handles judgment enforcement, civil penalty cases brought by various federal agencies, bankruptcy, asset forfeiture, environmental enforcement, and various civil fraud cases.

The Defensive Litigation Section defends lawsuits brought against the federal government. These suits include Constitutional torts, medical malpractice, and other tort actions, defense of federal programs and agency decisions, employment discrimination cases, information law cases, immigration cases, and commercial, social security, prisoner, environmental, civil rights, and tax litigation.

~ ~ ~

Civil Cases Filed
Fiscal Year 2005

Appellate Division

Appellate Division Staff

The Appellate Division serves as the editorial board of review for the entire offi ce. The Assistant originally assigned to a case generally remains responsible for that case during its entire life in the offi ce. In criminal cases, this means from the onset of an investigation through the grand jury investigation, indictment, trial, appeal, and even post-conviction claims. In the Civil Division, it means from the beginning of the lawsuit through judgment enforcement and appeal. All appellate briefs, however, are reviewed by the Appellate Division both for soundness of legal analysis and for correctness and effectiveness of form. Assistants in the Appellate Division also directly handle both criminal and civil appeals in sensitive or diffi cult cases. In addition, the Appellate Division acts as “house counsel” to the U.S. Attorney and other Assistants on complex or unusual legal issues.

~ ~ ~

Administrative Division

The Administrative Division is responsible for planning and executing a comprehensive range of administrative services that support offi ce operations. These services include overseeing the offi ce’s budget allocation, providing comprehensive personnel services to employees, maintaining information technology systems, coordinating automated litigation support

DOJ_NMG_0026408

Administrative Division Staff

services, procuring supplies and equipment, and managing property and facilities at three separate staffed office locations (Detroit, Flint and Bay City).

The Fiscal Unit manages the office's operating budget. This entails executing, monitoring and reporting quarterly on budget activity and ensuring that any unexpected expenditures are funded through special one time funding requests. The unit manages the office's credit card programs for both travel and small purchases. The unit also is responsible for managing the payroll budget to ensure that hiring decisions are within allocated funding levels. On an ongoing basis, the budget is closely monitored to ensure that payments are made in a timely manner and that funds are allocated in the best way to meet the office's operational needs, especially in the area of litigation.

The Human Resources Unit provides a myriad of personnel services to support a staff of approximately 200 employees. The scope of the office HR program includes the following: staffing and placement; classification and position management; employee benefits and services; performance management; pay administration; personnel action processing, records maintenance and associated legal reporting requirements; pre-appointment security clearances; overall monitoring of employee orientation, training and development; development and implementation of AA/EEO programs; advisory services for supervisors and managers.

The Information Technology Unit oversees operation of this office's computer systems. A large local area network that connects almost 200 PCs in the office is maintained by the unit. A help desk is staffed to assist users with hardware, software and telecommunications difficulties. The IT unit's webmaster maintains an internal intranet to provide on-line resources to the entire staff, as well as the District's Internet site. The Information Technology unit provides technical oversight of the office's case management system. This information database (also known as the "LIONS" system) tracks defendants coming into the federal legal system.

The Automated Litigation Support Unit is responsible for recommending, supporting, and educating employees on the use of technology to further the Eastern District of Michigan's efforts in various criminal and civil matters. The goal is to increase efficiency, decrease costs, and facilitate user-friendly data management and presentation. One of the unit's essential functions is consulting with Assistant U.S. Attorneys, paralegals, legal assistants, and federal agents/investigators to understand and address their software and hardware needs in managing and presenting documents and evidence. The ALS unit balances the requests of the litigation team with its capabilities, and provides a reasonable, automated approach to litigation management.

The Office Services Unit manages any necessary redesign of existing space and is responsible for ensuring that every square foot of space in the office is used with maximum efficiency. Staff assigned to Office Services assist in the acquisition, operation and maintenance of all non-computer equipment, supplies and services, control an extensive property inventory, and coordinate records management functions. The unit also manages the receipt/delivery of mail and reception services. Finally, the unit provides direct support to the District's Security Manager and ensures that all physical security systems are maintained and all personal and records security requirements are met.

DOJ_NMG_0026409

Branch Offices

Branch offi ces in Bay City and Flint represent the offi ce in litigation for the Eastern District north

Bay City, Michigan Office

of Metropolitan Detroit. The operations of each branch offi ce are under the supervision of a senior supervisory AUSA. The Assistant U.S. Attorneys in Flint and Bay City are responsible for a range of civil, criminal and appellate matters.

The Bay City Branch Offi ce is responsible for the Northern Division of the Eastern District. The Northern Division includes 21 counties in the northeastern portion of the lower peninsula of the state that extends from Saginaw County at the southern end to Cheboygan County at the northern end. The criminal cases range from petty offenses committed in the Huron National Forest to any homicides that occur in the Saginaw-Chippewa Indian Reservation located near Mt. Pleasant, and includes any other federal crimes committed within its geographical area. The Bay City offi ce is staffed by three AUSAs and four support personnel.

Located approximately an hour and a half north of Detroit, the Flint Branch Offi ce represents the government in all criminal and civil litigation arising in Genesee, Lapeer, Shiawassee and Livingston counties. The most frequent prosecutions are controlled substance offenses and general crimes. In recent years, the Flint offi ce has prosecuted an increasing number of fi nancial institution frauds; prescription drug mills; medical billing frauds; and Internet child pornography offenses. The Flint Branch also supports two "Weed & Seed" programs, and is active in Project Safe Neighborhoods. The offi ce is staffed by four AUSAs; three support staff and a student trainee. Two Genesee County Assistant Prosecutors have been appointed as Special Assistant United States Attorneys to prosecute illegal fi rearms offenses.

United States Courthouse, Flint, Michigan

2005 CASE HIGHLIGHTS

COUNTER-TERRORISM

Hizballah Fund-raiser Sentenced to 54 Months for Providing Material Support to a Foreign Terrorist Organization

Mahmoud Youssef Kourani pleaded guilty to charges of conspiracy to provide material support to Hizballah, which has been designated as a foreign terrorist organization. Kourani was sentenced to 54 months' imprisonment. The evidence showed that the defendant organized and hosted meetings at his Dearborn residence, featuring speakers from Lebanon, during which the participants were solicited to make donations to Hizballah. The money solicited by Kourani was intended to support Hizballah's "Orphans of Martyrs" program to benefit the families of those killed in Hizballah terrorist operations or by Hizballah's enemies. *United States v. Kourani*

Baggage Screener Convicted of False Statements During Background Check

Sadeq Naji Ahmed, a baggage screener at Detroit Metropolitan Airport, was convicted by a jury on charges of making false statements on his security background investigation, and was sentenced to 18 months' imprisonment. The defendant falsely stated that he had never had a security clearance suspended, when in fact, his clearance and his access to classified information were suspended in 2001 when he was a member of the U.S. Air Force at Elgin Air Force Base in Florida. He was also found guilty of falsely stating that he had not left a job under unfavorable conditions when, in fact, he had left the Air Force because he had made statements that U.S. aircraft flying over Iraq should crash, that he supported Usama bin Laden, that he was neither for nor against the September 11, 2001 terrorist attacks, and that he would not fight with the U.S. military if the United States took action against Iraq. His employment with the Transportation Security Administration was terminated. *United States v. Ahmed*

~ ~ ~

Father and Son Sentenced in Bank Fraud, Money Laundering Scheme

Ahmad Musa Jebril and Musa Abdallah Jebril, son and father, were sentenced to 70 and 58 months' imprisonment, respectively. Both were convicted at trial in November 2004 on charges of conspiracy, bank fraud, mail fraud, wire fraud, Social Security fraud, money laundering, failure to file income tax returns, and being felons in possession of firearms and ammunition. The jury also issued a special verdict finding 13 real properties were forfeitable and entered a money judgement of $200,000. Both defendants were later charged with jury tampering in connection with their trial. Evidence presented to the Court at the time of sentencing showed that the defendants had supported violence against the United States. *United States v. Jebril*

~ ~ ~

Man Convicted of Threatening to Bomb Federal Courthouse

Defendant Vassalo K. Russell pleaded guilty to charges of threatening to use a weapon of mass destruction against U.S. government

DOJ_NMG_0026411

property. In the summer of 2004, the defendant made three separate bomb threats against the Theodore Levin U.S. Courthouse, the same building in which he later pleaded guilty. The defendant made the threats in an effort to avoid appearing at his court hearings scheduled on those dates on a probation violation for a prior bank fraud conviction. *United States v. Russell*

Two Charged in Separate Threat Cases Targeting Muslims

Defendants pleaded guilty in separate cases to charges of sending threatening email messages to the Islamic Center of America in Detroit. John Barnett pleaded guilty to sending a message that threatened to "hunt" and "kill" those attending the mosque based on their religion. Michael Bratisax pleaded guilty to sending a message stating that he would "pray to get the opportunity to kill a Muslim." Both were awaiting sentencing at the end of 2005. *United States v. Barnett* and *United States v. Bratisax*

MAJOR NARCOTICS CASES

Three Physicians and a Pharmacist Face Charges for Illicit Drug Distribution

Stuart Bilyeu, Elena Perry-Thornton, and Mukunda Mukherjee all licensed physicians, and Oliver Obi, a licensed pharmacist, were all charged in separate indictments for illegal drug distribution. Obi was convicted and sentenced; the others are awaiting trial.

Bilyeu, a medical doctor, was indicted in 2005 for knowingly dispensing and prescribing controlled substances for other than legitimate medical reasons during the operation of his medical practice at the Down River Pain Clinic. Bilyeu is alleged to have prescribed and dispensed hundreds of thousands of dosage units of frequently abused pain medications such as Vicodin, OxyContin, morphine and Dilaudid. In 2003, Bilyeu was the second largest physician purchaser of Vicodin in the State of Michigan, and the following year he was again the number one physician purchaser of Vicodin in Michigan and ranked number 14 in the entire United States. According to the indictment, Bilyeu repeatedly prescribed controlled substances to an undercover patient with minimal or no examination, without significant complaints of pain, after learning that the patient was trading the pills for sex. Patients and relatives of patients have complained that Bilyeu was involved in more than one patient overdose and one patient overdose death. Trial is scheduled for 2006. *United States v. Bilyeu*

Elena Perry-Thorton, M.D., was indicted in 2005 on 20 counts of illegally prescribing prescription drugs, including OxyContin. Contrary to law, at various times Perry-Thornton allegedly operated her office out of an apartment in the Harbortown Apartment complex, her residence, and also out of a used car lot on Junction Street, all in the City of Detroit. In eight months, Perry-Thornton prescribed approximately 80,464 dosage units of OxyContin, 164,379 dosage units of Vicodin, and 71,282 dosage units of Xanax – the OxyContin alone having a minimum street value of approximately $3,200,000. Perry-

Controlled Substance Unit

DOJ_NMG_0026412

Thornton's "patients," according to the indictment, were receiving and/or filling consecutive prescriptions for OxyContin on the same day or within a few days, as well as using different pharmacies. Perry-Thornton is also alleged to have written multiple prescriptions for controlled substances to "runners" in the names of "patients" without ever having either met or examined such "patients." Perry-Thornton is scheduled for trial in 2006. *United States v. Perry-Thornton*

Licensed pharmacist Oliver Obi, owner of the Sherwood Community Pharmacy, pleaded guilty and was sentenced to 87 months in prison for illegally selling millions of dosage units of prescription drugs from his pharmacy. Obi worked with a small number of trusted pill dealers and would take orders for thousands of dosage units of controlled substances. Obi never required a prescription, but would simply sell the drugs in bulk in the original manufacturer's bottles. In 2001, the investigation showed, Obi ordered and received 173,003 dosage units of 60 milligram doses of acetaminophen with codeine. This order was more than 70 times the national average for a pharmacy to dispense. Obi also ordered 1,012,600 7.5 milligram dosage units of hydrocodone, commonly known as Vicodin. This purchase pattern was more than 65 times the national average for a pharmacy to dispense. Obi ranked 3rd in the entire United States for the purchase of these two drugs, which are commonly diverted from legitimate use to illegal street sale. One witness described using a duffel bag to carry the drugs out of the defendant's pharmacy. The court ordered Obi to forfeit approximately $1.6 million in cash, real estate and cars. The case is currently on appeal. *United States v. Obi*

Mukunda Mukherjee, M.D., was determined to have written more prescriptions for 80mg OxyContin than any other physician or hospital in the state of Michigan for an 18-month period in 2003-04. He was indicted in 2004 for distributing schedule II, III, and IV prescription drugs for no legitimate purpose, and has been in custody since June 29, 2004. Forfeiture of assets worth about $169,000 was also charged in the indictment. Trial is set for early 2006. *United States v. Mukherjee*

~ ~ ~

"Black Mafia Family" Drug Organization Charged in Large Scale Drug Ring

Terry Flenory, Demetrius Flenory, and 23 other defendants were indicted on various federal drug and money laundering charges. According to the indictment, the Flenorys have allegedly been operating a drug organization, sometimes known as the "Black Mafia Family" (BMF), which dealt in multi-kilo quantities of cocaine in the Detroit metropolitan area beginning in the early 1990's. The organization is alleged to have distributed in excess of 476 kilograms of cocaine and laundered in excess of $270,000,000 in U.S. currency. By the mid-1990's, the organization extended into other parts of the country. As part of the conspiracy, BMF would use vehicles equipped with traps and hidden compartments to conceal and transport cocaine and the cash generated from the sale of cocaine. Drug proceeds were laundered through the purchase of luxury vehicles, real property, cashier's checks, and, in an unusual scheme, over $1 million in winning lottery tickets. Law enforcement officers from across the country have seized over $5 million in

DOJ_NMG_0026413

cash from the Flenorys' drug organization. This case is awaiting trial. *United States v. Flenory et al.*

~ ~ ~

Cocaine and Marijuana Multi-Million Dollar Criminal Enterprise Taken Down

Alleged drug kingpin Quesand Lewis and 22 others were indicted in July 2005 on various drug trafficking and money laundering charges. Twenty-two of those individuals are charged with conspiracy to distribute marijuana and cocaine, and with money laundering from 1994 through the present. According to the indictment, the organization was responsible for two attempted murders in Detroit during the course of its operation. Quesand Lewis is charged as the principal supervisor operating a continuing criminal enterprise involving the distribution of marijuana and cocaine in Detroit and elsewhere, including more than 30,000 kilograms of marijuana, and generating illegal drug proceeds well in excess of $10 million. The grand jury further charged Lewis with a forfeiture count in the amount of $178,115,820, which was alleged to represent the gross proceeds he obtained from the sale and distribution of marijuana during a one-year period. This case first came to light in March of 2004, when the Novi Police Department seized approximately $4.8 million in narcotics proceeds from a Novi hotel and from a residence in Northville. As a result of that seizure, Alexander Tam and Leonardo Montalvo were charged with participating in a conspiracy to distribute marijuana. Both men were convicted and sentenced to incarceration in a federal correctional institution. Evidence seized in Novi lead to the initiation of a court-ordered wiretap investigation involving more than twenty telephones utilized by the co-conspirators. Several defendants have already pleaded guilty and others are awaiting trial. *United States v. Lewis et al.*

~ ~ ~

"Canadian Connection" High Potency Marijuana Ring Busted

During 2005, ten members of the Canadian-based Trong Nguyen organization were convicted and sentenced for conspiracy to distribute marijuana, money laundering and bulk cash smuggling. Extradition is being sought for five additional defendants, including Trong Nguyen, who have been arrested in Canada. U.S. and Canadian law enforcement authorities have also seized and forfeited in excess of $5 million in drug proceeds from this organization. In 2003 and 2004, law enforcement officials tracked a steady increase in the volume of marijuana smuggled into the United States from Canada, much of it across the Ambassador Bridge, the Windsor-Detroit tunnel and the Sarnia Blue Water Bridge. This marijuana – often referred to as "B.C. Bud" – is hydroponically grown at locations in Ontario, British Columbia and elsewhere. Because of its potency, Canadian-grown hydroponic marijuana can sell for over $2,500 a pound in the United States. Canadian and U.S. law enforcement

DOJ_NMG_0026414

officials also determined that elements of organized crime - in this case an Asian criminal organization made up primarily of Vietnamese nationals – were playing a central role in the sale and distribution of hydroponically grown marijuana, a highly lucrative business through which they generated millions of dollars per month in criminal proceeds. The target organization – headed by Trong Nguyen of Missassaugua, Ontario – was able to coordinate the distribution and sale of over $1 million of marijuana per month through associates located in Detroit, Minneapolis, Boston, Pittsburgh, Philadelphia and other locations across the United States. *United States v. Nguyen et al.*

~ ~ ~

Saginaw Cocaine Traffickers Convicted After Gun Battle

James Sylvester, Fred Wyatt, Calvin Ayers and Corine Sylvester were indicted on cocaine trafficking charges after an investigation uncovered a multi-kilogram cocaine distribution conspiracy involving the shipment of the drug from California to Saginaw, Michigan using couriers who would travel by bus. On the final five-kilo shipment, a controlled delivery of the cocaine was made by Sylvester and he was arrested at the bus station. Officers then proceeded to the house that was the ultimate destination to conduct a search, and upon entering the house they were met by a hail of bullets. Two officers were wounded and two of the three shooters inside the house were killed. The surviving defendant was convicted by the state, while defendants Wyatt, Ayers and Corine Sylvester pleaded guilty in federal court.

Ayres was sentenced to ten years, but that sentence was reduced to 6 years based on his cooperation. Corine Sylvester was placed on probation for two years. James Sylvester was convicted by a jury of twelve felony offenses relating to cocaine, crack cocaine, marijuana, prescription drugs and firearms violations. Sylvester and Wyatt are currently awaiting sentencing. *United States v. Sylvester et al.*

~ ~ ~

Seventeen Convicted in Scheme Involving Cocaine-Packed "Candles" Smuggled Via UPS

Riley Graham and sixteen others were indicted and convicted on charges arising from a large scale, long term cocaine distribution and money laundering operation involving in excess of 150 kilograms of cocaine and over $1.5 million in proceeds. From about 1991 through 1998, the defendants would travel to and from California, Georgia, Pennsylvania, West Virginia, Tennessee, Ohio and Michigan to distribute large amounts of cocaine. To avoid detection, the defendants encased the cocaine in wax, compressed to hockey puck size, so that it looked like a large candle. The "candles" would then be shipped as a "special gift" with a box full of clothing to various clothing stores in the greater Detroit area that were purchased as business fronts. Later, they would place the cocaine "candles" in wicker gift baskets along with other such items to disguise them. A United Parcel Service (UPS) employee, who had been hired by the drug organization, would intercept the packages containing the drugs and deliver them. As part of the plan to hide the drug proceeds, top leader Riley Graham had various members of his organization transport or wire large amounts of drug money to an associate in Saint Lucia, West Indies, in an effort to build and develop the first casino resort on the island of Saint Lucia. *United States v. Graham et al.*

DOJ_NMG_0026415

"Joy Boys" Drug Gang Put Out of Business

Fourteen members of a Detroit drug gang called the "Joy Boys" were indicted on cocaine distribution charges. The "Joy Boys" specialized in selling crack cocaine on a "24/7" basis to customers who would call a "customer service" telephone number and arrange to meet at a particular street location on the west side of Detroit or in a near western suburb. The sale would be conducted while both the sellers and the buyers were in their cars. The method of operation has been referred to as a "mobile crack house." Undercover buys, aerial surveillance, video, search warrants and court-ordered wiretaps were used to investigate the gang. During the peak operating times, between October of 2002 and December 2003, almost seven thousand customer service calls per week were made to the organization, generating approximately $30,000 daily in narcotics proceeds. As of October 2005, eleven defendants had plead guilty, one defendant is pending trial and two defendants are fugitives. *United States v. Smith ("Joy Boys" Drug Organization)*

~ ~ ~

Combatting the Influx of "Ecstasy" from Canada

The Eastern District of Michigan has seen a dramatic increase in the importation of the powerful designer drug "Ecstasy" from Canada through the use of ports of entry at Detroit and Port Huron. In August alone, agents of the Immigration and Customs Enforcement seized approximately eight million dollars worth of Ecstasy pills. To combat this problem, the office has pursued an aggressive prosecution posture. The following are a few examples of significant prosecutions.

- In August, 2005, Barbara Williams, Nicholas Williams and Kandy Reeleder were all charged with conspiracy to possess with the intent to distribute Ecstasy. The Williams' had taken their automobile across from Canada on a small ferry in order to enter at the Algonac, Michigan port of entry. Inspecting ICE agents found that the back seat had been hollowed out and stuffed with approximately 21 vacuum-sealed bags containing over 200,000 Ecstacy pills with a street value of $5,000,000. The defendants are detained pending their trial. *United States v. Reeleder et al.*
- In August 2005, Phi Lau was arrested at the Ambassador Bridge in Detroit after ICE agents found his fuel tank filled with 25 zip-loc bags filled with Ecstasy pills. The total number of pills was 2,000, with an estimated street value of approximately $500,000. Mr. Lau is currently detained pending his trial. *United States v. Lau*
- Matthew Kachman and nine other individuals were indicted for smuggling tens of thousands of Ecstasy pills into Mid-Michigan from an Asian connection in Toronto, Canada. The pills were brought over the Blue Water Bridge to Port Huron by numerous individuals in private vehicles. All defendants have pleaded guilty and have been or are awaiting sentence. *United States v. Kachman et al.*
- In 2005, Chanh Chan Lao, a significant importer and distributor of Ecstasy into Michigan from Canada, was sentenced to 20 years in prison after being convicted by a jury in Bay City, Michigan. After a lengthy investigation by ICE and DEA, Lao, a Toronto resident, was arrested when he entered the United States. This case involved approximately 600,000 Ecstasy pills. *United States v. Lao*

DOJ_NMG_0026416

WHITE COLLAR CRIME PROSECUTIONS

Economic Crimes Unit

MCA Execs Convicted in $256 Million Corporate Fraud

Seven former high-level executives of MCA Financial Corporation (MCA) have been convicted of fraud for falsifying MCA's books and records and misleading investors, lenders, and regulators, resulting in losses to investors and lenders of over $256 million. The main defendant, Chief Executive Offi cer Patrick Quinlan, was sentenced to ten years in prison in 2005. MCA, operating in Southfi eld, Michigan was a privately held mortgage company that made conventional and subprime loans to individual homebuyers in Michigan and several other states. These loans were sold to investors. From 1993 until its seizure by state regulators in January 1999, MCA engaged in a scheme to defraud by misrepresenting its true fi nancial condition through the preparation and use of false and fraudulent fi nancial statements that were regularly fi led with the SEC and made available to brokers, investors, banks and other institutional lenders. As the result of paper transactions involving low-income housing in the City of Detroit between MCA and numerous off-book partnerships controlled by MCA's executives, millions of dollars in sham assets and revenues were created and included in MCA's balance sheets and statements of income. Losses to the victims of the MCA fraud – individual investors, banks, the pension fund for police offi cers and fi re fi ghters of the City of Detroit, and other institutional lenders – totaled about $256 million. In 2001 and 2002, seven former MCA executive offi cers were charged with federal crimes. All seven have pleaded guilty to various combinations of wire fraud, mail fraud, making false statements to the SEC, conspiracy, and misprision of felony. Four have been sentenced to sentences ranging from two to ten years. The remaining three executives will be sentenced in early 2006. *United States v. Quinlan et al. (MCA)*

~ ~ ~

Lason Officials Charged with Falsifying Records, Defrauding Investors

Three top executives from Lason, Inc., a publicly traded company headquartered in Troy, Michigan, were charged in 2003 in an indictment alleging that, from 1997 to 2000, they defrauded investors and potential investors, institutional lenders, and others of tens of millions of dollars by overstating and fabricating company revenues, understating its expenses, and fraudulently boosting its earnings per share numbers for the purpose of meeting or exceeding the quarterly consensus estimates of stock analysts. Lason, Inc. provided printing services, mail-processing service, and electronic information management services to hundreds of business customers, including automobile manufacturers, and operated units located throughout the United States and other countries. In August 2004, one of the defendants, Lason's former chief operating offi cer, pleaded guilty to participating in the fi ling of a false and fraudulent quarterly report (10-Q) for Lason with the SEC. He has also agreed to cooperate. The trial of the remaining two defendants is scheduled to begin in June 2006. *United States v. Monroe et al. (Lason)*

DOJ_NMG_0026417

Operation "Broken Loan": FBI Undercover Sting Busts Mortgage Fraud Scheme

Six defendants were indicted and fourteen others charged in criminal complaints charging them with fraud in connection with home mortgage loans. The losses involved over $2.7 million. A two-year undercover operation run by the Macomb FBI uncovered several complex and extensive networks of individuals working within real estate markets to defraud lending institutions through the submission of fraudulent mortgage applications. These schemes include the use of false employment and asset information, straw buyers and collusive appraisers willing to create fraudulently inflated property appraisals. Most of the schemes were coordinated by mortgage brokers who recruit the participants and split the illegal proceeds, in various amounts between them. *United States v. Hooker, et al.*

Owner of Title Insurance Company Embezzles Nearly $2 Million

Thom Hopper owned Klear Title, which held escrow monies in trust for Commonwealth Land Title Insurance Company. From January through April 2002 Hopper took about $1,829,000 from this trust account; wired it to a personal account he controlled in Ottawa, Canada; and used it to purchase items for himself, including a Canadian race course and a down payment on the Tampa Bay Storm, an Arena Football team. Hopper pleaded guilty April 14, 2005, and is awaiting sentencing. *United States v. Hopper*

~ ~ ~

Phony "Credit Repair" Company's Officers Indicted

Four defendants were charged with 30 counts of mail fraud in connection with a phony "credit repair" company called ICR Services. They claimed to have a "magic disk" that could access the computer data bases of the credit reporting services and erase all negative and derogatory information from the client's report. Over the course of the scheme approximately $60 million was received from clients. No trial date is set. *United States v. Pavone et al.*

~ ~ ~

Two Arrested for Economic Espionage - Trade Secrets Theft

On February 1, 2005, two former executives from Metaldyne, Inc. were arrested on a criminal complaint charging them with stealing trade secrets relating to Metaldyne's proprietary powdered metal manufacturing process for making large auto parts, such as connecting rods. Metaldyne, Inc. of Plymouth, Michigan is one of only two companies in the world that has perfected this manufacturing process. According to the complaint, former Executive Vice President, Anne Lockwood and former Technology Director, Fu Ping Liu, unlawfully obtained secret computer files crucial to this powdered metal process in order to assist a Chinese parts manufacturer. *United States v. Lockwood, et al.*

Brothers Charged in Medicare Fraud, Bribery Scheme

Two brothers are charged in various counts of an indictment charging health care fraud; mail and wire fraud; conspiracy; making false statements related to a health care matter; and attempting to bribe federal law enforcement agents. According to the indictment, the defendants illegally sought reimbursement from Medicare for the salaries of their homemaker spouses who were falsely listed as health care provider managerial executives

DOJ_NMG_0026418

on annual cost reports submitted to Medicare, as well as for marketers they paid to seek patient referrals from physicians' offi ces, but who were falsely described as performing reimbursable roles such as nursing and quality assurance. The defendants are charged with receiving Medicare reimbursements exceeding $2,500,000 to which they were not entitled. In addition, the United States brought a civil case against one of the defendants who fl ed to Pakistan rather than face arraignment. As a result of this action, brought under the Federal Debt Collection Procedures Act, the United States was able to seize nearly $1 million of the defendant's assets, prompting him to return to the United States and face prosecution. A jury trial is scheduled for early 2006. *United States v. Khan*

~ ~ ~

Attorney Indicted in Commodity Futures Trading Investment Fraud

Northville attorney and real estate broker Charles Mady was indicted for mail and wire fraud; embezzlement from a commodity pool; being an unregistered commodity pool operator; and money laundering. According to the indictment, during a 28-month period, Mady solicited over $12,000,000 from at least 30 people for the purpose of pooling their funds and using the money to trade in the commodity futures markets.

Mady allegedly lied about his trading record (his consistent losses eventually exceeded $4,000,000) and also took over $3,000,000 of investor funds for his own personal use, while giving false documents to his investors. The indictment alleges that, as a result of these acts, defendant caused his investors to lose a total of over $8,000,000. While awaiting trial on these charges, Mady was re-indicted for making various false statements to another victim, causing him to grant Mady access to the individual's private electronic security trading account, and allowing Mady to incur over $1,000,000 in trading losses in the victim's account. *United States v. Mady*

Doctor and Eight Others Charged with Defrauding Blue Cross-Blue Shield

Detroit doctor Zack Brown, M.D., and eight others were indicted for health care fraud in connection with a scheme to recruit at least 34 "phony patients" that bilked Blue Cross-Blue Shield of Michigan (BCBSM) out of more than $1 million. The "phony patients" would allow Dr. Brown to bill their BCBSM cards for treatments they never received, then take a share of the reimbursement paid by BCBSM. In addition to Dr. Brown, others acted as recruiters who were paid to fi nd the "phony patients." Defendants billed BCBSM for more than 20,000 physical therapy services and injections between 1999 and 2003 that were never actually provided to patients. Seven other defendants have already pleaded guilty and 19 have signed pre-trial diversion agreements and begun paying back more than $100,000 in restitution. *United States v. Brown et al.*

Federal - State - Local Task Force Fights Identity Theft

The Detroit Metro Identity Fraud - Task Force (DMIF-TF) was formed in 1999 with the goal of maximizing law enforcement and prosecution resources to target individuals and organizations involved in the production and use of counterfeit means of identifi cation, identity theft and account takeovers. The Federal Bureau of Investigation, the United States Postal Inspection Service, the United States Secret Service, and the Social Security Administration - Offi ce of Investigations

DOJ_NMG_0026419

have joined with state and local agencies, including the Michigan State Police, the City of Troy Police Department and the City of Auburn Hills Police Department to create a powerful law enforcement response to ID theft crimes. Other state and local law enforcement agencies provide investigative assistance on a case by case basis. Target Corporation also provides a full-time fraud investigator to the task force. Since its inception in 1999 through September 2005, DMIF has executed over 114 search warrants, brought 110 indictments, and arrested 293 defendants.

VIOLENT CRIMES

General Crimes Unit

Six Charged in Murder of Armored Security Guard

In October 2005, six men, Timothy Dennis O'Reilly, Norman Duncan, Kevin Watson, Earl Johnson, Archie Broom and Khayyam Wilson, were indicted for a number of crimes including premeditated murder with a firearm during and in relation to a crime of violence, to wit: Bank Robbery. The indictment alleges that these individuals ambushed and shot Norman Anthony Stevens, a Total Armored Service guard and a father of six while he was restocking the ATM machine at a Dearborn Michigan Credit Union. Approximately $204,000 was taken during the robbery. Defendants are also charged with a second robbery of a Guardian Armored Security Services vehicle in a similar manner. This time, however, the victim driver was able to run to safety after having been shot at. The defendants used a stolen minivan as a getaway vehicle and netted approximately $170,000. All defendants are currently detained and are awaiting trial. *United States v. O'Reilly et al.*

~ ~ ~

Ypsilanti Drug Ring Charged with Murder and Conspiracy

Ten defendants have been charged with conspiracy to distribute controlled substances and use of a firearm during drug trafficking offenses, resulting in murder. The indictment alleges that the charged individuals conspired to run a drug organization which operated in the Ypsilanti area from 1998 through 2004. As part of the conspiracy and in an effort to protect their profits, seven of the defendants, were charged with killing Seth Thompson, a rival drug trafficker, as a means of eliminating competition. All defendants are currently awaiting trial. *United States v. Taylor et al.*

~ ~ ~

Latin Counts Street Gang Charged with Drug Trafficking and Murder

Twenty-nine members of the Mario Mendez crew, part of the Latin Counts street gang, were indicted on charges of drug conspiracy and firearms violations related to six home invasions which occurred in Southwest Detroit. The Latin Counts is a gang organization which has long operated in Southwest Detroit. These activities include the killing of rival gang members or drug dealers, armed home invasions at locations alleged to have large amounts of drugs stored in them and numerous other forms of criminal activity, including witness intimidation. All

DOJ_NMG_0026420

defendants have either pleaded guilty and/or are awaiting sentencing. *United States v. Mendez et al. (Latin Counts)*

~ ~ ~

Seven Indicted on Methamphetamine, Murder, and Firearms Charges

Seven individuals were indicted by a federal grand jury in Bay City, Michigan in July, 2005 on charges of trafficking in over 500 grams of methamphetamine, in addition to firearm offenses and a drug-related homicide. Named in the 27-count indictment were Donald Norton York, David Warren Tice, Jr., Shelli Tice, Jonathan Patrick Rose, Sergio Coria, Matthew Tyler, and James Laughton. The indictment charges that York, Tice, and Laughton conspired to murder Brian "Lefty" Langdon in March of 2002 and that Rose violated federal firearm laws. Shelli Tice is charged with illegally possessing drugs. *United States v. York et al.*

~ ~ ~

PROJECT SAFE NEIGHBORHOODS

Protecting neighborhoods from armed criminals is at the top of our public safety agenda. Project Safe Neighborhoods is designed to focus federal law enforcement and prosecution resources on serious offenders who present the most imminent threat to society based on their prior criminal history or the proclivity toward violence.

The following two cases are examples of the excellent results from Project Safe Neighborhoods:

~ ~ ~

Defendant Sentenced to 151 Months on Firearms Conviction

Omar Vaughn pleaded guilty on July 15, 2005, to one count of felon in possession of a firearm and one count of possession with Intent to distribute marijuana. The charges arose following an investigation and execution of search warrants by the DEA and Southfield Police Department at three locations. Three firearms (one stolen), and approximately 8,180 grams of marijuana, along with ammunition and narcotics paraphernalia were recovered during the execution of the warrants. Approximately $32,000 in U.S. currency was seized and was forfeited in connection with this matter. Vaughn was sentenced to 151 months incarceration. *United States v.Vaughn*

~ ~ ~

Lifetime Probationer Sentenced to 420 Months Incarceration for Gun and Drug Convictions

Vincent Thompson was arrested following the execution of a search warrant by the Detroit Police Department at a residence in Detroit where suspected drug activity was occurring. Two days before the warrant was executed, Detroit Police Officers made a controlled purchase of narcotics from the location. Officers found 11.34 grams of crack cocaine, 33.28 grams of marijuana and a loaded 357 handgun. Thompson was on "lifetime probation" at the time of his arrest, and due to his significant criminal history, was sentenced to 420 months. *United States v. Thompson*

DOJ_NMG_0026421

PROTECTING CHILDREN FROM EXPLOITATION

Man Charged in Connection with Commercial Exploitation of Children

On April 26, 2005, Karl Kaechele was arrested at Detroit Metropolitan Airport after returning to the United States from Vietnam and Cambodia. Following his arrest, illegal prescription drugs and a series of notebooks chronicling two or more years of child sexual assault and prostitution offenses were seized from his luggage. A subsequent search of his Florida home revealed additional evidence of international travel for the purpose of abusing children. Kaechele was indicted in May 2005 and is currently detained pending trial. *United States v. Kaechele*

Couple Convicted of Abducting Minor and Coercing Prostitution

Clarence Brown and his girlfriend Holly Marie Hollis, under the pretenses of transporting a 14-year-old minor to her home, abducted the victim and transported her to Fort Wayne, Indiana, where she was forced into prostitution at a truck stop. In order to instill fear in the child, Brown raped the victim twice and otherwise physically abused her. The victim eventually escaped after a female truck driver befriended her and agreed to take her home. Hollis pleaded guilty to her role in the case and was sentenced to 46 months in prison. Brown was found guilty after trial and is currently awaiting sentencing. *United States v. Brown et al.*

~ ~ ~

Child Predator Travels from Chicago to Abuse "Minor"

Karthikenyan Ramachandran, a resident of Chicago, Illinois engaged in a series of online conversations with an undercover Deputy of the Macomb County Sheriff's Department whom he believed to be a 15-year-old girl. Ramachandran indicated his desire to engage in sexual activities with the girl as well as smoke marijuana. During one of the online conversations, Ramachandran sent an image of his genitals using a webcam connected to his computer. As a result of the online conversations, Ramachandran traveled from Chicago to a park in Mount Clemens, Michigan to meet who he thought would be a 15-year-old girl. Instead, Ramachandran was met by officers of the Sheriff's Department who arrested him. Ramachandran had in his possession at the time of his arrest a bottle of wine, a quantity of marijuana and condoms. Ramachandran is currently awaiting trial. *United States v. Ramachandran*

~ ~ ~

Indiana Man Indicted for Attempted Sexual Conduct with a Minor

Kent Guest, a Frankfort, Indiana resident was indicted on charges of interstate travel for the purpose of engaging in illicit sexual conduct with a minor in 2005. According to the indictment, Guest began communicating through instant messages and email with an undercover FBI agent who was posing as a 39-year-old divorced female interested in a relationship that would involve sexual activity with her daughters, ages three and five. During some of the online conversations, Guest made references to his sexual interest in children as well as discussing preparing a child for intercourse. Guest made

DOJ_NMG_0026422

arrangements to meet with the person he thought was the divorced female. Instead, Guest was arrested by FBI agents once he arrived at the agreed upon destination. During an inventory search, agents discovered a bag containing the prescription sexual potency drug Cialis, a bottle of herbal sexual potency compound called "HGH Extreme" and three images emailed to Guest by the UC agent. Guest is currently awaiting trial. *United States v. Guest*

~ ~ ~

Utah Child Sexual Predator Convicted

Jonathan Owens, a Roy, Utah resident pleaded guilty to charges involving interstate travel for the purpose of engaging in illicit sexual conduct with a minor and for interstate distribution of child pornography. In March and April of 2005, Owens engaged in a series of online conversations with an undercover FBI agent whom he believed to be a single mother of two young daughters, ages three and fi ve. He indicated a desire to engage in sexual contact with the children, as well as their mother. During the series of online conversations, Owens, on one occasion, sent images of child pornography to the undercover agent. As a result of the conversations Owen, in connection with a business trip to Oklahoma, planned to travel to Detroit, Michigan to meet with the woman and her daughters. Upon his arrival at the Detroit Metropolitan Airport, Owens was arrested by FBI agents. Owens is currently awaiting sentencing. *United States v. Owens*

CHILD PORNOGRAPHY

Man Convicted on Child Pornography Charges

Kirk Surant was convicted by guilty plea to interstate shipment/receipt of child pornography and possession of child pornography. Surant used Yahoo groups to communicate with Angela Larkin of Williamsport, Pennsylvania, who sent Surant child pornographic images of Larkin's daughter, age two. Surant's seized computers were found to contain these images as well as more than 600 other images that depicted children less than 12 years of age, as well as images of violence and sado-masochism. Surant is currently awaiting sentencing. *United States v. Surant*

~ ~ ~

Defendant Pleads Guilty to Using Yahoo Group to Distribute of Child Porn

Daniel Floied pleaded guilty to interstate distribution of child pornography. In October 2003, Floied joined various Yahoo groups that permitted him to purchase, upload and download child pornographic images. While participating in the group titled "tnl 24", Floied uploaded 35 child pornographic images and made them available to other members of that group. The images contained depictions of children less than 12 years of age. Floied is currently awaiting sentencing. *United States v. Floied*

DOJ_NMG_0026423

Royal Oak Man Awaits Trial for Possession of over 10,000 Child Porn Images

Robert Kent was indicted on a charge of possession of child pornography. A search of Kent's residence in Royal Oak, Michigan yielded one computer, one floppy disk and 38 compact disks. More than 12,000 images of child pornography or images belonging to a child pornography series were found in allocated space on Kent's computer and on the other examined media. The images primarily consisted of prepubescent female children posing nude and engaging in sexually explicit acts, alone and with other adults and children. Additionally, Kent's computer directory structure displayed a high level of organization, categorizing all of the child pornography images into specific, descriptive folders by age and picture series. Kent is currently awaiting trial. *United States v. Kent*

~ ~ ~

TAX FRAUD

Mobile Home Park Owner Convicted of Tax Fraud

Timothy Wirth was involved in the mobile home park business. He submitted a series of false bank loan statements to different lending institutions in order to obtain ever-increasing amounts of credit. Included in the false submissions were IRS returns Wirth had supposedly filed, but hadn't. On at least one occasion he forged the signature of an income tax preparer on such a return. He also forged the signatures of individuals he had a land contract with, as well as the signature of two bank officials and a notary on various real property instruments. He then recorded the instruments in order to create a false impression as to his real estate holdings and financial status. He has pleaded guilty and is currently awaiting sentencing. *United States v. Wirth*

~ ~ ~

Tax Preparer Sentenced in Multiple False Return Scheme

April Jones was convicted by a jury on 31 counts of aiding and assisting in the preparation of false federal income tax returns. Jones gained larger refunds and minimized tax liabilities through her tax service for co-workers at a local auto plant and their referrals. She did this by adding fictitious job search deductions, gifts to charity, and un-reimbursed employee expenses, causing the Internal Revenue Service to suffer a tax loss of over $70,000. In most cases, Jones failed to sign the returns as the preparer even though she was collecting a fee. At sentencing, the court determined that her relevant conduct, involving 58 additional tax returns, led to a total tax loss of over $244,000. Internal Revenue Service Criminal Investigation Division became aware of Jones' activities during their investigation of Maquilla Yvonne Squire, of Detroit, Michigan, another local auto plant employee. During questioning, many of the taxpayers who utilized Squire's services, identified Jones as the return preparer on their subsequent tax returns. Squire was sentenced to 27 months' imprisonment as the result of pleading guilty to two counts of aiding and assisting in the preparation of false and fraudulent tax returns, after creating over $730,000 in false deductions. April Jones was sentenced to 35 months in prison followed by one year supervised release. *United States v. Jones et al.*

DOJ_NMG_0026424

PUBLIC CORRUPTION and SPECIAL PROSECUTIONS

Special Prosecutions Unit

Former County Prosecutors, Police Chief Charged with Firearms Offenses

A Bay City grand jury returned indictments against three former local officials charging them with abusing their offices in order to personally obtain and possess machine guns and silencers. Fred MacKinnon and Gary Theunick used their positions as county prosecutor and chief assistant prosecutor, respectively, to buy several such firearms by claiming that the purchases were being made by the prosecutor's office as a law enforcement agency rather than in their personal capacity. Maxwell Garnett, who was then the chief of police of Rose City in Ogemaw County, likewise claimed that the machine guns and silencers were being purchased by and for the police department when he was actually buying the firearms for himself and his associates. All are awaiting trial. *United States v. Theunick et al.*

~ ~ ~

Wayne County Former Official Sentenced in Bribery Scheme

Wilbourne A. Kelley, III, of Detroit was sentenced to 44 months in prison, a fine of $30,000, and restitution of $113,413.66 to Wayne County as a result of his 2004 convictions for conspiracy, extortion, federal program bribery, and making false statements to federal agents. Kelley's wife, Barbara Kelley, 57, of Detroit, was also sentenced to 41 months in prison, a fine of $30,000, and restitution of $91,516 to Wayne County for her convictions on conspiracy, extortion, federal program bribery, money laundering, and making false statements to federal agents. From 1987 until 1999 Wilbourne Kelley was Wayne County's Deputy Chief Operating Officer assigned to the Office of the County Executive, responsible for the operation of Detroit Metropolitan Airport. The evidence at trial showed that Kelley and his wife conspired to wrongfully obtain money and property from companies which did business with the airport. *United States v. Kelley*

~ ~ ~

Former Federal Immigration Official Convicted of Stealing From Detainees

Patrick M. Wynne, a former detention officer responsible for housing illegal immigrants, entered a plea of guilty to stealing cash and other property from hundreds of illegal immigrants between 2000 and 2004. During that time Wynne was also the property officer for the INS/ICE detention facility in Monroe, Michigan. In that position, Wynne had been entrusted with maintaining property belonging to hundreds of individuals who were kept in custody pending deportation from the United States. It was Mr. Wynne's duty to ensure that the property was secure and was returned to the rightful owner at the time he or she was released from custody. Instead, Mr. Wynne stole as much as $290,000 from more than 500

DOJ_NMG_0026425

detainees. The underlying investigation resulted in a review and a restructuring of the procedures used by the Detroit Office of the Immigration and Customs Enforcement Division to document, maintain and return property seized from illegal immigrants. *United States v. Wynne*

~ ~ ~

Detroit Police Officer Found Guilty of Stealing Cocaine from Property Room, Sentenced to 220 Months in Prison

Former Detroit Police officer Donald Hynes was convicted in March 2005 for his part in the theft of over 100 kilograms of cocaine from the Detroit Police Department evidence vault, and associated money laundering and obstruction of justice offenses. Seven codefendants pled guilty in 2004, including the main coconspirator, John Cole. The evidence at Hynes's trial showed that Hynes had access to the computer password of a Narcotics Division lieutenant, which he used to change the computer records of seized cocaine to designate that it should be destroyed rather than retained. John Cole then picked up the cocaine for "destruction," but instead sold it and used the proceeds to buy houses and other properties. Cole concealed his ownership of the properties by putting them in the names of relatives and associates. Cole, who testified against Hynes, was sentenced to 180 months in prison. Hynes was sentenced to 220 months. In addition, eighteen properties (valued at over $700,000) as well as cash and automobiles were forfeited. The case was investigated jointly by the FBI and the Internal Revenue Service Criminal Investigation Division. *United States v. Hynes*

~ ~ ~

19 Convicted in Large-scale Public Corruption Schemes in East Detroit and Clintondale School Districts

Nineteen defendants involved in a corrupt payment scheme were sentenced in connection with charges brought relating to a pattern of corrupt practices involving both the East Detroit Public Schools and the Clintondale Community Schools. The investigation began with the complaints of two newly elected board members at East Detroit Public Schools who perceived a corrupt relationship between Hudson Construction – the construction manager on a $30,000,000 bond project – and the district superintendent, several administrators and fellow board members. The execution of several search warrants revealed a pattern of corrupt activities, including kick backs and payments for work that was not performed. As a result of this investigation 19 defendants, including numerous school administrators, elected board members and building and service contractors either pleaded guilty or were convicted of various federal law violations. These included seven school administrators, three school board members, seven contractors, one revenue officer employed by the Internal Revenue Service, and one inspector employed by Macomb County. *United States v. Hudson et al.*

DOJ_NMG_0026426

Chippewa Valley Principal Convicted of Stealing $400,000

Former Chippewa School District elementary school principal Richard Zaranek pled guilty in October 2005, to embezzlement and money laundering for funneling approximately $400,000 from the school's child care and parent teacher organizations into his personal accounts. The plea agreement requires Zaranek to serve at least 27 months in prison and forfeit property, including equity in his primary residence, to repay the school. *United States v. Zaranek*

~ ~ ~

Three River Rouge School Administrators Convicted for Stealing from Employees, School

River Rouge Schools Superintendent Benjamin Benford pleaded guilty to extorting approximately $23,000 from school administrators working under him in the school district. Benford did so by requiring that each administrator pay him a certain amount of cash on his birthday, at Christmas, at the time of school board elections, and on Bosses' Day. Benford was sentenced to 15 months' imprisonment and ordered to pay full restitution to the affected administrative staff members. While Benford was superintendent, he hired his friend Joseph Hudson to assist in running the school's television studio. Hudson then used that position to steal over $200,000 from the school district between 2000 and 2002. Hudson went to trial and was convicted of all counts. Hudson is awaiting sentence. His sentencing guideline range is 27 to 33 months. Codefendant Leon Higgins, who assisted Hudson in defrauding the district of over $100,000, pleaded guilty and cooperated in the investigation. Based upon his cooperation, he received a sentence of probation and was ordered to pay full restitution, even though he only received $10,000 from the fraud – the balance was retained by Hudson. *United States v. Benford, et al.*

~ ~ ~

Police Officer Convicted for Selling Drugs to Addicts, Webcasting Drug Usage

Detroit Police officer Ceiere Campbell was convicted by a jury in December 2004 for distributing crack cocaine and heroin. The evidence at trial showed that Campbell provided the drugs to addicts he found on the streets of Detroit, in exchange for the addicts allowing Campbell to film them as they used the drugs. Campbell then used the video footage on a pay-for-view website he created called "Streets Illustrated." In April 2005, Campbell was sentenced to 24 months in prison. *United States v. Campbell*

~ ~ ~

"Asian Spas" Charged in Prostitution Ring

After a lengthy undercover investigation led by the FBI, eight indictments were returned by a Flint grand jury against 13 defendants, including the principal operators of Asian "Spas" operated as fronts for prostitution activities in Genesee, Saginaw, and Midland counties. Charges included conspiracy; money laundering; and interstate travel in aid of racketeering, and each indictment also included counts seeking criminal forfeiture of assets. The prostitutes at these spas were not indicted; all were Asian nationals, some illegally in the United States. Charges were dismissed against one defendant who was mentally ill, and

DOJ_NMG_0026427

another who died. Forfeitures totaling $297,000 in cash and two residences were ordered by the court. *United States v. Kim, et. al.*

~ ~ ~

CIVIL RIGHTS – CRIMINAL ENFORCEMENT

Human Trafficking Ring: Ukranian Women Coerced to Work as Exotic Dancers

Michail Aronov, a Lithuanian citizen, pleaded guilty to charges that he conspired with others to compel Eastern European women to serve as exotic dancers in the metropolitan Detroit area in violation of federal law. Aronov also pled guilty to engaging in an immigration conspiracy involving the women, which included illegal recruitment, transportation, and harboring of the women. Finally, Aronov pled guilty to conspiring to launder the proceeds of the compelled servitude and immigration crimes. At the time of his plea, Aronov admitted that he and his partners operated a business enterprise from 2001 through 2005 called "Beauty Search, Inc.," premised on importing, brokering and managing Eastern European women who served as dancers at exotic dance clubs in the Southeast Michigan area, and that he and his partners held the women in a condition of compelled service and collected their earnings. Aronov admitted that he and his partners employed a number of coercive methods to compel and maintain the continued service of the dancers. Aronov's sentencing guidelines range of imprisonment is 13½ to 16½ years. He agreed to pay restitution and forfeit at least $537,043. *United States v. Aronov, et al.*

~ ~ ~

Former Taylor Man Sentenced to Four Years for Arson Hate Crime

In July 2002, Lori and Reginald Doster bought and renovated a house in Taylor, Michigan. Just as they were finishing the renovations and about to move in, the house was subjected to an arson attempt. A rear bedroom window was broken, gasoline was poured in, and the gas was lit. The house suffered significant damage. The fire was part of a campaign to drive the Dosters, who are African American, from the neighborhood because of their race, as demonstrated by various other incidents such as "KKK" being spray-painted on their door. Michael Richardson, a former resident of the neighborhood, told acquaintances that he knew who set the fire, but when he was interviewed by the FBI, he denied having any such knowledge. He was charged with making a false statement and in July 2005 was sentenced to 48 months' imprisonment. Richardson was allowed by the court to turn himself in, and when he failed to do so on the designated date he was charged with failure to surrender. Trial on that charge is scheduled for early next year. *United States v. Richardson*

~ ~ ~

Five Mt. Clemens Officers Convicted on Excessive Force/ Obstruction Charges

In July, 2002, five uniformed Mt. Clemens police officers were involved in the traffic stop of a vehicle operated by Robert Paxton. Paxton had just engaged in a "road-rage" incident with an off-duty Mt. Clemens officer, and the five on-duty officers stopped Paxton a few minutes later. They

DOJ_NMG_0026428

pulled Paxton from his vehicle, threw him to the ground and pinned him. He was then kicked and punched repeatedly, before being thrown into a police car and taken back to the police station. When the officers returned to the station, they agreed to concoct a false story of what happened so as to legitimize their use of force on Paxton. All of the officers involved, including the off-duty officer from the road rage incident who came to the scene to watch, were charged with various civil rights and obstruction of justice offenses. Two officers were convicted of using excessive force against Paxton. The five officers were convicted of obstructing the investigation. The lead defendant, Patrick Carson, was sentenced to 33 months in prison. Duane Poucher pleaded guilty to the same charges, testified at trial, and received a sentence of two years' probation. The remaining defendants were each convicted of obstruction of justice offenses and were sentenced to terms of probation which include home confinement. The convictions and sentences are now on appeal. *United States v. Carson, et al.*

~ ~ ~

LABOR RACKETEERING

Two Union Leaders Charged in Construction Discount Scheme

Walter Mabry is the Executive Secretary-Treasurer of the Michigan Regional Council of Carpenters (MRCC). Anthony Michael is the former President and Executive Director of the MRCC. Mabry and Michael are charged with conspiring to solicit and receive prohibited payments in the form of discounts from a number of construction companies whose employees were represented, or would have been admitted to membership in, the MRCC, and with solicitation and receipt of a prohibited payment (discount) from one of the companies. According to the indictment, between approximately January 1998 and December 1999 Mabry and Michael, using

their union positions, conspired to solicit and obtain extraordinary discounts (that is, discounts beyond those typically given to customers) totaling over $120,000 on building materials, labor, and related costs, from a number of area construction companies whose employees were members of the union, in order to reduce the cost to Mabry of constructing a new personal residence in Grosse Pointe Park, Michigan. Trial is in 2006. *United States v. Mabry et al.*

~ ~ ~

Former UAW Officials Indicted for Extortion and Mail Fraud

Donny Douglas and Jay Campbell are charged in a three-count indictment with conspiracy to violate the Labor-Management Relations Act, conspiracy to extort, and mail fraud. According to the indictment, Douglas and Campbell conspired to require General Motors to hire two persons for positions to which they were not entitled, as a condition of resolving a labor dispute between General Motors and UAW Local 594. The indictment charges that this conduct was intended to defraud the members of Local 594 of a duty of fair representation by Douglas and Campbell, who were union officials at the time. A jury trial is scheduled for March 2006. *United States v. Douglas et al.*

~ ~ ~

DOJ_NMG_0026429

ORGANIZED CRIME

Albanian Organization Charged in Murder-Racketeering Ring

Florian Carcani pleaded guilty in state court to second degree murder, and has agreed to testify against his codefendants. In addition, Carcani has agreed to plead guilty to committing a violent crime in aid of racketeering in federal court. The remaining defendants – Oliger Merko, Ketjol Manikou and Edmond Zoica – await trial for first degree murder. In addition, Edmond Zoica has been indicted federally with committing violent acts in aid of racketeering. His federal case has been held in abeyance until the conclusion of the state court prosecution. *United States v. Carcani, et al.*

~ ~ ~

ENVIRONMENTAL CRIMES

Waste Disposal Executive Sentenced to 27 Months for Illegal Dumping

Ghazi George was the vice president of City Environmental in Detroit. City Environmental was in the business of accepting hazardous waste from industries for proper disposal. Rather than incur the expense of proper disposal, George directed the employees of City Environmental to simply flush hazardous wastes down the drain and into the city sewer system, or caused the wastes to be sent to a landfill that was not equipped to handle them. In order to conceal what City Environmental was doing, George ordered his employees to tamper with monitoring equipment on which the Detroit Water & Sewer Department relied to verify that City Environmental was complying with limitations on what it could put down the sewer. In March of 2005, George was sentenced to 27 months in prison and a $60,000 fine after pleading guilty to violating the Resource Conservation & Recovery Act and the Clean Water Act. The case was investigated by the Environmental Protection Agency and the FBI. *United States v. George*

~ ~ ~

Paint Company Owner Convicted for Improper Storage of Hazardous Waste

Norman Solomon was the president and owner of Michigan Industrial Finishes, a paint manufacturing facility in Hamtramck. Between 1997 and 2004, at Solomon's direction, Michigan Industrial Finishes stored at least one metric ton of hazardous paint waste per month. The waste included xylene, toluene and methyl-ethyl-ketone. The waste was stored in violation of a cease and desist order from the State of Michigan. EPA removed more than 3,300 drums of waste from the facility at a total cost of $4 million. Solomon was sentenced to four months in a halfway house, four months' home detention and $1 million restitution. The case was investigated by the EPA and FBI. *United States v. Solomon*

DOJ_NMG_0026430

CIVIL DIVISION CASES – DEFENSIVE LITIGATION

Civil - Defensive Litigation Unit

Office Defends the No Child Left Behind Act

This was the first lawsuit, filed on behalf of the National Education Association and eight school districts in Michigan, Texas and Vermont, to challenge the No Child Left Behind Act. The Department of Education is alleged to have violated the Act by forcing the states to spend their own money to meet federal regulatory requirements issued under the Act. The complaint seeks a declaratory judgment that the states are not required to spend their own money to comply with the federal requirements. The case was filed on April 20, 2005 and the government's motion to dismiss was argued on October 19, 2005. *School District of the City of Pontiac v. Margaret Spellings, U.S. Secretary of Education*

~ ~ ~

ACLU Files Lawsuit against PATRIOT Act

This is a case filed by the ACLU on behalf of several Muslim organizations in August of 2003 challenging the constitutionality of Section 215 of the USA PATRIOT Act. That section authorizes the Foreign Intelligence Surveillance Court to order the production of records relevant to certain investigations, including those intended to prevent international terrorism. The plaintiffs challenge Section 215 on the grounds that it violates their privacy, due process and free speech rights. In October of 2003, the government filed a motion to dismiss the case, arguing: 1) the plaintiffs lack standing to challenge Section 215 since they have not and cannot argue that Section 215 has been used against them or any of their members, and 2) even if the plaintiffs had standing, their constitutional arguments are without merit. The motion to dismiss has been pending for about almost two years. *Muslim Community Association of Ann Arbor, et al. v. Ashcroft*

~ ~ ~

Civil Rights Suit Causes Retrofitting of over 5,000 Apartments To Accommodate Persons with Disabilities

This is a disability discrimination case brought against a large-scale apartment developer and its architectural firms for discriminating against persons with disabilities in the design and construction of apartment complexes, in violation of the Fair Housing Act and Americans with Disabilities Act. Many of the apartment buildings were designed and constructed so that the first floor apartments could be reached only by going down stairs. On September 30, 2005, a consent decree was reached that resolved both matters. Under the consent decree, the developer and architects have agreed to retrofit 49 apartment complexes in seven states to make over 5,400 ground floor apartments accessible, and to pay a $110,000 civil penalty and up to $950,000 to victims harmed by the lack of accessible features at the properties. *United States v. Edward Rose & Sons et al.*

Woman Sues TSA over Screening at Airport

A woman with a prosthetic leg brought suit claiming that she has been subjected to unreasonable searches by TSA screeners at various airports across the country. The plaintiff originally sought an injunction prohibiting TSA from searching her at all, and allowing her "unencumbered access" to boarding gates. She subsequently changed her request to an injunction requiring TSA to strictly follow its own procedures. The plaintiff's motion for preliminary injunction and the government's motion to dismiss have been pending since July 20, 2005. *Thomson v. Stone*

~ ~ ~

Citizenship and Immigration Services Prevails in Suit Brought by Employers

These two cases involve identical issues. In both cases the plaintiff employers are challenging Citizenship and Immigration Services' (CIS) denial of I-140 employment-based visa petitions filed on behalf of alien workers who the employers seek to hire in a computer-related capacity. The issue in both cases is whether CIS acted arbitrarily and capriciously in determining that the aliens do not meet the requirements for a "professional" worker because they do not hold a U.S. baccalaureate or a foreign equivalent degree. The court ruled favorably for the government. One employer appealed to the Sixth Circuit. *Whale Corporation v. United States Citizenship and Immigration Services; W.C. Software Services v. United States Citizenship and Immigration Services*

HUD Settles Old Racial Discrimination Class Action Suit

This is a class action racial discrimination suit filed in 1968 against the City of Hamtramck and HUD involving removal of black residents through urban renewal. Judge Keith, sitting by special designation, continues to handle the case as trial judge. Plaintiffs prevailed at trial against both Hamtramck and HUD. After appeals, which significantly cut back on HUD's joint liability secondary to Hamtramck's primary liability, there was a partial consent judgment in 1980 between Hamtramck and plaintiffs that contemplated the building or rehabilitation of 200 units of subsidized and affordable housing for plaintiff class and 150 units of elderly housing. On October 5, 2005, HUD and plaintiffs filed a stipulated settlement setting aside 25 Section 8 (HCV) housing subsidies for the most needy class members that will be transferable to the remedial housing, including a rent-to-buy feature, once it becomes available (building has just begun). On December 14, 2005, Judge Keith approved the HUD settlement as fair, reasonable, and adequate after a Rule 23(e) hearing. *Garrett, et al. v. City of Hamtramck, et al.*

~ ~ ~

Government Prevails in Suit Over "No-Pet" Rule

On February 18, 2005, a jury returned a verdict of $314,209 for the United States and plaintiff-intervener in a suit alleging that the defendants violated the Fair Housing Act by refusing to waive a no-pets rule to allow the complainant to keep an emotional support dog in her unit. The case was referred to our office after the Department of Housing and Urban Development (HUD) received a complaint,

DOJ_NMG_0026432

conducted an investigation and issued a charge of discrimination. *United States v. Royalwood Cooperative Apts, Inc., et al.*

~ ~ ~

Verdict Against Drug Dealer Shot During Undercover Deal Upheld on Appeal

Two drug traffickers were shot during their attempt to rob two undercover DEA agents during a $48,000 controlled delivery. Suit was brought against the DEA under the Federal Tort Claims Act because one of the robbers was killed and the other was rendered a quadriplegic. The one who is quadriplegic sued the United States for wrongful use of deadly force. In May, 2003, the case was tried, and the court found for the government, issuing a no cause verdict. The plaintiff appealed, and on May 27, 2005, the Sixth Circuit affirmed in a published decision. *Morales v. United States*

~ ~ ~

Government Prevails in Suit Brought by Retired ATF Agent

This was an age discrimination suit brought under the ADEA by a retired ATF Special Agent who claimed age discrimination. The agent had unsuccessfully applied for at least 40 merit promotions after he was 40 years of age. At issue in this case were his unsuccessful applications for four vacancies in the Detroit Division office. A five-day bench trial held in February, 2005, resulted in a favorable verdict for the government. *Griffith v. Ashcroft*

~ ~ ~

Cause of Death At Issue in VA Medical Center Malpractice Case

The survivors of a Saginaw VA Medical Center patient who died after taking an excessive amount of the steroid dexamethasone have sued claiming negligence. The government did not dispute that, due to the negligence of personnel at the Saginaw VAMC, this occurred. The issues litigated involved whether the dexamethasone overdose caused the patient's death and, if so, how long he was likely to survive with hormone refractory metastatic prostate cancer. This case settled for $300,000 in late 2005. *Krcmarik v. United States*

~ ~ ~

Dissatisfied Bidder's Suit Against HUD Dismissed

This was a disappointed bidder case brought by LaSalle Group, a general contractor who, despite being the lowest bidder, was not awarded the general construction contract for a project called the Mexicantown Project. The Mexicantown Project is an effort by the Mexicantown Community Development Corporation (MCDC), a non-profit corporation that is funded heavily by grant monies from HUD and the Treasury Department's Economic Development Administration (EDA). MCDC awarded the bid to the second-lowest bidder at least in part because of its partial minority ownership (LaSalle Group had no minority owners). LaSalle's claims against HUD and EDA were brought under the Administrative Procedure Act and 42 U.S.C. § 1983. The court granted the federal defendants' motion to dismiss on grounds of lack of subject matter jurisdiction. Plaintiff did not appeal. *LaSalle Group, Inc. v. Mexicantown Community Development Corporation*

DOJ_NMG_0026433

Government Wins Trial in Case Brought Against Postal Service

A contract driver for the Postal Service alleged that he was permanently disabled when he lifted a ramp at the direction of a postal employee. At trial, the postal employee testified that he did not direct the plaintiff to assist him, but rather the plaintiff grabbed the ramp to remove it because he was in a hurry to get underway. After trial, a verdict was entered for the government. *Grugan v. United States*

CIVIL DIVISION CASES – AFFIRMATIVE LITIGATION

Civil - Affirmative Litigation Unit

TRO Issued Against Durable Medical Equipment Provider

In an investigation resulting from the filing of a *qui tam* action, Rodney Cooper, Scott Cooper and related entities, of Birmingham, Michigan, were found to be improperly billing Medicare for medically unnecessary durable medical equipment, including diabetic shoes, knee braces and back braces for nursing home patients, some of which was never delivered to beneficiaries. The United States successfully argued to the court that there was probable cause to believe that the defendants fraudulently received about $3 million from Medicare and Blue Cross and Blue Shield. Pursuant to 18 U.S.C. § 1345, the court enjoined the defendants from selling, transferring or disposing of any assets, from the continued violation of any health care statutes, and the destruction of business, financial, patient, and accounting records. *United States ex rel v. Cooper, et al.*

~ ~ ~

Forfeiture Returns Money to Victims of Commodity Trading Fraud

The Commodity Futures Trading Commission ("CFTC") seized approximately $4.2 million from the account of a fraudulent commodity futures trader, Todd J. Snively. A civil forfeiture complaint *in rem* was filed against $4.2 million seized by the CFTC, and the United States prevailed in that civil action. As a result, 845 victim-investors each received two-thirds of their investment monies back, via the federal forfeiture remission process. Subsequently, Snively was charged criminally and pled guilty to mail fraud. Snively was sentenced to the statutory maximum of five years of incarceration. This office has been granted the authority to direct the United States Marshals Service to disburse an additional $140,000, representing the amount forfeited by Snively in the criminal case, to the 845 victim-investors on the same pro-rata basis utilized in the civil forfeiture case. Snively was also ordered to pay restitution to the 845 victim-investors in the total amount of $1,973.432.29. *United States v. Snively* and *United States v. $4.2 Million* (Civil and criminal forfeiture – remission and restoration to fraud victims)

Medicare Fraud Proceeds Seized From Home Health Care Agency Owners

Elena and David Szilvagyi, owners of Prime Care Services Inc., a home health care agency (and several other related corporations) defrauded Medicare of an estimated $836,000 pursuant to the submission of false annual cost reports. Falsely obtained Medicare payments were used by defendants to build their lavish private residence in Clarkston, Michigan. Pursuant to the False Claims Act, the government brought suit seeking treble damages and seized approximately $650,000 in a pre-judgment garnishment action under the Federal Debt Collection Procedures Act. Defendants entered guilty pleas in a parallel criminal proceeding brought in the Western District of Michigan and are currently serving 48- and 30-month respective prison sentences. In October, the court ordered the couple to pay $2.5 million after granting the government's motion for summary judgment in the civil case in the Eastern District, based upon defendants' guilty pleas. *United States v. Szilvagyi, et al.*

~ ~ ~

Forfeiture Forces Power Wheelchair Company Owner to Give Up $1 Million in Fraudulent Medicare Payments

This was a civil False Claims Act proceeding parallel to a criminal action. Defendant Hussein Amr, sole owner of U.S. Medical Supply, Inc., billed Medicare for unnecessary power wheelchairs and their accessories, and also engaged in up coding and submitting infl ated repair bills. Amr was found guilty in the parallel criminal case, and signifi cant forfeiture of approximately $1 million was obtained. The civil division further obtained a judgment in the amount of $864,818.68, which was collected through an administrative offset. *United States v. Amr and U.S. Medical Supply, Inc.*

~ ~ ~

Doctor, Companies, Sued for $1 Million Fraud for Failing to Disclose Common Ownership, Control Relationships

Aurora Healthcare, Inc. (Aurora), was a non-profit hospital that provided psychiatric services to Medicare and Medicaid patients. The United States intervened in this case. Defendant Soon K. Kim, M.D., controlled the operations of Aurora through a management team provided by Salem Service Company (Salem), a company which he owned. Kim and Salem reportedly caused Aurora to lease hospital premises from Michigan Mental Health Care Network, LLC (the "Network"), another company controlled by Kim, and to purchase other services from Kim-related companies. Notwithstanding Medicare and Medicaid guidelines that required participating hospitals to disclose and properly account for related party transactions, Aurora submitted cost reports to the Medicare and Medicaid programs during the 1998 through 2000 cost years which failed to disclose Salem and the Network as related parties. Fraud against the Medicare and Medicaid programs reached nearly $1 million. *United States ex rel. Clark v. Aurora Healthcare, Inc.*

DOJ_NMG_0026435

Assets Frozen, $ 500,000 Seized in False Billing Investigation

Agents uncovered evidence that Rebecca Sharp was buying and selling home health care and physical therapy patient lists, engaging in kickbacks from home health care entities and also falsely billing Medicare for medically unnecessary services. Agents executed seizure warrants, netting approximately $500,000 in fraud proceeds, most of which will be included in forfeiture counts. In addition, the government successfully obtained a TRO under the Fraud Injunction Statute, 18 U.S.C. § 1345, which prevents defendant from dissipating her assets during the pendency of the False Claims action. It is anticipated that damages will be in excess of $1 million. *United States v. Sharp*

Defendant in Metro Airport Fraud Case Seeks Chapter 11 Protection

This is a *qui tam* case alleging fraud in Wayne County contracts to oversee construction projects at the Detroit Metropolitan Airport. The United States intervened in part and declined to intervene in part. The United States intervened against defendants American International, Frank Vallecorsa, Robert Meredith, and also added Wilbourne Kelley as a defendant. Single damages are approximately $19 million. American International filed for bankruptcy protection on March 14, 2005. On August 26, 2005, the Bankruptcy Court ruled that the government's False Claims Act suit is not subject to the Bankruptcy Code's automatic stay provision. On August 24, 2005, American International filed its Chapter 11 Plan of Reorganization which was orchestrated by Frank Vallecorsa. The United States successfully objected to the confirmation of the Chapter 11 plan proposed by Vallecorsa. These cases were subsequently converted to Chapter 7 and a trustee appointed to liquidate the assets. *United States ex rel. v. American International, Frank Vallecorsa, et al.*

~ ~ ~

Special Verdict Orders $500,000 Forfeiture in Mortgage Fraud Case

Defendants were charged with 42 federal violations arising out of a mortgage fraud scheme. The Indictment contained forfeiture allegations seeking forfeiture of approximately $200,000 in United States currency and twelve real properties valued at approximately $300,000 based on their involvement in defendants' fraudulent activities. On November 24, 2004, following a trial, a jury rendered a verdict finding defendants guilty on all counts. The jury also issued a Special Verdict ordering all forfeiture sought by the government. The total value of the forfeiture is approximately $500,000. *United States v. Jebril*

COMMUNITY PARTNERSHIPS

Law Enforcement Coordinating Committee

The Law Enforcement Coordinating Committee (LECC) provides an informational network for law enforcement managers and executives committed to the ideal of cooperation and coordination at all levels of local, state and federal law enforcement.

The LECC of the Eastern District of Michigan sponsors or co-sponsors no or low-cost training seminars addressing the professional needs of more than 100 local and state law enforcement agencies. The program has become the cornerstone of joint federal, state and local law enforcement efforts. Robert Poikey, our LECC coordinator, has an extensive background in law enforcement. He can be contacted at 313-226-9120.

~ ~ ~

Project Safe Neighborhoods – Community Outreach Initiatives

On May 14, 2001 President George W. Bush announced the implementation of Project Safe Neighborhoods, a national initiative that targets gun crime and violent offenders in an effort to make our streets and communities safer. Despite an overall decline in the number of gun homicides during the last fi fteen years, the incidence of gun violence remains intolerably high. Our nation's violent crime rate is among the highest in the industrialized world; our teenagers are more likely to die from a gunshot than from all natural causes of death combined.

Project Safe Neighborhoods seeks to address the problem of gun violence by establishing partnerships between federal, state and local law enforcement authorities as well as partnerships with community and faith based groups. The United States Attorney has been charged with the responsibility for bringing together the law enforcement agencies and the community to ensure a uniform and comprehensive approach to reduce gun violence. Project Safe Neighborhoods has three components: 1) enforcement, 2) prevention and 3) public awareness/community outreach.

In the Eastern District of Michigan the centerpiece of the enforcement component are the gun case referral agreements with local prosecutors, which operate to assure swift prosecutions and maximum sentences for those who commit crimes with guns. In 2005, 134 gun cases were referred for federal prosecution. The average sentence for those cases is 79 months. In 2004, the average sentence was 95 months.

~ ~ ~

Operation "Weed and Seed"

Operation Weed and Seed is a community development initiative of the Department of Justice that is coordinated in the Eastern District of Michigan under the leadership of the U.S. Attorney. Weed and Seed uses a community driven strategy which seeks to "weed" out crime and "seed" in needed resources designed to strengthen the community, its residences and

DOJ_NMG_0026437

businesses. There are currently seven Weed and Seed sites in the Eastern District of Michigan that have proven to be a valuable asset to the District. The sites are located in the east, west and northwest areas of Detroit as well as the cities of Inkster, Highland Park and Flint.

The Weed and Seed sites continue to be officially recognized and funded by the Department of Justice. The sites assist the U.S. Attorney's Office in the Eastern District by fostering relationships between local residents, neighborhoods and businesses along with federal, state and local law enforcement. These relationships have proven to be key in assisting the office with community outreach efforts.

The sites continue their two-prong strategy. This strategy includes working with law enforcement within their respective sites to weed out violent firearm and drug offenders. At the same time, working with local businesses, churches and schools to seed in human service programs.

Our Weed and Seed directors conduct Project Sentry, a three-day workshop for middle school youth regarding the dangers of guns and violence. It is designed to educate students about the medical, legal, emotional and societal consequences of gun violence. The program is unique in that the program is taught by students, doctors and nurses, lawyers, law enforcement and other community groups.

Project Sentry also offers Sentry Clubs, which are designed to teach middle school students life skills through the game of chess. The program is 15 weeks, one hour per week, designed to teach children how to plan ahead, think strategically, peacefully resolving conflicts, and increasing their attention span, while at the same time showing them how to play the game of chess.

~ ~ ~

DEFY
(Drug Education for Youth) Camp

The office launched its first DEFY (Drug Education For Youth) Camp in the summer of 1997. DEFY is a drug education and personal development program for youth which is being implemented across the country by Weed and Seed sites. The DEFY program is designed to expose the youth participants to a structured and disciplined environment. Phase I of the DEFY program consists of a five-day nonresidential camp at neighboring Selfridge Air National Guard Base. More than 90 youths participated in the camp, ranging in ages from 10 through 12. Young people living on the base with their families also participated daily in the DEFY activities. The DEFY curriculum consists of information related to the dangers of drugs and gun violence. Recreational activities including swimming, bowling, fishing, boating and aerobics are provided daily. The curriculum is presented by local, state and federal law enforcement agencies and the Weed and Seed directors. Additionally, the youth are in the daily care of mentors and group leaders composed of active duty and reserve military personnel, military spouses, base youth services personnel, and a host of other volunteers. For many youth (and some of the adults) the camp was their first exposure to life on the base.

Phase II is consists of a ten-month mentoring program. The mentoring programs are built around the life skill modules that were taught

DOJ_NMG_0026438

during Phase I. DEFY graduates continue to receive support and encouragement to continue active participation in schools and neighborhoods within their communities.

Anti-Terrorism Advisory Council

As part of our mission to disrupt and prevent terrorism, the United States Attorney chairs the district's Anti-Terrorism Advisory Council (ATAC). The ATAC, which comprises members of federal, state and local law enforcement agencies, emergency responders, the medical and public health communities, and the private sector, is designed to make the district a seamless collaboration of all of the agencies working to prevent terrorism. The ATAC meets quarterly to bring all of our partner agencies together and facilitates information sharing on a daily basis. The ATAC provides guidance on criminal trends and developments in the law, initiates training opportunities, and coordinates special counter-terrorism projects, such as improving communication capabilities and preparing for the Major League Baseball All-Star Game and Super Bowl XL. As a result of the coordination developed through the ATAC, some successful counter-terrorism prosecutions have begun with information provided by one of our partner agencies.

~ ~ ~

BRIDGES

The United States Attorney also participates in "BRIDGES," ("Building Respect in Diverse Groups to Enhance Sensitivity") a successful partnership between federal law enforcement agencies and leaders in the Arab American and Middle Eastern communities in the Metro-Detroit region. BRIDGES is the outgrowth of an alliance formed shortly after 9-11 to address the potential for backlash against the local Arab American and Middle Eastern communities. From this alliance evolved BRIDGES, which now meets on a regular basis to provide a forum to address issues of mutual concern and to foster better understanding. BRIDGES addresses issues such as the Iraqi out-of-country voting held in the Eastern District of Michigan, border crossings, no-fl y lists, cultural sensitivity, hate crimes, law enforcement policies and procedures, and immigration.

During 2005, BRIDGES hosted a public forum on terrorism fi nancing through charitable giving and a town hall meeting on enforcement of civil rights laws to protect the Arab American and Middle Eastern communities. Based on the success of BRIDGES, Deborah Ramirez, a law professor at Northeastern University, who conducted a study on law enforcement/ community relationships, has stated that "the Dearborn/Detroit area is the 'gold standard' for law enforcement partnerships with the Arab, Muslim, and Sikh Communities." The success of BRIDGES has inspired other districts to form their own BRIDGES chapters.

Michigan Alliance Against Hate Crimes (MIAAHC)

This Offi ce continues to have a leadership role in the Michigan Alliance Against Hate Crimes (MIAAHC), which we co-chair with the United States Attorney's Offi ce for the Western District of Michigan and the Michigan Department of Civil Rights. MIAAHC is designed to unify the resources of federal, state and local law enforcement agencies, as well as community leaders, in a coordinated fashion to ensure a complete and effective response to hate crime in Michigan. The membership includes community and civil rights groups as well as representatives from federal, state and local law enforcement. Meetings are held quarterly, with standing

DOJ_NMG_0026439

subcommittees (Enforcement and Training, Data Collection/Trend Analysis, Victim Support, Education and Public Awareness and Community Response) generally meeting on a monthly basis. Activities include: providing guidance and assistance in the investigation and prosecution of individuals who commit hate crimes; training federal, state and local law enforcement offi cers in hate crimes enforcement; educating communities on the scope of the problem and the strategies needed to combat such criminals conduct

~ ~ ~

Advocates and Leaders for Police and Community Trust (ALPACT)

Our community outreach efforts include our continuing leadership role in Advocates and Leaders for Police and Community Trust (ALPACT), a coalition of law enforcement and community advocacy groups that meets monthly to discuss issues of mutual concern, including racial profi ling, post 9/11 discriminatory backlash issues, and more. This year, ALPACT has held important training and discussion related to use of force decision-making, the use of Tasers by law enforcement, diversity and the rise in hate crimes in southeast Michigan.

12th Annual Great Lakes Native American Conference

The Eastern District of Michigan was host to the 12th Annual Great Lakes Native American Conference, August 22 - 24, 2005 in Bay City, Michigan. This annual multi-disciplinary conference is intended for individuals who provide services to

Native Americans, such as representatives from human services, schools, clergy, victim services, the medical profession, probation offi cers, prosecutors offi ces, law enforcement, judges and Tribal leaders. The goal of this conference is to provide these individuals with skills that will enable them to provide an improved response to victims of family violence and other violent crimes. This year's conference was attended by 133 individuals who gave rave reviews about the quality of speakers, knowledge obtained and workshop topics. This conference is a collaborative effort of the United States Attorney's Offi ces for the Eastern and Western District of Michigan, the Eastern and Western District of Wisconsin and the District of Minnesota. These offi ces continue to work together to make this annual event a useful educational experience.

DOJ_NMG_0026440

VICTIM AND WITNESS SERVICES

The United States Attorney's Office for the Eastern District of Michigan is committed to the protection of the rights of crime victims and witnesses and ensures that they are treated with dignity and respect.

This has been accomplished through our Victim-Witness program. This program will assist eligible federal crime victims and witnesses with the following:

- Provide information about the status of the case;
- Provide referrals for victims to crisis intervention, counseling and other assistance services;
- Provide information on victim compensation to victims of violent crime;
- Provide information about submitting written or oral victim impact statements at the time of a defendants sentencing;
- Accompany victims to court for trial and sentencing;
- Register victims with the Victim Notification System database and provide notification;
- Provide logistical information and assistance to witnesses with respect to directions, transportation, parking, witness fees and travel reimbursement (assistance with airline and lodging arrangements is provided for out-of-state witnesses); and,
- Provide notification, upon request, to the employer of the victim/witness if cooperation in the prosecution of the crime causes absence from work.

The program also provides training in victims issues to federal, state and local service providers. The training included courses on the new Justice for All Act, drug-endangered children, Native American victim issues, and Internet child exploitation. The Victim-Witness Program Coordinator is Sandra Palazzolo. She can be contacted at 313-226-9510 for assistance.

Moussaoui (OPA)
The jury began deliberating today in the death penalty trial of Zacarias Moussaoui after the conclusion of closing arguments. Prosecutors requested the death penalty, and the defense implored jurors to send Moussaoui to prison for life so he would not become a martyr. A verdict is expected sometime this week.

L.A. Times Torture Story (OPA)
DOJ Public Affairs was notified that the *LA Times* is writing that one of their reporters in Afghanistan purchased or looked at a disk taken from the laundry at Agram Air Base in Afghanistan as recently as this weekend. The disk reportedly contained names and phone numbers, as well as police methods to use pain (pressure points) to control prisoners. The Department of Defense Public Affairs office has been contacted for comment.

Michigan Couple Charged with Obscenity and Child Pornography Violations (CRM)
A Brutus, Mich., couple—John Mart Messer and Deborah Messer—has been indicted on charges of operating an obscenity distribution business and related offenses. The indictment, returned April 20, 2006, by a federal grand jury in Grand Rapids, Mich., was unsealed and the couple was arrested in Michigan today. John Messer was charged with one count of engaging in the business of selling obscene matter, one count of mailing obscene matter, one count of transporting obscene matter via common carrier, six counts of receiving child pornography, and one count of possession of child pornography. Deborah Messer was charged with aiding and abetting the operation of a business of selling obscene matter. If convicted, the defendants face maximum penalties of five years in prison on each of the obscenity counts, 20 years in prison on the receipt of child pornography count and 10 years in prison on the possession of child pornography count.

North Dakota Region Utilities to Spend Over $100 Million Under Clean Air Act Settlement (ENRD)
The Department of Justice and the U.S. Environmental Protection Agency today announced settlement of a case alleging violations of the New Source Review (NSR) provisions of the Clean Air Act against Minnkota Power Cooperative and Square Butte Electric Cooperative—member-owned rural utilities—that will reduce emissions of sulfur dioxide (SO2) by about 23,600 tons per year and nitrogen oxides (NOx) by more than 9,400 tons annually from

the Milton R. Young Station—a lignite coal-fired power plant near Center, North Dakota. This is the first NSR settlement with a power plant utility in the Western United States.

***Cook v. Rumsfeld* Dismissed "Don't Ask, Don't Tell" Policy Upheld (Civil)**
A federal judge in Massachusetts on Monday dismissed a lawsuit filed by 12 service members challenging the military's "don't ask, don't tell" policy. The service members had argued the policy violates their constitutional rights to privacy, free speech and equal protection under the law. However, the Bush administration in court documents argued that Congress, in approving "don't ask, don't tell," recognized that the military is characterized by its own rules and traditions, including some restrictions that would not be accepted in civilian society.

GOP Leaders Urge Price-Gouging Probe on Gas (Antitrust)
CNN is reporting that Congressional GOP leaders on Monday formally called on President Bush to launch an investigation into possible price gouging by oil companies, as gas costs shot up nearly 25 cents per gallon in two weeks. According to CNN, Speaker of the House Dennis Hastert and Senate Majority Leader Bill Frist asked the President to direct the Justice Department and Federal Trade Commission to investigate the rising oil prices and also will request that certain areas be exempt from having to use a more expensive but cleaner blend of gasoline. The Justice Department is not commeting on this matter.

Director Mueller visits FBI Field Offices (FBI)
Director Mueller visited the Charlotte and Atlanta FBI field offices today. The Director hosted a press availability at both sites that were well attended by media. The line of questions included innocent images, GA Tech arrests-IT matter, restructuring of the FBI, FBI hiring trends for next year, and comments on the USA PATRIOT Act. Stories regarding these matters are expected in local media.

Tomorrow's Expected Releases/Events:

The Antitrust Division is tentatively scheduled to issue a release on a merger matter. (Talamona)

The Tax Division will tentatively issue a release on a civil injunction. (Magnuson)

The Environment and Natural Resources Division will issue a release. (Magnuson)

'Don't ask, don't tell' suit dismissed; Judge says military can exclude gays

By Shelley Murphy, Globe Staff

A federal judge in Boston yesterday dismissed a lawsuit challenging the military's "don't ask, don't tell" policy, ruling that Congress has the authority to exclude gays from the armed services.

US District Judge George A. O'Toole Jr. found that Congress made a rational decision to adopt the policy in 1993 after holding lengthy hearings and concluding that openly homosexual service members would have a negative impact on the military. The policy prohibits the military from asking about sexual orientation, but orders the dismissal of personnel who disclose that they are gay, engage in homosexual activity, or are outed by someone else.

"The legitimacy of the end Congress sought to serve -- maintaining effective military capability by maintaining high standards of morale, good order and discipline, and unit cohesion -- cannot be doubted," O'Toole wrote.

But, in his 41-page decision, O'Toole added that "deciding that Congress has made a rational choice is not the same as deciding it has made a wise choice."

O'Toole wrote that "the remedy for bad decision-making by the Political Branches is to be found in the working of the political process."

The judge concluded that the 12 former service members who filed the suit had failed to prove that their constitutional rights were violated because they were forced to leave the service after their sexual orientation was known.

DOJ_NMG_0026446

The Servicemembers Legal Defense Network, which filed the suit on behalf of the 12 people, won't make a decision on whether to appeal the decision until its lawyers have a chance to review the ruling and talk with the plaintiffs, a spokesman for the group said yesterday.

"We continue to believe that "don't ask, don't tell" is unconstitutional and that there is no good reason to exclude lesbian, gay, and bisexual Americans from the armed services," said Steve Ralls, the spokesman for the group. "The plaintiffs in this lawsuit are among the best and brightest that America has to offer. They're fighting to be included in the services as other Americans are fighting to leave the services and so we should welcome their commitment to our country and not turn away their offer to serve."

Charles Miller, a spokesman for the Department of Justice, would not comment on the specifics of the case, but said, "We're pleased with the court's decision."

The suit, filed in December 2002, marks the ninth time that the policy has been challenged unsuccessfully in courts throughout the country. The plaintiffs had hoped that a 2003 US Supreme Court ruling that struck down a Texas law that made gay sex criminal had opened the door to new challenges.

The "don't ask, don't tell" policy replaced a ban on gays in the military.

The suit estimates that there are 65,000 gays, lesbians, and bisexuals in the military. Each of the 12 plaintiffs served in the war on terrorism, some in Iraq and Afghanistan, according to the suit.

Laura Galaburda of Jamaica Plain, who was the only one of the 12 plaintiffs from Massachusetts, resigned from the Air Force in 2002 after telling her commander she is a lesbian.

In an interview with the Globe after the suit was filed, Galaburda said she was in her fourth year of medical school and working at Andrews Air Force Base in Maryland when she felt she could no longer stay silent about her sexual orientation.

Messages left at telephone numbers listed for two of the plaintiffs were not returned yesterday.

Ralph Ranalli of the Globe staff contributed to this report.

Federal judge throws out suit challenging 'don't ask, don't tell'

BOSTON -- A group representing service members who sued the federal government challenging the military's "don't ask, don't tell" policy says it'll likely appeal a decision by a federal judge who threw out the case.

U.S. District Judge George A. O'Toole Jr. on Monday dismissed the lawsuit filed by the Servicemembers Legal Defense Network, citing the authority given to Congress in establishing the country's military policies.

"In Congress, there were hearings by committees of both Houses at which the arguments for and against the policy were aired and debated. The resulting legislation was the end product of a focused process of debate and deliberation," the judge wrote in his ruling.

Established in 1993 under the Clinton administration, the "don't ask, don't tell" policy prohibits the military from asking about the sexual orientation of service members. It requires those who acknowledge being gay or engaging in homosexual activity to be discharged.

The 12 service members argued the policy violates their constitutional rights to privacy, free speech and equal protection under the law.

But the Bush administration argued in court documents that it "rationally furthers the government's interest in maintaining unit cohesion, reducing sexual tensions and promoting personal privacy."

Steven Ralls, a spokesman for the Servicemembers Legal Defense Network said the group would likely appeal the ruling, although a final decision has not yet been made.

"We continue to believe the military's ban is unconstitutional, and there is no reason lesbian, gay and bisexual Americans should be prohibited form serving our country," Ralls said.

In their lawsuit, the service members claimed that the policy violates their First Amendment rights because it forces them to remain silent about their true sexual identity.

O'Toole rejected that argument.

"The policy .... is, by its terms, directed at homosexual conduct or the propensity or intention to engage in such conduct. The fact that one might speak about one's conduct, or one's propensity or intention to engage in certain conduct, does not

mean that a governmental regulation pertaining to the conduct is also an impermissible restriction on speaking about it," O'Toole said.

Charles Miller, a spokesman for the U.S. Department of Justice, said the government was pleased with O'Toole's ruling.

"Don't ask, don't tell" has been upheld by appeals courts in several other jurisdictions. One of the reasons the service members filed the lawsuit in Boston is because the appeals.

Suit Claims DoD Data Use Illegal

NEW YORK - The Defense Department is violating the privacy of millions of high school students nationwide with a detailed database it uses for military recruitment, a federal lawsuit filed Monday claims.

The New York Civil Liberties Union sued on behalf of six high schoolers, saying the department is ignoring privacy rules set by Congress regarding the collection and distribution of students' personal information.

Military officials have said they have about 30 million names in the database. The Pentagon said last year the list includes high school students ages 16-18 and college students, and includes such information as the students' Social Security numbers, gender and race.

Hope Reichbach, a 17-year-old senior at Hunter College High School in Manhattan and a plaintiff, said she contacted the NYCLU after she had tried unsuccessfully to get her name removed from lists and databases that she said subjected her to repeated phone calls from military recruiters.

"I want them to leave me and other students alone," Reichbach said.

The department is flouting a 1982 military recruitment law that specifies that it refrain from collecting information on students under 17, that it store the information for no more than three years and that the information be kept private, the lawsuit said.

The current database includes information on 16-year-olds, is storing the information for five years and is being shared with law enforcement and other agencies, the lawsuit said.

Megan Gaffney, a spokesman for the U.S. Attorney's office, declined to comment on the lawsuit Monday.

The plaintiffs are six 16- and 17-year-old students who don't know if they are included in the database, but who object to it, lawyers said.

"Our clients don't wish to join the military," said Corey Stoughton, NYCLU attorney. "And they don't want their genders, ethnicities and social security numbers collected and distributed."

Boeing nears settlement with US to resolve probes - report

LONDON (AFX) - Boeing Co and federal prosecutors have reached a preliminary agreement to resolve a pair of high-profile criminal investigations, but the company is balking at calls by some Justice Department officials for roughly 750 mln usd in fines as part of a comprehensive settlement, the Wall Street Journal Europe reported, citing unnamed sources.

Based on the talks so far, Boeing would avoid pleading guilty to any specific charges in both cases while admitting

wrongdoing under what is known as a deferred prosecution agreement, the sources said.

Boeing has signaled that it may be willing to pay about 500 mln usd to simultaneously settle related civil claims, the paper cited the sources as saying. The government is seeking significantly more, but negotiations aimed at a compromise are heating up, they added.
